"I Can Make You a Master Writer and a Convincing Speaker!"

—GRENVILLE KLEISER, Famous Speech Specialist

Whatever your business or occupation you need a command of the English language to be successful. It will bring you to the forefront and will help you, as no other single thing can, to reach the goal of your desires and achieve success.

Years of study and experience have enabled Mr. Grenville Kleiser to formulate a course of lessons in Practical English which has been universally admitted to be superior to any instruction hitherto offered on this subject. It enables you by post, in your spare moments at home, to—

Enlarge Your Vocabulary by Thousands of Words;
Use the Right Word in the Right Place;
Correct all Errors of Grammar Diction and Idiom;
Develop Originality of Style and Expression;
Write Tactful and Forceful Letters, Essays, Advertisements, Articles, Stories and other Composition;
Become an Engaging Conversationalist and Be Popular in Good Society;
Be a Person of Culture, Power, and Influence;
Earn More Money and Get Better Position.

If it is your ambition to become a forceful effective speaker, enrol yourself for Grenville Kleiser's Mail Course in **Public Speaking & Development of Personal Power.** It enables you to—

Conquer Timidity and Fear;
Banish "Stage Fright" & Nervousness;
Acquire Poise and Self-Confidence;
Develop Power and Personality;
Grip and Hold Attention;
Argue Effectively and Winningly;
Talk Convincingly & Sell More Goods;
Attract Attention in Social Gatherings;
Address Meetings and Sway others by Forceful Speech;
Become a Living Force and Gain Respect.

This Course will bring out the best that is in you, by making you a positive, clear-cut, convincing thinker and Speaker. Nothing like it is available anywhere in India or abroad.

WRITE TODAY FOR FULL FREE PARTICULARS

There is absolutely no uncertainty—no guesswork—about Mr. Kleiser's methods. He has had years of experience in leading educational institutions and is generally recognised as the foremost teacher of speech culture and English by post. He has had under his tutelage many of the best known men in the public eye. His Mail Courses are his life work. They are for every ambitious man and woman who would use the English language for all one is worth in business and social life. We shall be glad to explain any of these two Courses to you. Send us the coupon above or write for full particulars, enclosing two annas in stamps. Will you do it TO-DAY?

DIAPEPSIN

Diapepsin is a scientific combination of Diastase and Pepsin which are the two most essential ingredients for the proper digestion of food. A teaspoon of Diapepsin taken immediately with food sets up a chemical action which is allied to early stages of digestion. The rest of the digestive process becomes smooth and you can get the most out of the food that you take.

It is not scientific to strain the digestive mechanism of the body if the digestion is already weak. Diapepsin could give the right amount of aid necessary for complete digestion of food. By this strength will return to the body and the digestive process will begin to function normally. Diapepsin is only an aid to nature to help her regain the lost hold.

The Stomach is lined on the inside with a soft thick mucous membrane and in this lining and underneath it are large number of tiny glands which secrete mucous, and produce the various constituents of the gastric digestive fluid. Chemical action of this gastric juice of the stomach contents brings about the early stages of gastric digestion. Diapepsin will be of use where these glands are not functioning normally and indigestion is setting in.

CALCUTTA-9

ROUND THE WORLD

By Mr. J. N. SINHA
(Assistant Conservator of Forests, Bihar)

A most interesting travel book that reads like a novel—valuable and instructive information of the world in the language of story book. The different customs of foreign people, their manners and outlook, are delicately mingled with humorous and entertaining anecdotes.

"There is a certain distinctiveness about the book which sharply marks it off from the ordinary travel tales of this kind."

—*Hindusthan Standard*

"The volume is a record of first-hand experiences in various countries of the world, and is full of information which a large public ought to know."

—*Amrita Bazar Patrika*

34 Photographs & 3 Maps :: 2nd Edition—Price Rs. 7-8

CALCUTTA.

"Among the makers of modern Bengal Ramananda Babu will always occupy an honoured place. × × × Like Tagore's the late Mr. Chatterjee's genius was essentially constructive. × × By publishing this engrossing biography of her father, Srijukta Santa Devi has done a great service to Bengal and derivatively to the whole country. × × No one could have written a biography of Ramananda Babu as she has done. It will certainly remain a source book for future writers and students."

—*Hindusthan Standard.*

"An authentic and highly interesting biography in Bengali of the late Ramananda Chattopadhyaya. × × The life story of such a man is naturally linked up with the main currents of contemporary national history and we are glad to note that the author has adequately covered this wider background in delineating the individual's life. The style is restrained and has a homely grace, and a number of fine photographs have greatly enhanced the value of the volume. We are sure the book will be read with profit by those who wish to study the currents and cross-currents of Bengal's history for the last half a century with which Ramananda was intimately associated."

—*Amrita Bazar Patrika.*

CHATTERJEE'S PICTURE ALBUMS

IMPORTANT FOR THE CULTURED

The Renaissance of Indian Art has now become an accomplished fact. Even the Western World of Art has given recognition to it.

Price Rs. 4 each number. Postage extra.

Only a few sets Nos. 10 to 17 are available

CHATTERJEE'S Albums are of Great Value :

Historical and Artistic

THE ARTISTS REPRESENTED IN THIS SERIES INCLUDE

Abanindranath Tagore—The Master
Nandalal Bose—Acharya, Kalabhavan, Santiniketan
Gaganendranath Tagore—The Master and Creator of a school
Asit Haldar—Principal, Government School of Arts and Crafts, Lucknow
Abdur Rahman Chughtai—The foremost Musalman Painter
Samarendranath Gupta—Principal, Mayo School of Art. Lahore
Sarada Ukil—The famous painter of Delhi
Mukul De—Principal, Government School of Art, Calcutta
Surendranath Kar—Kalabhavan, Santiniketan
Bireswar Sen—School of Arts and Crafts, Lucknow
Deviprasad Ray Chowdhury—Principal, Government School of Arts and Crafts, Madras
Kshitindranath Majumdar—Indian Society of Oriental Arts
Surendranath Ganguli
Upendra Kishore Ray Chowdhuri

WONDERFUL POWERS OF AN OCCULTIST

Have your Past, Present and Future wonderfully revealed by Prof. M. J. Narsian, B. A., the Famous Astrologer and Occultist. His system of calculation is based upon YOGA-SADHANA (Meditation) and upon Ancient & Modern Science of Prediction. His book *Your Future Thru Astrology* has been eulogised in the Press. Prof. Narsian possesses wonderful OCCULT POWERS, and "Hypnotic Chart" is appropriately designated "The Mascot of Success". Numerous eminent persons have certified his wonderful predictive faculties.

DETAILS OF CHARGES:

Accurate Description of your Life Past, Present & Future up to 1952	Rs. 5-4
Detailed Annual Life Reading for next twelve months	Rs. 5-4
Three Questions Answered	Rs. 5-4
Hypnotic Chart (size 19" × 25")	Rs. 10-8
Hiro-Mantric-Talisman surcharged with Psychic Spiritual Powers	Rs. 10-8
Extensive Astrological Life Reading (Western Astrology)	Rs. 25

DATA REQUIRED:

Birth date, time and place of birth. If your birth date is not known, please mention approximate age, date and exact time of writing.

A copy of your HOROSCOPE drawn according to Western Astrology will be sent with leaflets on "The Third World War" and "Future of First Indian Republic" without extra charge.

Payment may be made by M.O. or Postal Order.

THE MODERN REVIEW

JANUARY 1951

VOL. LXXXIX, No. 1 WHOLE No. 529

NOTES

The New Year

The Old Year is drawing to a close as we write these lines, but we see little hope as yet that peace and goodwill will prevail with the coming of the New Year.

At home, we have had the worst harvest since that of 1942-43, the year of the Great Famine. And further the surplus area, of Assam has been devastated by one of the most intense earthquakes on record. Trade and Industry are still in the throes of a three-year-old depression, caused by the anti-social attitude taken both with Capital and organised Labour alike. The sufferings of the common citizen, that is to say of 98 per cent of the population, have been intensified beyond all measure thereby. Black-marketing is still rampant and labour efficiency lower than ever. The economic tension, which had been eased somewhat due to devaluation is likely to be affected adversely by the urgent necessity for the large-scale enhancement of the food-grain imports. We shall go into details later in these matters.

The political situation at home had been stabilized to a certain extent during the first three quarters of 1950. Then came the rumblings of the Chinese invasion of Tibet and the major disturbances in Nepal, which gave a fresh impetus to the foreign-controlled disruptionist movements in India. And along with that have come some curious legal decisions which have rendered the maintenance of law and order by the present methods somewhat precarious. This has encouraged the major disruptionist group to reorganise afresh on a new alignment.

We must make it clear at this point as to why we call the group disruptionist. If it were merely a question of the path, Right or Left, it would be another matter. If all India, or the major portion of its nationals, went towards the goals of Socialism, or even to the extreme Leftist peaks of Marxian Communism by the constitutional methods of voluntary evolution and non-violent revolution, we would acclaim rather than denounce the movement. But when we see that certain major groups are not merely inspired by foreign examples, but are actively directed and financed by a foreign organisation, and we see that its entire programme is aimed at the undermining of the solidarity of the nation's administrative and economic set-up, with the object of creating a chaotic vacuum in which foreign domination can intrude in with ease, then we must consider such organisations as anti-national and disruptionist.

Let us, for example, consider the following report on the re-organisation of the C.P.I. that appeared in the *Statesman* of December 29 :

"It is understood that the third Party Congress of the Communist Party of India, due to be held in January, may be delayed because of the recent reconstitution of the Central Committee, and also because of differences of opinion among Party members on political issues. No information is available about the venue of the Congress; possibly it has not yet been fixed.

The reconstituted Central Committee consists of Mr. Rajeswar Rao, Secretary (Andhra), Mr. Nambudripad (Kerala), Mr. Bires Misra (Assam), Mr. Narayan Reddi (Andhra), Mr. Parulekar (Bombay), Mr. Manindra Singh (East Pakistan), Dr. Ranen Sen (Bengal), Mr. Yusuf (U.P.), Mr. Dange (Bombay), Mr. Ajay Ghosh (Bihar) and Mr. Ghate (Bombay), the last five being new members. Mr. Somnath Lahiri (Bengal), who was a member of the Committee, has resigned.

The Politburo has also been reconstituted. It consists of Mr. Rajeswar Rao, Mr. Nambudripad, Mr. Dange, Mr. Ajay Ghosh and Mr. Ghate.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

In a statement issued by it on December 18, the Central Committee stated that it had not been possible at the Committee's meeting earlier in the month, to "thrash out the political differences and evolve an agreed political line." The statement added that it was essential for the party to discharge effectively its duties and responsibilities "in the struggle for national liberation."

It is learnt that the whole matter has been referred to the Cominform for a final decision and for the issue of a directive about the lines on which the Party should work in India.

On receipt of the directive the Party Congress will meet to work out a detailed programme.

Meanwhile, to strengthen the Party, efforts are being made to readmit to the organization members who have been "unjustly expelled." Several Bengal district committees are reported to have suggested the withdrawal of the expulsion order on Mr. P. C. Joshi, the former General Secretary, and a review of his case by a commission. An inquiry commission has been set up to deal with the case of Mr. Ranadive and some of his associates for their "Left sectarianism amounting to Trotskyite-Titoite policy."

The new Central Committee, which thinks that no open session of the Congress is possible, is considering how best the Congress may be made representative of all sections of opinion in the party.

The expanded committee is also exploring the possibility of working jointly with all Leftist parties to fight the general elections, and for the withdrawal of all repressive measures, the release of political prisoners and restoration of civil liberties. As a first step, in the trade union field efforts are being made to work unitedly, if possible through amalgamation, with the A.I.T.U.C. and U.T.U.C. in Bengal.

The success of the Chinese Communists in Korea has been a source of great inspiration to Indian Communists. In Bengal, the recent release of a large number of Communist detenus under orders of the High Court has also given a fresh impetus to party activity, and several released members have already started organizing labour in jute mill areas to make up the ground lost during the past two years. A committee has been constituted, with one of the leading party members recently released from detention as secretary, to organize "trade union" activity in Calcutta industrial centres."

This was preceded some time back by a piece of news from Bombay in which the dictum of a prominent Chinese Communist leader was given. In his comments he rebuked the C.P.I. for making exaggerated claims and directed it to *follow, in future, more closely the directions that were sent to it from abroad.*

Apart from the disruptionists, there has been wide dissensions inside the body-politic of the Congress itself. There are separate groups crystallizing out with various nucleii and in West Bengal one such section has left the Congress altogether.

So taken overall, the political picture is dismal and in other spheres hardly promising. It is indeed a bleak prospect for the New Year!

Further, the nation is poorer today by the loss of the last two giants we had in our midst. Sri Aurobindo the Seer had remained detached from the public platform for nearly four decades. But his influence on the mind of the leaders of the nation had only been intensified by that isolation. There was an aura round him like that of the great sages of yore, and from his detachment came inspiration to the fighters for the nation's freedom.

The Divine that manifested Itself in and through a Bengali body as Its instrument has willed to withdraw Its presence from this mundane world. This came to happen on the night of December 5 last. A pall of still sorrow has descended on India at the departure of one of whom Sri Aurobindo had himself sung :

"He who would bring the heavens here,
Must descend himself into clay
And the burden of earthly nature bear
And tread the dolorous way."

Since 1906 India had believed in him as one of the heaven-sent deliverers who with the *mantra* of Liberty would put his own people at the altar of equality in the comity of modern nations. That *sadhana* he saw in fruition on August 15, 1947—a date which happened to be Sri Aurobindo's birth-day in 1872. India has been hoping that as political freedom has come, her people would have now the inclination and opportunity to devote themselves whole-hearted to the service to God and Man, to the ending of inequalities in human society and injustices in human relations.

Since 1910 when he retired to Pondicherry, a vaster vista has been opened before him by Divine Will. India has been following him in her unobtrusive ways through good report and evil; and the world has been increasingly feeling its way towards the realization that in the ancient wisdom of Ind lay the secret and centre of redemption from crises that overtake her almost at equal intervals of time. The news of the passing into the Life Eternal of this Indian seer and sage has helped to strengthen this realization in this wider field. And our feelings can be given expression in the words of Shakespeare, quoted by one of his disciples in anticipation of such a day.

". . . When he shall die,
Take him and cut him out in little stars
And he will make the face of heaven so fine
That all the world will be in love with night,
And pay no worship to the garish sun."

In the Master's own words we find, in the *Life Divine* :

"To fulfil God in Life is man's manhood. We must accept the manysidedness of the manifestation even when we assert the unity of the manifested. All problems in life are essentially problems of harmony."

Scarcely had we recovered from the shock of the passing of Sri Aurobindo when came the news of the sudden death of the Sardar. The Ship of State is verily without a Pilot today !

We could write chapters and chapters on the qualities and achievements of that stern warrior and Elder statesman. But as yet the sense of irreplaceable loss is the one thought that reigns supreme. The burden on Sri Jawaharlal Nehru is stupendous, and unless vision and inspiration is given him at this critical juncture in the nation's destiny, there will be calamity. The successors to the Sardar that have been chosen by Sri Nehru to take over the portfolios are amiable gentlemen of a very different calibre and metal indeed. We confess their appointment has not in the least allayed our apprehensions about the future.

Pakistan has maintained its intransigent and actively hostile attitude, despite all the futile appeasement attempts by Prime Minister Nehru. We had the information given in Parliament that no less than 81 raids had been made on Indian soil by armed Pakistanis. In West Bengal, we have had a prolonged minor skirmish *on our soil* during the first three weeks of December. The outcome has been as follows:

Cease-fire orders have been given by the West and East Bengal Governments to their police forces posted on the borders of Nadia and Kushtia districts.

During the past three weeks there have been almost daily exchanges of fire between Indian and Pakistani police near the border villages of Bhatupara and Betia, the dispute arising over the harvesting of paddy by cultivators.

The two Governments have agreed to immediate demarcation of the boundary in the disputed border areas by the Directors of Land Records of West and East Bengal.

Our staff correspondent in Dacca writes that joint demarcation of the boundary line in the dispatch border areas is expected to commence in the first week of January.

Comments are superfluous! One merely wonders if West Bengal is inside the Indian Union.

India's "No-War" Letters with Pakistan

Letters exchanged between the Prime Ministers of India and Pakistan on the "no-war declaration" had been placed before the Parliament in its last session.

We do not see that these letters have improved relations between Pakistan and India. We can only praise Sri Nehru's patience, and with that he could display the same virtue, even in a niggardly measure when it concerns critics at home.

In his last letter Sri Nehru said : "I am as convinced as ever that such a declaration would go a long way to clear the atmosphere for a friendly discussion of all the issues that are outstanding between our two countries. In view of the dark clouds of war that are spreading all over the world, such a declaration by India and Pakistan would have a profound

Welcoming the Pakistani Prime Minister's assurance that Pakistan had "no intention of attacking India" and wanted a "peaceful settlement of the Kashmir question" Sri Nehru said : "As I stated before Parliament on November 28, India is pledged to peace and I gave a solemn assurance that we shall continue to work for peace with our neighbour country. There, I think, we must leave the matter for the present."

Referring to Press propaganda, Sri Nehru said that the leading newspapers of India had dealt with the Delhi agreement "helpfully and with a sense of responsibility" and "the tone of the Calcutta newspapers had improved considerably."

Sri Nehru says: "Leading newspapers in Pakistan, however, stand out in sharp contrast and anti-Indian propaganda of an extreme type continues from day to day. This applies more especially to the *Dawn* of Karachi. In its leading articles and its news columns there is unjust and unbridled criticism of India. Fictitious reports appear of economic and political conditions in India. All kinds of base motives are imputed to us; the latest example of this is the gross perversion of our relations with Nepal."

Referring to Kashmir, he says: "You have repeated what has been said before on behalf of Pakistan, and no purpose will be served by my repeating what I have said so often on behalf of India. I would only point out that we are, and always have been, prepared to agree to any reasonable arrangements that would combine effective protection of the security of the State with complete freedom to the people of Jammu and Kashmir to decide their own future."

Referring to Mr. Liaquat Ali Khan's allegation about the setting up of a provisional Government of East Bengal, Sri Nehru said that in April last there had been an announcement to that effect on the air from a secret source and the attempts of the police to locate the illegal transmitter had been without success. But since then there had been no such announcements.

After drawing attention to a reported broadcast in February last on Dacca radio "calling for vengeance on non-Muslims," Sri Nehru said: "I am sure you will agree that stray incidents of this kind are best ignored. In any case I can assure you that I will not tolerate any illegal activities on Indian soil directed against the integrity and security of Pakistan. The large-scale movement of military forces of India last February that you have mentioned, was, as I stated in February, a purely precautionary defensive measure, taken in a period of high tension."

Denying the Pakistani Prime Minister's statement that the Indian representatives had agreed that there was "no question of varying the shares" of the two countries regarding canal waters, Sri Nehru said that Mr. Liaquat Ali Khan had quoted from a report of a sub-committee of the Punjab Partition Committee which had not been agreed to by the Partition Com-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

mittee and the whole matter had been referred to the Central Arbitral Committee.

The statement quoted from the sub-committee's report was also incorrect. The actual words used were: "There is no question of varying the authorized shares of water to which the two zones and the various canals are entitled."

Denying that India was seeking to increase greatly for herself supplies of canal water at Pakistan's expense, Sri Nehru has said that India only proposed to utilize the waters to which she was entitled. But before doing so she had generously agreed not to prejudice any existing irrigation in Pakistan until Pakistan had reasonable time to tap alternate sources.

This had been "fully realized" by Pakistan's representatives when they agreed to the May 4, 1948 agreement. "It is, I confess, a matter of amazement to me that you should still seek to maintain that that agreement was made under compulsion." Sri Nehru adds:

"Pakistan's intransigence as regards the technical examination agreed to between the two countries hardly requires proof. Engineers of both countries had met more than once, but if in spite of this and the mass of factual data available, there was no progress, it could only be attributed to the refusal of the Pakistani Government representative to permit the two sets of engineers to get on with the technical examination of the problem.

It is our firm conviction that, if only the technical examination is allowed to be made in a spirit of mutual understanding and accommodation, not only the richest areas in Pakistan but all other legitimately irrigable areas will get the supply of water they reasonably need.

"I have no doubt that if the tribunal which I have suggested is established and is assisted by the results of such a technical examination, it would not be difficult for it to find an equitable solution of the problem."

Referring to the evacuee property question, Sri Nehru said: "I can only regret that you should still think that the tribunal we have suggested would not serve any useful purpose. I am also disappointed at your refusal to discuss the evacuee property dispute pending a settlement in the canal water dispute, except on the basis suggested by you, namely, that there should be freedom of sale and exchange of urban property.

"In my previous letter I have explained why we feel that this method of approach to the evacuee property problem would not lead to a satisfactory solution. I need not repeat what I have said previously."

Sri Nehru then dealt with the question of Pakistani assets. Characterizing the Pakistani Prime Minister's statement that Mr Nehru had "summarily dismissed" the question of release of Pakistani assets as "doing me less than justice." Sri Nehru has drawn attention to his letter of January 18 in this connexion and India's large financial claims on Pakistan.

Mentioning the sums due to India on stores transferred to Pakistan and Pakistan's share of the expenditure on the Joint Defence Council, Sri Nehru said that it would not be correct to say that negotiations on the subject between the two countries had failed. There had been some correspondence and discussions between India and the Governor of the Pakistan State Bank and the Pakistani Finance Ministry, and some progress had been made in clarifying the issues.

Thanking Mr Liaquat Ali Khan for his invitation to him to visit Karachi, Sri Nehru said: "I attach value to periodical meetings between us as they can help us more than anything to understand our respective points of view to pave the way to a settlement of outstanding issues and, generally, to promote good relations between our two countries."

Nepal

Prime Minister Nehru told the Indian Parliament on December 21 that the Prime Minister of Nepal would issue a proclamation announcing constitutional reforms and "other matters" before the end of December.

PTI adds: Sri Nehru said that India was anxious that there should be peace and stability in Nepal. "At the same time, we felt that the introduction of substantial political reforms was essential for this purpose.

"It was on this basis of respect for Nepal's independence, combined with an urgent interest in political reforms there, that we carried on our conversations with representatives of the Government of Nepal who were recently in Delhi. We explained our position fully to these representatives, Generals Kaiser Shumsher and Bijaya Shumsher, and, at their request, we gave them, on December 8, a Memorandum defining our aims and proposals.

"The Government of India's primary objective is that Nepal should be independent, progressive and strong. For this purpose, they regard immediate constitutional changes, which will satisfy popular opinion and are acceptable to important non-official organizations of Nepalese nationals, as urgent.

"In their (Government of India's) view it is necessary:

"1. That a Constituent Assembly, composed entirely of properly-elected members, should be brought into being as soon as possible to draw up a constitution for Nepal.

"2. Pending the meeting of the Constituent Assembly mentioned in (1) an interim Government which will include persons representative of popular opinion and enjoying public confidence should be established.

"Apart from an adequate number of popular

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

representatives, this interim Government should include members of the Rana family, one of whom should be Prime Minister. Members of the interim Government should be formally appointed by the King on proposals submitted by the Prime Minister. This Government should function as a Cabinet, on the principle of joint responsibility, and should frame its own rules of business.

"3. In the interests of peace as well as stability, his Majesty King Tribhuvan Bir Bikram Shah should continue to be King of Nepal. During the King's absence, he may appoint a regent to act on his behalf during that period.

"These suggestions are made in a spirit of sincere friendship and with the sole object of ensuring the stability and progress of Nepal. They are necessarily suggestions of principle. Once the principles are accepted, details could easily be worked out.

"The Government of India will be glad to give any assistance that the Government of Nepal may need in working out the details of a constitution and on connected matters.

"They wish to emphasize that in order that the changes now made should work smoothly, it is of paramount importance that the present authoritarian regime should be liberalized in spirit as well as structure, and that the changes should satisfy all progressively-minded Nepalese nationals."

He had received a reply from the Prime Minister of Nepal which read as follows: "Our representatives who had been to New Delhi have brought with them the Memorandum containing friendly suggestions and advice offered by your Excellency and the Government of India with the sole object of ensuring the independence, stability and progress of Nepal.

"I need not say that any advice and suggestions given in a spirit of friendship by our great neighbour have always been received by us with the attention they deserve. My Cabinet has been actively considering the matter, but as momentous changes are envisaged they are naturally taking some more time to consider the matter than was originally anticipated.

"Careful thought is necessary before we actually decide on steps which will bring about far-reaching changes without jeopardizing the stability and peace of the country. Nevertheless, we are working on the matter with as much speed as is possible and I am confident that we will be able to prepare a proclamation addressed to the people of Nepal announcing the constitutional reforms and other matters before the end of the month. I shall send an advance copy of it as soon as it is ready.

"I should like to take this opportunity of expressing to the Government of India and to your Excellency in particular sincere thanks on behalf of my Government and myself for the kindness and courtesy with which our representatives were received in Delhi, which enabled the discussions to be carried on in an atmosphere of friendship and cordiality."

Appreciating the friendly tone of this reply, Sri Nehru said: "We have no desire to hurry the Government of Nepal. At the same time we cannot ignore the fact that delay in a settlement is likely to make the situation worse.

"The world situation, unfortunately, has grown darker since we discussed international affairs earlier this month. It is our firm conviction that the longer political reforms and a satisfactory settlement are delayed in Nepal the greatr the danger to Nepal's security and internal tranquillity.

"The suggestions that we made in our Memorandum were made in a spirit of sincere friendship and with the sole object of ensuring the stability and progress of Nepal. They were offered after great care and in the hope that these suggestions will be examined and dealt with by the Government of Nepal in the spirit in which they had been offered.

"We have continued to recognize His Majesty King Tribhuvan Bir Bikram Shah; we feel that, in all the circumstances, this is the right course, and any discontinuance of recognition would produce many complications and would come in the way of a peaceful settlement.

"Any other arrangement, such as the replacement of the constitutional head of the Kingdom by a Council of Regency, appointed by the Prime Minister to act in the name of a child King, would make the introduction and smooth working of progressive constitutional changes more difficult."

The Government of India, said Sri Nehru, had observed the strictest neutrality in the internal struggle in Nepal. The officers in the border areas had been instructed accordingly, and they had carried out these instructions.

Within a week of this statement, General Bijay Shamsher Jung, Foreign Minister of Nepal, came to Delhi. On December 27 he saw India's Secretary-General for Foreign Affairs when discussions on the Draft Proposals regarding constitutional reforms and other issues affecting the Nepalese situation were held. The Nepal Government's proposals, while trying to meet generally the principles adumbrated in the memorandum of the Government of India in regard to the convening of an elected Constituent Assembly and formation of an Interim Government for Nepal, it is believed, do not indicate any clear acceptance of the advice tendered by the Government of India on the question of Kingship. According to Delhi reports, Nepal Government's reply boils down to two proposals, *viz.*, their willingness to set up a Constituent Assembly after the present census operations are completed and to form an Interim Cabinet consisting of nine members of whom not more than three would be representatives

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of the people. The census would be complete after two years. The present Nepal Government are also understood to have expressed themselves against the return of King Tribhuvan.

India's Defence

"Prime Minister Nehru told Parliament on December 21 in reply to a pointed inquiry by Pandit H. N. Kunzru, that India now was more secure than 90 per cent of the countries in the world.

After the cheers that followed had died away, the Prime Minister elaborated his point which, he said, he did not make on the basis of the strength of India's armed forces. He declared that, judging from the present world situation, the danger to India in the near future was far less than the danger threatening more powerful and advanced countries both in the East and the West.

The Prime Minister was speaking on the debate on the supplementary demand for Defence services. Referring to the question of a reduction in the strength of the Army, persistently mentioned by some members, he said the matter had been continually under consideration by the Government since 1946-47, but much could not be done yet because of "obvious factors."

The Government were still determined to go ahead with the proposal but would take every precaution so that the general strength of the Army did not lessen. "We would rather have a highly mechanized, relatively small army than a large ill-equipped foot army," he said.

Those elements in the Army who were not properly equipped and not relatively well trained would be demobilized. This would not affect the fighting strength of the Army as these elements were more or less equivalent to a police force."

We only wish we could share the blind optimism of those estimable representatives of ours who cheered Sri Nehru. As for the crazy cranks that are demanding a reduction in the actual strength of our fighting forces, we consider that the Adult Education Board could well make a start by imparting some lessons from Indian History to them.

War and Peace in the Balance

Abroad the sky is darker than ever although there has been a lull in the actual fighting in Korea for the last four weeks or so. The attempt made in the U.N.O. by the Asiatic group to bring about a "Cease-fire" agreement between the U.N.O. forces and China seems to have misfired due to suspicion and hesitation on the part of Communist China. The Chinese U.N.O. delegation led by Mr. Wu have broken off negotiations and have gone back to Pekin by a devious route, *via* Moscow.

That the Chinese delegation should thus proceed to Moscow direct from Lake Success is more than merely significant. The normal course, one should have thought, would have been to report to the home government at Pekin and then Pekin could have held consultations with Moscow. But the order seems to be reversed, showing that the direction and initiative lies with Moscow and Pekin seems to function as the executive headquarters.

The reading of the Chinese riddle is outside our scope for the present. China herself seems to be on the horns of a dilemma. We believe there are still counsels in Pekin that are in favour of continuing the millennium-old friendly relations with India. But at the same time it would be disastrous to ignore the fact that China has virtually surrendered all her rights of independent action by entering the Soviet bloc. And therefore the chances for a successful mediation by the group led by India are doubtful.

The question of neutrality for ourselves has therefore become acute. What if the world conflagration blazes up? We are not prepared for it in the least. And for preparation we need active outside aid on a massive scale. Can we obtain that aid without sacrificing our rights of neutrality? The different political groups here give different opinions. The political trends in India, indeed in all Asia, are further complicated by statements like that of Mr. Hoover in the U.S.A.

This complacent gentleman does not seem to have realized that if war breaks out now, the U.S.A. will not be in the same position of vantage as she was in the previous two World Wars. In them she could sit on the fence and take her time in choosing the hour of her entry in the struggle for world supremacy. Even after her entry she could spend months and months, *ad lib*, training and equipping her fighting forces and developing her reserves while less fortunately placed nations poured out blood and treasure in torrents in trying to beat back the tidal waves of aggression. In the first World War, Russia and France absorbed the entire shock of the mighty war machines of the Kaiser, U.S.A. came in for vast financial involvements and little beyond. In the second World War, France went down but in the West Russia absorbed the colossal forces of destruction let loose on her by Hitler and in the Far East the Japanese could not free 75 per cent of their fighting forces that were bogged down in China. Both Russia and China traded space for time, thereby undergoing titanic sacrifices, and the time thus gained was placed at the disposal of the U.S.A. High Command for equipment and organisation of mighty forces that took their time in launching out against tried and spent enemies in the West and the East.

In the next World War there would be no "shock-absorber" nations, as should be apparent to all sensible persons, in and out of the U.S.A. We have neither the desire not the right to challenge Mr. Hoover's isolationism. But we do find his idea of Uncle Sam posing as Jehovah, sitting in solitary grandeur to pronounce judgment and distribute largesse on the lesser peoples of the Earth, to be ludicrous to say the least. This *bania* mentality has brought Britannia to her present position,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

thanks to her Curzons, Chamberlains and Churchills, and Uncle Sam will fare no better if he is unable to profit by the experience of others.

Indeed, judging by American papers and the speeches of U.S.A. notabilities, all Asia is *terra incognita* to the American pundits, outside a slice of China, and the present-day Japan. The *Reader's Digest* for September 1950, contained an article titled "Why Stalin's Conquest of Asia Must be Stopped." The author William C. Bullitt, is a career diplomat, having served his country as an ambassador both to France and to the Soviet Union. We have very seldom come upon such an exposition of ignorance about Asiatic lands and peoples by a person of high diplomatic rank.

In his opinion, the key to Stalin's conquest of South-East Asia lies in French Indo-China. If the Communist forces of Ho Chi Minh are able to drive the French and the French supported Annamite forces of Bao Dai out of Indo-China then the resulting chain reaction will mean the overrunning of the whole of South-East Asia by the powers of Communism.

His argument runs :

For if Indo-China should fall to the Communists not only Siam (Thailand) but also Burma and Malaya would be overwhelmed in short order.

The Siamese are a delightful people but they are not warriors. They admit frankly that if Ho Chi Minh should conquer Indo-China they could offer no effective resistance.

Burma is open to attack from Siam, Indo-China and China. Today Chinese Communist forces are stretched out along its northern border. The Burma Road, our supply line to China during part of World War II, may now become the supply line for the Communists in Burma. The country has a Socialist government—anti-Stalinist, but weak—and there is a veritable rainbow of dissident forces in open rebellion against the government. There are thousands of Communist guerrillas. Several different tribes are demanding autonomous status. The most important tribe, the Karens, numbers two million. They are non-Communist but by fighting the Central Government they indirectly help the Communists. Riddled with civil strife, Burma is ripe to be taken over by a well-organized Communist effort.

Beyond Burma lies India. There, with the aid of an excellent native civil service built up by the British, a few able political leaders are trying to establish a democratic government based on illiterate and poverty-stricken masses that have never known freedom. Divided by religious hatreds as well as class hatreds, the Indians are natural victims for Communist propaganda. The presence of triumphant Communist armies on the Burmese border of India would be a prelude to such infiltration and agitation that the collapse of India into Communist hands would probably be a mere matter of time.

The British still control Malaya. But they have been so unsuccessful in putting down the Communist guerrillas that on April 29 of this year the London *Economist*, which is careful in its estimates, stated : "If existing trends in the development and continuation of bandit activity are not reversed, Malaya will eventually be lost." Malaya is the world's largest producer of tin. Should Malaya be taken over by the Communists, it would be a serious blow to British, as well as to U.S., economy, since Malaya is an important source of natural rubber.

Indo-China, as the dike which prevents the Communist flood from sweeping over Siam, Burma and Malaya, is today the strategic bastion of the entire area.

Mr. Bullitt and Mr. Hoover both have made it plain that American aid is on the bargaining counter and the purchase medium is the pledge to enter the lists against the Soviet bloc as a satellite of the U.S.A. It is needless to point out that as such, it would mean a very considerable sacrifice of self-respect and self-determination for any nation to ask for aid under such conditions. Thus the Soviets are automatically placed in a position of vantage.

The Soviet Foreign Minister, Mr. Andrei Vyshinsky, signalized his appearance at the General Assembly on November 18 last by assuring that Russia profoundly desired the 'peaceful co-existence' of Capitalism and Communism in the world. He was speaking in a debate on the peace plan put forward by Mr. Trygve Lie, United Nations Secretary-General. Russia has proposed a counter-plan with a six-point programme for a 20-year peace.

The Vyshinsky programme calls for :

1. Periodic top-level Security Council meetings 'with the understanding that the Council shall function with its full and legal membership with the participation of the representative of the People's Republic of China.'
2. Unswerving observance of the principles of unanimity in the work of the Security Council.
3. Unconditional prohibition of atomic weapons and other weapons for mass extermination of people and the institution of controls to ensure the observance of that prohibition.
4. Observance of the principle of numerically equal Great Power contributions to armed forces to be made available by agreements for Security Council use.
5. Technical aid to backward countries without any demand for 'political, economic or military privileges for the countries rendering assistance.'
6. Development of international trade without discrimination.

We, in India, attempt to maintain a detached attitude towards this two Power Blocs controversy and competition. M. Vyshinsky's pronouncements leave us cold, therefore. He called Mr. Lie's "peace-plan" as reflecting "the views of the Anglo-American Bloc"; it was based on "political bias." He omitted all reference to the war in Korea in which the Soviet protege, North Korea, has been charged with "aggression." And the one-month debate between the delegates of the two Blocs in the General Assembly has been unfruitful so far as easing the tension in the world's mind was concerned.

Meanwhile, the situation in the Far East is assuming an ominous shape.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

The world situation *vis a vis* Peace or War was admirably summarized by Mr. L. B. Pearson, Canada's Secretary of State for External Affairs, at the Federal-Provincial Conference in Ottawa on December 4th. A summary of that statement is given below. We might remark that though the tension has increased since then, the position in the main remains as delineated by him.

"The vital question at the present time is how great is the risk of a major war. With developments in Korea and in the United Nations in a state of flux it is particularly difficult to discuss this question with assurance of certainty. If hostilities cannot be localized in North Korea and if fighting spreads into Manchuria, the result may be open war with Communist China. Furthermore, it is only safe to assume that Peking risked armed intervention in Korea on the basis of assurances of assistance from the Soviet Union if intervention should lead to military operations against the territory of China. Therefore war with China might result in Soviet assistance to Chinese forces. Assistance might initially be indirect and voluntary, of the kind which the Chinese Communists claim they are giving North Korea and which could later be said not to constitute official intervention. But just as this kind of Chinese intervention in Korea has led to the danger of open war with China, so similar Soviet intervention on behalf of China might lead to open war with the Soviet Union. It is to be hoped that the autocrats of the Kremlin understand this danger as well as we do.

At the moment the focus of our hopes and fears is Korea. We must strive to find a solution to the grave and menacing problem there. This will be no easy task. Before it can be done, moreover, there must be stabilization of the military front in Korea on a line which can be firmly held. Our military advice gives us reason to hope that, in spite of heavy initial losses, such a line can be established and maintained. When this has been done we can then see where we are in regard to the political aspects of the Korean and Far Eastern questions. The Chinese Communists have now made it abundantly clear that they regard United Nations action in Korea as menacing their interests so greatly that they are willing to risk general war in challenging it. Therefore, as soon as circumstances make it possible, we must take up again the effort to reconcile, on the one hand, the determination of the United Nations to resist aggression and, on the other, whatever legitimate interests the Chinese may have in the future of Korea and the adjacent area. I am not sure that we can reconcile these two, our interest in world peace with the purposes behind their intervention. But we must try, and we must try by some more practical and effective means than mere public statements of good intentions and pious hopes.

During this period when the peace of the world will be in balance and when we shall be walking on the edge of a volcano which is rumbling alarmingly we must not look for easy and spectacular results. We must realize that the Chinese Communist leaders are schooled in the tactics of public abuse which have long been part of the Soviet method of diplomacy. Many of them are completely ignorant of the Western world, are not likely to give us visible or audible help and will, in fact, make our task harder by vilifying us with scorn and slander and misrepresentation. But we need not give way to despair or to fatalistic acceptance of something that is regarded as inevitable and about which therefore nothing can be done except to arm. There is no reason on the side of the free democracies why the efforts now being made through the United Nations to localize and then end the war in Korea should not succeed. We must therefore make crystal clear by our words and, more important, by our policies, that if they do not succeed the responsibility will lie where it belongs—in Peking and in Moscow. If, as we trust, these efforts do succeed the immediate danger of a third World War would for the moment be removed. That would not, however, mean we could rule out of our calculations the possibility of such a war breaking out later. The materials for a fire would still be there and there would still be madmen about with matches.

The Soviet Union already possesses the capability to wage a major war at any time. Its policies, moreover, show it is willing to take the risk of provoking one, even though it may not deliberately desire one. At the present time the Soviet Union possesses great preponderance of power on land; on sea it would be able seriously to interrupt Allied lines of communication by use of its submarine fleet and by other means. The greatest military weaknesses of the Soviet Union are in the air and in its relative deficiency in atomic bombs. The Soviet Union would probably wish to reach a higher degree of preparedness, especially for air and atomic warfare, and to augment its economic potential before becoming engaged in hostilities.

The possibility that this cautious and delaying attitude is the basis of Soviet foreign policy must be weighed against the temptation to take advantage of the passing opportunity offered by relative Western weakness against the apparent willingness of the U.S.S.R. to take chances which may lead to war, and against the bellicose and inflammatory tactics of the Cominform. These tactics, leading to aggressive war in Korea, as well as the expansionist nature of Soviet foreign policy generally, provide the incentive and necessity for Western rearmament and closer cooperation. The effect of this rearmament will become increasingly important after 1951. If, therefore, the leaders of international communism have convinced themselves that war with the West must come at some

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

time, they may consider that their best opportunity will be in the months ahead. Because of this and because of recent events in North Korea the danger of major war in the immediate future has, I think, increased. Such a war could result either through deliberate armed aggressive action on the part of the Soviet Union or its satellites or through willingness on their part to take increased risks in spite of the knowledge that major war might result.

The question of whether the risk of a major war will diminish after, say, the end of 1951 depends, of course, in large part on whether the Western world has been able to increase its defences and ensure the necessary unity of action; or whether we can strengthen, as we are trying to do, the United Nations as an agency for preserving peace, for settling disputes, and, in the last analysis, for organizing collective force against an aggressor. The free Democracies are now taking steps to these ends at Lake Success and within the North Atlantic organization. The crisis of the last few weeks in Korea has shown with even greater clarity than before the necessity for doing this and for doing it quickly and effectively. The Democratic world is tragically but inescapably compelled to devote an increasing proportion of its resources to the task of rearmament.

This rearmament is essential and must be given priority for the time being over other objectives; but by itself it is not enough. We must also preserve and increase our economic and social strength. *We must take the steps necessary to rally to our side the peoples of Asia.* We must give political and normal leadership of a kind which will attract and hold the support of wavering powers, especially in Asia. Otherwise the Soviet Union may be able to extend by non-military means, by the pull of its sham but alluring offers of bread with freedom, its domination over large parts of the underprivileged, underdeveloped world with its masses of millions. The forces of Communist aggression in Asia have in the past successfully allied themselves with the forces of national liberation and social reform. The task of the Western Democratic powers is to assist the Democratic Governments in those areas to break that unnatural alliance. For this purpose it is essential that Western countries help Asian Democratic countries in their plans for economic development in order to relieve distress and poverty there, on which international Communism feeds. Within the measure of its resources Canada should do its part to help in this great effort to promote human welfare and hence to ensure peace.

There is some discussion going on at present whether the atom bomb should or should not be used against aggressors in Korea. One important consideration must be the effect of such use on the relations of the Western World with Asia. The military and others may argue that the atomic bomb is just another weapon, but in the minds of ordinary people everywhere in the world it is far more than that and its use has acquired immensely greater significance than any other aspect of war. The anxiety with which the possibility of such use is regarded has been strikingly and increasingly evident of late among our friends in Europe and in Asia. This anxiety is the main reason for the appeal, even in free countries, of cynical Communist peace campaigns.

It is hard to exaggerate the psychological and political consequences of employment of the bomb or threat of its employment in the present critical situation. Strategic use of the bomb against Chinese cities might conceivably reverse the course of military events in Korea now, but at the cost possibly of destroying the cohesion and unity of purpose of the Atlantic community. Certainly its use for a second time against an Asian people would dangerously weaken the links that remain between the Western world and the peoples of the East.

The atomic bomb is the most powerful deterrent element in the arsenal of the free world but it is universally regarded as the ultimate weapon and should be treated as such. There has been mass intervention of Chinese Communists in Korea. In the present critical military situation those who have their own forces engaged (and this applies of course particularly to the United States whose intrepid men are bearing the brunt of the fight) are obviously entitled to have full consideration given to the use of every available means of supporting the ground forces fighting under the United Nations command. This is natural and inevitable; but before a decision of such immense and awful consequence for all of us is taken, there should surely be consultation through the United Nations, particularly with the Governments principally concerned. One of those would be the Canadian Government, which has from the beginning been a partner in the tripartite development of atomic energy. It is of supreme importance to the morale and survival of free peoples that, if war comes, responsibility should be clearly and inexorably fixed. While there is any chance at all of preventing the extension of present hostilities, the advantages of using the bomb or even of threatening its use are, I think, likely to be far outweighed by the reactions among the peoples of the world and especially the peoples of Asia.

In the confused and dangerous international situation of today it is essential to try to see the world steadily, realistically, and as a whole. The obvious Soviet game is to provoke incidents and tensions at various points on border lands between the Western world and the Soviet Union and to try to lead us into the trap of concentrating too great a proportion of our limited resources on one or two isolated border points. It is clear, the Communists are trying to lead us into this trap in Korea. In order to fight the present war in Korea a large part of the immediately avail-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

able forces of the West have been committed to that country. If war in Korea should become war against China (and I repeat we must do everything within the power of statesmanship to prevent this) it will be difficult to avoid committing an even larger part of Western resources to that war. This would mean we would be leaving exposed our most important, and in the long run our most dangerous front—Western Europe. That is still the part of the world where we must concentrate our main effort on building up substantial defensive strength under the collective control of the members of the North Atlantic Pact who are slowly but surely building the structure of a North Atlantic community on political, economic, military and social foundations. At present the increasing power of that community is the greatest deterrent to war."

After describing the uneasy balance throughout the world between the countries under the domination of Soviet communism and those where free institutions still prevail, Mr. Pearson recalled how this balance had been upset by the Communist attack on the Republic of Korea.

"From the outset," he said, "it was clear that this act of open and armed aggression might have consequences which would present us from re-establishing any tolerable relationship with the Soviet world and might even lead to a third World War. One of the most serious charges against the North Korean Government, and against those governments in Moscow and Peking which stood behind it, is that they were willing to run this enormous risk not only for themselves but for the whole world. Ever since the attack on the Republic of Korea, we have believed that the efforts of those who supported United Nations action should be directed solely towards defeating the aggression and thereby halting the chain reaction which might have followed its success. The men who decide the policies of the Soviet Union and of their Communist satellites could gamble with the future of the world in order to extend the boundaries of the system under their control. We were not prepared to gamble in that reckless way. Conscious of our share of responsibility for the preservation of peace and freedom, and indeed for the preservation of mankind, from the mass destruction which modern weapons make possible, we believed and continue to believe that we should not try to do more in defeating this aggression than restore the freedom and unity of Korea."

Mr. Pearson then outlined the military measures which had been taken in an effort to restore stability. After the defeat of the invaders in South Korea, this effort entered a new phase. "What we had now to solve," he went on, "was more than a military problem. We had to determine in what way and at what point we would attempt to re-establish the political position in the Korean area. On a problem of that kind there could easily and properly be a number of different opinions.

"I do not intend to examine the various opinions which were put forward, except to say that in all the discussions of this problem which have taken place at Lake Success, in Washington, in London and elsewhere, we have consistently urged that moderation and a sense of global strategy, both military and political, should be our guide in deciding at what point military operations should be broken off and the work of pacification and reconstruction begun. We still believe that that is the proper rule to follow.

"It is now clear that in a further reckless act the Chinese Communists have intervened in Korea in very large numbers. Their final purpose is not yet beyond doubt, but certainly they have committed themselves to an incursion far in excess of any that might be explained by nervousness over local Chinese interests along the border between Manchuria and Korea.

"In this dangerous situation, it remains our view that if and when the military position is stabilized, we should try to begin negotiations with the Chinese Communists by every means possible. I am aware of the difficulties, I assure you, but I believe that nothing should be left undone which might conceivably result in an honourable and peaceful settlement in Korea. If, for example, providing the military situation is stabilized, there could be a cease-fire followed by negotiations possibly covering more subjects than Korea, in which the Chinese Communists would participate, there might still be hope of reaching such a settlement. At least we would have done our best, and the responsibility for failure could be placed where it would belong.

"I know that the policy I suggest will be called 'appeasement' by some; 'warmonger,' 'fascist,' 'appeaser,' 'red,' 'peace,' 'democracy'—such words are now used so loosely and irresponsibly that their coinage has become debased. So let us not be frightened by words. The action which was taken at Munich in 1938 and which has made 'appeasement' a byword, was open to two charges—that it was short-sighted because it was based on illusions about the nature of the Government which was the aggressor at that time, and that it was shameful because it sacrificed the freedom of one country in the interests of the security of others. Neither of those accusations can be brought against the policy I have outlined. It is not appeasement. It is an attempt through diplomacy to reach a *modus vivendi* with the Asian Communist world. The United Nations Commander in Korea himself has remitted to diplomacy the task of deciding what to do in Korea in this new situation created by Chinese intervention. It is the function of diplomacy to seek accommodation which can be the basis for stable relations between differing countries and systems. We have agreed in the past that some such accommodation with the Soviet Union and its satellites is necessary. In the present

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

circumstances I believe it is our duty to make every effort to reach such a settlement, but we must not allow this process or the situation which makes it necessary to weaken our resolve or interfere with our plan to strengthen our defences. Above all, we must not allow it to weaken the unity or the friendly co-operation of those countries in the free world who are now working together so closely for the good purpose of establishing conditions of stability and peace in the world."

Political Conditions

The general picture we have here is a greater awareness about the rights and liberties of the individual than of the society as a whole. We have had long lectures on civil liberty from the Press, platform and the Benches of the High Courts, and we have had plenty of exhortations on patriotism from high above, but we find in general that the common citizen is gradually having his rights and liberties circumscribed and limited by law and law-breaker both alike. A group of youths set a tram on fire or lead a procession through crowded streets during hours of business, thereby disrupting the normal work of thousands of bread-earners, causing waste of time, money and energy and adding to the troubles of the entire community. When they are brought to justice we find that the law has not the power to hold them. If, on the other hand, they are held without trial, there is an uproar in the country about the civil liberties of the individuals. We do not advocate detention without trial, but we have to put forward the question as to whether the liberty of the individual to disrupt society, that is to say to indulge in anti-social crimes, is the objective for which we have been striving all these years. The police have utterly failed to stop political crimes. In Madras, Hyderabad, Assam and West Bengal Communists have at times been vigorously active. The police have not only failed to secure previous information about their future plans so as to forestall them, but they have more miserably failed to apprehend the culprits, secure evidence and get them convicted. Many of the cases have ended either in discharge or with nominal convictions. In such cases either wrong persons were caught or the police curiously failed to get adequate evidence. The cost of police administration has continued to go up proportionately with the increase in their ineffectiveness. We must reiterate our opinion that there have been flaws on the judicial and legal sides as well. The High Courts of Justice must not be held sacrosanct. There is an idea in the heads of the eminent gentlemen who adorn the Benches of our High Courts that their actions and their pronouncements must be beyond all criticism and that a High Court judge like Caesar's wife is beyond all criticism and reproach. To them we must say that the rights of godhead cannot be assumed by them and that in any democratic society *vox populi* is truly and really *vox Dei*. Justice must be even-handed but it must be Justice and not legal quibble.

Industry

This year's picture of our industry is a curious one. On the one side we witness the thwarted greed of industrial adventurers who have obtained control of industry through speculative intrusion. Their knowledge of industry is poor in the extreme. Their capacity for long-term planning is nil. Their sole point of efficiency lies in their ability to set up unholy combinations with the corrupt officials, evade taxes, plan blackmarketing by creating shortages and inflate profits by substituting inferior basic materials in their products. The overall picture of these three and a half years of freedom is one of sliding down the gradient. In reality, iron and steel and jute are the only well-organised industries that we possess. In the former efficiency is going down month by month and in the other ruthless get-rich-quick method of the "temporary" Indians is leading the country to chaos. The textile and sugar industries have proved instruments of unmitigated evil for loot and exploitation of the poor defenceless consumers. A countrywide blackmarketing in poor man's cloth and sugar needs has been rampant throughout all these years of freedom. But for the inefficient Ministries of Industry and Supply and the corrupt officials these evils would and should have been checked and prevented long ago. The nationalised industries, although few in number, have become costly luxuries. Eight government owned and managed collieries have succeeded in "earning" us a net loss of Rs. 1,32,30,175-9-0 during 1950 while company-managed collieries have simply coined money. To support our statement we append the following official table :

Statement referred to in reply to part (c) of Starred Question No. 707, by Shri Naziruddin Ahmad, for 6-12-50, showing the verified *f.o.r.* cost per ton of each colliery separately with the respective output for the financial year 1949-50 as also the Control rate of similar grade of the market coal.

	Name of Colliery.	Output during 1949-50 Tons.	Average cost per ton.	Control price of same quality. Steam Coal Rubble and Smithy Nuts.
1.	Kargali	6,07,822	25 3 2	14 6 0
	,,			14 0 0
2.	Bokaro	11,99,495	11 8 5	14 6 0
3.	Jarangdih	30,398	25 5 8	14 0 0
4.	Sawang	37,244	22 1 3	14 6 0
5.	Bhurkunda	1,46,362	16 10 6	14 6 0
6.	Argada	95,748	13 13 2	14 6 0
7.	Kurharbaree	1,88,304	27 13 3	16 4 0
8.	Serampore	1,85,656	28 4 9	16 4 0
9.	Talcher	1,27,478	17 4 8	15 6 0
10.	Duelbera	65,326	22 2 4	15 6 0
11.	Kurasia	2,48,843	11 1 8	15 8 0

On the other side of the medal we have the picture of organised labour. Under the guidance of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

disruptionists who are directly or indirectly controlled by Moscow, or under the control of shortsighted hotheads as in Bombay, efficiency is being deliberately sacrificed resulting in a disastrous rise in cost of living. While pampering union labour, who constitute not even two per cent of our population, the labour leaders forget what additions they are going to make to the already too-high cost of production and what the burden will mean to the poor consumers. The Ministry of Labour at the Centre is in very inefficient hands. Today, organised labour is gradually trying to attain control by means which entail the suffering of 98 per cent of the population. Labour leaders seem to have thrown overboard all thought of the welfare of the country as a whole.

We have the picture of a national planning before us. The Planning Commission has submitted a semi-progress report for the first half year. Towards the end of September the Planning Commission announced the outline of its Rs. 1800 crore outlay project which was to serve as a basis of discussion for the London Commonwealth Conference which finalised the Colombo Plan. There is a considerable family resemblance between that and the present Rs. 1840-crore Colombo Plan, writes Mr. S. B. Rangnekar in the *Economic Weekly* of Bombay. The Colombo Estimates of expenditure are identical with the Planning Commission (September) estimates. At a glance, the expenditure on the Six-Year Plan for India as included in the Colombo Plan is as follows :

Agriculture	.. ..	Rs. 608 crores
Communications	.. ..	„ 702.7 „
Fuel and Power	..	„ 56.6 „
Industry and Mines	..	„ 180 „
Social Welfare	.. ..	„ 291.3 „

Expenditure on agriculture and instruments for moving agricultural products will form 71 per cent of the total expenses, only 10 per cent having been allocated under the head Industry and Mines. India's potentiality as an industrial country has been fully recognised all over the world. The present tendency to convert India once again into an agricultural country must be seriously considered. We refrain from giving details of the plan here for want of space; we must content ourselves by referring to Mr. Rangnekar's very able article on the subject in the *Economic Weekly*, dated December 23, 1950. But we must register our apprehension that our Six-Year Plan, an offshoot of the Colombo Plan, smacks definitely of an attempt to put our national planning on a reverse gear. Eminent gentlemen have been placed in charge of national planning. But we must confess that we are unable to praise those planners who aim at increasing our agricultural land by 3½ per cent and food production by 10 per cent in six years time and that after an investment of more than Rs. 1300 crores! We have no hesitation in predicting failure for their efforts unless the administration is remodelled entirely in order that they have a solid foundation on which to build. We believe that greater emphasis on small projects would have done greater good and would have made us less dependent on foreign money, foreign machinery and foreign experts which, if denied or withdrawn at a crucial moment, would bring untold misery and loss. Today, India cannot be boycotted but if this plan is put into operation, threat of boycott by U. K. and U.S.A. would remain a source of perpetual danger to us. The Bihar Food Minister admitted the other day that the small irrigation schemes have been complete failure because nothing had been done by the Departments. This is also equally dangerous for the country. Today our planners, big or small, stand on shifting sands of power-politics, speculative and rapacious capital, intransigent and grossly inefficient labour and a thoroughly corrupt, lazy and inefficient administration.

Trade

The picture in the field of trade is no better. Some gain has been claimed after devaluation but it is yet doubtful whether the net balance will be in our favour taking into consideration the immense suffering caused to the consumer due to the sharp rise in prices following devaluation. Ordinances, speeches, statements and press conferences came one after another in torrents but the price-level remained where it was. Blackmarketing thrived as even before. Jute became an object of international blackmarketing and crores of dollars went into the pockets of the jute exporters and mill managing agents. Export duty on jute was raised to Rs. 1500 per ton in order to mop up the surplus dollars left after meeting all costs of production and carriage to U.S.A. While the country is going severely short of cotton textiles, huge orders for the export of coarse and medium cloth from the U.S.A. have been accepted. There were talks of State Trading in jute and jute products but nothing tangible emerged. The import control machinery had proved such a great handicap to the trade that an inquiry had to be undertaken into its working.

Transport

As in food, industry and commerce, transport has also remained at the same low level of efficiency. Despite enormous expenditure of foreign exchange and large-scale importation of locomotives and other railway materials, railway travel has become even more lacking in all amenities than it ever was during the last decade. Bribery and corruption are still rampant and transport of materials is now a more intense headache than ever before.

Post—Telegraph—Telephone

The Post and Telegraph Department was regarded as an example of efficiency in organisation and efficiency in Indi

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

until 1942. Today sending materials by post has become a gamble as we know to our cost. In the matter of communication by post, telegraph or telephone, degeneration seems to be the motto of the day. The stoppage of Sunday delivery and the introduction of the ridiculous "Own Your Own Telephone" schemes have been the two outstanding "achievements" of the Ministry of Communications both of which have proved oppressive for the general population. Similarly in Radio and Broadcasting, there does not seem to be any planning. Lack of enterprise on the part of direction is becoming more and more prominent every day.

Public Health

The general picture here is also one of stagnation with a few bright spots here and there. We must remark in this connection that the medical profession as a whole does not seem to have realised that it has any national responsibility. The medical associations are fairly well organised all over the country but we have received as yet no indication of a clear-cut progress or any definite coherent and insistent calls from them, indicating their willingness to co-operate with the nation for the betterment and welfare of the people they serve. The Ministry in charge at the Centre and in the States do not seem to possess any vision nor do we find them exhorting the people to help themselves.

Education

The picture here is of utter absolute muddle at the Centre and little better in the States. The University Commission has submitted its Report but we have witnessed no attempt on the part of the Education Ministry to implement its recommendations. The same muddle and indecision continue in the field of secondary and primary education. Some provinces like Bombay, Madras, U.P. and Bihar have gone ahead with their programmes of expansion of primary education but in many of the States practically nothing has been done in this direction. Many of the school text-books contain the same ancient howlers. Educationists have been busy throughout the year as before in making money by producing school text-books. No effort has been made to reform our universities on whose Senate about 90 per cent of the members continue to be nominated. The result here has been just as one could expect with the present set-up in the Central Ministry of Education.

Technical Aid to India

The three years since the 15th August, 1950, have demonstrated how our people are inadequately equipped to play a decisive part in the material competitions of the modern world. We attempt to import "experts" from outside to give a shape to our grandiose schemes of re-construction and renovation of India's economy. And for reasons unexplained, we have only found it possible to indent technical advisers from Far Western countries; Germany, Japan and the Soviet Union have either not been approached or these countries have refused to be helpful.

Placed in this predicament, we have to make the best of it. In this view of the matter, we are glad that the United Nations Economic, Social, Cultural Organization has been moved and agreed to help India. Sometime ago, an agreement was signed at Delhi between our Government and this world organization. The account given below will give us the history of this transaction. Between the signing and implementation of the agreement, there will be a time lag. We must not lose patience with this weary waiting. We cannot be choosers when our scientists and capitalists are so inadequate in number considering the vastness of our needs. A Delhi report tells us that an agreement was signed here by Dr. M. S. Adiseshiah, Head of the Technical Assistance Service, UNESCO, on behalf of UNESCO and Dr. Tara Chand, Secretary, Ministry of Education, on behalf of the Government of India in connection with the programme of technical assistance to be rendered by UNESCO to India during 1951.

This is the second agreement to be signed with specialised agencies of the U.N., the first agreement having been entered into with the Food and Agricultural Organization last September.

During his visit to Florence last May to attend the fifth General Conference of UNESCO Dr. Tara Chand had made an official request to UNESCO on behalf of the Government of India for assistance under its expanded technical assistance programme. The request pertained to a number of schemes of national importance for which technical assistance was considered necessary, the important ones being the establishment of a Scientific Bibliographical Centre, the establishment of a Higher Technological Institute and the provision of specialists for work in various educational and research institutions including the National Laboratories.

UNESCO has agreed to provide the services of ten specialists in various subjects during the first year of the programme. Two of these specialists will be working in the National Laboratories, three in the Indian Institute of Technology, Kharagpur, three in the research laboratories of the Central Waterpower, Irrigation and Navigation Commission and one each in the Birbal Sahni Institute of Palaeobotany, Lucknow and the Central Institute of Education, Delhi. The Government of India will provide for these specialists facilities, such as furnished accommodation, medical care and hospitalisation and the cost of transportation within the country.

The recently concluded Indo-U.S. technical assistance agreement, under President Truman's Point Four programme, was signed at New Delhi on December 24 by the U.S. Ambassador in Delhi, Mr. Loy Henderson, on behalf of the U.S.A., and Sir G. S. Bajpai, Secretary-General, External Affairs Ministry, on behalf of India.

Digitized by Arya Samaj Foundation Chennai and eGangotri

Under the agreement, the two Governments undertake to co-operate in the interchange of technical knowledge and skill and in related activities designed to contribute to "the balanced and integrated development of the economic resources and productive capacity" of India.

Comprising five Articles, the agreement will serve as a basic one, and individual contracts for specific projects will be entered into as and when necessary. It also makes provision for co-ordination and integration of the technical programmes operated in India.

India's share in the first year's allocations by the U.S. Congress for bilateral technical aid under the Point Four programme has been provisionally fixed at $1.2m. The country's requirements of U.S. experts and of facilities for training Indian scholars in the U.S.A. have been assessed.

Three U.S. experts are at present working in India on agricultural projects. Two Indian Government officials will shortly leave for the U.S.A. for training in agricultural extension methods. These arrangements are likely to be brought under the agreement signed today.

Since the authorization of the Point Four programme by the U.S. Congress last June, five specific projects for India have been approved. Three of these are under way. Two are agricultural projects while the third is in the field of child welfare. Two other projects, approved but not yet under way, call for sending three U.S. geologists to India for the development of ground, water and mineral resources.

Deshmukh on India's Financial Position

Sri Chintaman Deshmukh delivered the annual address this year at the yearly general meeting of the Associated Chambers of Commerce of India.

Sri Deshmukh's speech may be regarded as a presentation of the Financial picture of the Indian Union purely in so far as it concerns the industrialists of India. The Common Citizen will find nothing inspiring in it nor is their any hope or promise in it of any easing of the tension in the year to come.

The two main concerns of the vast majority of the nationals of India are that of rising prices and shortage of essentials to the point of scarcity. With regard to the former Sri Deshmukh has tried to explain away failure, without indicating whether the Government was still grappling with the problem or it has thrown up the sponge. The second question has hardly been touched.

With regard to wasteful expenditure by governmental departments, there is no doubt in the mind of any reasonable person that there is enormous scope for saving, both at the Centre and in the States. This matter has also been sketchily touched by Sri Deshmukh in his address. Indeed from what he has said there is little hope of any remedial measures being initiated.

In his address Sri Deshmukh said : "We are meeting at a time when the international atmosphere is surcharged with grave apprehensions. Let us hope that the efforts which are being made to relax the tension and to avert the possibilities of a world conflagration are crowned with success. The prevailing unsettled conditions, while making the solution of our economic problems even more difficult, lend a sense of urgency to our endeavours in that direction and underline the necessity of a closer understanding and collaboration between the Government and the public. Recent international developments abroad have accentuated the severe strain to which the economic situation in the country was already subjected as a result of succession of natural calamities of unusual severity at home.

"I think it will not be out of place if I mention here some of the measures taken by the Government of India to check the upward pressure of prices exerted by these factors. As you know last year following the devaluation of the rupee, there were price cuts in essential commodities like cereals, cotton yarn, cloth, pig iron and steel. A reduction of 3 to 15 per cent was made in the issue price of food partly through a cut in transport and distributional charges and partly through a reduction in procurement prices. As a result of these price reductions, the general price index fell to 381.3 in December last, representing a reduction of about 3 per cent from the October 1949 level. It did not however prove possible entirely to check the upward pressure on prices generated by devaluation and by June 1950 most of the gain had been lost, the price index rising to 395.6 by that time.

Sri Deshmukh said that the commencement of hostilities in Korea also resulted in rise of the general index to 405.2 in July this year and the rise continued, the high-watermark being reached in the first week of October when the index stood at 413.5. Since then, he added after some slight fluctuations, it had fallen to 411.3 for the week ending November 25. Comparative figures were available for October 1950, which showed an increase in our price level of about 4 per cent as against the pre-Korean war level, he said. This, however, represented a slower rate of increase than in the U.K. and U.S.A., where since the outbreak of the Korean war, the corresponding rise in price level was 7 per cent and 8 per cent respectively.

Outlining Government measures to check inflation the Finance Minister said that soon after the outbreak of the Korean war, Government passed the Essential Supplies (Temporary Powers) Amendment Act, prescribing drastic penalties for hoarding foodgrains. The Centre assumed powers to make laws for a period of one year in respect of two subjects in the States' lists, *viz.*, trade and commerce, and production, supply and distribution of goods. In September last, the supply prices of goods ordinance was passed. Very recently, a Prices Advisory Board, consisting of representatives of various interests, had been formed to advise Government of price policy and on the best means of executing such policy. Imports have been liberalised and a new Open General Licence was issued. Arrangements were being made to avoid competitive purchase of cotton in order to keep

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

down the prices within the ceiling fixed. It was the intention to introduce monopoly procurement of food in all States in order to secure supplies to the maximum possible extent for the rationed areas; but the sudden worsening of the food situation in several States as a result of the severe drought in October had introduced serious complications with which we are wrestling at the moment, he added.

Refuting the allegation that economic problems have been subordinated to political considerations, Sri Deshmukh said that Government did never allow politics to interfere with their economic policy, especially in regard to food procurement prices. Neither it could be said that the taxation policy of Government has been influenced by political motives. "In determining our policies," he added, "psychological conditions have naturally to be taken into account, and if that is to be dubbed as politics, there is no governmental action in the economic sphere which can be considered to be free from politics. Economics is not an arithmetical problem but essentially a problem of human reactions and human relations."

On Indo-Pak Trade Sri Deshmukh said that the continued difficulties of Indo-Pakistan trade, which began with Pakistan's decision not to devalue her currency, had been a source of disappointment to all of them. The present situation could not be improved until a suitable exchange rate was fixed. He also said that the absence of a settlement was due to no lack of effort on the part of India Government. "We suggested to Pakistan a conference between the Governments of the two countries to discuss all issues arising out of devaluation along with other measures calculated to help in the restoration of normal trade relations. Pakistan Government were not, however, prepared even to place on the agenda of such a conference either the exchange rate of Pakistan currency or the minimum prices fixed by them for raw jute."

He said that India supported Pakistan's application for membership of the International Monetary Fund because "the settlement of this issue could be brought about by an objective scrutiny of the par value of Pakistan currency by the International Monetary Fund which has the necessary experience and authority." Pakistan's membership became effective in the middle of July this year, Sri Deshmukh said, they had hoped that the question would be taken up by the I.M.F. as the par value of member's currency was determined normally within a period of two or three months from the date of its membership. But owing to the pre-occupation of the Fund staff with other matters, the discussion had to be delayed to give more time to the Fund's technical staff to complete their study of this question. He had hoped, the Finance Minister added, that this study would be completed last month but recent information, however, went to show that this discussion was likely to be postponed for a further period.

Stating that India was keen to solve this deadlock, Sri Deshmukh said, "All that we desire is that the par value of the Pakistan rupee should be fixed as a result of an objective study free from all political predilections." He hoped that it should not be impossible to arrive at some arrangement to maintain the trade relations between the two countries pending the decision of the International Monetary Fund. He assured that political differences between the two countries, had not been allowed to "influence us in our economic relations with Pakistan."

Expressing Government's concern for jute industry Sri Deshmukh said Government were fully conscious of the importance of avoiding to take any hastily conceived measures which might affect adversely the long-term interests of the industry. Government, however, could not, he added, look with indifference on any section of the public indulging in practices which were detrimental to the interests of the country. He welcomed the co-operation of the industry in putting down these activities. The Finance Minister said that their decision to raise the export duty on Hessian was prompted by the expectation that with the considerable resultant curb on the scope for dubious practices, it would be possible for the industry to exercise more effective control over their members and their associates and that Government would not be driven to have recourse to more drastic alternatives. On the question of State trading, he said, Government were fully aware of the complexities of this expedient and its manifold social and economic implications and he assured that no action would be taken without full consideration of all aspects of the question.

On the criticism that the principal cause in the general and steady rise in the cost of living index and thereby in the cost of production, must be attributed to the deficit budgets of the Central Government, Sri Deshmukh said it would be wrong to attribute as inflationary effect to the deficits of the Central Government. He explained that though there had been deficits in the capital Budget since 1946-47 to the tune of about Rs. 500 crores during the same period, there had been deficits in the country's balance of payments also which had reduced the external assets of the Reserve Bank of India by Rs. 800 crores, which was higher than the deficit in the Central Government's Budget. He recognised that if the deficit financing could have been avoided altogether, the effects of the adverse balance of payments position during the last few years would have been positively disinflationary. The alternative to this deficit financing of Budget would have however been the discontinuance of the rehabilitation of railways and the few important works which were being undertaken at the public sector.

Further, a substantial part of the Budget deficit was due to the settlement with the U.K. for stores and equipment badly needed for the defence services and the pensionary liabilities of the Government of India.

Sri Deshmukh announced that Government had been engaged on a scrutiny of expenditure in order to find out possible avenues of economy. But he also laid stress on the raising of sufficient resources for our development programme, which 'is as important as economy in expenditure.'

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

He said, the constitution of the Planning Commission in this country had proved timely, not only for co-ordinating our development plans but also in the larger context of the move initiated by the Commonwealth countries for the economic Development of South and South-East Asian countries. The co-operative economic development plan which had been evolved at the Conference recently held in London includes, as an integral feature, a Commonwealth technical assistance programme first outlined at the previous Conference of Commonwealth Ministers at Sydney under which India would receive as well as render technical assistance. "In addition to this, India is likely to receive technical aid under President Truman's Point Four programme, and negotiations between India and the specialised agencies of the United Nations, as well as for the bilateral aid direct by the U.S.A. are in progress," he revealed.

The Finance Minister felt the necessity of improving stock exchange quotations "before we can hope for any considerable investment in new flotations." "It is essential to restore genuine investment activities in the stock market and one of the causes which keeps the genuine investor away is the activities of the speculator," he said.

Sri Deshmukh emphasised the desirability of creating out of profits adequate reserves for financing trade and industry, and the shareholders to be content with moderate dividends.

Speaking on the labour relations, the Finance Minister urged that labour and employer should work harmoniously and settle their disputes through some method of adjudication and arbitration. He appealed to the Trade Union leaders to wean away workers from the fold of those who advocated indiscipline and violence.

He felt that reference to Tribunals of questions relating to retrenchment as a result of rationalisation was justified. He also favoured the idea of granting gratuity.

Referring to the criticism of the awards of Labour Tribunals, he said, Tribunals gave awards after great deliberation and after hearing both sides. The presiding officers were drawn from the ranks of Judicial officers, serving or retired, and it would not be fair to charge them as being partial towards workers.

He pointed out that when employers were not satisfied with the award of the Industrial Tribunals, they could appeal to the Labour Appellate Tribunal. It was mainly at the insistence of the employer that the Appellate Tribunal was set up with a view to securing uniformity in decisions concerning labour matter, he said. He, however, felt that it might be necessary to devise some further means for ensuring that the overall economic considerations were kept in mind and that the benefits which were extended to labour did not imperil the development of industry.

The Finance Minister said that with a view to giving the necessary incentive to trade industry and commerce, the rigours of wartime taxation had been considerably softened during the last few years and there had been a progressive reduction in the rates of income tax and super tax at all levels of income.

The Finance Minister disclosed that Income Tax (Amendment) Bill would be introduced in the near future. It would be a fairly comprehensive measure. While he agreed that business should be left to organise itself in the manner best suited to it, the incidence of income tax on business must be independent of considerations arising out of the peculiarities of the methods of business organisation. He, however, said that Government had realised that the rule requiring the distribution of profits up to certain limits by privately controlled companies should be elastic and proposed to make provisions accordingly.

In conclusion, Sri Deshmukh said : "India today is at the cross-roads of destiny, and I have no doubt that she will take the right road. Surveying the Indian economic scene, I am heartened by the signs of stability that I can discern through the welter of immediate difficulties. These, especially in the matter of food, are serious, admittedly, but with careful management they should not be insurmountable if the people face the situation with cool heads and stout hearts. There is increasing understanding between Government and industry, and with forbearance on both sides there is no reason why industry and labour should not settle down to harmonious relations. We in Government have a lively realization of the importance of maintaining law and order and of creating economic conditions conducive to increased production of wealth. In a scarcity-weary community it is not always clear to one sector what its duty is to others: but it is for the leaders of public opinion in their various sectors to influence choice of action in the right direction. With internal stresses thus abating India offers a favourable field for enlightened and imaginative capital assistance from abroad. That, like the quality of mercy, will be doubly blessed."

Bombay Food Conference

A Conference of the Food Ministers of the Centre and the States met at Bombay for the discussion of the overall food position in the country. The representatives of all the 22 States and Chief Commissioners' provinces agreed that there should be a unified policy for food. The States resolved that they must act unitedly in enforcing controls on the movement of foodgrains from one place to another, within or without the State. The decision to import sufficient foodgrains has been taken. An eight-member committee has been formed to go into the question of the abolition of rationing in the villages. The Committee will evolve a unified system of distribution within the States. The members of the Committee are the Food Ministers of Bombay, Madhya Pradesh, Uttar Pradesh, Madhya Bharat, Sourashtra and West Bengal.

Sri Munshi made it clear to the Conference that India, under the present circumstances, could not give up her controlled economy in foodgrains. But this, he added, was different from maintaining that there should be complete uniformity throughout the country.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"In my view," Sri Munshi continued, "the main pillars of controlled food economy today are: (1) Maintenance of a reasonable price level and (2) Government control of distribution arrangement to prevent suffering by the middle class and certain vulnerable sections of the people."

The Food Minister reiterated that Government's self-sufficiency plan envisaged a complete stoppage of foodgrain imports only after March 1952. But, he added, exceptions in the plan would be made for building a reserve, meeting an unusual calamity and to meet a deficit resulting from a diversion of acreage from foodgrains to cotton and jute in national interests.

"There is no question of restricting imports next year under the self-sufficiency pledge because the deficit in the year is very large," Sri Munshi said.

The Food Minister called upon the States to co-operate "in meeting this challenge of scarcity during the coming year" and combine into a "syndicate for feeding the whole country."

Sri Munshi warned the Conference that on account of the drought in the "rice bowl" of India, the availability of rice for distribution in 1951 would be negligible. He appealed to the North Indian States for a "gesture" to reduce their rice consumption to the absolute minimum and divert all their rice supplies to the rice-eating States.

Sri Munshi also thanked the surplus States of Madhya Bharat, Punjab, PEPSU, Madhya Pradesh and Orissa for their "magnificent" assistance to deficit States during the current year.

Late, during discussion Sri Munshi is understood to have given the Ministers an overall picture of the food situation in the country for the coming year. He was stated to have pointed out that in the next year the deficit would be at least 5.5 million and might probably exceed that figure if the reported crop failure in Madras was serious and the present estimated shortage 2.4 million tons in Bihar "upsets calculations."

The conference discussed the food position of various States, both surplus and deficit, with a view to determining the supply position.

Several States, particularly Uttar Pradesh and Madhya Pradesh, complained about decontrol of gram by the Government of India. This, they said, had affected their procurement as a large section of cultivators refused to part with grain when they were unable to get gram at reasonable price.

When the question of abolition of rationing in rural areas came up for discussion Bombay's Dinkerrao Desai made a strong plea for the continuation of the present system. Any change in the policy of abolition of rationing in villages, he is understood to have pointed out, would "spell disaster" not only to the deficit States but to the country as a whole.

Sri Desai presented in detail the viewpoints of the State in a memorandum presented to the conference. Bihar and Mysore are understood to have supported Bombay's stand on this question. Madras and most of the North Indian States favoured reduction of rationing commitments by abolishing rationing in villages.

Sri Ravi Shankar Shukla, Chief Minister of Madhya Pradesh, who is also in charge of Food portfolio, is understood to have urged through a separate note to the conference the establishment of grain banks in each village before any step was taken for the abolition of rationing in rural areas.

Sri Shukla said that every village in the country should possess, through these grain banks, conducted on a co-operative basis or through governmental agency, at least one year's stock. This would create proper "psychological atmosphere" for derationing in rural areas, he stated.

Sri Shukla denied that surplus States were not co-operating fully or doing their best and said they were sending out every available ounce of foodgrains. In his own State there was no rationing but it was also free from blackmarketing and hoarding. His Government were selling foodgrains through their own shops but allowed 25 per cent of the total foodgrains to go into the free market. This, he said, prevented hoarding.

In its concluding session, the Food Conference unanimously agreed that distribution arrangements in States should continue to be controlled and directed "with suitable adjustments" and austerity measures must be stiffened.

The Conference accepted the conclusions of the Sub-committee with regard to the nature of control and the manner of its enforcement.

The Committee's recommendation in this respect was: "Each State should in consultation with the Centre maintain the arrangements which best serve the purpose of meeting the situation in the State in the coming year."

The Conference fixed the target of imports of foodgrains for the year 1951 at 3.7 million tons.

The Conference emphasised, however, the need to take all steps to meet the critical food situation during the next year as it was thought that the international situation might create unexpected difficulties in the way of imports.

The six-point conclusions agreed to by the Sub-committee and endorsed unanimously by the Conference are:

(1) As a result of natural calamities in all except four States, the food position in the country has been very grave. Apart from internal difficulties, the international situation has been growing difficult. It is affecting both availablities and shipping. It is, therefore, imperative to take all possible steps in accordance with a unified policy and direction to meet the critical situation during the year 1951.

(2) The misunderstanding in the country as

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

regards the self-sufficiency pledge should be cleared. According to it foreign imports have to be stopped by March 31, 1952 except for—(*a*) Building up reserve, (*b*) Making good diversion to other crops in national interests, and (*c*) Meeting the deficiency arising from natural calamities.

It is implied in the pledge that the deficit areas have to be helped by the country as a whole thereafter. But so far as the coming year is concerned, the pledge does not interfere with securing sufficient imports. The target of import for 1951 is fixed at 3.7 million tons. At the same time, international situation might create unexpected difficulties for which the country must be ready.

(3) Any theoretical consideration of control or decontrol is out of question in the context of the present situation. The controlled economy in the matter of foodgrains must continue. The price level has to be maintained in so far it may be practicable. Distribution arrangements must continue to be controlled and directed with suitable adjustments. Austerity measures must be stiffened.

(4) As regards the nature of control and the manner in which it should be enforced, each State should, in consultation with the Centre, maintain the arrangements which best serve the purpose of meeting the situation in the State in the coming year.

(5) The Grow More Food drive and controls are part of an integrated system, and every step should be taken by the States to see that interdependent activities are controlled by a uniform and effective policy and that till the next kharif season efforts should be made to grow short-term supplementary food in the areas wherever it is possible.

(6) The situation though critical is under control and the Centre and the States are mobilising all available resources to see that the country is enabled to face it with as little hardship as possible. At the same time the public will appreciate that under no circumstances should they give way to panic, which only aggravates the situation without providing any remedy.

Effort therefore should be concentrated on publicising measures adopted and both public men and the Press should co-operate with Governments in sustaining the morale of the people. At such time it is of the highest importance that all parties and interests should combine to support the Governments in their endeavour to meet the situation.

Food

Food continued to cause deep anxiety during 1950. The question that comes uppermost in the mind is : Are we really deficit ? The quantum of shortage is still undefined. The official figure was given by Sardar Patel in October last as 6 to 7 per cent. But we believe that wastages in transit, in storage and by vermin have been very high and we shall not be surprised if a serious enquiry into wastages reveal the total coming to 6 or 7 per cent. In West Bengal, such an inquiry had been undertaken by a Committee constituted for the purpose, but when wastage figures began to mount up, the enquiry was hurriedly shelved. Besides wastage, there are pools in some provinces like U.P. C.P., where people consume food beyond a reasonable quantity. Provinces known as surplus are Assam, Orissa U.P. and C.P. Through sheer neglect of food production, Assam is being converted into a deficit province. Provinces like Bengal, Bihar, Madras and Bombay are deficit. So also are Hyderabad and Mysore.

The needs of the deficit areas are being met from two sources, procurement from surplus States and imports. We must say that statewise procurement has failed. Amongst the outstanding examples was Assam from where on the one hand huge quantity of food is being smuggled into Pakistan, and on the other we have the ludicrous picture of the food Minister going on hunger strike demanding food from the Centre. In surplus States, the State Governments have pandered to the greed of peasants and have subjugated the urgent need of the nation as a whole to party-politics inside the State. U.P. is an outstanding example.

Mr. Munshi has declared in the Parliament, while admitting their inability to make India self-sufficient in food by March 1951, that come hail, come storm and all the instruments of heavenly wrath, the target date of March 1952 for food self-sufficiency would stand and shall be adhered to by the Government. But we believe that all talk of self-sufficiency by any date, 1952 or 1962 or 1972 is useless unless the Centre can bring the State Governments of surplus zones to their senses. As things stand today the entire economy of the nation is being jeopardised by the corruption, folly and inefficiency of the procurement departments. In West Bengal large-scale smuggling is going on across the Bengal-Bihar border. Lakhs of maunds of rice find their way into Bihar from Bankura, Burdwan and Maldah. This smuggled rice is being officially procured by the Bihar Government.

"Grow more food campaign" has been a costly farce. Up till now no Minister of first class calibre has been put in charge of "grow more food campaign" either at the Centre or in the States. Rather we have the paradox of finding the highest authorities in the land shouting from housetops that our one and only problem is food self-sufficiency and at the same time we witness the least efficient among the Congress retinue being given the task of devising ways and means.

Gigantic multipurpose schemes are being put forward. There also, the choice of men drafted for translating the schemes into action is in the nature of a grim joke. For example, in the D.V.C. men in control are undoubtedly esteemable gentlemen, but without the least knowledge, capacity or calibre requisite for

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

gigantic scheme of this type. We are importing talent from abroad but these are specialists, and unless they are supported by an administration of a far superior type to what is there today, gigantic waste and delay is bound to be the outcome. The same applies to all the multipurpose schemes so far as food production is concerned. The general picture that we have on the food front is one of indecision and drift and a very costly muddle.

Primary Education in Uttar Pradesh

There is an element of vagueness with regard to the control and superintendence over Primary Education in our country. The village-centred ideal that Gandhiji placed before us made all attempts at reform and reconstruction the legitimate field of Gram Panchayats. But we have not been following that ideal in this as in other fields, creating a confusion between the ideal and the practicable or what is regarded as practicable by the politician and the administrator. The following, summarized from a Lucknow report, illustrates this condition of things :

In 1946, the United Provinces Government took an important step in the field of education by adopting the ten-year plan for the expansion of education in rural areas. The idea was that 22,000 primary schools with a complement of 66,000 teachers should be started within the next ten years. It was hoped that these new schools, in addition to the existing Disrict Board schools, would enable primary education to be made compulsory. Public enthusiasm, however, made the Government revise its plan and make it a five-year scheme. Financial stringency has slowed the pace, the number of schools opened this year having had to be reduced from 4,400 to 550.

An idea of the progress made so far may be formed from the following figures. 11,550 schools have already been started with 28,744 teachers. A sum of Rs. 25,911,000 has been so far spent on them as recurring charges. The value of the equipment supplied comes to 2,049,000. Up to now 4,148 buildings have been put up at a total estimated cost of rupee one crore and twenty-nine lakhs, of which the Government has contributed Rs. 32 lakhs and 36 thousand in cash and timber and the public Rs. 97 lakhs and 8 thousands in cash, kind and labour.

The question of ultimate control of these institutions has always been before the Government. The Minister for Education has stated more than once on the floor of the Legislature that a dual system of educational control is not good and the management of these schools shall have to vest in some one authority, Government, District Boards or *gaon sabhas*. District Boards have been pressing Government to transfer these schools to them. Government appreciate the reason for this demand and after taking all relevant factors into consideration, have now decided to accept it.

In West Bengal, the same vagueness prevails. Below University Education, the Government has been able to get control over all branches of education. In this process they appear to have forgotten how non-official initiative has played the most helpful part in spreading educaiton in Bengal, east and west. Under this new dispensation this source of inspiration may dry up, though the Uttar Pradesh example of the people paying Rs. 97 lakhs 8 thousands out of Rs. 1 crore 29 lakhs, the cost of school buildings, may prove our fears to be unreal. But this narrows the field of experiment, the seed-plot of every forward-looking move. The caricature of Basic Education that the West Bengal Government has made proves, however, the reality of our fears.

Attitude of the Sikhs

Sometime ago Shree Ram Singh Randhawa of Amritsar sent us a cutting from the *Tribune* (Ambala Cantt.) of September 29 last containing a letter published in it explaining the attitude of the Sikhs in post-1947 India. The writer of this letter was Sardar Hukum Singh, President, Shiromani Akali Dal, New Delhi. We feel that we should take note of the comments of this letter though it was not addressed to us. Because it ventilated the "object minority consciousness" of a section of the Sikhs. His criticism appears to be directed against the Hindus in East Punjab whom he described as "a strong politically conscious minority suffering under an acute persecution mania" who have emerged out of the partition "as an absolute majority in the new Punjab," transforming "all their past frustrations into an intensely aggressive communal consciousness."

The words used by Sardar Hukum Singh ring familiar to us; the Muslim League used these and poisoned the atmosphere of India with results which even Sardarji's "virile" community could not forestall or halt. We, Hindus, Muslims and Sikhs of India, have none of us been able to give a good account of ourselves. For good or evil, about 7 crores of Muslims of India are in Pakistan today; the rest have been suffering from the folly of Muslim League leaders. If the Sikhs are not particularly careful Master Tara Singh's leadership will hasten them to the same predicament.

We give general support to the idea of a Punjabee-speaking State or Province as we do to every linguistic area demarcation if the other conditions are satisfied. But we have our doubts whether the Punjabee-speaking State of the Sikhs' conception will solve the problem. The special correspondent of the Rashtriya Swayam-Sevak Sangh's weekly organ, *Organizer* of Delhi said something on this topic which throws fresh light on it. The letter appeared in its issue of December 18 last.

> Nobody is opposed to a Punjabi-speaking Province as such. The real question is: what is to be the basis for demarcation of this Province and what place is to be given to Hindi and Nagri script in it. With the resettlement of millions of Punjabi-speaking refugees from the West Punjab in the East Punjab, the Punjabi-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

speaking area of the Punjab has become coterminous with the existing boundaries of the Punjab including Pepsu, Himachal Pradesh and Delhi. A Punjabi-speaking Province, therefore, must mean expansion of East Punjab so as to include all these units and not any further vivisection of the already truncated Punjab.

The trouble does not, however, end here. There is the Sikh insistence on the Gurumukhi Script. The *Organizer's* correspondent suggests a middle way which may be given a trial. "About the language the best course is to give equal place to Hindi and Punjabi, as the language can flourish only if it is taken out of the shell of Gurumukhi script. Nagri script, in which Punjabi was written even before the Gurumikhi script was invented in the 17th century, can clothe Punjabi language as well, even better than Gurumukhi. The language problem, therefore, cannot be solved by excluding one or the other but by giving equal place to both the scripts. That would be in the best interests of the Punjabi language and the millions who speak it and take pride in it. So far as Hindi is concerned, there cannot be any difference of opinion about its place in any Province unless its people deliberately decide to commit suicide by confining themselves within the narrow Provincial boundaries."

Blatant Folly

The Dravidian Federation has been battling against "Aryanism" and all that it has meant in the south of the Vindyas. A section of the Tamilians have been at the forefront of this agitation. They have now been expanding their functions trying to organize a boycott of North India men and things, North India finance and business concerns. The sentiment behind it has been explained by a Madras weekly, and it is true that the people and the Government understood the "method" of this madness. Says our contemporary:

> "The agitation that has been inaugurated by the Dravidian Federation against North Indian exploitation of this country, is based on the excellent principle of economic self-sufficiency of this Province. The agitation does not mean that the North Indians who have settled down here should be packed up and sent out. On the other hand, North Indians and South Indians should remain in this province as the citizens of this Province and help the growth and development of this Province economically. The sponsors of the agitation do object—and they are very serious about it—to the exploitation of this Province by the North Indian capitalists for their own advancement and benefit. What is happening here is that North Indians come here, trade in this country, accumulate wealth and carry away that money to their homes in far away Gujarat and Marwar, which makes this Province poorer, because this Province does not derive such benefit by people of this Province going out and trading in other parts of India."

There are obvious dangers to this line of justification to which a Madras Minister appears to have drawn the attention of enthusiasts in the anti-North India cause. The *Sunday Observer* attempts an angry retort on it:

> "Mr. Bhaktavatsalam referred to the Tamilians who have settled in Bombay, Calcutta, Delhi and other places. We must beg to state that they went as glorified coolies to serve the North Indian masters as secretaries, typists, steno-typists and clerks. We do not think that even one in a hundred of South Indians is carrying on business on a large scale in any of the up-countries like North Indians who are exploiting South India. If, as a result of this agitation, they were to be sent out of those places, we would welcome them back and they can flourish much better than they are doing in those far-off places. Let us not weep over the plumage while we allow the bird to die."

The paper says that it has not sponsored the agitation, but as publicists "who want to study every problem of this country on its merits," it makes this attempt to understand, and in a way to justify this boycott move. For, they are "following the excellent example set by countries like Burma, Malaya, Ceylon and Africa, nothing more, and nothing less." We have often to wade through masses of crudity and unbalance in course of our duty as journalists. But the above two quotations totally astound us by their blatant folly. Is Mr. Ramaswamy Naicker planning to stage a Malan or a Goonesimha coup?

"Refugees" Want to go to Pakistan

Certain North India daily papers featured some time ago a news announcing the formation of an Association which propose to strive for the return and rehabilitation of "refugees" in their "original homes" in Pakistan. Rana Jang Bahadur Singh, Editor of the *Times of India*; Sri Ranbir, Editor of the *Daily Milap*, and others sponsor the movement. In a statement they explained the purpose to which the energies of their Association will be directed.

"The complicated problem of rehabilitation of 'refugees' numbering several millions, uprooted from their hearths and homes as a result of the Himalayan blunder of the leaders, has not only been baffling the Government of India, but also eating into the vitals of the country. Though the Government have spent crores of rupees, the problem stands where it was. Lakhs of persons are still homeless and without any shelter. Lakhs have no means to provide themselves and their dependents with two square meals a day.

"Mahatma Gandhi was correct when he stated that the most effective method of rehabilitating the 'refugees' was to devise ways and means for their rehabilitation in their original homes. The Father of the Nation had been striving hard to bring it about when the cruel hand of death snatched him from our midst. His mission thus remained un-fulfilled.

"After three years of trials and tribulations, we have realised that Mahatmaji's was the only sane advice. We feel an irrepressible urge to go back to our homes. Even those who have, fortunately, been well-placed after the partition, have a yearning to return to their homes and settle there once again.

"Now, in order that non-Muslim 'refugees' from

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri
16843 70897

the other side of the border, could regain their lost homes, and enjoy the status which they enjoyed before the partition, we the undersigned form ourselves into an association with the sole object of making the mission of Mahatma Gandhi, a success."

We publish this statement without trying to damn it with faint praise. The organizers of the Association are responsible people. And the step they have initiated is fraught with consequences whose features are unclear today. But we join issue with them when they unnecessarily go out of their way to stigmatize as "Himalayan blunder of the leaders" their decision to accept the Mountbatten Plan. In February and March, 1947, when the fire of Muslim separatism had been burning in a blaze in the Punjab, we do not remember to have read of any statement by Hindu and Sikh leaders questioning the need for a parting of the ways from Muslims.

Sardar Patel without whose agreement no partition plan could have been carried into effect did in speeches made at the Nagpur and Banaras Universities specially try to throw light on the factors that decided the issue in his matter of partition. The Muslim League was prepared to pay the price of blood in having their Pakistan because the League leaders had at their back the expressed and unexpressed support of the British bureaucrats in India. With the Muslims satisfied they were scheming to use the Princely Order with a view to keep India weak by Balkanizing her territory.

This game "the leaders" forestalled. And we do not remember that at that time any Hindu or Sikh leader was prepared to go as far as the Muslims, realizing that such a tactics would prolong alien rule over India.

The statement revives a useless controversy. To recall the true perspective of that great decision and to defend the memory of Sardar Patel from imputations with regard to his wisdom and sense of realities in India, we unwillingly enter this controversy. The use of Gandhiji's name in this connection is not legitimate. The world knows that he regarded the demand for Pakistan as a "sin," and as a man of religion he fought against it to the last. But even he appears to have had doubts about the matter, strangely prescient of things to come. The following from the *Harijan* of March 16, reporting part of his "Walking Tour Diary" of February 18, 1947, would go to support our contention :

> "Q.—Do you support evacuation of the Hindus from the affected areas if the League Government or the majority community agrees to give us due compensation?"
>
> "A.—He had supported the proposition from the non-violent standpoint. It was applicable to all provinces whether the majority was Hindu or Muslim. What could the Government do if the majority had become so hostile that they would not tolerate the presence of the minority community. In his opinion it would be improper for them to force the majority into submission nor could they undertake to protect the minority at the point of the bayonet. Suppose, for instance, that the majority would not tolerate *Ramdhun* or the clapping, would not listen to the fact that Ram was not a person but the name was synonymous with God, and that the Hindus believed in clapping, suppose further that the Muslims would not tolerate that, he had no hesitation in saying that the minority should evacuate if adequate compensation was paid."

Bihar's Welcome Move

We publish gladly from the *Bihar Herald* of Bankipur the following news and comments on a matter which had poisoned relations between citizen and citizen in India. It is a welcome move.

If the *PTI* message be true (past experience leads us to expect strings attached to such announcements) the Government of Bihar have decided not only to abolish communal representation in the services, but also to abrogate altogether the procedure of asking candidates for the Provincial services if they were natives or domiciled citizens of the State.

Our objections to these age-old practices were only two. Firstly, they prevented the growth of an Indian Nationalism and encouraged narrow Provincialism. Secondly, they gave us a sense of inferiority. It amounted to an admission that we were not able to hold our own in competition with people of other Provinces. There may have been a time in past when our graduates were apprehensive of external competition, but today we are proud to think that the products of our University are not inferior to those turned out by any other Indian University. By taking the bold step of abolishing all distinctions between the citizens of India wherever they may come from, Bihar has thrown a challenge to other Provinces to follow in her footsteps if they dare do so....."

Dr. Malan in Desperation

Dr. Daniel Malan and the White racialists he represents, are in a desperate mood. Faced by world reprobation, they have been uttering threats to all their critics and to people who really wish them well.

South Africa's Prime Minister warned Britain on September 11 last, not to 'poke her nose' into South African affairs. Criticising members of the British Parliament—'even Cabinet Ministers'—who made adverse criticism of South Africa, Dr. Malan told the Nationalist Party's Transvaal Congress :

> "South Africa is no longer a British colony; South Africa is a sovereign, independent country. We do not poke our nose into the affairs of Britain and we expect of Britain that she should not do so with us.
>
> "If Britain wanted to bring about an estrangement with South Africa, they must continue on the course they have set.
>
> "I say this in no sense of hostility but in all friendliness in the hope that it will be taken to heart.
>
> "We regard Britain as our friend. We are anxious to retain her friendship. We want to co-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

operate with Britain and other members of the Commonwealth, but it must not be onesided."

Taking their cue from their leader two other South African Cabinet Ministers rebuked the British War Minister, Mr. John Strachey, for saying that he "very much disliked the policy of the present South African Government."

Economic Affairs Minister Eric Louw said:

"Mind your own business and keep your nose out of South Africa's affairs."

Defence Minister Francois Erasmus said:

"Mr. Louw has taken the words out of my mouth."

Mr. Louw addressing the Transvaal Nationalist Party Congress said that he was surprised that a British Cabinet member should express himself in such unpleasant terms about another Commonwealth country.

In view of his own recent visit to Britain, the present visit of Finance Minister, Mr. C. C. Havcher and the impending visit of Mr. Erasmus—all on matters of interest to Britain and other Commonwealth countries—he found it surprising that a British Cabinet member should express himself about South Africa in terms such as Mr. Strachey had used.

On November 28, South Africa's Nationalist Minister of Lands, Mr. J. G. Strydom went one better by saying that

"The United Nations was a danger to South Africa because it was interfering in the Union's domestic affairs; its coloured member States were trying to dictate how South Africa should treat its Indian, coloured and African population. Mr. Daniel Malan's Nationalist Government was not only fighting against the United Nations but against the leaders of the United Party Opposition who were becoming allies of India and Pakistan."

The United Nations Special Political Committee recommended that South Africa, India and Pakistan should go ahead with Round Table talks on the Union's treatment of its 300,000 inhabitants of Indian origin before April 1951. Earlier the Committee decided it was competent to deal with India's complaint against the Union's treatment of Indians.

Mr. Strydom declared :

"It should never be forgotten that the former United Party Government under the late Field-Marshal Jan Smuts had been 'equally guilty' with Britain, France and the United States of the destruction of Germany—the only bulwark against Communism. The Nationalist Party had been reviled during the war, because it opposed that policy. But today Russia and its satellites were so powerful that Western Europe including Britain could be overrun before the United States could do anything to help."

These narrow-minded politicians have good reasons to take up this attitude. Even the U.S.A. press have become critical of them. To cite one instance, the mass circulation magazine *Life*, in a 16-page photographic study of "South Africa and the Problems," in its issue of mid-September last, said that 'the black problem' threatened 'the peace and security of the Union.' The photographs, many in colour, were the work of Miss Margaret Bourke-White who, *Life* claimed, had 'explored South Africa's great issue, and dilemma—the black problem.'

Through centuries of White control the problem has grown steadily graver until today it threatens the peace and security of the Union and has aroused grave international concern over South Africa's stewardship of human liberties. In an unabashed outbreak of racialism that tries to pass off as nationalism, South African champions of White supremacy have spread a new doctrine of segregation called *apartheid*.

Native reserves are often bare of young men because more than half of the able-bodied are syphoned into the gold mines. The work is arduous, the pay low. The only raise in 30 years was given in 1944 to bring the scale to 30 cents a day plus food and lodging.

Confronted by the civilized world's criticism, the Malanists have thrown reason to the winds and developed this desperate mood, because they have grown conscious that the days of their power are coming to an end.

Spain

There has been speculations in the West about making it possible for Spain under General Franco to join the United Nations Organization. The United States Government has been credited with taking the initiative in the matter. The real pressure for this step appears to be coming from the Spanish-speaking States of the two Americas, who could not be ignored by their northern neighbour. There is a world of prejudice against General Franco for his part in aligning himself with Mussolini's Italy and Hitler's Germany, for killing the republican movement in the country. We have seen hints thrown out that it was the Protestant Churches which in their ill-feeling against Roman Catholicism were really creating this prejudice as Spain is a Catholic country.

But there are other standards to judge Spain by. The following from the *World Interpreter* of New York sets it out : "In the city of Barcelona, the real economic capital of the country, in 1940, 5,675 bank cheques were protested, in the value of 8,364,000 pesetas. In 1943, the number of protested cheques had risen to 64,151 in the amount of 405,878,000 pesetas. During 1949, the value of cheques protested has almost tripled.

This reflects not only a financial situation, but a mentality created in the Province of Catalonia where uprightness and commercial honesty were always comparable with those of Britain. A popular anecdote is revealing.

Senor A offers Senor B a carload of sardine tins at 18,000 pesetas. Senor B sells them for 30,000 pesetas to Senor C and he, for 40,000 pesetas, to Senor D. Finally Senor E, a far-sighted man afraid of dying from hunger should there be a war, acquires the carload for 56,000 pesetas.

Three days later Senor E telephones indignantly to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Senor D. "I've been cheated," he cries into the phone. "You sold me sardine tins, and now it turns out that the tins are empty."

At the other end of the wire Senor D exclaims: "But man alive! Why did you open the tins? They were not to eat! They were just to do business with!"

Europe's New "Neutralists"

The news that the Governments of the United States, Britain and France have as good as agreed on the scheme for the enlistment of German military formations to halt the Soviet Union's dash west-ward has not caused the world any surprise. Mr. Churchill and other schemers of a European Federation have been announcing from the house-tops that the Soviet Union if and when it decides to move west can reach the English Channel within a week, and to forestal this drive German military knowledge and skill are indispensable. In the light of these developments, the article from the *Life*, reproduced below, reveals a state of things that appears to cause a certain amount of anxiety to the American Administration:

'Neutralism' is the popular new word in Europe. Its devotees, the 'neutralists', are a growing party in practically every West European country. The 'neutralists' want to sit it out in case of war between the U.S. and Russia. Born of the cold war, the phenomenon of European neutralism is something that must be reckoned with in the continuing evolution of U.S. foreign policy. It could be dangerous. But if 'neutralism' in its present connotations is analyzed a bit, the menace shrinks to proportions that should be manageable.

Like 'isolationism,' neutralism covers a multitude of attitudes. Some European neutralists are undoubtedly defeatists; others believe in varying degrees of appeasement of Stalinist bullying tactics. Some use the word to express a grudge against the U.S. A few professed neutralists may be secret Communists who employ the word for their own non-neutral ends. But the newest brand of neutralist in Europe is neither a defeatist nor an appeaser nor a secret Communist. He is simply a person who has come to take hope that Europe can be made strong enough to stand on its own feet. As such, he is a harbinger of good things, an indication of reviving European health and aplomb.

In France the new neutralist is responsible for much of the steam behind the drive for the Schuman plan: obviously a strong Franco-German steel industry would do much toward making Europe a self-sufficient entity. Since it is precisely the aim of such U.S. policies as the Marshall Plan to promote a Europe capable of standing on its own feet, this particular drive of the new French neutralist is to be commended. In Western Germany the new neutralist is a somewhat more worrisome phenomenon. But the German neutralist in the Rhineland doesn't worry the Germans in the Western sectors of Berlin, where there are no neutralists. "If we can take care of the Reds out here," said a prominent Berlin German official recently, "we can handle the neutralists back there."

The new European neutralist is on the U.S. side precisely insofar as he works to make Europe a genuine world force. The neutralist is, however, the victim of an illusory analysis of the nature of the struggle between Russia and the U.S. if he thinks it can at any moment cease to involve him. A strong Europe, so the neutralist argues, could stand aloof in the event that the cold war between Russia and the U.S. passes over into hot war. But this is to assume that the U.S. has some special quarrel of its own with Russia. The U.S. quarrel with Russia is Europe's quarrel—and humanity's.

The plain fact of the matter is that the cold war has little immediate meaning apart from Europe's own integrity. There will be no hot war between Russia and the U.S. for Europe to stay out of unless Russia bids for world domination by grabbing eiher Europe or South-east Asia.

A liberal Dutch journal, the *Nieuwe Rotterdamse Courant*, puts the case succinctly. 'Europe's weakness, Southeast Asia's weakness,' says the *Courant*, "are the *cause* of the cold war." (The italics are ours). It follows, therefore, that a Europe strong enough to stand on its own feet and to project its strength into Indo-China and Indonesia would automatically remove the cause. It is for this reason that the new European neutralists need not worry the U.S. unduly just so long as they continue to work for a powerful and united European community.

Jadavpur Engineering College

This college is the only remnant of the National Education Movement inaugurated in Bengal in 1906 coincident with what has come to be known as the "Swadeshi Movement." It held its annual convocation on December 10 last; Acharya Chandrashekhar Venkata Raman, scientist and savant, delivered the address of the occasion. Speaking from his own experience of Bengal where he passed about 25 years of his life, eventful of research and pursuit of truth, he referred to the "idealism" of the people who were found always more responsive to appeals to their "faith in the virtues of academic achievement" than to their material interests. By his contributions to the world of modern scientific knowledge, the Acharya has earned his right to speak of our inadequacies. This right he exercised when he uttered words that 'point the finger to the seat of our complexes.' Acharya Chandrasekhar said:

> "It was often found in this country that men occupying high position talked of the uselessness of pure science and of academic knowledge. This attitude towards knowledge was not going to lead them anywhere. The question was whether they, in this country, were going to remain content by getting the new inventions from the West, by getting ideas, equipments and experts to fit and look after the equipments from the West. Engineering could not progress by depending on others. They in India, would have to start from the beginning piling up knowledge and building up character and strength to free problems. They must have to think out original ideas and anticipate their future problems. What was wanted was leadership as India had

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

shown in the past in the fields of literature, philosophy, etc. Let the past give them strength to face the great problems before them. They were formidable problems to be faced in Bengal. If Bengal failed, India failed. If any part of India suffered, everybody suffered. There was a fundamental unity among them. They had great problems and they had to solve them by abiding faith in human values, not on the economic value, but on the virtues of knowledge. Knowledge was the root of power and if they wanted power, they must have knowledge."

This call to self-confidence is more than ever necessary when in carrying out schemes of better life for our people, foreign knowledge and foreign "experts" have been proving to be more of a liability. Speaking of the special subject of engineering, the address highlighted the value of knowledge distinct from its application to material life. "Knowledge was moving forward. If they were not going to keep away from modern civilisation and they wanted India's progress in industry and engineering, success must be achieved in the wide front of knowledge by an aggressive pursuit of knowledge in the sense that they did not want to be mere followers of others in the field of science, but wanted to be leaders striking out new ideas which might seem utterly useless but sooner or later would find practical application. The whole history of modern science and its relation with engineering had demonstrated that science went first and engineering came afterwards. Engineering showed the way of making money, while men of science showed how to make it. Science showed the way and engineering came afterwards to grab the money."

Jubilee of the Philosophical Congress

The Silver Jubilee Session of the Indian Philosophical Congress opened at the Senate House of the Calcutta University on the 19th December last. Acharya Sarvapalli Radhakrishnan presided over the ceremony and opened the proceedings with an *extempore* speech. The report that has appeared in the press does not tell us how the philosophers in India proposed to "break through this vicious circle" that encompasses the modern world except that "India is a state of mind, not a country, not a geographical expression. It is a direction of the human spirit. It is a perpetual foe to every kind of fanaticism. This has been true of India of these years. And if we live in the fundamentals of these great souls then we hope to survive to preserve ourselves against any action."

The confusion in the world of activity could not have grown if there had been coherence in the world of thought. India's ambassador to the Soviet Union should have been able to illustrate from his experience gathered there how the renovation of human values worked under Soviet auspices renews his faith in the present and the future. And his dissertation on "the spirit of the present age"—"the spirit of science"—leads us not far. And his insistence on the value of "the individual" in the evolution of the "new order" renews a fight that Soviet philosophy appears to have gained by relegating the individual to the position of a cog in the wheel of the State. "As philosophers, as human beings," we have a general idea of the causes and consequences of the world *malaise*. But a way out we find not in Acharya Radhakrishnan's speech. He leaves us to "the young men and women throughout the world (who) are silently working for bringing about a new social order where tormented people of the world may find peace and unity. The solitary thinkers are there working for another world. We can catch the sound, fainter perhaps than others but persistent, the sound of things growing, of roots thrusting, of bonds bursting, of young men and women shaking off their chains and striving for a new world into life where man may see the face of happiness. The philosophers of the world should strive to sustain the new world with faith, to produce the men who subordinate national, racial and religious divisions to the ideal of humanity. That is the message which our old wisdom gives."

The message of "our old wisdom" is not open to challenge. Science has laid the foundations of "an one world" morality. But the question that tests the intellect of the modern world is how in the life of modern men and women, this morality can be enforced. Acharya Radhakrishnan's speech does not throw light on this concrete problem.

Phani Bhusan Adhikari

The death of this savant severs another link with the Uttar Pradesh forged by Bengali enterprise in the field of scholarship, in the spread of modern education in the area. He left his mark as professor of philosophy in the Hindu University of Banaras, and after retirement therefrom was connected with Rabindranath Tagore's Visva-Bharati at Santiniketan for some time. He dies full of years and honours in his 84th year. The traditions of devotion to knowledge are being carried on by one of his daughters, Srimati Asha Aryanayakam at Sevagram where she is head of an educational institution where experiment in Gandhiji's Basic Education is being carried on. We tender homage to his memory and extend our sympathy to his children. May his soul rest in peace.

William Christopher Wordsworth

The death of this educator of youth in Bengal revives memories that were generally friendly as between the teacher and the taught. Wordsworth came to Bengal during the time when sensitiveness to foreign rule had developed so profoundly that relations were liable to be strained on almost any pretext. Prof. Wordsworth could maintain an equable temper bespeaking a balanced nature aware of the difficulties of the situation. He retired from service before his time and joined the Calcutta *Statesman* as one of its assistant editors thereby becoming the educator of a wider public. He left India in 1947. To the members of his family we tender our sympathy.

THE SARDAR PASSES AWAY

Irreparable Loss to the Nation

By C. L. R. SASTRI

". . . this fell sergeant, death,
Is strict in his arrest."—Shakespeare : *Hamlet*

The history of Indian politics, viewed from a certain angle, is but a history of the mortality among her distinguished sons and daughters. Untimely death and disability have formed the warp and woof of that memorable fabric. As far as human memory can reach back it has been a sickeningly heart-rending story alike of promising careers cut short in mid-career and of proved veterans that could well have been spared to us for a few more strenuous years. Necrology has, in consequence, played a by no means insignificant part in our gubernatorial addresses. It is indisputable that the one thing resoundingly certain of life is death : all flesh is as grass and mutability is the order of the day. But a fact loses none of its poignancy by being elevated to the status of a truism.

Atropos, then, with her celebrated shears, has been incessantly active with the thin-spun lives of our politicians : in a manner of speaking, today they may be with us, but tomorrow their places may know them not. It is not necessary for me to dig up the remote past to attest the truth of this statement : recent events bear it out no less remarkably. Both in the united and in the partitioned India it has been the same sad story—with death as the star-actor. As the Philosopher Prince would have put it : "Marry, this is miching-malecco: it means mischief."

"The Rest is Silence"

We need hark back no more to the India that was united : it has gone the way of "the many Ninevehs and Trecatempoli": the comparison between that and the present partitioned India might be spared in the interests of our equanimity. India gained independence —or was supposed to have done so—in August, 1947. By the end of January, 1948, the "Father of the Nation" was assassinated in broad daylight by a fanatic of unity. Much has been written on the loss sustained by the country as a result of it; and by abler pens than mine. I shall, therefore, refrain from adding even a drop to that veritable Niagara. Besides, has not the Home Minister of Bombay silenced all further comment on it by saying, in his usual forthright fashion, that God willed it? As everyone knows, he is a man of few words, and when he speaks he must be supposed to lay down the law on the subject. So then, the matter is closed : the rest is silence." Hon'ble Shri Morarji Desai has spoken : "the rest is silence."

The Trio

The Mahatma and the Pandit and the Sardar formed a distinguished trio and were at one time deemed to be indispensable to the proper governance of our beloved Motherland. Exaggeration is the essence of politics, and even in that "dark backward and abysm of time" some sceptics, like myself, dared to question the validity of that oracular dictum: it seemed to us that we had encountered it once too often and that, like most thunderings from Sinai, it was in dire need of some sort of deflation. The death of the first, and the greatest, of that distinguished trio furnished it, and furnished it much earlier than even those sceptics dared to hope. Indeed, looking at it now from the distance of three years, it appears to have caused no more than a tiny ripple on the otherwise placid waters of life : that enigmatic entity, "society", recovered from its shock almost in a trice and people went about their lawful occasions much as though there never had been such a thing as ascetism in public life. I am not suggesting that the death of the Mahatma was not, as the saying is irreparable: I am suggesting only that one failed to discern the infinite pathos of it by a look around at the familiar places. They swiftly ceased to bear any signs of a recent cataclysm. If this were the case when the greatest of India's sons died what, one shudderingly asked oneself, would be the case if someone much smaller than he were to be removed from our midst in his own good time? "Death, where is thy sting?" could then be uttered more bravely.

December 15, 1950

Not very long after that tragic event—as these events are reckoned—our one and only Sardar passed away in Bombay. The news of his death on the morning of December 15 in a city dear to him by long association was nonetheless shocking because it had not been entirely unexpected. Everyone knew that he had been ailing for months and months past, and his leaving New Delhi for Bombay a few days earlier was looked upon by many as his last journey. And so it proved to be, notwithstanding a momentary recovery.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

That recovery was followed by a relapse that proved fatal. The Sardar died full of years and of honour. Nor was there anything tragic in his death—except the inevitable tragedy that is inherent in death in general.

March 29, 1949

There would have been—if he had died on March 29, 1949, instead of, as he did, on December 15, 1950. On that earlier date the plane by which he was to reach Jaipur for inaugurating the Union of Greater Rajasthan next day had a forced landing within 30 miles of the city. For about four hours there was no news of him. As someone has put it, those were tense moments for our people. Seldom had public anxiety reached such a high pitch. Equally intense was the nation's relief when news was received of his safe arrival in Jaipur for keeping his engagement. Congratulations poured in from all parts of the country. On his return to Delhi the jubilation in Parliament was beyond description. The members were not satisfied until on their behalf the Prime Minister presented to the Sardar a large silver trophy mounted with a replica of the plane in which he travelled. It was characteristic of him that he heartily laughed over the incident and treated it as a "vast entertainment."

Irreparable Loss

The Sardar was, essentially, a Stoic: he could, therefore, afford to treat the incident as a joke—and to pass on to the other items on the agenda of life. It could never have been a joke to the country. The country loved him and the country needed him. The country needs him still. If I may venture to say so, he was the only politician among contemporaries of whom that could be said—with any degree of veracity. The oft-quoted word, "irreparable," can be applied to him with a greater measure of truth even than to his Master. The Master's work had been done when he fell a victim to the assasin's bullet. Probably Bombay's Home Minister was right in giving it as his considered opinion that Providence willed the Mahatma's death. The Sardar, however, had still some work to do if so be he had been spared to us for a while longer. And I say it that have not always been his wholehearted admirer.

That, however, is wrapping it up in a small parcel, as the immortal Sam Weller would have put it. There have been occasions when I went at him ruthlessly—notably in the matter of his titanic quarrel with the redoubtable Dr. N. B. Khare, one-time Premier of what now goes by the name of Madhya Bharat. The Sardar fully lived up to his reputation as the "Iron Man" of the Congress in that episode of his career—and lived up to it *wrongly*. There had been opportunities enough for him to live up to that reputation *rightly*; but he sadly missed them.

The "Dharsana" Episode

It was in 1930 that I first came to regard him as a hero. Those were the days of the "Salt Satyagraha" and of the Mahatma's famous Dandy march. My politics were then—as now—"sicklied over with the pale cast of" Liberal "thought"; and the cockles of my heart were not warmed by all that ballyhoo. Came the day, however, when I could no more regard the movement with the same spirit of detachment. To be a Liberal was not to discard the name of "patriot"; and though Congressmen will no doubt laugh heartily over it, I have all along been both a Liberal and a patriot. When I read in the papers about the police's indiscriminate *lathi* charges on the innocent non-violent Satyagrahis—both men and women—and especially about their *lathi* charges in Dharsana where the Satyagraha was led by the Sardar's daughter, Miss Maniben Patel, I could no longer restrain myself and converted myself, mentally, into an out-and-out Congressman. There was some sacrifice involved in this—inasmuch as I risked the vehement displeasure of my father who was a Liberal in thought, word and deed. I ceased to be a Congressman again—after the senseless Gandhi-Irwin Pact of the following year. Consistency is not always the hobgoblin of little minds, and the Pact came to me as a veritable shock after all the preceding *Strum und Drang*. My flirtation with the Congress came to an end as abruptly as it began.

What did not come to an end, however, was my respect for the illustrious Sardar and his no less illustrious daughter. I have always believed that the movement would have ended in complete success—and not in that namby-pamby Pact—if it had been under the uninterrupted control of the Sardar. But that was not to be. Leaders given to endless vacillation have no business to be in charge of such dynamic movements, and the country would have been spared a deal of bother if either those movements had not been started in the first instance, or having been started, they had, throughout, been under the spirited guidance of "Iron Men" like the late-lamented Sardar. The Sardar was a born leader; but on very few occasions did it fall to his lot to lead. That was one of the tragedies of Indian politics. He was not only not the man to conclude such meaningless Pacts as the Gandhi-Irwin Pact aforementioned: he was not the man who would ever have demeaned himself into defining "Poorna Swaraj" as the "substance of independence." I was among those who were aghast when I learnt that that was how the Mahatma—who originated the Satyagraha—defined it to Mr. George Slocombe of the *Daily Herald* at the time of the latter's interview with him in the Yeravada gaol. I could well have imagined what ribald mirth it would have provoked in the hearts of Congressmen if that definition had come from the lips of one of the poor Liberals. But it is a mad world, my masters, and what is really the high-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

water-mark of moderation is apt to pass off as dare-devil extremism in a Congressman. It has always been so: what is merely cussedness in the Captain is rank blasphemy in the soldier. But the Sardar's mind was ever crystal-clear: verbal jugglery was anathema to him and he abhorred wrapping anything in cotton-wool—in folds and folds of it.

Integration of the States

Nowhere was the Sardar's clearness of mind more in evidence than in the historical integration of the five-hundred and odd States which the British bequeathed to us as a legacy. The other legacy that they bequeathed to us was the never-to-be-sufficiently deplored partition of our beloved Motherland. Having (God be praised!) been left to himself he could, as we have seen, tackle the first problem with his customary thoroughness. I have a feeling deep down in me that he would have come out in equally shining colours if he had been left to deal with the second problem also "on his own lonesome", as it were. The Sardar has never been a lover of partition. He was the one man who could have called the bluff—both of the Muslims and of the British. But, for certain sentimental reasons, the higher hierarchy of the Congress did not deem it politic to leave the partition problem in his sole charge: there would have been too many wigs on the green!

The higher Congress hierarchy, however, did immensely well to assign the task of the integration of the States to him and to no other; and, in this connection, I cannot help regretting that that hierarchy should have chosen to place Kashmir in different hands—with what tragic effects he who runs may read. But we should be thankful to small mercies, and it was an inspired Sardar who came to the task of the States. By a characteristic blend of cajolery and coercion he contrived to liquidate all these States—barring one, as I have already insisted. This is no place to go into details. The point for us to remember is that he finished his job in a blaze of glory.

His Unique Service to Delhi

I have, earlier, referred to the Sardar's historic tussle with Dr. N. B. Khare, and referred to it in rather disparaging terms. The firmness that he displayed there was misplaced, and the country's misfortune was that where that firmness was really needed it was, to say the least, conspicuous by its absence. There is a time for "coming" the Iron Man "over" someone, and there is a time, too, to refrain from doing so. When the Sardar "steam-rollered" the venerable doctor of Nagpur it was certainly not the right time. His firmness was sorely required at the time of Partition and afterwards. And then he displayed his unique quality only once. It was during the Delhi riot days of 1947. He and the R.S.S. saved Delhi from Muslim domination. His blood will curdle

down the corridors of time if only for that tremendous service to the Hindu cause. Thereafter the giant slumbered again. I cannot remember his strength in action in the days that followed. A Hindu to the core—and a warrior at that—he, like several others not noticeably as strong as he was reputed to be, seemed to have allowed himself (for reasons of mistaken "loyalty") to be caught in the toils of a spurious "secularism" and thus was perforce impelled to let the rights of his fellow-Hindus go by default. I can write columns upon columns on this aspect of the matter—piling Pelion on Ossa, as it were—and do so with "my head hanging down in shame" that the only resolute Hindu Cabinet Minister could not always bring himself to sponsor the Hindu cause and to keep the barbaric Muslim hordes at bay.

The Two Loyalties

The Sardar, at any rate, was no double-distilled idiot and he could not, I am certain, have been taken in by all the muck that has been written and spoken in honour of that much misunderstood word, "secularism." But—and here is the rub—there was such a thing as "loyalty" to one whom, to please and to placate the Mahatma, he agreed—*malgre lui*—to look upon as his "leader," and he permitted a lesser "loyalty" to over-power the greater—namely, the loyalty to the nation as a whole. Had he been able to see the two loyalties in their correct perspective there would have been—I am prepared to lay all Lombard Street to a China orange, as the saying is—no dastardly partition of the country, no post-partition riots, no Kashmir idiocy, no "secular" nonsense, no anti-Mahasabha and anti-R.S.S. campaigns, no impotent ending of the Hyderabad "police action," no "symbolic links," and no "neutrality" stunts. He was the one man who could have put old Liaquat in his place *at any time*—even in the notorious "Joint Cabinet System" days of 1946—*but his hands had always been tied*. Of his own volition he was content to play second fiddle to one who, by rights, ought to have played second fiddle to *him*: there lay the tragedy of recent Indian politics. He—and no other—should have been the Prime Minister and he should have acted according to the dictates of his own "inner voice" rather than, in an *un*characteristically weak moment, abandoned the role of "skipper" of the team to one who, on all counts, was no match for him and could not have been if he had tried with "both his hands," as Humpty Dumpty would have put it. "First things first" should have been the slogan. As it turned out, however, the slogan became: "First things second and the Hindus to be always at the loser's end—for 'secularistic' reasons."

The Tragedy

Sam Weller once respectfully admitted to his

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

was apt to run away like a wheel-barrow with the wheels well greased." I am apt to do the same—in the totally different context of the grievances of the Hindus against Muslims in the first instance, the British in the second, and Congressmen in the third. At a pinch I can bring myself to forgive the first two but never the third. It is not so much that they are "secular": it is that they are spurious. *They are simply bad coins that fail to ring true.* But the Sardar was, in essence, and left to himself, a genuine coin, and thus was neither "secular" nor spurious at heart. The misfortune was that he considered himself to be a mere soldier on the battle-field for ever owing obedience to his two Generals—one dead and the other living. Leaving the Mahatma alone for the present, he should never have let his loyalty to the Pandit run riot in the way it did. Had he had sufficient real "iron" in him to obey the monitor "within" the face of India would have been entirely different today. But, alas, he willed otherwise; "and oh, the difference to us!"

Apollo in the House of Admetus

It was a notable godsend to the Muslim irredentists that our departed patriot chose to consider himself only as a soldier on the battle-field ever alert to do even the most unpatriotic bidding of his two Generals instead of following the dictates of his own conscience and being the *Generalissimo,* the Chief whom everyone in the Congress fold had to obey. Many writers, in their obituaries of him, have been at pains to stress the peasant strain in him, the strain of blind obedience to those whom he elected to regard as his superiors. I repeat with all the vehemence at my command that it was a double tragedy—his own and his nation's, the Hindu. For when all the "secularist" wine has been drunk and but the "lees" remain over people—now in a state of semi-coma—will begin to realise that there is a distinct nation on earth called the "Hindu" and that, if only he had willed otherwise, the Sardar would have been its most shining ornament. But, as has been stated above, the Sardar's *role,* as he mistakenly conceived it, was that of a mere soldier on the battlefield. *He was really Apollo serving in the house of Admetus.* But he did not know that he was Apollo, and the Admetus in the case was equally ignorant that he was Admetus.

Mr. Attlee's Historic Statement

Just after the Simla Conference of 1945, convened at the instance of the late Lord Wavell, the Sardar visited Bombay where he made perhaps the most soul-stirring speech of his life, denouncing alike the British and their born stooges, the Muslims. But he soon appeared to forget what he had spoken then. He made out a devastating case against both. He, no less than the Pandit, repeatedly swore against the very conception of Pakistan. But when the real test came they faltered and failed to make the maximum capital out of Mr. Attlee's historic statement on the floor of the House of Commons on March 15, 1946 that *no minority in India would be permitted to wreck the unity of the country.* If any statement was ever unambiguous it was this; but neither the Mahatma nor the Pandit, nor the Sardar had the gumption to take advantage of it. I shall leave it to my readers to imagine what huge capital our *Muslim* friends would have made out of it if that statement had been conceived in *their* interests. British statesmen, I need hardly point out, have never been guilty of being over-generous to the Hindus. They are not, *even now* —else, look at Kashmir. But even on the rare—the too rare—occasions when they "unbend" a little towards us we tragically fail to make the most of it. It is a sad commentary even on the Sardar's own reputed "strength" that he also lacked the courage to regard that statement as the Hindu's "Magna Charta" and to fling it at the faces of the Muslim "die-hards" and "last-ditches."

Puerile Reasoning

Everyone knows what happened ultimately *in spite of Mr. Attlee's statement.* The Muslim minority was allowed—*by Congressmen*—to disrupt the unity of our beloved Motherland. The Sardar was often in the habit of pleading that he had imagined, when he gave his *imprimatur* to the partitioning of the country, that the Muslims, having got their "Stan," would henceforth cease to be a thorn in our flesh and that all would be well with us on this side of our own 38th Parallel. A man of the Sardar's sterling commonsense should not have put forward that puerile reasoning. But our public is extremely gullible, and it swallowed it with hook, line and sinker.

Conclusion

I could have written more, but I am pressed for time. The country has lost its most distinguished Congress leader in the death of the Sardar. I have but one complaint against him: he should not have deemed himself only as a soldier on the battlefield, ready to obey the orders of his Generals. He *only* among Congressmen was of the stuff of which Generals are made: had he conceived himself as such, and not as the other, he would have, assuredly, died a man of *fulfilled* renown."

THE LOSS OF SARDAR

News has just reached me of the end of Sardar Vallabhbhai's earthly life. For several years past he was more like my eldest brother to me than just a leader. It is always difficult for me to write about one with whom I feel a sense resembling that of identity.

I have got so much used to death, that it has ceased to upset me too much. And yet the loss of such dear and respected souls like Jamnalalji, Mahadevbhai, Gandhiji and now Sardar, not to mention others not known to the world, each leaves on the mind a lesson, which is painful. Habit enables me to bear it with seeming composure, and to perform my duties without showing signs of being unhinged; but the interest in worldly life diminishes with each such loss of friend.

The world will mourn the Sardar's death, as it has mourned so many others. Even his opponents will pay, for a while, glowing and sincerely-felt tributes. But after a time, the world ceases to miss them. It instals new heroes and transfers its worship to them.

Personal friends, however, miss them for good and irreplaceably. The Sardar's death is such a one for me and so many others like me. But since it has to be borne, it must be so done with fortitude.

Wardha, 15.12.50 K. G. MASHRUWALA

Life for Duty

Just as the December number of the *Sarvodaya* was about to be issued today, news was received of Sardar Vallabhbhai's demise. The editor of a magazine needs must write something immediately, and so the printers postponed printing for a time and the editor sat down at his table to write. What he will write, God only knows.

It was only a few days since the *yogi* Shri Aravinda passed away and now we have the news that the Sardar is no more.

One of the newspapers writing on the *yogi* Shri Aravinda said that it was not possible for us yet to measure the loss we have sustained by the demise of such a great man. Men of coarser intellect will not even feel its touch, they will not be even aware of it. It requires a subtle and refined intellect even to realize this loss. This in short is the gist, in my words, of what the paper wrote in connection with Shri Aravinda's death. But the loss due to the Sardar's demise, even men with the grossest intellect will realize in an instant.

The service rendered by a *dhyana-yogi* (contemplative thinker) who strives to raise the spiritual level of human life remains concealed in the region of the unmanifest. The service rendered by the active (*karma-yogi*) social worker who spends his life in solving the problems facing society and in making people's life happy, being in the manifest, is visible to the naked eye. We have lost almost within the period of a week two such benefactors of ours, men of diametrically opposite natures.

But both of them have completed their *sadhanas* and have left us enough material to guide us. That the Sardar could survive the death of Gandhiji was due solely to his strong determined will and the inspiration and grace of God. That he desired to live after Gandhiji was simply for the good of us, his countrymen. Hence it was that he buried his grief at the loss of Gandhiji in his own breast and attended wholeheartedly to the duties before him.

We should learn this very lesson from their lives and should apply ourselves to the task in hand without being overpowered by grief. प्राप्तं प्राप्तमुपासीत हृदयेनापराजितः । (With the heart even undaunted, one should discharge whatever duty comes to him.)

AGRICULTURAL COST : A STUDY IN ITS METHODOLOGICAL APPROACH

BY PROF. D. C. BISWAS, M.A.

"Among persons interested in economic analysis, there are tool-makers and tool-users."
—A. C. PIGOU.

"The gap between the tool-makers and the tool-users is a distressingly wide one, and no economist can fail to have sympathy with the impatience of the politician, the businessman, and the statistical investigator, who complain of the extremely poor, arid or even misleading information with which the analytical economists provide him . . . It is natural enough for the practical man to complain that he asks for bread and the economist gives him a stone. But the answer of the economist to such complaints should not be to fling away his tools and plunge into the tangled problems of the world, armed only with naked hands."
—JOAN ROBINSON

As the title suggests, this essay is a critical study of the methodological aspect of calculating the cost of cultivation. The subject is important and raises issues of a very complex and intricate nature. It requires a thorough analysis and critical examination of the issues involved. It is convenient therefore to examine at the outset, the broad features of the problem and connected matters and then eventually to pass on to the theoretical treatment of the subject in all its bearings, bringing into prominence those particular aspects which need emphasis, without

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

naked hands." The object of this analytical study is more to throw light on the intricacies and initiate a theoretical discussion which may help evolve a scientifically sound technique of calculating agricultural cost than to attempt a formulation of a set of principles of cost calculation.

No apology is perhaps necessary for a discussion of this sort, because this sector of Indian agricultural economics still remains practically unexplored. As far as known, discussions that have been made of agricultural economics in this country primarily centre round the problems of uneconomic holdings, agricultural prices, and of re-orientation of the entire agricultural system of India; but very little attention has been paid to the methodological aspect of cost study. As a result, there has been no uniformity of principles of economic analysis underlying the various schemes of cost investigation undertaken by several well-known institutions, each in its own way, having no co-ordination among them. Mention may be made of the Punjab Board of Economic Enquiry, the Indian Council of Agricultural Research, some universities, and the Indian Central Jute Committee, which have collected wealth of information on cost, but as a basis for any policy making these cost data, could not be utilised being considered to be of doubtful validity. This is an evidence of the fact that the sponsors of these schemes of investigation are not unanimous about the economic principles of methodology which is responsible for the wide divergence between their estimates of cost. It is, therefore, felt that this part of Indian agricultural economics, which has so long been left void, requires exploration and light that will enable us to set the analytical process on a right track and arrive at uniformly reliable estimates of cost which can serve the administrators as a dependable and valid standard of reference. Another point of considerable importance in this connection is the structural formation of agricultural cost, which is a related subject but not an integral part of the methodological study. This subject, too, has been left practically unattended to; at least, it has not been given the attention it deserves. If possible, a separate study will be undertaken for a fuller exposition of the topic.

Determination of agricultural prices in parity with industrial prices has assumed great importance in the present-day discussion of agricultural economics. This is what it should be. Fixation of industrial prices is a less difficult job than that of agricultural prices for obvious reasons. Industrial concerns are well-organised units with well-defined establishments. Precise financial records and accounts are maintained, annual balance sheets prepared and published, and their true economic position, so far as loss or gain is concerned, is clearly understood. Whereas in agriculture, farms are not well-organised, no account of any sort is maintained, and of course no attempt is made to prepare any profit and loss account. Loss or gain they go on with their profession as usual because no alternative avenue is open to them. Farming is more a way of life than a business proposition with them; the stimulus is self-supply rather than farming for profit. If they reap a bumper harvest and find a good market for the commercial crop, they thank their stars, if not, they blame their ill luck and bear it with silent stoicism. This much is the economic sense of the Indian farmers. To what extent economic motive is operative in their formulation of farming policies is a question very difficult to answer. Take, for instance, their individual distribution of land under different crops. Whether their decision in respect of it is influenced by economic forces or by natural (*e.g.*, agronomical and meteorological) factors or by both is a hard question to solve statistically. Here and there some attempts have, of course, been made to discover whether any correlation exists between the acreage under a particular crop and its price in the preceding season and the result obtained is stated to be significant.* It is, none the less, problematical to assume that the former's decision is the resultant, pure and simple, of the interaction of the economic forces at play. It is a well-known fact that agriculture in India is a 'gamble in mónsoon'. Sometimes it so happens that in a majority of cases extra-economic factors, *e.g.*, natural phenomena, play a decisive role in the making-up of the cultivator's decision. †

Whatever be the cultivator's response to economic causes, there is no gainsaying the fact that his economic position is interwoven with the entire socio-economic fabric. Of the economic causes, however, price alone is, doubtless, a major factor in the present-day disequilibrium of the national economy and reflects its harmful effects through extremely disparate movement of relative prices. It, therefore, requires to be adjusted and stabilised to bring about a much-needed equilibrium in the socio-economic relations of the people. Stabilisation of prices makes it imperative to study the normal cost of production, more so in agriculture, because in this sphere elements of uncertainty are too many and price fluctuations,

* "Indian Cultivator's Response to Prices" by A. R. and H. C. Sinha and J. R. Guha Thakurta, *Sankhya*, Vol. 2 and 3, p. 155. The authors have calculated the co-efficient of correlation between the prices and subsequent acreage changes in respect of three commercial crops, cotton, linseed, and groundnut and obtained a fairly high co-efficient of the order of O. 6. Yet they maintain that in estimating crop areas by statistical methods it is necessary to take both the meteorological and economic factors into consideration.

Jute : Some Aspects of Demand and Supply—By Messrs. Ghosh and Basak. (Indian Central Jute Committee's publication). The co-efficient of correlation between price and subsequent acreage under jute for the period 1918-1938 has been found to be 10.701.

† *Report of the Commodity Prices Board*: Gokhale Institute of Politics and Economics Publication No. 20, p. 15 : "There are a large number of limitations on the extent to which any individual producer can change within a short period the area normally devoted by him to production of individual crop."

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

addition, cause havoc to the agriculturist. If floor and ceiling prices can be correctly determined and enforced and fluctuations are allowed only within a small amplitude, the farmer's economic position is likely to be partially stabilised—an achievement of no small significance.

The industry, too, is likely to be adequately benefited in so far as it utilises agricultural raw materials, and will stand on a surer footing in respect of a major item of cost. It may seem platitudinous to narrate the economic benefits which are expected to accrue from stabilisation of agricultural prices at a normal level having a steady relationship to the long period trend of costs and prices, yet consideration of these positive benefits lends added importance to the study of agricultural cost.

Fixation of prices of primary products like industrial raw materials, *e.g.*, jute, cotton, etc., or of foodgrains is a very responsible job. Industry can not be made to suffer to make agriculture remunerative or vice versa, and at the same time relative prices of different agriculutural commodities should not be allowed to disturb. Industry and agriculture are complementary, one to the other, in a balanced and unified economic system, and any disturbance in price relations will affect this system very adversely. The task is, therefore, too delicate and involves a great responsibility; as such, uncoordinated *ad hoc* surveys of these vital economic problems haphazardly planned and hurriedly conducted ought not to be taken as the basis of any important policy making. Such a course will inevitably lead the national economy to disaster. Correct and proper appreciation of the problem in its right perspective is all that is needed first to plan an efficient investigation into this basic economic problem. A thorough discussion on an academic level is called for at this stage in order to help elucidation and correct appreciation of the intricate issues involved. State intervention to justify itself ought to be based on a sure foundation so that it can achieve its avowed object of removing the anomalies obtaining in the socio-economic relations rather than aggravate them.

So, the theory on the subject should be reviewed and adapted for the purpose against the background of the broad features as outlined above. Price fixation requires a careful study of both price structure and cost structure. What are the elements that enter into price and in what proportions? An analysis of these inter-related matters which are responsible for price formation leads automatically to the consideration of cost structure. In agriculture as in other fields of production, the cost of production is inextricably linked up with the resources of the farm. Farmer's resources and status have an important bearing upon his cost of production. Bearing this in mind the unit of land in relation to which cost is to be calculated should be decided upon. The fundamental issue, therefore, in any study of agricultural cost in the perspective of Indian system of small-scale farming is what should be this unit—should it be a plot or a farm? This point is important because Indian agriculture is beset with diverse problems of intricate nature and their influence on cost can not be overrated. Cost in relation to a plot is something to be isolated and as such very difficult to determine unless it is considered in the context of the whole volume of efforts and sacrifices made by a particular farming unit in its entire farming enterprise in a particular period of agricultural rotation. And many other similar difficulties are associated with the plotwise study of cost irrespective of the farm. The convenient and uncontroversial course is to take the farm as the unit. An exploratory survey of the structure of farms and of farmers' status in different agricultural zones will reveal the inter-related nature of the problem and corroborate this view. As such a rightly thought-out scheme of investigation into the basic economic conditions of Indian agriculture is, therefore, a prior necessity for a sound and efficient technique of cost calculation to be devised. The weakness or strength of farming units, the influence of which is invariably reflected on cost will also be revealed thereby. This aspect of the study has a specific importance from the standpoint of relating price to cost.

In the light of the foregoing considerations the case of the farm as a productive unit for the purposes of agricultural cost determination is therefore established. But the question arises—cost of which farm governs the supply price? The usual practice with the general public is to talk of average cost in connection with fixation of prices. The Prices Sub-Committee of the Policy Committee on Agriculture, Forestry and Fisheries have, however, recommended in page 48 of their report the cost of the representative farm or more accurately the representative cost as the suitable basis of price fixation. The Commodity Prices Board have rejected the cost of production approach and suggested, instead, the principle of adopting *ad hoc* measures, so to say, to regulate internal prices of individual products as warranted by external prices, as an expediency to meet the temporary phases of the present abnormal economic situation, and ease out the process of restoration of the dynamic course of economic events to normalcy. So, there is no unanimity of opinion.

Theoretically prices have a tendency to equal normal cost in the long period under competitive conditions, and normal cost is not the average cost except in constant return industries. In diminishing return industries, however, the normal cost of production is the marginal cost, that is, the cost of production on the margin of profitable application of capital and labour. And this is the cost "to which the

CC-0. Indian Public Relations Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

price of the whole produce tends under the control of the general conditions of demand and supply." On this principle, therefore, the average cost of the marginal farm or intensive marginal cost of the intra-marginal farms determines the supply curve in a competitive equilibrium. Average cost of unit production over the entire range of production in a particular diminishing return industry is theoretically ruled out. Agriculture in an old country like India is definitely a diminishing return industry, especially in its present organisational set-up, and, because of this basic truth, the technique of marginal analysis is the appropriate analytical device that can be logically adopted in calculation of agricultural cost in India. For application of the principle of marginal analysis it is necessary to have information on the size and resources of each individual farm, because the scale of agricultural operation has a significant effect upon unit cost of production. This information will also reveal on what principle—extensive or intensive margin—a particular farm is operating, and the stage—above or below the margin—it has reached.

Let us examine at this stage the implications of the three sets of values that can be derived according to the three concepts, namely, average, representative, and marginal. The average cost may be computed from the entire observed data on cost or from the data of the farming unit which represents the average of the sizes and resources of all the farms investigated. The representative cost may be taken as the most frequently occurring cost in the farms under investigation or as the cost of the most representative farm or land. The marginal cost is, as has already been pointed out, the average cost of the marginal farm or the marginal cost of the intra-marginal farm or land. In all likelihood, two values will be obtained in each of the former two cases and on'y one value in the third case; that is, to make more clear, two values will be obtained for the average calculated in two different ways as indicated, so also two values will be obtained for the representative cost.

In customary discussions of the average and the representative cost, the farm does not come in prominently as is necessary to evaluate the effects of its size and resources on cost. The Prices Sub-Committee have, however, made a specific recommendation to study cost of production on the representative land with particular reference to the size and resources of farms. In order to study the combined effects of soil quality and farm size, etc., on cost, it is necessary to calculate separately the cost in respect of each category of land in each farm.

An explanation is necessary for the theoretical rejection of the average cost. Let an hypothetical case be taken to illustrate the implications of the three different types of cost which will explain the reasons for rejection or acceptance of one or the other cost.

For an easy grasp of the discussion that follows on this point, a table of imaginary data is inserted here. The data refer to an hypothetical frequency distribution, on the average cost basis, of 100 farms producing a total output of 100,000 maunds of sugarcane under conditions of diminishing return. (See Table).

Let it be assumed that there is an effective demand in the market for all these 100,000 maunds of sugarcane as produced by these 100 farms under conditions of diminishing return, and that the whole output is sold without loss to any of them. All the farmers are not of the same efficiency and all cane-growing land is not of the same fertility. Both efficiency and ferility are widely varying variables. farms are distributed over a range between the most efficient and the least efficient farm, and land over a range between the most fertile land which yields the highest producer's surplus and the least fertile or marginal land which yields no surplus. In case of

TABLE

Hypothetical frequency distribution of 100 cane growers, on average cost basis.

Average cost	No. of farms	Cumulative no. of farms	Quantity produced	Cumulative output	Total cost in each cost group	Diff. between price and cost (price : overall average cost)	Diff. between price and cost (price : marginal cost)	Diff. between price and cost (price : representative cost)
Rs. as. p.			Mds. (000)	Mds. (000)	Rs.	As.	As.	As.
1 0 0	2	..	4	..	4,000	(+) -/8/-	(+) -/12/-	(+) -/10/-
1 2 0	3	5	6	10	6,750	(+) -/6/-	(+) -/10/-	(+) -/8/-
1 4 0	6	11	10	20	12,500	(+) -/4/-	(+) -/8/-	(+) -/6/-
1 6 0	15	26	15	35	20,625	(+) -/2/-	(+) -/6/-	(+) -/4/-
1 8 0	24	50	20	55	30,000	nill	(+) -/4/-	(+) -/2/-
1 10 0	40	90	30	85	48,750	(—) -/2/-	(+) -/2/-	nill
1 12 0	10	100	15	100	26,250	(—) -/4/-	nill	(—) -/2/-
					148,875			

N.B.—1. The market price is assumed to be Re. 1/12/- at which the entire output (100 000 mds.) is sold in an uncontrolled market. (2) The marginal production is 15,000 mds. (3) The marginal cost is Re. 1/12/- which is equal to the market price. (4) The number of marginal farms is 10. (5) The value of the mode is Re. 1/10/- because in this group occurs the largest number of farms; the representative cost is therefore Re. 1/10/- being the typical cost. (6) The overall average cost is approximately Re. 1/8/- (Rs. 148,875 divided in 100,000 mds.)

intensive cultivation, each intra-marginal farm or land has a series of cost per unit production for a corresponding series of different quantities of output produced, and this series constitute what is called the supply schedule or supply curve. The proportions of the different classified categories of land in the composition of the total land holding of a farm are not the same for all farms. Cultivation in each category of land has been pushed to the margin in order to raise the total volume of the crop, 100,000 maunds.

The fact that the whole quantity is sold without loss to any farmer is a conclusive evidence that the marginal cost of the intra-marginal farms or land as well as the cost of the least efficient farm or least fertile land is covered by its market price. Had it not been so, *i.e.*, if the price did not cover the highest or the marginal cost, the least efficient farms would have switched on to the production of some other crop and intra-marginal farms curtailed their production to bring the marginal cost in parity with price. Maybe, this change-over may not prove easy and take place forthwith due to the static and rigidified system of agricultural practices, which is an instance, in point, of the hindrances to automatic operation of the law of demand and supply. This fact accounts for the average cost not being always the minimum cost under equilibrium conditions and points unmistakably to the undeveloped nature of the agricultural economy, the consequences of which react adversely upon the economic position of farmers, at least, in proportion to the business part of their farming. On the basis of this fact it may be argued that price fixed on marginal cost parity unduly remunerates the least efficient farmers to the detriment of consumer's interest. As against this view it may be said that this is a case of maladjustment of economic functions, which is associated with the stage of economic development obtaining in a particular socio-economic setting. Its incidence, as such, should fall on the entire society. State intervention in such a situation is therefore advocated to remove the socio-economic mal-adjustments. However, this is a digression and has got little bearing on the question of methodology. The automatic process of adjustment of supply to demand to bring about a cost-price parity is implied in the assumptions made in the theoretical exposition of the long period competitive equilibrium in a free economy on which rests the classical theory of value. These assumptions constitute the limitations to the usefulness of the marginal technique in analysis of realistic economics and will be discussed in a relevant context.

In the light of the foregoing considerations it will be easy, now, to compare the average, the representative, and the marginal cost, and assess their relative significance. The average cost is, ordinarily, taken to be the true representative cost, as it is affected by all the items in the observation. The true representative character of the average depends upon the distribution being normal or nearly so without any extreme value at either end; otherwise no statistical ingenuity can make it representative. But, in connection with price-fixing, the concept of representative cost has been introduced to mean the most frequently occurring cost (*i.e.*, typical of the largest number of farms having a common type of land) and, as such, it is more analogous to the statistical measure, mode, than to the arithmetic mean. These two values are identical in an exceptionally ideal situation of a perfectly symmetrical distribution which is very uncommon in the domain of agricultural economics. In any other situation, that can be visualised as to the behaviour of cost in diminishing return industries, especially under conditions of small-scale and uneconomic farming, the average cost (*i.e.*, the arithmetic mean) is likely to be less than the representative cost (the mode); and, therefore, the latter covers the cost of a larger number of farms than the former. This conclusion is doubtless hypothetical, as it is deduced partly from *a priori* assumptions and partly from empirical observations; for this reason the representative cost (the value of the mode) cannot have a greater claim to validity and reliability unless verified empirically.

The price, fixed in parity with the average cost, will not at all be remunerative for a great many farmers; those who are on the margin will be ousted altogether, and others will have to curtail production. The principle of representative cost is also not free from this defect, but, in this case, the number of producers likely to be hit is very much less. As a basis for price-cost parity the representative cost has been recommended on practical considerations and for lack of reliable quantitative information on marginal cost. But, here too, the problem of the least efficient farmer yet remains and his output is essential to make up the total supply for which there is effective demand at a price which just covers his cost with little or no margin of profit in a free economy. The intra-marginal farms or land will also lose some amount of producer's surplus due to price-fixing on the representative cost principle.

So, it appears from the above considerations that the marginal cost is the only logical basis for price-cost parity. And this parity is also free from the objections raised by the Indian Commodity Prices Board to the parity formula recommended by the Prices Sub-Committee, referred to above, on the American model of relating price to cost with reference to some base period parity.

Of the three types of cost, the average, the representative, and the marginal, as a basis for price-fixing, the last is theoretically the most sound, though difficult for calculation. The average cost is definitely unsound in an increasing cost industry, though its calculation is quite easy. The representative cost is the *via media*; it is the average cost of the farms belonging to the largest frequency (modal) group. It is neither theoreti-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

cally very unsound nor does it involve any difficult process of calculation, (unless it be a case of bi-modal or multi-modal distribution). As against the marginal cost principle it may be contended, in the present context of inflationary spiral, that in theoretical consideration of the logical basis of cost-price parity, the essential object of price-fixing should not be missed or relegated to the background. The purpose of price-fixing is not merely to stabilise price at a suitable level but also to bring relief to the consumer by reducing the price level. The contention can be very easily met. All things being equal, the price can not fall below the cost of the least efficient farmer, because in that case he will be ousted and the more efficient producers will curtail production. As a result, the demand will go unsatiated with consequent rise in price. So, there is no way out but to relate price to the marginal cost, *i.e.*, the cost of the least efficient farmer. Cost is definitely a function of demand in the long period competitive equilibrium. In a diminishing return industry with demand for its product inelastic, or moderately elastic at higher levels of its relative price, the greater the demand the lower will the margin of production be pressed and higher will be the cost at the margin. There can be no evading this hard economic reality.

The final choice being made of the particular type of cost to be determined, we enter into the second phase of our theme—the procedure to be adopted and the elements to be taken into consideration in determining the cost. Let it be assumed that marginal cost is our final choice and for determination of which the marginal tool is to be employed. The conditions precedent for its applicability have already been noticed. These conditions obtain only in a perfectly competitive set-up and, as such, are very abstract and take us far from the real world. The agricultural economy, particularly in India, does not satisfy them fully. The reasons are :

On the supply side :

1. Farming, as already stated, is more a way of life than a business proposition; self-supply rather than commercial profit is the incentive;
2. Cultivator's response to prices is very slow, which is attributed to the existence of frictional agencies which impede the smooth movement of the economic wheel;
3. Transport difficulties restrict accessibility to markets, thereby rendering them imperfect to a certain extent;
4. Staying and bargaining power of cultivators is very negligible;
5. Lack of mobility of labour and capital obstructs the quick adjustment of supply to demand; and

On the demand side :

1. Competition amongst buyers of important commercial crops, *e.g.*, jute and cotton, is restricted by formation of groups;
2. The greater bargaining capacity of buyers.

It is quite evident from the above considerations that agricultural competition is influenced by certa characteristics which do not conform exactly to t financial assumptions underlying conventional theor

In view of the above limitations the marginal t is to be applied with certain modifications to suit t real problem. On the marginal cost principle, ea farm has its own cost curve, and the industry as whole may be likewise conceived as having a separa overall cost curve. A technique is, therefore, to b devised, on the lines of the marginal concept, whi will be an approximation to it but not exactly t same, to suit our problem which is circumscribed b many limitations as narrated above. A suitable m *media* can be devised on the basis of average cost o each farm. Such a method will not deviate fundame tally from the marginal approach but at the same tim will afford us an appropriate approach to our tangl problem. A scale of cost for the whole industry c thus be constructed, though on the basis of averag cost of individual farms yet neglecting their individu cost curves. It has already been noted that th average cost of the marginal farm which is equal t the normal price under competitive conditions, is th same as the marginal cost of intra-marginal farms What is the average cost of an intra-marginal farm The marginal cost of the intra-marginal farm minu the economic rent is equal to its average cost. This i true for all positions of the margin, and for eac position of the margin there is a correspondin average cost of each intra-marginal farm. A scale cost constructed on the principle of average cost o individual farms with reference to a particular yea may not hold good for other years because of a likel shift in the position of the margin in different years but it will furnish us an important information abou the different cumulative quantities of output produced and the number of farms producing at and below eac level of cost, and is, therefore, substantial advance i the analytical process. To make it clear, let us refe to the hypothetical distribution of 100 farmers in th above table. There we find the number of cane-growers and the quantity of output in each cost group. Th highest cost group represents the marginal farms, thos above it the intra-marginal farms. The relative posi tions of the intra-marginal farms are obviously deter mined with reference to the position of the margin Similar consideration may be made of the differen quantities of the output produced at different cos levels. Thus a scale of costs can be constructed (as i Table above) to demonstrate the manner in which th individual costs are scattered in an ascending orde with the cumulative output and acreage at and below each level of cost. To make this scale of costs a stabl and valid standard of reference it should be cons tructed for each homogeneous agricultural region on a solid foundation of facts observed over a number of years covering, at least, one complete agricultural cycle of yield variation.

THE PROGRESS OF HISTORICAL RESEARCH IN INDIA

By Sir JADUNATH SARKAR, C.I.E., D.Litt.

The ambition of making original research in Indian history was planted in my heart just after I had done my B.A. examination. That was in April 1891. In the same year I wrote my first historical paper, a narrative of the fall of Tipu Sultan, which was printed in the magazine of the Eden Hindu Hostel, named the *Suhrid*. It was based entirely on printed English sources,—the only materials then known to me, but was not a mere *rechauffe* of standard historical works. Today, after carrying to its natural conclusion the detailed study of the Decline and Fall of the Mughal Empire (1650-1803) in which I had been engaged for fully half a century, I have at last the leisure to make a comparative survey of the course of historical research among us during the past 60 years.

What a contrast does such a backward glance present to our view! Our workers have made wonderful progress in this field, and have advanced from high to higher, hard to still harder tasks with the passing of the years. Their method of work and the quality of their productions have steadily improved.

Contrast our earliest Buddhistic researchers such as Krishna Behari Sen and Ramdas Sen with our latest, say Beni Madhab Barua and Probodh C. Bagchi. Or, in the field of British Indian History, place the works of our pioneers, Rajani Gupta and Akshay Maitra by the side of the achievements of modern students like Brajendra N. Banerji and others. Or, the earliest edition of the Sanskrit *Vrihaddevata* and *Lalita Vistar* by Rajendralal Mitra with the later editions of the same books by Prof. Macdonell and Lieumann respectively. The two groups of workers seem to belong to two different ages or to two different races, so vast is the difference in quality between their works.

And, yet, these early Bengali scholars were uncommonly intelligent and industrious, but the fruits of their labour have been superseded by those of our latest workers. Of this there are two causes: first, a difference of methodology, and secondly, an immense increase in our historical materials and "critical apparatus" over what were available to Rajendralal or Krishna Behari Sen.

The modern method of historical investigation runs in two channels: the research worker must try to reach the very fountain-head of information, and he must hear all the witnesses, as far as possible, before he can attain to the true facts. When Buddhist studies began in Bengal, our scholars depended solely on Burnouf's French translations of the Sanskrit-Buddhistic literature transcribed by Brian Hodgson or the English translations of Pali works by Cowell and Rhys Davids. But today it will not do. Unless we can go to the original Sanskrit and Pali sources themselves, and confront Mahayan works with Hinayan works, true research is impossible. And, we must also study the vast collections of Buddhistic and Tantric MSS. and even sheets of paper dug out in Khotan and Mongolia by Stein and Le Coq, Grunwedel and Peliot, as well as the retranslations of early Indian works now preserved only in Chinese and Tibetan versions. If the net is not thus extensively flung and the fisher does not go down to such depths, the resulting research work becomes a mockery.

In the field of Indo-Muslim history, the only resources of our old school for the Mughal Empire were Khafi Khan's *History* (completed in 1734) and *Siyar-ul-mutakharin* (completed in 1785), and for Bengal *Riyaz-us-Salatin* (written in 1788), because English translations of these were available. But not one of these books is an original source, except for the few passages where Khafi Khan narrates what he heard from his father and Ghulam Husain what he himself saw. On the Mughal imperial period research truly worthy of the name cannot be attempted even by reading the original Court-annals (called *Namas*) of these Emperors composed in the Persian language by their order. For these Court-annals, though contemporary works, were not the very fountain-head or original source of information about these Emperors, because they were written on the basis of the official despatches and news-letters (sometimes day to day) which were stored in the Delhi Record Office and placed under the eyes of the elegant Persian authors whom the Emperors appointed to write their annals. These *Namas* were really digests of the original documents, just like the official histories of the two World-wars which every European State is now slowly compiling.

For the history of the Mughal Empire under Aurangzib and throughout the 18th century, I have used the veriest raw materials, namely, the despatches and private letters of the nobles and generals, and the news-letters from camp and court (often daily), all in the Persian language and as yet unprinted. Several thousand pieces of this class have been collected by me. In addition, from 1730, despatches and state-papers in the Marathi language are available, and happily these have been mostly printed. Then come, in the later 18th century, the letters of the British Residents

at the Indain Princes' Courts, most of which have been edited by us for the Bombay Government.

The seeker after truth regarding our people's past, is like a pilgrim ever climbing upwards to the very source of the Ganges. Secondly, he must, as far as humanly possible, assemble all the materials, written in different languages and now preserved in many different countries and cities. Let him beware of hearing one side or even only a few witnesses and thus pronouncing a one-sided judgment. Such conclusions cannot stand the scrutiny of time.

This new methodology makes it imperative for our research students to learn a number of languages, besides English, so as to go outside the narrow circle of translated works. In Europe it would be considered incredible that research is attempted without a knowledge of the language or languages in which the original sources of information on that subject are written. It is my firm belief that research in the history of the Delhi Empire in the 17th century is impossible without an adequate knowledge of both Persian and Marathi and for the 18th century these languages are the indispensable keys to the knowledge we seek. So, let our young workers provide themselves with this linguistic equipment before beginning to dig deeply. For my history of Shivaji, I had to study the original sources by learning Persian and Marathi and a little Portuguese, besides English, Sanskrit, French and a little of Rajasthani Hindi.

Now, what is the prospect of historical research among our people in the years to come? It cannot be denied that the remarkable progress we have made in modern research, has been entirely due to European teaching, European example, and sometimes conflict with European workers in the same field. Today the independence of India has removed this very potent stimulant, or necessary irritant. It is, in the altered political condition of India, all the more necessary that we should intensify our industry, sharpen our vigilance, and above all curb our natural tendency to self-glorification. For, in the realm of scientific research there is no halting, no rest; sleep means death; the arrest of progress is at once followed by a retrogression, and the flame of knowledge, if it once goes out for want of adequate oil, cannot be kindled again except at an immense cost of time and labour.

We, therefore, after the withdrawal of our European teachers, must see to it that we create among our own people an unbroken succession of efficient teachers,—what is called a "school of history" in English, or *Guruparampara* in Sanskrit. This throws an immense burden or responsibility upon our leaders of thought.

Secondly, we must build up full and varied research libraries, completed after years of persistent effort and wise alert purchase by boards of experts with adequate funds. Research is impossible without materials, and the materials include not only manuscripts, but also rare printed books, sets of learned journals, works of reference—like the *Encyclopaedia of Islam* (now not available even for Rs. 2,500 a set), maps, *catalogues raisonnes* of manuscripts in Europe, State libraries, and detailed survey maps, and illustrated coin-catalogue. Such libraries have to be built up in each regional circle of India, and not concentrated in the capital of this continent of a country.

The University of Syracuse in the U.S. purchased and brought away from Berlin the entire library of the famous Prussian historian Leopold von Ranke, including every scrap of notes and loose papers written by him; these are now being catalogued and scholars all over the world will flock to Syracuse for conducting their research. Similarly, the Indological library of Prof. D. R. Bhandarkar was purchased for Rs. 32,000 by the Bombay Government and taken away from Calcutta to Poona, so that the new-born University of Poona has been able to start research on ancient India in its very second year. My own life-long collection of rare books and Persian and French MSS. on Indo-Muslim history is now unique in India in several of its contents, besides being complete for British Indian history, especially the Sepoy Mutiny.

But what I have described so long is the external apparatus of research. We need above everything else that pure flame of the quest of truth, that fanatical devotion to our aim, regardless of fame or gain, which is the mark of the true scholar. Such a scholar will easily rise above the temptation to be satisfied with the cheap praise of his countrymen, or the recognition of one of the mushroom Universities which are springing up all over India, wherever there is a dialectical variation. The true scholar is a national of the Republic of Letters, which transcends the narrow bounds of provinces, countries and languages, and places its students at the bar of the world-court of scholarship. Let recognition by that Court be the secret ambition of every one of our research workers. National chauvinism does not go very far,—and even where it goes it only acts as a delusive will-o-the-wisp.*

* Reply to addresses presented to Sir Jadunath Sarkar at the Royal Asiatic Society of Bengal, on his 81st birthday, 10th December, 1950.

LONDON LETTER

By Major D. GRAHAM POLE

London has been gay during the past week with flags and bunting and glittering cavalcades in honour of the visit of Queen Juliana of the Netherlands and her husband Prince Bernhard, Prince of the Netherlands. The Dutch Queen has captured the public imagination. It is not only because, as one critic points out, 'she is the representative of one of those dynasties, never very common and now grown rare, who have justified their position over centuries by an outstanding record of public service.' It is because, like the late King Gustav of Sweden, she has brought a new quality into constitutional monarchy. He dispensed with a coronation ceremony; she has abolished the court courtesy and prefers instead a friendly handshake. Each has come nearer to the common people and at the same time lost nothing in stature and dignity. Juliana has often visited this country but never before as Queen. During her three days' visit she twice drove in state through the streets of London. Seated in an open horse-drawn landau—preceded and followed by a sovereign's escort of Life Guards, but not surrounded by them—she could see and be seen by the cheering crowds who on each occasion turned out to greet her in spite of the most unpromising dismal November weather. She seemed to many to be very like the women in the 'Dutch Interior' school of paintings for which her country is famous. (It has indeed been often remarked that her hands are to be recognized over and over again in these paintings). There is the same sense of gentleness backed by tremendous force of character. It was suggested recently, at a meeting of the United Nations, that nationalism is the only force in the world today capable of combating Communism. But nationalism can be a larger selfishness and is often tempted into aggression. In a constitutional monarchy, on the other hand, the idea which is embodied is that of public service. And it follows that people who cheer such a monarch are in fact cheering their better selves. Discussing this point the other day—and reflecting that here we turn out to cheer a Juliana while in a communist country they turn out to cheer the winner in the latest duel for increasing industrial output—and how much richer is our lot—someone added: 'And here we don't *have* to turn out to cheer unless we want to!'

Critics and apologists have poured out a spate of words on the subject of the Government's handling of the Sheffield-Warsaw Peace Congress. The Home Secretary undoubtedly was in a very difficult position. Only a week or two before a scientist engaged here in the most secret atomic research had taken himself off to Russia. He was a naturalised British subject and his treachery was very recent evidence that Communists are a law unto themselves. Moreover in Korea we are at war with Communist aggression and we cannot afford to take risks. Against this background therefore it is not very surprising if the Home Secretary looked at the business simply from the point of view of security. But when he decided to impose a strict scrutiny at the ports, to turn back anyone who failed to pass that scrutiny, and turned back so many that the organizers of the Congress decided that it was not worth while attempting to meet in Sheffield and transferred the meeting to Warsaw—then he unwittingly transformed the situation and perhaps gave the Communists many more propaganda points than they might have made at Sheffield or Warsaw. It has been suggested that instead of banning the Congress to members of the Labour Party and prohibiting their attendance, a better method would have been to allow all who wished to attend. The vote for peace would then have been overwhelming but another view than that of the Communists would have been heard and might possibly have swamped the Congress.

To turn to opinion here. There is an uneasy feeling that other things besides the Sheffield Congress fell down. Hospitality for instance. This is a particularly dreary winter and, as Mr. Harold Nicolson remarks, "We do not in the least enjoy the spectacle of elderly foreigners being turned back in hordes to face the rigours of a Channel passage." But most of all we feel that harm has been needlessly done to the cause of free speech—that men and women behind the iron curtain, who live for the day when they can re-join the free world, may wonder whether we are as vigilant of our freedom as we used to be. The Russians of course are making the most of it. *Pravda*, in accustomary style, proclaims that "this openly Fascist act has exposed Mr. Attlee as an ordinary policeman in the hire of the American aggressors." (Ordinary policemen, one might point out, are not in the hire of aggressors. Where do these dictatorships get their ideas!).

The fact is that we have missed a great opportunity. When the Communists decided to hold their "World Peace Congress" in the murky industrial gloom of Sheffield, it was a challenge. It should have been met with imagination as well as with defensive measures. No one here seems to have thought so, but a distinguished French writer, M. Bertrand de Jouvenel, has had a lot to say on this point. He has written a remarkable letter to this week's *Time and Tide*. In it he hands us a trumpet with which, had we but blown it, we might have blown down the Iron Curtain as assuredly as Joshua blew down the walls of Jericho! He suggests that when the project of a Communist Peace Congress to be held at Sheffield was first put forward, the British Government should have welcomed it. On terms. It should have made it known that the Congress would be favoured by all official means

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"on the sole condition that the Soviet Government gave the same facilities for a similar congress, of, say, the partisans of liberty, to be held in a Russian town." What an obvious idea and what a brilliant one!

M. de Jouvenel continues that people in general do not realise the extent to which Russia is a Closed Empire. He says that a Benedictine monk commented the other day that "for the first time in history a State is so well closed that one cannot even enter it in a spirit of willing martyrdom." And his opinion is :

> "We should tirelessly put Moscow in the position of refusing the reciprocity of free entry and free speech. We should offer them to swap great orators, ask them to send Mr. Molotov over on a lecture tour with his own translator as against Mr. Eden in the same conditions. We should offer to give them an hour of time on our own broadcasting system in exchange for the same on their system, and so forth."

I hope this letter will be read by Mr. Eden.

Meanwhile it is ironical to think of Russian Communists holding a Peace Congress in betrayed, tragic Warsaw. And it does not seem as if the Congress is bringing prosperity to the city: rather the city is being mulcted instead. An astonishing report appeared last week in the *Daily Mail*. It described the hospitality meted out to two English women delegates. Names and addresses are given so there is no reason to doubt its veracity. These women are accommodated free in workers' flats. They sleep in centrally heated rooms to which servants bring hot water and tea. A bottle of beer is on the night table—strange habits they think we English have!—but if bought outside it would cost five shillings. There are cigarettes at ten to fifteen shillings a packet, some apples as well at three and nine pence each. A 'bus with guide-interpreter drives them to lunch where the wine laid on is worth £3 a bottle. So it goes on all day. But can these women really be impressed ?

The guide-interpreter, who is also a spy, is everywhere present in Warsaw. An *Evening News* correspondent recounts how, immediately after he had telephoned his first story to London, such a 'guide' was fastened on to him. Her name was Maria and she described herself as being there to help the Press generally. But watching him was her only job. One of the matters especially espied on was any attempt on the part of anyone to get into touch with diplomats residing in Warsaw. Plain clothes agents were posted outside every non-Communist embassy and consulate *and the homes of all their staff*. When this correspondent visited the British Embassy he was trailed by three men in a Citroen car. When he left the Embassy, they were on his tail again. In the Press buffet at the Congress he got into conversation with an American diplomat, Mr. Joseph Robinson. Maria promptly disappeared to be succeeded by an Agent who came and asked to see their passes, rejected the American's, and forced him to leave under escort. Both the American and the correspondent asked the Agent for his authority. But all he would show them was the Dove of Peace which he wore embroidered on his arm-band. In such an atmosphere it is not surprising that the correspondent abandoned the idea of trying to get in touch with ordinary Polish families. 'It is not what will happen to you, but what will happen to *them*,' he was told by the British residents. By the State Secrets Act of 1949 it is a treasonable offence to give political, economic, or *social* information to an unauthorised person.

Before leaving this subject it is worth recalling one thing. The revolutions in Poland, Hungary, and Czecho-Slovakia were not spontaneous. These countries were sold out to Russia and their present regime is guaranteed by the Red Army. Mr. Hugh Seton-Watson has just published a book, with the title *The East European Revolution*, and it is described as indispensable to anyone who wishes to follow East European affairs. The reviewer, Mr. Ian Dawson, draws attention to the fact that Eastern Europe is now the victim of Russian economic imperialism. And he continues :

> ". . . Eastern Europe is being driven to create a heavy industry to balance the Ruhr-Lorraine complex and provide the USSR with urgently needed capital equipment . . .
>
> "The capital for the transformation of Eastern Europe comes from the overworked sinews of its own people, and the product goes in large measure to strengthening the Soviet Union strategically and economically, the process which Marxist theory describes as exploitation of surplus value."

Exploitation of surplus value ? Exploitation of human beings!

Communism has been described as a new religion. It must be unique amongst religions in that it was conceived in hate. In a footnote the other day I came across a list of Karl Marx's *hates*. These included the gods, the Christian religion, his parents, his wife's uncle, his German kinsfolk, his own race ('Ramsgate is full of fleas and Jews,' he amiably reported), the Prussian reactionaries, the labouring population, which he called the Lumpenproletariat, 'parliamentary cretinism', and the British Royal family ! One cannot help echoing feelingly his mother's rueful comment. 'What a pity Karl did not make a little Capital instead of merely writing about it. . . .'

Apart from the visit of Queen Juliana, the principal news on the home front is the strange action of the Liberals and the effect which it is likely to have on politics. So strange is their action that in any other age they would have been thought to be bewitched. The witch in question is Lady Megan Lloyd George. She, with two other Liberals, have apparently decided that they will not use their votes to impeach the Government. There are only nine Liberals in the House of Commons but their votes were always an

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

anxiety to the Government. The spectacle of a Government always just scraping, and once in a while just missing, a majority is undoubtedly unsatisfying and perhaps even demoralising. But upon whatever *principle* can three Liberals decide to drop the division lobby overboard? Already they have darkened counsel. Liberals, if anyone, should have views about the question of continuing controls. But they abstained from voting on the Opposition amendment concerning controls.

This split in the Liberal Party is all the more unfortunate because it reproduces the Asquith-Lloyd George split of more than a quarter of a century ago. Association of ideas will prove very potent and there can be little doubt now that the general public will despair finally of the Liberals, who must seem to them to be more occupied in splitting up than in getting on with the business of the country. Lady Violet Bonham-Carter, Asquith's clever daughter, has perhaps rather unwisely, rather too completely, pulverised the new dissidents. She has described Lady Megan's conduct as 'so subtle and intricate, it would be understood only by Freud.'

I will end on a different and more human note. Recently there has been a furore in the Christian world because, in this Holy Year, the Pope has promulgated a new dogma. In the English countryside, we take a more domestic view of our religion. Thus a Lay Reader writes a delightful article in a current weekly. There is a vacancy in the parish living just now and until the appointment of a new Rector it falls to him to read Morning and Evening Prayers. He pokes gentle fun, not at any beliefs, but at some of the prayers. "The more you publicly recite Morning and Evening Prayers," he says, "the more you are aware of their blemishes. They have not moved with the times as smoothly as you imagined. . . . It is a strain to pray for the High Court of Parliament when you cannot ask for deliverance from the bureaucracy!"

Amen !

Westminster, London, December, 1950.

———:O:———

PROBLEM OF POPULATION AND FOOD SUPPLY IN INDIA

By Prof. C. B. MAMORIA, M.A., M.Com.

The haunting spectre at all the present-day discussions is the problem of Indian over-population. The phenomenal growth of Indian population, taken in conjunction with the grinding poverty of the masses, has given rise to an acute controversy as to whether India is over-populated or not. Over-population in the Malthusian sense is said to take place in an old country where population expands more rapidly than the supply of food. When such over-population takes place, equilibrium is restored by what Malthus calls, "positive checks," *viz.*, starvation, epidemics and wars, and failure of crops due either to drought or floods, etc. In India, it is a well-known fact that tens of thousands of people perish every year due to epidemic diseases, mal-nutrition and sometimes actual starvation.

According to the modern notion of "optimum population," a state of over-population comes into being as soon as the actual population exceeds the optimum number. According to Prof. Adarkar, under given conditions of the arts of production and the progress of science, there must be an optimum point at which real income per head is likely to be maximum owing to the free interplay of natural resources on the one hand and the facilities of economic co-operation on the other. "In other words, the optimum is the figure which in view of the total economic resources of the country can enable the population to enjoy the highest possible standard of living. The optimum is not a fixed value, for it naturally varies according to the extent of resources, and it should be interpreted as a curve rather than a figure. A country whose population at any time falls below this optimum may be considered 'under-populated,' which means that an increase in its population would enable it to improve its standard of living. Similarly, a country whose population is at any time higher than the optimum may be said to be 'over-populated.' If the actual population figure for a country tends to come closer to the optimum population, *i.e.*, if the demographic movement makes an improvement of the standard of living possible—demographic tension will become less. On the contrary, it will be accentuated and may become alarming if the movement of population is such as to increase the divergence between the actual population and the optimum population, thereby producing a gradual decline in the standard of living."[1] It is thus in terms of conformity of the actual standard of life with the highest that is physically and economically possible that the population situation has to be judged. It is this relationship that gives significant connotation to such terms as 'over' and 'under' population. According to this optimum concept over-population can take place in a nation of millionaires, if it can be shown that with a slight diminution in

1. *International Labour Review* : "Population" and Social

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

number the per capita income would have been higher than it is.

With this brief theoretical discussion, let us see whether India can be described as being a victim of over-population. At the very outset it may be pointed out that there are two views on this question. On the one hand, it is maintained that the grinding poverty of the masses, exceptionally high death rate, acute food shortage, despicably low standard of living of the masses, continuous fragmentation of holdings and steady increase in the number of landless labourers is a positive proof of the excess of number over the equilibrium norm. The rapidly increasing population has upset India's rural and urban economy. Due to poverty we have been so much crippled that both our agriculture and industries cannot be developed in the light of the modern technological methods. We are thus caught in a vicious circle so that our agriculture and industries, instead of being complimentary and mutually helpful, have become reciprocally inhibitive. It is held by the supporters of this view that in the creation and feeling of this economic deadlock the rapidly growing population is greatly responsible.

On the other hand, it is held with equal vigour that the poverty of the masses is the outcome of the sheer Imperialistic exploitation. They say that the sub-human level of existence in the country is not a proof of over-population : nor is it an index of the country's inability to support the existing size of population but it is simply the product of the present economic and social organisation which fails to utilise the natural resources of our country to supply the needs of the people. If the resources are not properly utilised, people are bound to suffer whatever be the size of population.

> "Labour and resources are like the positive and negative of electricity which do not generate power until they contact. In India, the contact is yet to be established and hence we are poor. The day when 800 million hands apply themselves with a plan to the exploitation of our resources, the poverty will disappear."

Thus, according to this school of thought, there is nothing wrong at the population end. The cry of over-population is a mere piece of British propaganda raised by the apologists of the British rule and imperialist economists contrived to shift the blame for the growing poverty in India on the Indians themselves. In brief, their considered view is that the development of India's resources has been impeded by British rule and once that is removed population will take care of itself.

As things stand at present, India is suffering from over-population, in a rather acute form. It will be idle to deny that India is suffering from a 'devastating torrent of children.' This is particularly true of the middle class families. The lower class people too, have too many children but in their case a child is an assest, for young children are made work at an early age and thus help to augment t family income.

Dr. R. K. Mukerjee has warned that the pop lation of India has increased but the food supply h not increased to the same extent. He concludes th India has fallen short of food for 48 million of t average men, provided that agriculture seasons a normal, and droughts and floods do not occur. support of his view he gives us the following table:

India's population (in 1931)—353 millions.
India's population capacity on basis of her fo supply (in 1931)—291 millions.
India's food-shortage (in 1931)—42 billion calori
India's present population (in 1935)—377 millions
India's addition to food supply (between 1931 a 1935)—30.3 billion calories.
India's present food supply—280.4 billion calories.
India's present food needs—321.5 billion calories.
India's present population capacity (1935)—3 millions.
India's present food shortage—41.1 billion calories.
Present number of "average men" estimated witho food (assuming that others obtain their norm daily ration).

Thus, according to Mukerjee, there is a food def ciency of 12 per cent for our population in a year o normal harvests.

Mr. P. K. Wattal calculated that during 1913-14 t 1935-36 population increased at a rate of nearly on per cent per annum, while the crop production disclose an average rate of increase of 0.65 per cent per annum This suggests that the increase of population has ou stripped the production of food.[3]

Prof. Gyan Chand estimated that the cultivate area increased by 11 per cent, while population multi plied by nearly 21 per cent between 100 and 1934.[4]

Dr. Thomas gives the following indices of popul tion and production during 1920-21 to 1931-32:[5]

	Population	Production— Agricultural	Industri
1920-21 to 1921-22	100	100	100
1922-23 to 1923-24	102	111	99
1924-25 to 1925-26	104	112	115
1926-27 to 1927-28	106	113	137
1928-29 to 1929-30	108	111	130
1930-31 to 1931-32	110.4	116	151
1934-35 to 1935-36	115	121	201

It follows from the above that agricultural pr duction has kept pace with population, and that in dustrial production has increased much faster th population. In the decade 1920-30, population i creased by 10.5 per cent, but agricultural productio increased by about 16 per cent and industrial produ tion by 51 per cent during the same period.

Dr. Thomas takes a thirty-year period and com

to the conclusion that whatever period is taken, there is no indication that population has outstripped production as shown by the following figures :

Period	Population	Agricultural production	Industrial production
1900-01 to 1904-05	100	100.0	100
1905-06 to 1909-10	104	103:0	142
1910-11 to 1914-15	107	123.5	187
1915-16 to 1919-20	103	124.5	255
1920-21 to 1924-25	109	120.0	251
1925-26 to 1929-30	113	129.0	289

From the above it is clear that during the 30 years, population increased by 19 per cent, but if the first and the last quinquennial is compared, the increase is only 13.5 per cent. Thus when population increased by 13.5 per cent production increased by 29 per cent. Dr. Thomas, therefore, believes that population has not increased faster than production in a comparative sense and holds that production has been keeping pace with population.

This fact is further proved by the following table :[6]

Commodity	Weight	1911-14	1915-19	1920-24	1925-29	1930-34
Rice	52	100	115	107	104	114
Wheat	15	100	104	107	104	116
Barley	5	100	97	89	76	77
Maize	3	100	118	105	108	112
Bajra	4	100	118	120	128	127
Jowar	8	100	125	143	164	164
Gram	7	100	109	126	104	112
Sugar	6	100	118	116	123	173
All commodities	—	100	113	111	110	120
Population	—	100	105	101	107	112

If the majority of the population in India are under-nourished, this must be, according to him, due not to the rapid increase in population, not to any lag in the food supply, but probably to the bad distribution of the present income.

The findings of the United Nations Conference on "Food and Agriculture" held at Hot Springs (in 1943) also points to the same direction. It says that

> "Three-quarters of 1,150 million inhabitants of Asia were living below decent health standards and of them India probably has the largest share."

During the war years the food situation in India worsened by acute shortage in the country of energizing foods like milk, fruits and eggs. As a result of heavy slaughter of cattle for meeting the military requirements of meat, the civilian population including the invalids and children were deprived even more of milk and fruits than food-grains.

"The situation was aggravated by complex circumstances some of which were unavoidable, but some were such as could and should have been avoided. Among the unavoidable circumstances might be mentioned natural calamities like widespread disease in the *aman* paddy crop of Western Bengal and the cyclone of October 1942, war-time curtailment of transport facilities, Government purchases for military requirements, keeping of slightly more food for their families to eat by the underfed peasants and some holding of stocks by consumers due to fear of invasion.

"Among the avoidable catastrophes were uncontrolled inflation, bottlenecks in transport arrangements, half-hearted and haphazard controls of Government over commodities in different parts of the country, lack of co-operation between Central and Provincial Governments, and between the Government and the people, and the country-wide activities of the profiteers."[7]

From the twin standpoints of direct relationship between the growth of population and of resources, as also from that of the population growth and what would be needed to produce the highest per capita income, our situation is unsatisfactory. The general conclusion to which the Famine Enquiry Commission arrived would, therefore, seem to be amply justified. They observed :

> "In relation to the existing state of development of her industrial and agricultural resources, India is, in our opinion, over-populated. Pressure of population, which of course, varies in intensity in different parts of the country, is shown and felt in various ways; by the general trend of food imports and exports; by the decrease in the size of holdings, the fragmentation of holdings—and the increase in the number of landless labourers, all related to the fact that the total area under cultivation has not increased as rapidly as the population, so that the per capita has decreased ; by continuing poverty of the mass of the people, and by the widespread existence of mal- and under-nutrition, in spite of the growth in total industrial and agricultural resources and in the total wealth of the country."[8]

The acute food-shortage has caused a serious anxiety to all. While before the war there was a "dearth of money and a deluge of food," in the post-war period there has been a "plethora of funds and a paucity of food." The war no doubt led to scarcity of food and price control drove it underground and hoarding, profiteering, blackmarketing and corruption intensified it. But the root cause of this over-all food-shortage in a predominantly agricultural country is the extremely low yields of crops and their under-production due to various causes. With the shortage of food material there is an acute shortage of prime necessaries of life and the country is faced with "a whole array of dangerous and enduring enemies—poverty, squalor, ill-health, illiteracy, under-nourishment and unemployment."

According to one estimate by Dr. Rajendra Prasad, the total all-India requirement at present is about 64 million tons of cereals while the average production is only 54 to 59 million tons including

6. Thomas and Shastry : *Op Cit.*, p. 90.

7. L. C. Jain : *Indian Economy During War*, p. 15.

8. *Famine Enquiry Commission Report*, p. 90.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

about 3 million tons of grains produced annually. Furthermore, for sometime past we are falling short even of our average annual production :[9]

Production in lakhs of tons

Average for five years ending	Rice	Wheat	Jowar and bajra	Total (4 cereals)	Difference from the average
1943-44	282	106	112	500	..
1944-45	301	106	109	516	16
1945-46	284	92	88	464	—36
1946-47	302	81	85	468	—32

Thus it will be seen that views are extremely divergent, and statistics of production have been used to support totally divergent views. To find out whether the food supply in India is adequate or not we must know accurately (*a*) the total quantity of the food available for consumption and (*b*) the actual diet requirements of the people, and with regard to both, the information we possess is extremely inadequate. But there are certain accepted facts which might help us to arrive at a conclusion. Firstly, during the past few decades, while the population of India has been increasing the increase in net area sown with crops has been extremely slow and gradual.[10] Secondly, the proportion of the total area under food crops has declined while that under commercial crops has increased. The average under food crops has not kept pace with the growth in population and there is an actual fall per head.[11]

Decade by decade we are having an increasing number of people than are necessary fully to utilise such resources of agricultural production as we have.[12]

There has been a striking deterioration in food situation. India not merely shows a deficit in quantity of food production in relation to popula increase, but steady deterioration of the quality of foodgrains. There has been a continuous increase the production of inferior foodgrains at the cos wheat and rice during the last 40 years. The follo table gives the index numbers of production of cereals between 1910-38 :[13]

Relative expansion of less nutritive cereals

Cereals	1910-15	1915-20	1920-25	1925-30	1930-35	1935-38
Superior cereals :						
Rice	100	114.0	108.4	107.2	110.2	103.5
Wheat	100	96.2	93.4	93.0	97.8	104.2
Inferior cereals :						
Jowar	100	157.4	167.0	210.8	207.8	209.7
Barley	100	224.2	202.6	172.2	173.4	157.1
Bajra	100	114.0	105.0	126.0	125.0	125.0
Maize	100	114.0	100.0	106.0	112.0	105.0

It is evident that during the period 1910-38, w the production of such cereals as rice and wheat creased by 3.5 and 4.2 per cent respectively, jowar creased by 109.7 per cent, barley by 67.1, bajra by and maize by 5 per cent. Inferior cereals are cheap to grow and this also decides the nature of consu tion of subsistence farmers.

The decline in the average per head under food cr might not mean a smaller food supply per head i had coincided with an increase in the yield of cr but there is little evidence to show that the yi per acre has increased during the past few yea The spread of improved varieties has been very s and research has been concentrated hitherto m on commercial than on food crops. Broadly, th fourths of sugarcane, half of jute and nearly fourth of wheat and cotton are under impro strains. This conclusion is borne out by the follo figures:[15]

9. N. P. Bhoumick : "Food Problem in India": *The Modern Review*, August 1950, p. 106.

10. *The Famine Enquiry Commission—Final Report* (1945), p. 78.

Year	Population in millions	Net per capita shown Average net area sown (mill. acres)	Per capita area sown (acres)
1911	231.6	208	0.90
1921	233.6	205	0.88
1931	256.8	211	0.82
1941	295.8	215	0.72

11. "During the period 1908-09 to 1917-18, 0.89 acres per head of population were devoted to food crops, while during the period 1928-29 to 1932-33, the average has sunk to 0.79 per head and to 0.61 per head in 1942-43. In fact, the population had increased by 28.7 millions but the area under food crops went up only by 2.6 million acres; only 0.09 acres per head. The non-food crops, on the other hand, kept pace with the population, the average per head being 0.044 in earlier and 0.057 in the later of the two periods."

12. W. Burns : *Technological Possibilities of Agricultural Development in India*, p. 21.

The decline in acreage per head under food crops is revealed more clearly by the following estimates made by Dr. W. Burns :

Year	Average per head under food crops (including all foodgrains—sugarcane, vegetable, fruits, condiments and spices)
1911	0.83
1921	0.86
1931	0.79
1941	0.67

13. *National Planning Committee Report* on "Population," p.

14. Yield of selected crops :

Crop	1931-33	1934-36	1937-39	1940-42
Rice	852	806	766	731
Wheat	607	639	671	764
Cotton	78	91	89	102
Groundnut	939	868	857	870
Linseed	272	238	241	260
Sugar (raw)	2,985	2,442	2,832	2,915
Jute	1,263	1,039	1,094	992

15. It has been estimated that the increased yield per acre case of improved varieties is at an average two maunds per rice, and jute; one maund for jowar and bajra; 1.75 maunds per nuts; 0.5 maund per cotton-seed and 200 maunds per sugarcane.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Acreage in million acres

Crop	Total (acres)	Under improved variety. (acres)	Percentage under improved varieties
Rice	83.43	3.58	4.3
Wheat	33.61	6.96	20.6
Millets	38.69	0.34	—
Gram	16.90	0.33	—
Groundnut	5.86	0.22	3.4
Cotton	26.00	5.04	19.2
Jute	2.18	1.12	50.0
Sugarcane	4.00	3.22	80.0

So much about the quantitative aspect of our food situation. If we look at the qualitative aspect of the food supply position, the degree of maladjustment becomes still more acute. It is a well-known fact that mainly owing to extreme poverty of the masses and partly because she herself does not produce enough "protective food" like milk, fruits, vegetables, eggs, etc., for her people, that Indians, in general, cannot afford to have a nutritive diet. Hence, they have to remain content with a diet far below the essential required of health. A glance in the following table will reveal it (prepared by the Nutrition Advisory Commission of Indian Research Fund Association):

Articles of consumption	*Ill-balanced diet*	*Balanced diet*
Cereals	20 Ozs.	14 Ozs.
Pulses	1 „	3 „
Green and leafy vegetables	2 „	4 „
Root vegetables	2 „	6 „
Fruits	0 „	3 „
Milk	Negligible amount	10 „
Sugar and Jaggery	—	2 „
Vegetable oil, ghee	0.5 to 1.0	2 „
Fish, eggs, fruits, meat		1 Egg

Sir Byod Orr has rightly remarked in this connection that

> "Permanent under-feeding and periodic starvation is a rule in India. In normal times about 30 per cent of the population do not get 'enough' to eat, while a much larger section of the population have to be satisfied almost invariably with ill-balanced diet containing a preponderance of cereals and insufficient "protective foods" of higher nutritive value. Intake of milk, pulses, meat, fresh fruits and leafy vegetables and fish is generally insufficient."

On the basis of rationing standards, the Government of India has calculated the deficit as two million tons. What would be the deficit if we adopted the nutrition standards? Let us adopt the standard of our famous nutritionist Dr. W. R. Aykroyd and calculate the food-shortage in the country. In his "Ideal Composition of Diet" Dr. Aykroyd prescribes an intake of 19 ozs. of food-grains for every adult (his adult value is 80 per 100 of population). On that basis our food deficit comes to about 10.5 million tons for 1947-48.[16]

In this connection Dr. Aykroyd has frankly remarked:

> "To the nutrition worker our food situation in India is thoroughly unsatisfactory in normal times . . . The majority of the population lives on a diet far remote from the most moderate standards of adequate nutrition. If India depends entirely on what she can herself produce, a very large increase in the production of various foods is necessary to raise the existing standard to a satisfactory level. These may be roughly indicated as cereals 30 per cent increase, pulses 100 per cent, milk and milk products 300-400 per cent, meat, fish and eggs several hundred per cent, vegetables, particularly green leafy vegetables 100 per cent or thereabout."[17]

CRITERION OF AGRICULTURAL OVER-POPULATION

(1) *Man-Land Ratio*: Apart from the loss of equilibrium between food and population—even in the absence of adequate statistical data, there are certain symptomatic phenomena which tell us of the heavy pressure of population on land. The major effects of the incidence of the human factor on the physical basis of the country are reflected in the principal ways indicated as follows:

> "Owing to the slow rate of economic expansion, the rapidly increasing population had to remain in villages, thus causing over-crowding,[18] which reacted on the agrarian structure of the province and led to excessive splitting of the peasant properties and impoverishment of the soil."[19]

Over-population on the farm-land reduces the standard of living and cash resources of the individual peasant. Therefore no agricultural development which need capital can be carried out, the yield per acre declines, and the competition of overseas agricultural exporting countries—with technical aids at their disposal—reduces the possibilities of export at the time of fall of world prices. This in turn lowers the income per head of rural population, and reduces the internal market. Still less money is available for improvement or for education of the farming population in new directions.[20]

Since India is an agricultural country, man-land ratio is an important criterion for measuring the

16. Population in Indian Union 337 millions

pressure of population. Attempts have been made to estimate population pressure with reference to the cultivated area; 2.5 acres per capita are said to represent, according to Prof. East, the minimum size of cultivated land necessary for keeping the individual in health and efficiency.[21] Keeping in mind the fact that in many parts of India two crops are raised during the year, and that food requirements may be less in the East (due to warm climate) than in the colder countries of the West, we may safely assume that 5 acres is the minimum size of an agricultural holding necessary for the subsistence of a family of five souls. Judged by this standard of one acre of cropped land per capita the following table bears ample evidence of over-population :[22]

Provinces	Population in millions	Crop area in millions of acres	Crop area per capita in acres	Co-efficient of over population
Bengal	50.1	23.0	0.47	2.10
Bihar and Orissa	37.6	24.0	0.63	1.58
U. P.	48.4	36.0	0.74	1.35
Madras	46.7	34.0	0.74	1.35
Punjab	23.5	26.0	1.12	0.89
C. P.	15.5	24.5	1.58	0.63
Bombay	21.9	33.0	1.61	0.62

The crop area per capita in different provinces varies from 0.47 acres in Bengal to 1.6 acres in Bombay. In terms of nutritional potential this area is miserably small. Dr. O. E. Baker (Agricultural expert from U.S.A.) has calculated that the per capita requirement in respect of cultivated area for different standards of dietary is as follows :

A.	Emergency restricted diet	1.2 acres
B.	Adequate diet at minimum cost	1.8 „
C.	Adequate diet at moderate cost	2.3 „
D.	Liberal diet	3.1 „

Even for what would pass as emergency restricted diet in U.S.A., the per capita area under food in India has, it would appear, to be doubled for anything like adequacy, leave alone liberty, the whole land area of the country would not suffice if the existing population number and the yield capacity were to continue.

(2) *Increasing Subdivision and Fragmentation of Holdings* : A common feature of the agricultural land is the great reduction in the size of the holding by successive sub-division. So that not only are the holdings too small for agricultural operations, they are too small for subsistence also. The Kumarappa Industrial Survey Committee revealed that in Wardha district, the average (family) holding is not above 10 acres and may be taken as 5 to 7 acres of land.[23] The conditions are still worse in Balaghat district where the average holding per family comes to about 5 acres which is too small to maintain a family of 5 persons.[24] What is true of C. P. is also true of the other parts of India. In the densely populated parts as the Ganges-Gagra Doab, the eastern districts of U. P., South Bihar, the Padma, the Jamuna, the Cauvery and the Godawari Deltas, the fractionisation of holdings has gone to grotesque length. What is true of U.P., is also true of considerable parts of Bihar, Orissa and Madras.[25] Continuous fractionalisation of holdings restrains the small cultivator not only from adopting improved appliances and methods of cultivation and constructing wells, but also leads to abolition of fallowing and hence to soil depletion.

The extreme reduction of the size of holdings has had its repercussions on the land-lease market. It has given rise to a chain of reactions. Quick processes have set in where the peasantry are being reduced to occupancy tenants or owners of dwarf holdings, they in their turn to landless tenants who finally lose themselves in the mass of the agricultural proletariat, adding at each stage to a general deterioration of agrarian relations. The demand for land has increased and has pushed up values to a high pitch totally unrelated to the returns from land. It has given rise to an increasing number of the parasitic class, the absentee landlords.[27] Excess in demand for land over its supply has resulted in general 'land hunger' leading to rack-renting on the one hand and agrarian unrest on the other. Consequently agriculture is on a dear economy.

(3) *High Percentage of Food Crops* : Another symptom of agricultural over-population is high percentage of food crops (or a high percentage of cereal crops) in the total arable area. Climatic reasons, national commercial policy or lack of good communications, in some cases may favour the disproportionate utilisation of the arable land for the cereals. But within an agricultural region and over areas in which the natural conditions and the proportion of cereals used respectively for food and feed probably

do not vary considerably, the percentage of area under food-crops is definitely higher in the over-populated regions.[28] In India, with a rapid population increase, the total percentages of cultivated to cultivable area have now reached the phenomenal figures of 75 to 95 per cent in the Ganges Valley. Densities of cultivation and population in many districts of the Ganges plain are extraordinary . . . Forests, meadows and marshes, all are now invaded by the plough due to population increase, which also leads to scarcity of fodder and grazing grounds.[29]

(4) *Low Yield of Crops* : Adverse natural conditions and climatic fluctuations are in some regions directly responsible for low unit yields. The population density may not have any relation with the yield in such cases. But natural factors do not entirely explain the fact that even the maxima in low unit regions remain below the optimum yield obtained in other regions of similar natural conditions. The density of population depending on agriculture in such cases have a direct bearing on the unit yield of the region. The unit yields of cereals are lower in the more purely agricultural countries than in more industrialised countries. Excessive population results in disproportionate utilization of land for cereals, unsatisfactory system of crop rotation and less possibility of recuperation of soil. In agricultural economy the cost of fertilizers and of machinery always remains high and the standard of skill is low. There is no organised accumulation of capital necessary for the introduction of technical improvements. The agricultural population falls in a vicious circle. Pressure of population on land results in low unit-yields[30] which in their turn mean more demand for food and, therefore, more pressure on land.

Pressure of Live-stock on Land

There is also a direct relation between the diminishing number of live-stock and the increasing density of human population. Owing to the pressure of population on the available land, the area under food-crops steadily encroaches upon the pasture area. Thus the high proportion of cereals usually coincides with low live-stock densities. "The competition of both the human and bovine population for maintenance on small holdings which must yield both food and fodder crops has resulted in the steady deterioration of animals' food supply and of their breed and efficiency." Vegetarianism is ultimately a result of a heavy population pressure.

It may also be stated that in spite of the much talked-of industrialisation of the country since World War I, it does not appear that rapid progress has taken place in the industrial sphere except the expansion of a few industries like cotton, jute, mineral production, iron and steel, tea, coffee, rubber and lac and recently matches, cement, and sugar under State protection. The financial market remains still primitive and undeveloped or under-developed in the matter of trade. Thus notwithstanding the growth of a few industries on modern lines, the country remains still predominantly a land of peasants with small-scale industries and the impact of demographic pressure has fallen heavily on the rural side. Prof. Mukerjee has rightly remarked :

> "In India, during the last three decades there has been a decline in the relative population of industrial employment in relation to total number of workers, this accompanying a process which may be described as decentralisation . . . This has increased the occupational unbalance in the country and the pressure on the impoverished soil."[31]

This fact is brought out clearly by the following figures :

Region	1881	1891	1901	1911	1921	1931	1941
Urban	9.2	9.5	9.9	90.6	10.24	11.08	12.75
Rural	90.8	90.5	90.1	9.4	89.76	88.02	87.25

Percentage of variation during 1881-1941: Urban 3.55 and Rural —3.55.

Effects of Over-population

When the pressure of population is very heavy on the soil, it seeks relief under certain conditions partly in migration and emigration overseas in search of employment of some economic gain.[32] Over-crowding drives people away from Oudh and the eastern districts of U.P., to the plantations of Assam, the cotton and jute mills of Bengal, and the collieries of Bihar and Orissa and Bengal. Labour flows ceaselessly from different parts to industrial centres and even to fields in harvesting operations in Bengal and Bombay. In Madras, the people of the southern districts of Tamilnad and Northern Circars have emigrated in large numbers overseas especially to Ceylon, Malaya and Burma, etc.

The combined effect of all the factors stated above,—small holdings high proportion of cereal crops, low unit yields and the low density of livestock, is mal-nutrition and under-nutrition which is a most certain symptom of over-population and an outward sign of 'hidden-unemployment.' If the arable land is preponderantly under cereals, effects of bad harvests are disastrous. Further, high proportion of cereals imply scarcity of protective foods as the Woodhead Commission remarked :

> "Wherever we find, anywhere in the world, a dense population dependent on agriculture, we also find a lack of protective foods because the pressure on land does not permit their production in sufficient quantities."

So that nutritionally the standard of diet is very low. As population pressure increases there is a tendency everywhere not only to use more carbohydrates than proteins,[33] since the former are cheaper, but also to supersede all dairy products, animal foods and fruits; and this often causes unbalance which is particularly characteristic of the poorer sections and communities. It must be conceded that Indian dietary involves a minimum land requirement, about 97 per cent of the food energy consumed by the peasant family being derived from seeds, roots and vegetables.[34]

Shifting of Population Pressure

We can, therefore, conclude, that India is suffering from agricultural over-population. Hence, the problem before us is, how to shift the excessive demographic pressure from agriculture. The pertinent question, therefore, is how to bring about a more balanced distribution of people among various occupations which will go to reduce the excessive number supported by agriculture and at the same time increase the number of persons employed in industries big and small, and services and professions. The remedy lies in *two* directions, *viz.*, industrialisation of the country which would take away the surplus people from land and a rationalisation of agriculture which will increase the yield from land; and increasing the volume of agricultural employment, we now consider these problems briefly :

(*a*) *Industrialisation as a Measure of Relieving Pressure of Land* : As long as 1880 and 1901 pointed attention was drawn to the existence of a huge number of people in excess of what was necessary for cultivation of land by the Famine Commission reports and the development of the industries as one of the ways of increasing demographic pressure on land was suggested in pursuance of which the Department of Commerce and Industries was formed at the centre in 1905. Since the Industrial Revolution and especially in the first quarter of the 20th century rapid industrialisation took place in different countries of Europe and Japan to raise the standard of living of the people and to relieve excess population from farm-land. During the post-depression years also remarkable rise in the industrial employment took place. Taking 100 as the volume of employment in 1932, the index figure of employment in industry has risen within six years to 200 in Germany, 180 in Esthonia, 161 in Holland, 153 in Hungary, 151 in Denmark, 142 in Italy, 141 in Finland, 137 in Norway and 117 in Poland. For the whole of Europe (excluding Russia) the index had gone up to 140 by 1938. It is because of this industrial development that the percentage of people engaged in agriculture shows a decline in many European countries.[35] In this light the potentialities of India's advancement are not fully exploited. If 100 is taken as the index number of industrial employment (being the average for 5 years 1909-1913) after a period of 19 years it rose by 85 points, the index number of industrial employment in 1937 being 185. The number of workers employed in large-scale industries from decade to decade are given in the table below :

Number of workers in Large-scale Industries
(in lakhs)

Year	Mines	Factories	Plantations	Railway	Total
1901	0.88	4.70	6.38	3.70	15.66
1911	3.07	7.90	7.41	5.43	23.12
1921	3.55	12.30	10.02	7.49	31.19
1931	3.45	15.20	10.80	7.77	35.81

From these statistics it would be clear that the industries which have been established or developed since 1901 have provided employment only for 2 million persons or less than 1/20 of population increase since 1901. It is true that there are possibilities of establishing and developing of basic large-scale industries to cater India's requirements for capital goods and defence, such as for manufacture of plant and machinery, automobiles, ships, aircrafts, heavy chemicals, engineering and scientific instruments, etc., besides a good number of other commodities for which India has to rely on foreign countries. It must be noted that as the purchasing power of the people

increases, their standard of living will rise which will be reflected in the increased demand for consumption goods inevitably widening the orbit of industrial expansion.

However, judging from the volume of employment accorded by the industrial progress already made between 1901 to 1931, the possibilities of absorption of a great number of persons through the establishment of large-scale industries do not appear very large. According to Sir M. Visvesvaraya we can only expect the population supported by industries—big and small—to increase from 35 to 85 million. Even if this is realised, it is maintained that only one-fifth of the people may be absorbed in industries, leaving about four-fifths to eke out their living on land.[36]

In the sphere of industrialistion the emphasis must be laid on the rapid growth of small and cottage industries as a measure of providing employment for a large number of people in the countryside. Such cottage industries and medium scale industries worked by power wherever possible, which can be combined with farming so as to provide work in the spare time of the rural people, will have to be fully developed or made more paying. The development of the 'agro-industries' is the most important step towards relieving the pressure on land. By 'agro-industry' we mean "factory located close to the farm and both managed in organic relation to one another."[37] A programme of combined development of agriculture and rural industry will lead to integration of labour and establish 'a really balanced and wholesome national economy.'[38] The main purpose of agro-industry should be to process farm products and work in association with large holders of land and co-operative farms and societies. The Famine Enquiry Commission remarked :

> "Such a combined development would result in an increase in the productivity of land, an improvement in the supply of cattle feed and oil for human consumption and an expansion in the volume of non-agricultural employment in rural areas."[39]

The important farm products which can be processed in the rural areas and which can be developed into agro-industry are the rice and flour millings, sugar processing, cotton ginning, handloom spinning and weaving, paddy husking, gur making, poultry rearing, firing and manufacture of tea, preparation of cream and butter, fruit canning and preservation, preparation of jam, *achar*, *murabba* and pickles, milk condensation and powder making, tobacco industries, basket and paper-making, bee-keeping, soap-making, oil crushing, etc. Such small-scale industries, when they come to be established, will provide the most necessary link between agriculture and large-scale industries and will narrow down the gap between rural and urban incomes and living conditions by reducing the undue pressure on land and by providing another source of income to the rural population.[40]

The rural industries would create a further demand for capital goods like machine tools and motors and for partly manufactured goods like yarn, steel strips, non-ferrous metals, leather, rubber, glass, etc. The income derived from these would further enlarge the consumer's markets for large-scale industries producing consumption goods, such as sugar, cement, shoes, textiles and steel girders, etc. Describing the experiences of rural industrialisation in Europe Dr. Mukerjee writes :

> "Rural industrialisation in a number of countries in Europe has brought about such an intimate relationship between agriculture and industry that it is at times difficult to draw the line between the spheres of the two. Industry helps in the handling of produce, supply the firm with fertilizers, feeding stuffs, machinery and other subsidiaries and materials. On the other hand, agriculture supplies industry with some of its raw materials. Dairies and milk condensation and powder factories, factories for the preparation of organic therapeutic products, the edible oil industry, milling, canning chocolate and tobacco industries are all the outcome of correlation between agriculture and industry in Europe."[41]

With a new orientation and co-ordination between agriculture and industry on the one hand and the village and the city on the other, the establishment of a similar harmony of interests between the rural and urban areas in India is not difficult of achievement, so that "the science and the technique of the city will utilise the resources and raw materials and replenish the wealth of the village more than it will exhaust and its life will stmulate the minds and enlarge the vision of a far greater number of people than it will warp or repress."[42]

Diversification of the industries has also been claimed as an important weapon for lowering the pressure on land. With a variety of occupations, drought and failure in agriculture would not have meant such aggravation of poverty and unemploy-

36. According to the *Industrialists' Plan* about 58 per cent of the people have to subsist on agriculture after the execution of the plan :

Occupations.	1931		1941	
	Millions	Per cent	Millions	Per cent
Agriculture	106.3	72	129.7	58
Industries	22.1	15	57.9	26
Services	19.2	13	34.7	16
Total working population	147.6	100	222.3	100

-ment and dislocation of credit and finance. In a period of glut of agricultural production in the world the fall in income from agriculture might have been offset by better prices of industrial products. Industrialisation in the villages can be greatly promoted by hydro-electricity in India, absorbing the surplus of the agricultural labour population or maintaining a class of half-and-half labourers, half-agricultural, half-industrial as in Belgium and Czecho-Slovakia. As concentrated urban industrialisation has fostered population increase by creating a steady continuous demand for cheap labour and breaking up the social order, the decentralisation and ruralisation of industries would, besides relieving the pressure on land, tend towards a general improvement of the standard of living and check multiplication and disintegration of the stable forms of family, village and social structure in India associated with the present unhappy phase of economic development in the country.[43]

Reorganisation of Agriculture

The main point that emerges out of the preceding discussion is that India has to remain largely as an agricultural country even after her ambitious schemes of industrialisation are materialised. The whole agrarian system needs re-organisation according to the present-day needs and conditions on improved lines. This would include an increase in the net returns, reduction of production costs, better standard of living for the farmer, less arduous work for the head of the undertaking and considerable saving of labour whether paid or supplied by the family. The reorganisation of agriculture will have to be made on the following lines :

(*i*) Firstly, by intensification of utilisation of land already in use. This can be affected through improved methods in agriculture, such as improved methods of manuring, use of improved kinds of seeds, better farming, cultivation of heavy crops requiring additional application of labour and capital.

(*ii*) Secondly, by removing certain obstacles for the full utilisation of land resources through a radical scheme of reforms and effective planning with regard to land tenures, tenancy, ownership of land, size of holdings, inheritance, agricultural indebtedness, illiteracy and so on.

(*iii*) Thirdly, by extension of land use through bringing more areas under cultivation by means of expansion of irrigation works, establishment of land colonies, and converting of areas now less economically used into more economic and income yielding uses.

It is difficult to say what will be the proportion of people who will be found competent and quickly adjust themselves to their new occupations, to the total number of persons released from agricultu... The measure designed to correct the defects wou... not yield the same results without certain necessa... pre-requisites, such as, for example, the correspondi... growth of co-operatives, vocational and gene... instructions in rural schools and associations. Hen... if a rapid revolution, both agricultural and industri... is to be brought about, it is necessary that a pro... outlook should be developed among the people.

Change in Crop Planning

It is a well-known fact that not only are t... present average crop yields per acre very low, t... the existing distribution of arable land under t... various crops does not give the maximum food valu... which it is perfectly possible to obtain even w... these low levels of yield by a judicious crop pla... ning. The following table is very significant in t... respect :[44]

Food Values per Acre

	Rice	Wheat	Potatoes	Sweet potatoes	Tapioca	Plantin...
Estimated yield per acre (in maunds)	10	10	50	50	50	224
Protein yield (kilograms)	31	43	29	22	13	56
Carbo-hydrate yield (kilograms)	284	258	416	563	522	1190
Calories per day (in thousand)	1280	1260	1790	3880	2880	5040

Researches of experts like Dr. Aykroyd indicate that what India needs is really not more of cereals such as wheat, rice and ragi, but a more balanced diet. According to Sir John Russell, "The well-balanced diet does not require more but less cereals than at present, but it includes more of everything else, especially of vegetables, fruits and milk." The objective, therefore, in India should be to produce more of these supplementary and protective foods and to release more and more land for their production by increasing the yield of foodgrains on the lands on which they are cultivated. Dr. Mukerjee also holds the same opinion that the aim should be to counteract the present food deficiency and unbalance and to secure more protein from every unit of land. In this respect it is interesting to note what Mr. Afzal Hussain has remarked about increasing the food supply by developing proper cropping schemes. He has suggested tentative lines for redistribution of crops which may result in increasing the present supplies per 100 acres available for human consumption, of protein by 16 per cent, carbo-hydrate by 9 per cent, fat by 63 per cent, and calories by 3 per cent. The redistribution of crops he has suggested is shown in the table given below :[45]

* Excluding castor-seed and coconut.

† Represents potatoes, sweet potatoes, tapioca and banana.

Whether redistribution to the extent suggested by Mr. Hussain is practicable within the present framework of rural economy and social structure and with the existing resources of irrigation, manures and farm equipments, is very doubtful. But it is clear that there is tremendous scope for increasing food supply in the country—for everyone to have a balanced diet—by switching over emphasis in production from cereals to other vegetable and animal goods.

Migration or Immigration

When all the measures outlined above are found inadequate to relieve population pressure, it appears inevitable that the surplus population seek an outlet by migration or emigration. A more expedient solution may be found in some kind of internal redistribution of population. In view of the heavy pressure on land in certain provinces it is necessary that planned migration should take place from the heavily populated regions to the sparsely populated parts of the country. Generally speaking the U.P., Bihar and Orissa, Bengal and Madras have all over-stepped an equilibrium density, and it is the heavy and differential population pressure which explains emigration from these areas to the less thickly populated provinces. Amongst these Assam and Central Provinces may be said to be under-populated, although an optimum density may have been outstripped even in some under-populated provinces. Here large acres of waste-lands which are available for cultivation but not taken up and abandoned, exists, which can be brought under plough through measures of land reclamations, agricultural engineering and irrigation; and planned migration from the densely populated parts should be directed for agricultural colonization. New township should be developed in sparsely populated parts by providing all available facilities to the colonists.

Besides internal migration, overseas emigration is also an important factor in relieving population pressure.

There are such countries in the world as Brazil which has a population of hardly 12 persons per sq. mile; the U.S.A. a population of little more than 40 per sq. mile; Canada and Australia of as little as 2 or 3 per sq. mile; Argentina and other countries in Africa a little more. Whereas, on the other hand, India has an average density of 246 per sq. mile. Even recognising the force of climatic factors which would not suit Indian immigrants and settlers in lands like Canada, ample room is nevertheless available in countries more congenial to Indian conditions like Brazil, Central American or West Indian region, the Guinea coast of Africa and Zanzibar region. Given free opportunities of migration, the Indian peasant with his traditional skill and method of rice culture may introduce a new era of prosperity in these lands, as his dry crops like oilseeds and cotton, and dry cereals like jowar and bajra may prove a god-send to such sparsely populated regions as Sudan, Nigeria, Mozambique, Madagascar and Northern Australia.

But immigration of population on a large scale to other countries is not likely to help our problem, unless the world conscience is roused to a full appreciation of this problem, and International Migration is permitted. The Immigration Laws must therefore be revised by common consent. Unless a world-wide movement is adopted to redistribute by concerted action the entire population of the globe with a view to adjust man-power to the material resources in every corner of the earth, the population problem of the thickly peopled countries like China and India would be all but impossible to solve. The fate of these countries would be recurrent scourges of nature like war, pestilence, epidemics and famines, which may deplete their numbers by brute force or at least keep them in some check.

Conclusion

To sum up then, the problem of demographic pressure on land is not only one of provision of full employment to the rural people but is also essentially one of arriving at a balanced system of occupational distribution of population and full utilisation of natural resources together with the provision of well-balanced diet to the masses for an all-round growth and progress of the country. This all-important question can be tackled only by a well-planned development *pari passu* of industry and agriculture in such a way that the two supplement and complement each other, rather than the one ousting out the other. With the rapid economic advancement of the country, the poverty of the people will vanish and the standard of living will rise and there will be an expanded field for almost all occupations—transportation, trade, finance, public service, professional service and personal and domestic service—to absorb an increased number of the growing population.

LONDON BY THE SEA

Regency Brighton

By Major D. GRAHAM POLE

See Naples—and die. This famous tribute to the beauties of Naples is one that could never have been made of Brighton. The impact of Brighton, with its marvellous, invigorating air, is all the other way—see her and live!

It was a wonderful day for England when in the autumn of 1783 George, Prince of Wales, first descended upon Brighthelmston. Only a month before he had come of age. It is impossible not to see the finger of fate in this conjunction of events. For his real contribution to history—his and our heritage—is that he was to prove the most artistic Prince who ever succeeded to the Throne of England. More than that he was to create something unique in European art, the Pavilion at Brighton. One of his predecessors—Charles the First—was his equal in taste. But he never had the opportunities for its exertion which George when Prince of Wales was able to take so freely. Charles was poor, diffident, and beset by circumstances which gave him no peace. With George it was quite otherwise. He had time on his hands and where money was concerned he was in a strong position. Nearly thirty years were to pass between the date of his first visit to Brighton and the beginning of his Regency in 1811. During most of that time, after the Hanoverian fashion, he would be at loggerheads with the King his father and—as a consequence in those days—the great hope of the Opposition. It followed from this that it would often pay both King and Parliament to buy him off and settle his debts.

The Royal Pavilion, Brighton

Three years after his first visit to Brighton the Prince began the building of his fabulous Pavilion. It became an obsession which lasted till within three years of his death. (Suddenly he took himself off and never returned. What was the reason? Some say that like many an artist he had lost interest in his creation now that it was finally completed. Unkind contemporaries declare that he took a dislike to the place after finding the word 'Unpaid' scrawled across one of his beautiful mirrors.)

The building of the Pavilion nearly rivalled Solomon's Temple in the years which it took to come to perfection. In all it cost the Prince Regent about half a million pounds sterling—and twenty years after his death it was sold to the people of Brighton for the ridiculous sum of £50,000! This summer saw the centenary of Brighton's ownership and a wonderful exhibition of Regency furniture and costume has been staged in the Pavilion. The interior decoration of the State Rooms has been cleaned and restored to its original condition—wall paintings and chandeliers and beautiful spode lamps have returned from Buckingham Palace—and altogether to enter the Pavilion now is to step back into the day when the Prince himself presided. But the spirit of a place is not to be met in any collection of contemporary objects. At the Pavilion, upstairs and in an otherwise denuded room, it springs at you from the wall! Here is a painting by a modern artist and it is a satire in the grand manner. It is described as an 'Allegory: H.R.H. the Prince Regent awakening the Spirit of Brighton.' The artist was Rex Whistler who was killed in France soon after D-Day. Before he went to France he was stationed at Brighton and painted this picture on a wall in the house where he was billeted.

I have tried in vain to discover a photograph of this painting. Yet how convey an impression of its gaiety and exuberance? It parodies of course the Eros and Psyche legend. George, be-winged and trailing chiffon, has swooped down upon a sleeping nymph whose girdle is inscribed 'Brighthelmston'. The nymph sleeps with her hands clasped above her head. It is night and the Plough is over-head. Masted ships stand out to sea and a shrub to the left or a plant at the foot recall the Italian manner. The composition itself is as bold as Titian. It is in the detail that the humour lies. Thus George improbably wears his buckled shoe and kneels on crimson velvet. His left hand raises a conspiratorial finger. Funniest of all is the painting of the eye. The pupil is high-lighted, has slid right round into its corner, whence it seems to spill over in an evil sparkle! Impossible to convey the authority, the triumphant satire! (What a pity Rex Whistler was lost in the waste of war. But it is some comfort to feel how he must have exulted at being sent to Brighton.

The Prince Regent—as he is generally known although

the Regency lasted only for nine years—certainly 'awakened' Brighton. Until the eighteenth century she had had little history. Her inhabitants engaged in fishing and in resisting the encroachments of the sea. No mediaeval building survived—except the church of St. Nicholas—because in the sixteenth century the town had been raided and burned by the French. In the seventeenth century when history did catch up with her, it came in disguise. Charles the Second escaping after his defeat at Worcester, spent a night at Brighthelmston and sailed next day for France in a boat commanded by a local skipper. And at the opening of the eighteenth century, great storms had caused such distress that collections were taken up in churches throughout England to provide money for the building of wooden breakwaters. Very different would be the scene at the close of the century. Poverty-stricken Brighthelmston would have become Brighton, the most fashionable resort in Europe.

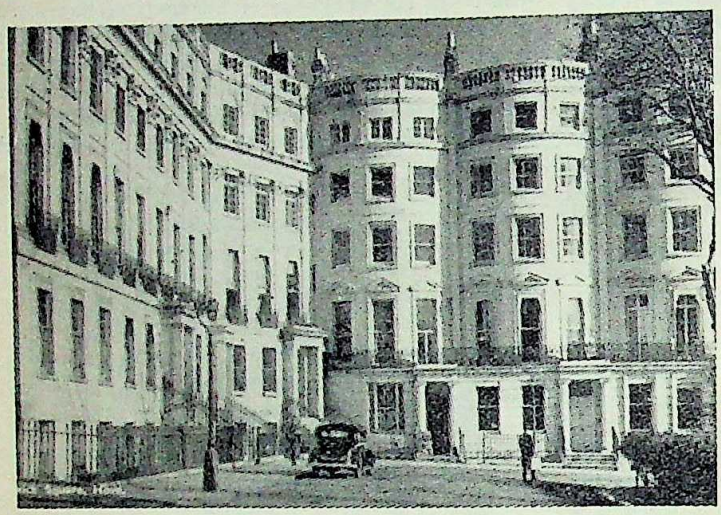
Brighton owes the beginning of her prosperity to a Doctor Russell who is not nearly so well remembered as he deserves to be. He was a native of Lewes, the county town of Sussex, and a Fellow of the Royal Society. In 1753, he published a book entitled *A Dissertation Concerning the Use of Sea Water in Diseases of the Glands.* Though nobody reads it now, this was an epoch-making book. It called attention *for the first time* to the health-giving nature of sea water. Even the drinking of it was recommended. Above all—in the light of after events—it recommended sea bathing. Thus he introduced the idea of the sea-side resort and the sea-side holiday.

At about the same time as he published his book, Doctor Russell discovered the existence of a 'chalybeate' spring in Brighthelmston. In an age of spas, this was a great advantage to the town. The doctor sent his patients there and himself built a house on the Steine—only the second one to be built there. This far-famed spot, soon to see the rise of the Pavilion and many attendant beautiful houses—was then a rough sea-swept common. (Steine is an ancient word for stone). Fishermen spread their nets out to dry and pigs scavenged around the boats.

Thirty years after the publication of Doctor Russell's book, the Prince arrived in Brighthelmston, as the guest of his uncle the Duke of Cumberland, who had rented a farm house to the north of the Steine. In the intervening years the virtues of sea-bathing had become generally accepted. (Without reference to times or seasons! People bathed before breakfast, in the dark of a November morning, if it was thought to be good for them). The Prince became a bather. He suffered from goitre, behind that high stock which he always wore, and perhaps he hoped that the sea-water would cure him. The bathing beaches of Brighton and the famous 'dippers'—attendants whose job it was to duck the visitors, few of whom could swim—have often been written about. But it is worth recording that the Prince's attendant was devoted to him. Once he went out after George (who could swim) and dragged him back by the *ear* to safety when he had rushed to come in! Years later, when the Prince was gravely ill, he tramped all the way to London to enquire after him.

Sea-bathing had been drawing the people to Brighton, but as yet no one seemed to have a value for the sea itself. There was no promenade, no carriage way along the front, and the first houses to be built at that end of the Steine had their backs to the sea! Visitors put up with rough accommodation in fishermen's cottages and, with regard to the general impression of the place, Doctor Johnson's growling comment was probably apt: he found it 'so truly desolate that if one had a mind to hang oneself for desperation on being obliged to live there, it would be difficult to find a tree on which to fasten the rope.'

Regency Square, Brighton



The building of the Pavilion was to burst on Brighton like a revelation. For forty-one years it would be the Prince's pre-occupation. During that time he would invite many different architects to Brighton, chase perfection endlessly in his experiments in interior decoration, encourage the fashion in landscape gardening which was later to give an added charm to the suburbs—to Lewes Crescent in Kemp Town and to Adelaide Crescent in Hove. Every contemporary architect of note would come to Brighton, or influence the building of the houses in Brighton.

To build the Marine Pavilion, as it was first styled, the Prince employed Henry Holland, the architect of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

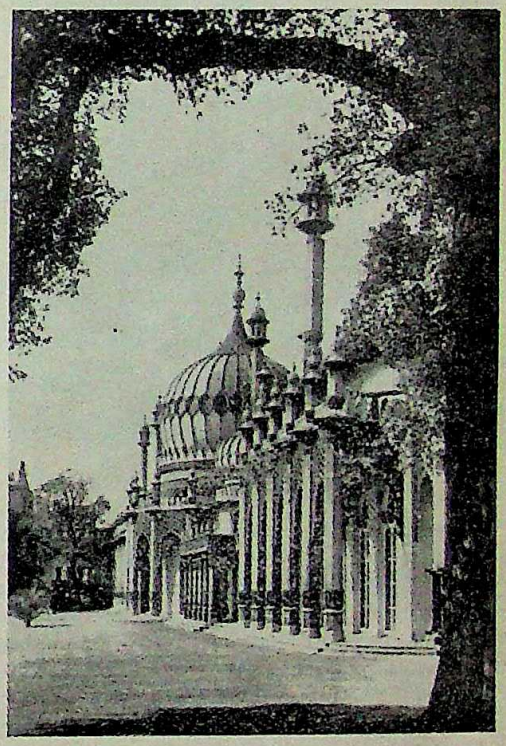
Drury Lane Theatre in London. It was a simple building in the prevailing classical mode, with a rotunda, bow windows and iron balconies. Later green-painted, tent-shaped, iron canopies were set above the balconies. This attractive idea of canopied balconies was to become a characteristic of Brighton. When twelve years later the Royal Crescent was built—the first houses to face the sea—it reproduced the bow windows and the canopied balconies. So did Bedford Square and Regency Square which closely followed. Indeed a canopy can have such charm that it was later developed and became a more important feature than the balcony itself which either did not exist or had been narrowed into insignificance. In Montpellier Villas, built long after the Regency and in 1845, the canopied bow windows give the houses an indescribable settled grace.

Brunswick Square, Hove

In 1802, Holland added new wings to the Pavilion. These were later to disappear, when the Music Room and Banqueting Room replaced them but the year marks a turning point in the history of the Pavilion and for quite another reason. The Prince received a gift of Chinese wall-paper which decided him to re-decorate the whole place in the Chinese fashion. For years there had been a vogue for Chinese art in England. It had led to the design of Chinese Chippendale furniture and, more entrancingly, to the erection of the Pagoda in Kew Gardens in London. But only at the Pavilion was the expression of these Chinese influences to attain such perfection that, in the words of Mr. Clifford Musgrave its historian, it remains 'the greatest monument of *chinoiserie* in the Western world.' The Prince Regent has often been criticised for his extravagance. He has been accused of fickleness because sometimes he changed a scheme of decoration as soon as it had been completed. But to quote Mr. Musgrave again: 'When one learns . . . how often these alterations were in the direction of greater subtlety of colour, from red to pink, or from blue to lilac, one realises how sensitive and faultless was the taste of the person directing the decorations.'

No sooner had Holland added new wings to the Pavilion than the Prince decided to build a Riding House and Stables. But instead of employing Holland again, who might have harmonized the neighbouring buildings, he commissioned an architect who built him his stables in Indian style. The main feature of the new building was its high and wonderful dome and which made the Pavilion inevitably look 'quite collapsed.' As a result, and not very surprisingly, it would not be many years before the Prince was employing a third architect—Nash this time, most famed of all Regency architects—to bring the appearance of the Pavilion into harmony with its stables.

Pavilion and South Gate, Brighton



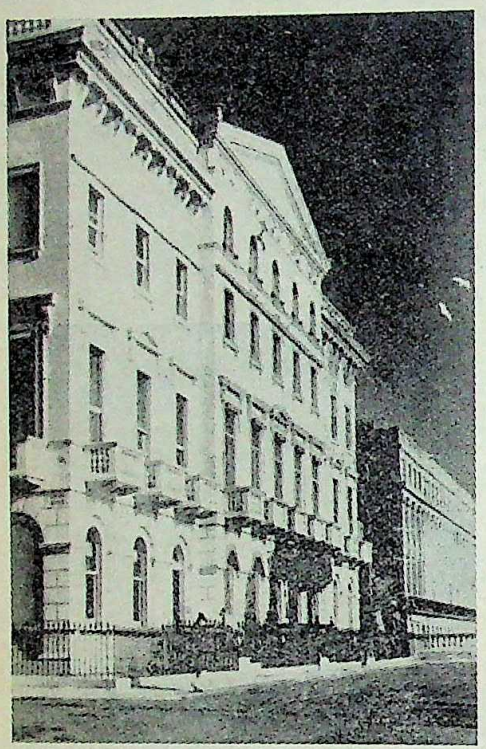
All this headlong plunging into architectural experiment is very typical of the Regency. Classical, Gothic, Chinese, Indian—the contemporary architect would use any style he felt appropriate. A very engaging personality whom the Prince consulted at this time was Humphry Repton. He was both architect and landscape gardener and had been employed in the latter capacity at a villa at Sezincote in Gloucestershire, which had also been built in the Indian style. The Prince asked him to produce plans for Pavilion in the Indian manner but finan-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

difficulties intervened and in the end the commission was given to Nash. However Repton was famous enough in his day and perhaps it is worth giving him a moment. (Readers of Jane Austen will remember that his name crops up in *Mansfield Park* when the 'improvements' at Sotherton are under discussion). The idea behind landscape gardening was to break away from the old formal arrangements of flat planted spaces and confining hedges. The garden was to be viewed as a whole and 'all nature was a garden.' In their eagerness to create these private landscapes the gardeners were often capable of the wildest schemes. Repton has been caricatured by a contemporary and this is supposed to be him speaking: 'Accord me your permission to wave the rod of enchantment over your grounds. The rocks shall be blown up, trees shall be cut down, the wilderness and all its goats shall vanish like mist . . . It was reserved for the exclusive genius of the present times, to invent the noble art of picturesque gardening, which has given, as it were, a new tint to the complexion of nature, and a new outline to the physiognomy of the universe!' What fun they had in the spacious days of the Regency!

In 1811, when he became Regent, the Prince appointed Nash to be his Surveyor-General. He, of course, was the architect of London's Carlton House Terrace, Regent Street and the terraces of Regent's Park. And in 1815, the year of Waterloo, he began work at Brighton. The outcome was the Pavilion as we know it today. Nash must have had extraordinary genius. After building a Banqueting Room and a Music Room at either end of the East Front, adding an Entrance Hall and Long Gallery to the West Front, with a Great Kitchen to the side—at the same time maintaining Holland's original Pavilion intact—he somehow managed to organize the whole of the exterior into its present beautifully balanced, satisfying, unified Indian whole. How proud the Prince must have been of him—and yet in his own time, and almost to our own, it was the habit to dismiss the Pavilion merely as a 'folly.' By 1821, the Pavilion was finally completed and the inhabitants of Brighton were allowed to come in and look round. What did they make of the Chinese interior, of the wall paintings in one of which Lady Conyngham, the last love of the Prince, is depicted as a Chinese bride? Did the older ones amongst them detect a likeness to the youthful Mrs. Fitzherbert, which some have thought was the secret of her attraction? In these notes I have not touched on the unhappy private life of the Prince Regent and his tragic marriage to Mrs. Fitzherbert. The facts are now generally known. Early in the present century the publication of the certificate established once and for all that the marriage took place on 21st December, 1785. (A marriage valid in the sight of God but not legal, since by the Royal Marriages Act—devised by George the Third—no marriage contracted by a member of the royal family could be valid without the King's consent. George would never have agreed to Mrs. Fitzherbert. She was a commoner but worst of all a Papist). Ten years after the marriage the Prince, in order to settle his debts which amounted to £460,000, agreed to marry the dismal Caroline of Brunswick. And within a year of that marriage he was drawing up his Will—since published—in which he referred to Mrs. Fitzherbert as 'my Maria, my Wife, my Life, my Soul' and directed that 'the picture of my beloved Wife, my Maria Fitzherbert, may be interred with me, suspended round my neck with a ribbon, as I used to wear it when I lived, and placed right upon my heart.' Lady Hertford and Lady Conyngham were to oust Mrs. Fitzherbert. Yet it is all inexplicable. For on his deathbed George the Fourth urged Wellington to make sure that nothing about his person would be disturbed. And when George had died, Wellington, stooping to see what it was that sparkled on his breast, saw that it was a miniature of Mrs. Fitzherbert.



The Royal Pavilion, Brighton

Anyway, Mrs. Fitzherbert is a character that cannot be passed by in considering the history of Brighton. She lived there most of her life and even after the Prince had broken with her. She helped to establish the Roman Catholic Church in Bristol Road—which is a very beautiful little church and possesses, aside from some excellent painting, two remarkable sculptured works. One is the monument to Mrs. Fitzherbert herself. She is depicted as a veiled kneeling figure and on her left hand her three wedding rings—she had been widowed twice before she married the Prince—are clearly shown. The other sculpture is in the baptistry and is a sculptured group of the Baptism of Christ. Both works are by Carew and the Baptism

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

is generally agreed to be his masterpiece. Carew, incidentally, is responsible for the best part of the Nelson monument in Trafalgar Square—the plaque depicting the death of Nelson.

Adelaide Crescent and Brunswick Terrace, Hove

No notes about Brighton would be complete without some comment on its three most famous ventures in house-building—Lewes Crescent, Brunswick Square and Brunswick Terrace, and Adelaide Crescent. Lewes Crescent, as the Kemp Town estate is generally known, begins in two terraces facing the sea—Arundel and Chichester Terrace—and from these terraces the wings of a crescent —Lewes Crescent—open out into a large square, Sussex Square. It is a perfectly lovely design. The wings of the crescent seem to be dancing back from the Sea. And in the midst of it is a piece of landscape gardening which has captured a bit of the downs. In this estate all the beauty is in the lay-out. Close to, the houses are splendid but uninteresting. The architects, Wilds and Busby, had a strange task. They designed the facades of the houses and the glorious lay-out. The insides of the houses were left to the choice of the prospective owner. The Kemp Town estate, in its hey-day, had many aristocratic tenants. They included the Duke and Duchess of Fife, King Edward VII, Queen Alexandra, the French King Louis Philippe, and the Sassoons (who added to its architectural riches their own private mausoleum).

The Kemp Town estate was begun in 1823. In the following year the same architects embarked on Brunswick Town (as it was first called following the precedent of Kemp Town). Brunswick Square is open at the south to the sea where the east side of the square is flanked by Brunswick Terrace. The Terrace is particularly attractive and shows the influence of Nash's Carlton House Terrace. As in that terrace the houses have a soldierly processional appearance. Brunswick Square was meant to be residential but the Terrace was for visitors. The most distinguished of these were Princess Lieven and the Austrian Chancellor, Prince Metternich.

Adelaide Crescent was begun in the reign of William the Fourth and the architect was Decimus Burton who designed the entrance to the park at Hyde Park Corner in London. The idea seems to have been similar to that of Lewes Crescent, but building was slow and hung fire. Only ten houses, on the east side of the square, were built by Burton and those on the west side are considered to be greatly inferior to his work. (It is fitting that Regency architecture should peter out here. Adelaide Crescent is well into Hove which always feels like a bourgeois suburb compared with cosmopolitan Brighton).

And here we must say good-bye to Brighton: A lovely Regency town, set so surprisingly by the sea, and which has given and continues to give health and pleasure to literally millions of people.

London, 29th September, 1950.

UNITED NATIONS CAMPAIGN FOR HEALTH

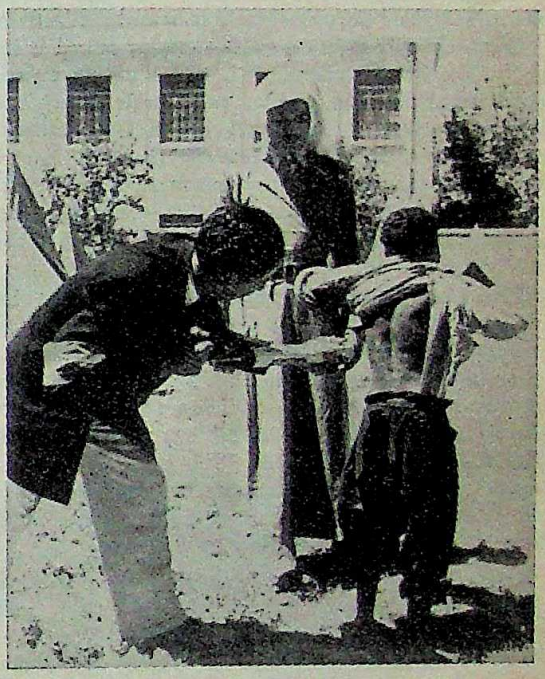
Digitized by Arya Samaj Foundation Chennai and eGangotri

By DAVID PERLMAN

I

Hub-deep in jungle muck, a bullock cart strains along a trail through India's Jaipur Hills. Perched in back, bouncing sorely against a drum of the insecticide DDT sits a young Canadian doctor. He is on his way to battle. The enemy: malaria. Its toll, all over the world: 300,000,000 casualties a year, 3,000,000 deaths.

Halfway around the globe, in Staten Island, part of New York City, a laboratory technician opens a cable from Geneva, Switzerland. The message is an order to invent a new weapon against an enemy that has scourged the world for centuries. The enemy: syphilis. Its toll: 50,000,000 cases a year, 2,000,000 deaths, 1,000,000 tainted babies.



A U.S. Air Force plane rests on a runway at Copenhagen, Denmark, its paint still dingy from the Berlin Air Lift. This time it has a new mission, flying vaccine supplies. The enemy: tuberculosis. Its toll: 50,000,000 cases a year, 5,000,000 deaths.

This is death on a fantastic scale, bigger than all the wars in history. This is an enemy to fight. Today the fight is on, waged by 67 countries which have banded together in one of the most startlingly successful projects born of the United Nations—The World Health Organization.

The World Health Organization—its members call it WHO—exists today because the men who built the United Nations knew that peace treaties, economic pacts, and cultural exchanges would mean little as long as four-fifths of the world's people were weakened by disease, a perpetual prey to exploitation. Out of this sort of reasoning came the compact, aggressive organization called WHO, with its headquarters at Geneva, Switzerland. It is compact because it cannot afford to spread itself too thin. WHO has a budget this year of only $7,500,000, of which about $2,000,000 comes from the United States, and the rest is prorated among the dues-paying member nations. To keep within this modest figure, it has set up a rigid system of priority projects, confining its major attacks to six fields: malaria, venereal disease, tuberculosis, maternal and child health, environmental sanitation, and nutrition.

Malaria is the greatest enemy of all and number one on the World Health Organization's priority list for action. Already, spectacular successes have been scored. Greece, for example, came out of the last war with nearly 2,000,000 cases of malaria a year among its population of 7,000,000. Whole villages were living on relief because the men, wasting from the disease, could not even trudge from their houses to their fields. Then the Greeks called for help. First came UNRRA—the United Nations Relief and Rehabilitation Administration. When it was disbanded at the end of 1946, WHO took over.

The experts conferred and swung into action. They decided that only complete eradication of the malaria-carrying mosquito would conquer the disease. They marshalled a staff: Dr. James M. Vine, 54, a lanky Australian veteran of epidemic fighting in Germany, was chief of the mission. Colonel Daniel E. Wright, 66, one of the world's greatest malaria engineers, was drafted from the U.S. Public Health Service as chief tactician. Vine and Wright drafted 11 doctors, 49 Greek medical officers, and 237 foremen of spraying teams. Each team included a half-dozen local Greek laborers, armed with portable sprayers. Barrel after barrel of DDT power was shipped into Greece—barrels of sure death for the anopheles mosquito.

Every individual in the Arab refugee camps in the Middle East has his clothes disinfected with the insecticide DDT

With Colonel Wright plotting the campaign on field maps, the spraying teams deployed over every malarial Greek village. They worked rapidly. In each village they moved from house to house, spraying every wall, every corner, every ceiling. In a single year they covered 5,700 villages with a population of 3,500,000 people. Teams worked far into northern Greece, where the civil war against the Communist guerrillas was raging. In Crete a spraying team was literally kidnapped for two weeks by a band of armed Communist guerrillas who came out of the mountains to demand DDT for their own malaria-ridden territory. Later, when Greek Government forces reoccupied the rebel area, because of the guerrillas' use of the insecticide, the troops found healthy villages and a valley ready for the harvest.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Attacking mosquitoes in village homes was not enough for Colonel Wright and his forces. To break the deadly cycle of disease it is necessary to get at the breeding places too. Three Greek Royal Air Force pilots were sent to the United States to learn crop-dusting techniques, and when they returned they taught a whole squadron. Swooping down to within 20 feet of the water level in the swamps, the planes frequently sprayed behind Communist territory, but never a shot was fired at the aircraft with their Red Cross insignia. On more than one occasion WHO planes interrupted pitched battles on the ground to do their job. For a long time, 5,000 Greeks died of malaria each year; in the past 12 months there has not been a single death. And what is more, the incomes of the Greek farmers in formerly malarial areas have doubled because of their increased productivity.

Even more important than this sweeping record is the fact that the Greek Government is continuing its malaria program by itself now, without any outside help. This is the whole idea of the World Health Organization—gather the best experts in the world, the most modern equipment, the newest supplies, and bring them to bear on a single sore spot. Then, while the campaign goes on, train local experts and show the local population how to do the job itself.

The World Health Organization's second most important problem is the white plague, tuberculosis. Here is another striking example of international action. At present in Europe, where tuberculosis takes 500,000 lives a year, more than 50,000,000 children are being tested for tuberculosis and those who are not immune—nearly 20,000,000—are being vaccinated. This is the largest mass immunization campaign ever undertaken in history, and it will grow even larger as the campaign spreads through Africa, the Near East, and the Orient.

It was started by the Scandinavian Red Cross societies soon after the last war, and quickly grew to such scope that the United Nations was called in. The United Nations International Children's Emergency Fund provides the vaccine and other supplies—as it does for many of the World Health Organization's projects; WHO scientists set up the vaccine standards and supervise the drive; Scandinavian doctors and nurses do the testing and inoculating.

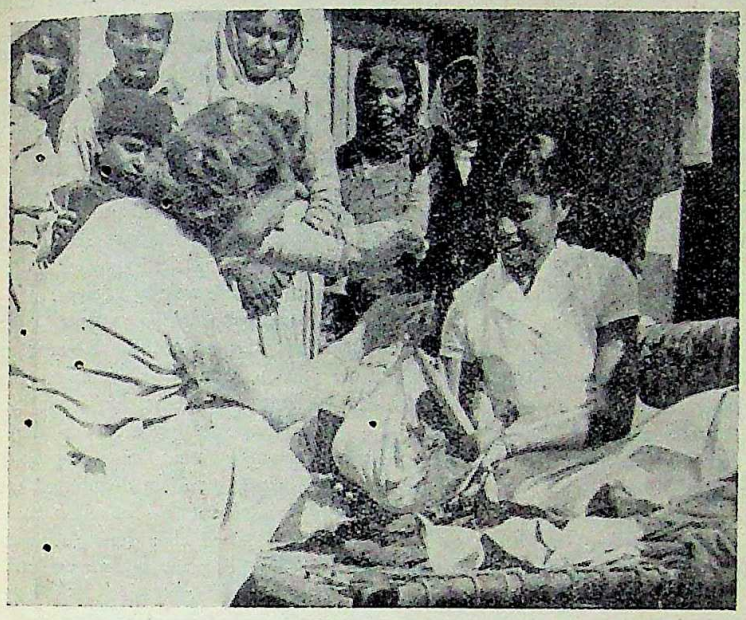
A typical operation in the campaign starts in Copenhagen, Denmark. Early in the morning, a white-coated worker in the Danish State Serum Institute packs cases of BCG vaccine in dry ice and sends them off to Copenhagen Airport. On the runway stands a U.S. Air Force C-47, one of the flying work horses that performed so valiantly during the Berlin Air Lift, loaned to the United Nations by the U.S. Air Force in Europe. Speed is essential, for the vaccine must be absolutely fresh to provide effective immunization. In a few hours, the plane lands at Warsaw Airport, unloads one case, and takes off again for Prague, Vienna, Belgrade, and Athens.

At the Warsaw Airport, a jeep picks up the case of vaccine and speeds off to the town of Laskarzew, in central Poland. There, a few days before, a BCG team has set up headquarters. (BCG is a vaccine of "tamed" living bacilli designed to prevent but not to cure tuberculosis through stimulating the body to build its own defenses). They have injected every child in town with tuberculin toxin. Those who have already been infected with tubercle bacilli, and who get a reaction from the toxin, do not need to be vaccinated. They are either immune or are already suffering from tuberculosis. But the others, more than half the total, need the shot of BCG to immunize them.

When the vaccine jeep arrives, the town declares a holiday. School is out for the day, and all the children are lined up in the village square. Doctors and nurses have their needles ready at a long table. The vaccine is unpacked, and the lines of children move quickly. By the end of the day, the task is done. The BCG team packs away its equipment, and that night there is a big party in the town hall. Next morning, the team moves on to another town.

In Poland, nearly 5,000,000 children already have been tested : 2,000,000 have been vaccinated. All over Europe —18,100,000 tests to date, 8,400,000 vaccinations, and the campaign continues. At least 80 per cent of those 8,400,000 youngsters will never suffer from tuberculosis.

In the World Health Organization's files at Geneva are the records of the strange case of a ship, a British cargo steamer, which came under the watchful eye of a unique WHO project, half broadcasting network and half detective agency, the Epidemiological Information Service. With headquarters at Geneva and its main substation at Singapore, the Information Service covers the entire globe as it ferrets out the five pestilential diseases covered by international quarantine regulations—typhus, plague, cholera, small-pox, and yellow fever, known as the "treaty diseases." WHO agents keep their watch over ships, ports, planes, and even the columns of Moslem pilgrims winding their way across the Arab states to Mecca.



Not long ago the British steamer arrived in Singapore from Rangoon with a cargo of rice in gunny sacks. Suddenly, a seaman in the crew developed a high fever; the glands in his groin swelled alarmingly. The Singapore Port Health Officer came aboard, and promptly ordered the ship's captain to make steam for the nearest quarantine anchorage. Bombs of deadly cyanide gas were used to fumigate the holds. At the hospital a microscopic smear test from the swollen glands of the sick man showed Pasteurella pestis—the plague germ, the Black Death.

Over the Singapore short-wave radio transmitter flashed the World Health Organization's message in its epidemiological code, broadcasting to all ports and ships within receiving distance. The same message was cabled to Geneva headquarters and to WHO's regional offices in Washington, D.C., and Alexandria, Egypt: "British freighter arrived from Rangoon with plague among crew. Fumigation carried out as necessary. Definite information not

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

available." Later that night, 10 powerful short-wave transmitters in Geneva were broadcasting the news to port health administrations all over the world. Simultaneously,

In India, a World Health Organisation pediatrics nurse weighs a four-weeks-old baby with the help of a student from the Delhi College of Nursing

WHO's network of 15 local stations from Shanghai to Madagascar beamed the message to their own regions. Ships and planes were re-routed away from the danger spots. That was WHO's radio service in action, saving millions of dollars for shippers around the world, as well as uncounted lives, by prompt information on outbreaks of quarantinable diseases.

But the case of the freighter was not yet finished. In the World Health Organization's Singapore office the experts were trying to spot the source of the disease. Rangoon could not find any plague-carrying rats in the warehouse or on the dock. Then the Epidemiological Information Chief for WHO in Singapore suggested a government entomologist look in the ship's cargo. The entomologist found dead fleas in the rice sacks. Laboratory examination revealed they were rat fleas—the insects that live on rats, carry the plague germ, and by biting humans spread the disease. The rice had come down from a plague-infested area in the interior of Burma, with fleas enmeshed in the sacking. Quarantine barriers could now be erected at the source, and Rangoon and Singapore cleared for normal port traffic.

Americans have been very active in combating venereal disease. Hundreds of American communities have embarked on their own venereal disease control projects, and cities like San Francisco are pioneering in concerted drives by psychiatrists, public health authorities, and doctors against syphilis and gonorrhea. Dr. John Cutler, on loan from the U.S. Public Health Service and now a World Health Organization venereal disease team leader in India, is working with an American public health nurse and Dr. Johannes Kvittingen, a Norwegian serologist to teach Indian doctors the simplest methods of diagnosis, penicillin treatment, and preventive action. Dr. Cutler soon realized that in India there were not enough highly skilled technicians to go around in the mobile diagnostic laboratories he sent to tour the countryside of Simla. Instead of taking the time to train the technicians, he decided to look for a method of diagnosis that unskilled workers could use. So he wrote to WHO in Geneva : WHO cabled the U.S. Public Health Service's

Children in a Shanghai tuberculosis clinic line up for tuberculin testing prior to D.C.G. inoculation for immunization to tuberculosis

Venereal Disease Research Laboratory in New York, and shortly thereafter a simplified method of slide analysis was forwarded to be used by semi-skilled Indian

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

technicians in the battle against endemic syphilis.

The World Health Organization's big venereal disease project this year will be a demonstration in international control located in Rotterdam, where for years the problem of infection spread by seamen has taxed the ingenuity of five nations. Rotterdam is not merely an international port; it is the center for tremendously heavy barge traffic along the Rhine River. A German barge sailor can pick up syphilis in Basel, Switzerland, and pass it on to the water fronts of Strasbourg, Antwerp, and Rotterdam, from where it can be carried across every ocean in the world.

The World Health Organization demonstration clinic in Rotterdam will attack every problem of venereal disease control at once. They will take that German sailor, for instance, and give him his first shot of procaine penicillin. Then they will issue him a treatment booklet, printed in Dutch, German, and French, with the date and type of his shot entered. Trained public health workers will interview him to find out who infected him, and whom he himself may have infected, and persuade them to report locally for treatment. When his barge heads up the Rhine, the sailor will carry his treatment booklet with him, and inside its front cover will be a list of other clinics in every Rhine River port where he can report for free treatment.

II

In China, the disease fighters of the United Nations are represented by a singularly brave and able group of men and women.

The World Health Organization's problems in China have been extremely complicated. Its workers have dealt with a provincial minister of health one day, and the next day he had been deposed. The Communists themselves welcome WHO one day, obstruct it the next. Health services are disorganized and supplies are scarce.

One of the most competent World Health Organization workers in China is Dr. Leo Eloesser, of San Francisco, in the Pacific Coast State of California, one of America's most famous chest surgeons and a former professor at Stanford University Medical School. In China, he has plodded many miles on foot, his medical equipment heaped in a cart, while his mobile laboratory moves to escape bombings. After a lifetime in the elaborately equipped surgical wards of the best hospitals in the United States, Dr. Eloesser has shown Chinese blacksmiths how to forge surgical tools out of old rifle barrels. And instead of trying to teach surgery, he is teaching field sanitation and elementary preventive medicine. Not long ago Dr. Eloesser started a school of medical assistants at a hospital in a mountain village in eastern Shansi Province. The hospital was so isolated high in north China's loess hills that its ambulance service consisted only of four sturdy peasants, who carried the patients in litters up the mountain from the valley communities below. But there were 200 beds, and a class of willing students.

Dr. Eloesser told the students :

"Carrying out health measures is simple. You need not have studied medicine for six years in order to be able to kill lice, to dig a latrine, to boil y drinking water, to inject a dose of typhoid vaccine recognize a hookworm egg; not to spit on the s nor cough in your babies' faces, and also to te others to do or not to do these things. These thi are simple and very, very useful."

Another American medical worker in China is R Ingram, a World Health Organization public health n who rides the old silk caravan routes by truck or ca back, far out in the Gobi Desert, moving from one pro cial hospital to another, organizing nurses' training, ting order into the chaos of Chinese hospital admi tration. A case of small-pox broke out in one reg which Miss Ingram visited and she taught the stud nurses about vaccination campaigns. She suggested t themselves plan a campaign for the nearby villages.

The students first approached the village el showed them how the vaccination needles worked, converted them to the idea. Then they canvassed e house, exhorting the villagers to come for inoculati On vaccination day, the villagers appeared in dro The students set up an assembly line. One group hel the people bare their left arms; another disinfected e arm with alcohol; a third placed drops of virus on cleansed spots; a fourth scratched the arms with ster needles. Finally, the rest of the students lectured on control, demonstrated how to use a fly swatter, and g each vaccinated villager the privilege of peering thro a microscope at a fly's hind leg. In a few days, nursing students had given more than 2,500 inoculati in 10 villages. There was no epidemic and only t new cases of small-pox occurred.

From China to New York, the World Health Organ zation is primarily an operational organization. T stories from the field, of course, show only part of WHO activities. They do not tell about the WHO fellowsh program, which has paid expenses for more than 6 doctors from 32 nations to study latest developments their specialties in the countries where the greate advances have taken place. Nor do they tell of the nev ending succession of international conferences where e perts gather to unify the world's pharmacopoeias, to up international standards for serums and vaccines. N do they tell of the research and the expert consulta working in maternal and child health, nutrition, and s tary engineering around the globe.

And yet, though its mission is above politics, World Health Organization has not entirely escaped vexing political problems of a split world that wrack United Nations itself. When the World Health Organ tion runs into the Russian problem, the situation becom difficult. The Soviets joined WHO enthusiastically at very beginning, and it was the Russians, in 1948, proposed admission of the United States to the organi tion. All that is changed now. In February 1949, cable to WHO Director-General Brock Chisholm, Soviet Union announced it was withdrawing from mem ship. Byelorussia and the Ukraine followed suit, Bulgaria. Dr. Chisholm, an able Canadian public he

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

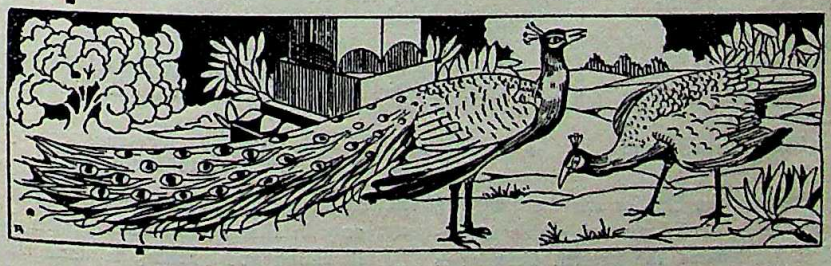
Digitized by Arya Samaj Foundation Chennai and eGangotri

expert and a noted psychiatrist, asked the Russians to reconsider and suggested he go to Moscow to talk things over. He has never had a reply.

Even before their withdrawal, the Russians had been attacking the World Health Organization for some time, complaining it was not giving enough attention to the eastern European countries, that its "swollen administrative machinery" was costing the member nations too much money, and that the administration of WHO was overloaded with representatives of the western nations.

The facts are these: The eastern European nations have received more from the World Health Organization in the form of fellowships, demonstration teams, and consultants, than any other group of countries in the world. Of WHO's budget for 1950, less than one-sixth goes for administration; all the rest is operational. Of the 500 men and women on WHO's staff, only 150 are administrative, the rest are operational. Time and again WHO has asked for Soviet scientists to serve on demonstration teams, or to work on planning projects at headquarters; the Russians have ignored the requests. Dr. Chisholm has kept a post open for a Russian as deputy-general for two years; it has never been filled.

Despite these irritations, the World Health Organization is pushing ahead with new projects in the interests of human welfare on both sides of the Iron Curtain. Under WHO auspices an international training center in anesthesiology will soon be established in Prague, where doctors come from all over Europe to learn the newest techniques. The World Health Organization is sponsoring an international training center in virus research in Budapest, and similar training centers in biochemistry and venereal disease in Warsaw. Czechoslovakia, Polaud, and Yugoslavia are getting WHO experts to help them rebuild the penicillin plants that were given them by UNRRA and that are now run-down.



Another important WHO project to spread medical knowledge across national borders is the creation of an international medical library at Charles University in Prague. The World Health Organization is spending a substantial sum to add subscriptions to 200 scientific periodicals, and to provide microfilming equipment. Because the library is in Czechoslovakia, it is expected that the Russians will send their medical publications, which are almost impossible to obtain in the West. Then, under WHO auspices, the library can microfilm the journals and ship copies to anyone interested, anywhere in the world. The result: an all-embracing exchange center for medical information—the first of its kind in history.

There is enthusiastic ferment today in the League of Nations building in Geneva, where the World Health Organization has its headquarters. The organization has succeeded in its limited campaigns already; now it is looking forward to vast new projects that will revolutionize the world economically and socially. Basing its plans on President Truman's Point Four program of technical co-operation with underdeveloped areas, WHO hopes to have extra money to spend this year beyond its regular budget.

Part of this money will be used to finance work in three new "Health Demonstration Areas," located probably in Asia, the Middle East, and South and Central America. In these areas the current idea of individual demonstration teams for specific diseases will be changed. Instead, large-scale teams will launch simultaneous attacks on the problems of disease eradication, nutrition, public health administration, sanitary engineering, health-education, nursing, veterinary science, entomology, and mental health. Doctors and scientists from surrounding countries will pour into the areas to work with the WHO teams, learning for themselves how to set up a combined medical operation that will assure an abundant life and contribute to the health and economic progress of the world.

Finally, the World Health Organization has a long-range plan for joint action with the United Nations Food and Agricultural Organization in a demonstration that will cover 10,000,000 acres and cost $10,000,000 over a five-year period. The doctors, plague fighters, and sanitary engineers will work with food-production experts for at least five years to prove that the pessimists are wrong when they say the world cannot possibly grow enough food to feed its expanding population. The experts of the two United Nations agencies will simultaneously wipe out preventable disease and implant the latest methods of scientific farming. They hope to break the age-old vicious circle that has kept millions of human beings in bondage—the circle that runs from disease to untilled land to malnutrition to disease, and from there to hopelessness and exploitation.

THE SCILLY ISLES

Digitized by Arya Samaj Foundation Chennai and eGangotri

By W. H. OWENS

Among the most enchanting little islands round the shores of Britain are the Scillies, lying in the Atlantic some thirty miles (48 kilometres) off the Cornish mainland. Here is a semi-tropical paradise, where flowers bloom the whole year round, and various kinds of exotic trees and plants thrive by the open sea beaches.

Islanders picking daffodils on a thickly-covered slope. Port Hellick can be seen in the background

Influenced by the Atlantic Gulf Stream, these islands enjoy much more sunshine than the rest of Britain. They are most colourful during the winter and early spring, when every available patch of ground is massed with yellow daffodils and the "scilly white" narcissi, making lively contrast against the deep blue of sea and sky.

Altogether there are nearly two hundred separate islands in the Scilly group, but most of them are merely gorse-clad rocks rising in curious shapes from the sea and haunted by seals and wild birds. Only five of the islands are inhabited today; the largest of them, St. Mary's is less than three miles long and about a mile and a half wide.

Tradition has it that the Scillies are the surviving fragments of the sunken land of Lyonesse, which in ancient times stretched far beyond the present boundaries of Cornwall and became the subject of innumerable legends. During the Middle Ages some Benedictine monks settled on Tresco, the second largest island, and built an important abbey there. But after the Dissolution of Monasteries in the 16th century, the whole archipelago became Crown property and was leased by the English monarchs to various families.

Nowadays the Scillies are famous for their flower-growing industry. In peacetime most of the 1,800 islanders are hard at work in fields that slope down to the sea's edge gathering as many as a million and a half blooms every day.

While the daffodil harvest lasts, the islands' steamer sails several times a week from St. Mary's harbour, laden from deck to hold with tons of freshly-picked blooms. At Penzance on the mainland, the flower-boxes are transferred to waiting express trains —"The Flower Specials"—which convey them rapidly to the markets of distant towns and cities. The success of the islands' industry is due largely to the fact that the Scilly climate enables growers to produce early flowers for the towns well in advance of any other district not only in Britain, but in Northern Europe generally.

The packing of daffodils in boxes for transport by boat from the Scilly Isles to Penzance

Bunching and packing is done chiefly by the wives and daughters of the growers in long sheds adjoining the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

fields. These women can bunch some thousands of flowers in an hour, yet their handling is so gentle that rarely is a single bloom damaged. A fine sense of colour is required too, because even flowers of the same species are not always of the same shade. Any bloom

Flower-boxes being unloaded from a boat at the quayside at Penzance, for transport to waiting express trains

which does not match its fellows exactly is cast aside, as are the ones showing signs of early fading.

Flowers, and flowers alone, have made the inhabitants of the Scillies one of the most prosperous and contented little communities in the world. Yet the industry is not much more than seventy years old, and it had quite romantic beginnings.

Nobody thought of cultivating flowers on a commercial scale until about 1870, when Augustus Smith, Lord of Tresco Island, sent a few blooms from his own grounds to the London market. They were packed in an old hat-box. Buyers were astonished to see spring flowers in midwinter, and this first small consignment gained such a good price that an immediate demand was made for more. From that day neglected fields were ploughed up, the cultivation of flowers became a serious business and the industry has never looked back.

St. Mary's, apart from its extensive flower farms, has a wonderfully varied coastline with bays and coves of white crystal sand between picturesque headlands that jut far out into the Atlantic. Hugh Town, on the western side, might be termed the metropolis of the Scillies. For here are shops, hotels, banks, and growers' offices, all centred round the quaint little harbour. Overlooking this is the old Star Castle, built in the year 1593 to prevent the islands being used as a base by Spain, then at war with England. This mansion fortress was also the last Royalist stronghold to surrender during the English Civil War.

Among the remarkable sights in the Scilly Isles are the Abbey Gardens on Tresco, separated from St. Mary's by about two miles of water. Set upon rocky terraces that rise steeply from the seashore, these gardens contain what is undoubtedly the finest collection of sub-tropical trees and plants in the United Kingdom, all of them growing in the open air.

Specimens have been gathered here from many parts of the world. They include such varieties as the Mexican Yucca, the Indian Fan Palm, the Burmese Honeysuckle and the Chilean Peuya. There are also Himalayan ginger trees, bananas and citrons, together with a splendid group of Lebanon Cedars, all planted by a former lord of the manor of Tresco.

An air view of St. Mary's, the largest island in the Scilly Isles

Beyond Tresco lies St. Martin's Island, whose tiny population of 140 souls, is divided into three "towns"—Higher Town, Lower Town and Middle Town. The remaining inhabited islands are St. Agnes and Bryher, the last named containing the loveliest rock and cliff scenery of them all. The natural colourings of the rocks and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

sands, and the shallow blue waters in the long, curving bays and deep inlets, produce some memorable pictures in clear, sunny weather.

Wherever you wander in the Scilly Isles you find flowers; they grow everywhere, not only in the trimly-hedged fields, but even along the rocky seashores near the edge of the Atlantic breakers. In the outer isla many of the rocky headlands are covered with the pink sea-thrift and delicate blue sea-thistle. The ench ing Scillies have been truly called Britain's "Isles Flowers."

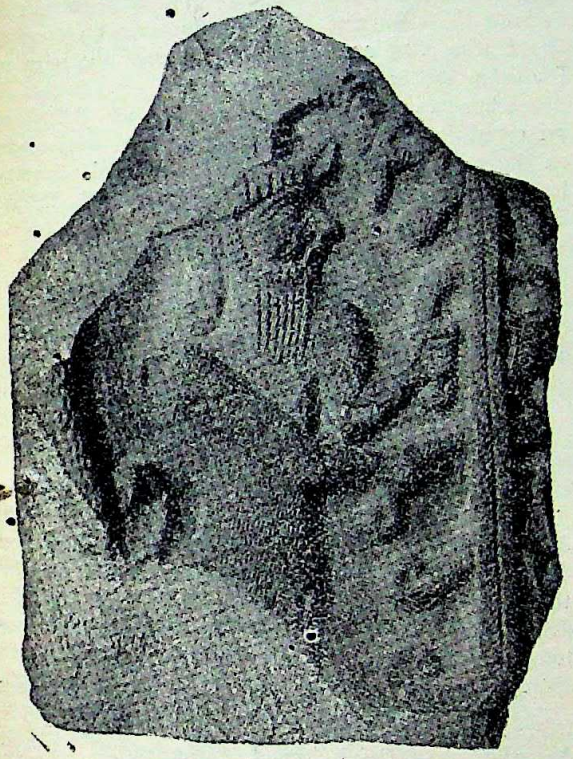
ANCIENT INDIA AND THE NEAR EAST

By Dr. TAMONASH CHANDRA DAS GUPTA, M.A., PH.D.
Calcutta University

Millenniums ago, in the almost forgotten period of history, certain races, tribes and peoples migrated to, inhabited, conquered or otherwise established themselves in the Near East and thereby implanted t peculiar culture in this part of Asia. They were, name a few, the Egyptians, the Cretans, Aegeans, the Greeks, the Babylonians, the Assyri the Chaldaeans, the Phrygians, the Hittites, Mitannis, the Sumerians, the Medes, the Persians the Indo-Aryans—among many others. All t peoples belonged either to the Semetic or to Aryan branch of the big family of the human r commonly known as the Caucasians. The nomenclat in regard to these divisions is now used more prope in linguistic than in ethnic sense which admit of o three types in classifications, and the Near East peoples belonged, at least, to two of them. These th types or divisions are named the Mediterranean, Nordic and the Alpine, and the peoples of Near East mostly belonged to the former two, wit certain admixture in blood which was but natu under obvious circumstances of social and politi influences.

Bas-relief of Cyrus the Great

Geographically, the boundaries of the Near Ea including the Middle East (South-West Asia) exte up to the river Indus of India to its east and Egy and the Mediterranean Sea to its west. The Casp Sea, Caucasus, the Elburz and the Hindukush mou tains form its northern boundary while the Arabi Sea, the Red Sea and with them the great Indi Ocean remain as its boundary to the south. In s of this boundary, Egypt, roughly speaking, though African land, joined hands with the Near East closely that for all practical purposes the limits of Near East are not complete without Egypt.



Ancient India had its eastern boundary first up the river Indus and then up to the rivers Gang and the Jamuna while the western boundary of t sub-continent of south-western Asia of which Ind once formed a part was bounded culturally by t river Nile, thus taking within it a fair slice of Afric India of those far-off days being a part and parcel this vast region, the river Indus and the river Nile we the two rivers in the two extremes of east and we of this land. The most important rivers in the interi of this region were the Tigris and the Euphrates.

The period of time to which the early history o the races mentioned herein refers belonged to the Ston

Digitized by Arya Samaj Foundation Chennai and eGangotri

the Bronze and the Copper Ages, reaching up to the beginning of the Iron Age. Thus, the interesting episodes concerning them and dealt with here all belong to a period long before the birth of Christ. The case of the ancient Egyptians stands first in the list of nations and peoples so far as time-element is concerned, as we find the dawn of civilization first perceptible in Egypt, and then the cases of the Sumerians, the Babylonians, the Hittites, the Mitannians and others may be mentioned.

Bas-relief representing a deity (Susa)

Racially speaking, the nations that took prominent parts in the drama and built up powerful kingdoms or empires in the Near East were resolvable into two important branches of the Caucasians, *viz.*, the Semitic and the Aryan (Indo-Aryan, Indo-Iranian and the Indo-European). In fact, the early history of the Near East is the history of the conflict between the earlier Semitics and the later Aryans. Of the former the strongest champion was Egypt and of the latter the strongest power was Persia.

Though the Semitic (or Hamitic?) Egyptians were foremost to establish their suzerainty in the Near East, the Aryan Sumerians of Babylonia, who ruled there after the Semitics, were the next to be noted along with the Aryan (?) Hittites of Anatolia.

"Who were these Hittites" is even now a problem. Some scholars think that they were at least in part 'Mongols' while some consider them as Aryans (Kretselvmer). But Hall expressed his doubt as regards both these theories and considered the Hittites as forefathers of the present Armenians and closely connected with the Phrygians (of Thrace), the Greeks and the Slavs, at least in language. The Hittites were also Anatolians (Caucasians) and mixed up with the Mitannians (an Aryan race) by marriage ties and adoption of Mitannian names.

Bas-relief representing war-captains (Susa)

"From the Anatolian plateau they might look down upon the distant monarchies of Egypt and Babylonia, slumbering in peaceful prosperity provided by the Nile or the Euphrates. With these two peoples, though an occasional bid for empire led at different times to conflict, ended at last by the establishment of diplomatic relations, the Hittites maintained effectively a triangular balance of power in Western Asia for more than a thousand years."—J. Garstang: *The Hittites, Vestiges of a Vanished Empire.*

This scholar also opined that

"From before the first dynasty of Babylon till the fall of Troy (from 2600 B.C. at least until 1200 B.C.) the Hittites remained the bulwark of Europe in Asia."

The Anatolian Hittites lived beyond the Taurus range and never the powerful armies of Egypt and Babylon could penetrate this area known as the Khata-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

land. In fact, the Hittites stemmed in the tide of Semitic invasion of culture and conquest and maintained on the whole their less-developed culture with vengeance.

"The Semitic population stopped at the foothills, just as it does now, the boundary between Arabic and Turkish speech today is the ancient boundary between Semite and Hittite."—Hall : *Ancient History of the Near East.*

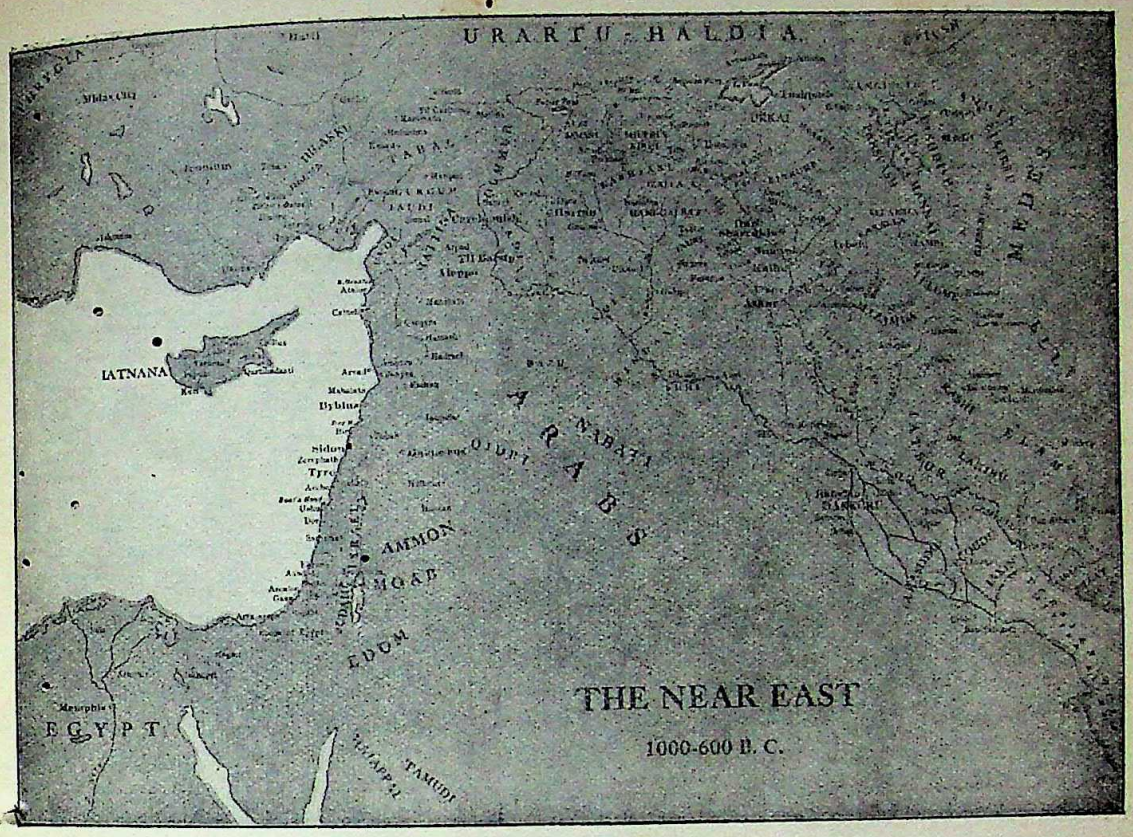
A stele showing the victory of the Sumero-Akkadian prince Naram-Sin (C. 2800 B.C.) against his foes (Elamites?)

At one time the Hittite Empire extended from the Aegaean Sea right up to the Persian Gulf, so powerful they had become, thus keeping in check even the powerful Egyptian kings, and making the Amorite kings of Syria their vassals. Occasionally, however, there also existed friendship between Egypt and Khatti through peace-treaties and marriages. Thus Rameses II (C. 1266 B.C.) of Egypt married the Hittite princess Pudukhipa (Egypt-Ueret-maait-Neferu-Ra) who was the daughter of the Hittite king, Khattusil.

Ramesis II and Khattusil, after prolonged warfare came to a certain understanding and cemented the friendship by a royal marriage. Babylonia had the sympathy of both at the time due to the incursions of Babylonia's rough neighbour, Assyria. Assyria, though afraid of the Khatti kingdom, was often bold enough to create havoc in Babylonia due to its decadence and after the death of Khattusil even attacked the Khatti kingdom which Assyria eventually conquered. Perhaps the Assyrian king Shalmaneser I conquered the Hittite kingdom of Khatti during the reign of Dudhalia, son of Khattusil.

Ashur-nasir-pal's inscriptions (884-859 B.C.), preserved in the British Museum, throws much light on the strong military power of Assyria and the ruthless conduct of its ruler Ashur-nasir-pal II (884-859 B.C.).

"His usual procedure after the capture of a hostile city was to burn it and then to mutilate all the grown men-prisoners by cutting off their hands and ears and putting out their eyes; after which they were piled up, in a great heap to perish by torture from sun, flies, their wound, and suffocation; the children, both boys and girls, were also burnt alive at the stake, and the chief was carried off to Assyria to be flayed alive for the king's delectation."—Hall : *Ancient History of the Near East,* p. 445.



With the death of Ashurbanipal in 626 B.C. Assyria's star of fortune set, and the Scythian invasion dealt it the first blow. Babylonians revolted and finally the Medes crushed the Assyrians for ever. With the defeat of the Assyrians, their capital city Nineveh was totally destroyed.

The Scythians included among themselves various tribes, such as the Mannai and the Kimmerians. According to a Greek legend, Ashurbanipal (named Sardanapallos by the Greeks) perished in flames.

The first attack of the Medes on Assyria was made by Phraortes in about 634 B.C. which was repulsed. The next attack was made by Kyaxares the Mede in about 630 B.C., and Nineveh, her later capital (the earlier capital of Assyria being Ashur or Assur, modern Kala 'at Sherkat') was beseiged. This capital city was temporarily saved by Madyes the Scythian leader according to Herodotus. But these very Scythians under Madyes, barbarians as they were, swarmed in large numbers later on, all over Asia Minor, Babylonia, Assyria and Syria and ultimately brought about the ruin of Assyria. According to Strabo, Madyes himself was a Kimmerian (a tribe of the Scythians). Herodotus tells us, Madyes was defeated and killed by Kyaxares the Medes. The Median king Uvakshatra (Kyaxares) and the Babylonian king Nabopalassar (Nabu-pal-Usur) combined to take Nineveh after a severe seige in 612 B.C. The whole city was then

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

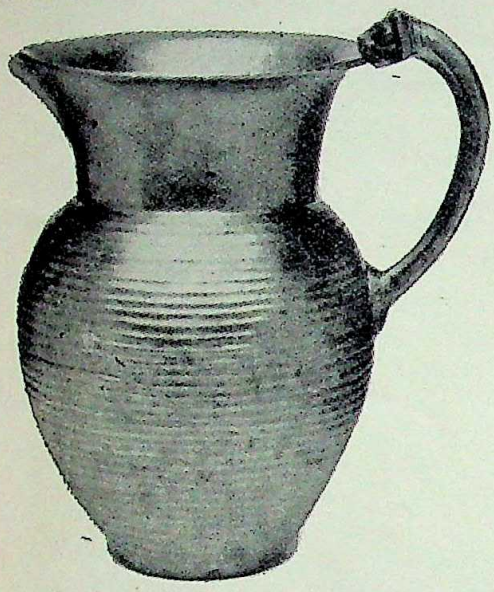
Digitized by Arya Samaj Foundation Chennai and eGangotri

destroyed and its king killed with all his family members and retinue.

Previous to the downfall of Assyria, Babylonia, shorn of its former glory and original territory, had been put under the vassalage of the Assyrian monarchy. It was now the proper time for Babylonia to regain some of her former power and prestige. The contending powers that came to the forefront for the mastery over the Near East were Babylonia and Egypt, and the bend of the Euphrates river remained the boundary line between the two. Babylonia under King Nabopalassar (a native of Babylonia) occupied Southern Syria and the Northern Mesopotamia (now Iraq), while the Egyptian Pharaoh Necho (609-593 B.C.) occupied northern Syria by defeating the army of Josiah in the famous battle-field of Megiddo. A small portion of Assyria, which was at this time being ruled by a weak Assyrian king, was the apple of contention for both Babylonia and Egypt. Seven years after the fall of Nineveh, the battle of Carchemish decided the issue in favour of Babylonia, and the remnant of Assyria was incorporated within the former.

Nebuchadrezzar, the son and successor of Nabopalassar, gradually extended the Babylonian frontier up to the boundaries of Egypt by conquering Syria and Phoenicia. Nebuchadrezzar was not only a conqueror but also a great, perhaps the greatest builder of temples and walls, for which all the kings of this family attained celebrity (See the German excavations of Koldeway). The temples of E. Sagila and E. Zida at Borsippa (Birs) were rebuilt by Nebuchadrezzar, while the sun-temple at E. Babbar, at Sippar, was rebuilt by his son Nabonidus. Spiegel, Gadd, Maspero, Petrie, Cowly, Breasted, De Morgan, Meyer, Sykes, Hall, Daiches, Sayce, Garstang, Prasek, Seiss and Evans are some of the experts and authorities in modern times, who have either written on the subject or carried on excavations in the Near East.

Something must be said here about the Chaldaeans.

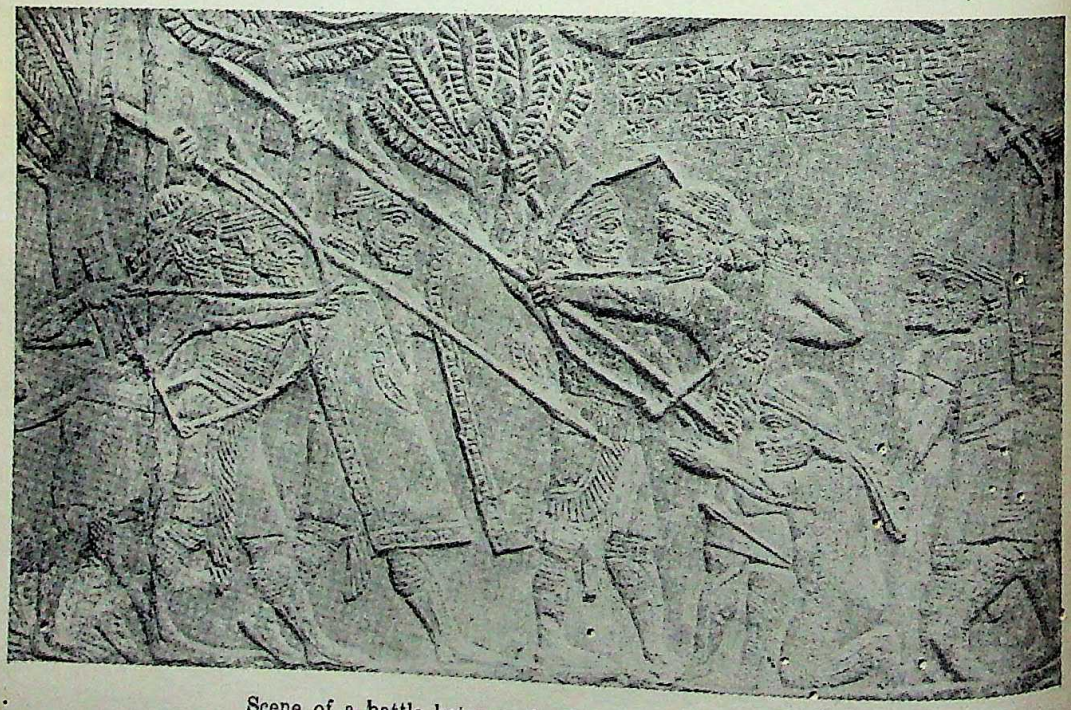


> "The Chaldaean tribes from the Southern shore of the Persian Gulf had also overrun Babylonia and had given her a short-lived dynasty."—Hall, p. 454.

This dynasty though short-lived produced such an able monarch as Nebuchadrezzar. This dynasty always ruled from Babylonia (the name of the country and the capital being the same), and Nabopolassar was even considered by some scholars as originally a native of Babylonia. The Chaldaeans always coveted Babylonia and made sporadic attacks on the kingdom at different times and at one time founded a dynasty there, as mentioned above. Among important and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

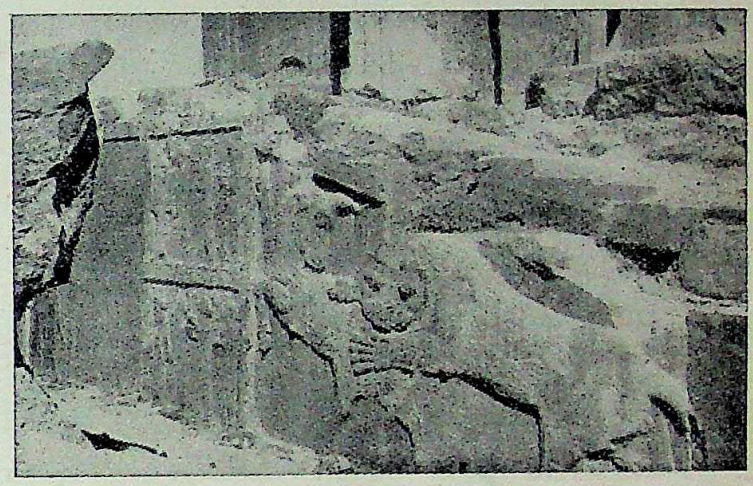


illustrious rulers of Assyria a few may here be named. They were Ashur-nasir-pal II (884-859 B.C.), Tiglath-Pileser I (reigning in 1107 B.C. circ.) and Shalmaneser I (1260 B.C. circ.), Sargon (died in 705 B.C.) and Sennacherib (705-681 B.C.). So may be mentioned the names of the earliest Sumerian rulers of Babylonia from the evidence of the modern excavations of Ubaid (near Ur), such as, Anni-padda, Utug, Ur-N and others. Then, among Semitic rulers of Baby were Khammurabi (about 2123-2080 B.C.) and Sam Iluna (Khammurabi's son) and among Chalda rulers of Babylon were Nabopolassar and his Nebuchadrezzar I among many other illustrious rule

A Persian golden bowl of the Achaemenid period

Now, let us turn our attention to the Medes ag To the north of Babylonia, the Tigris formed boundary between the territories of the Medes the Babylonians. The two kings of Cilicia and Ly as also the king of Urartu were then ruling inde dently. Prolonged warfare (591-588 B.C.) between Medes and the Lydians, at last settled Halys moun as the boundary between Lydia and Media. The ki dom of Urartu was finally absorbed by the Medi within their dominion at this period and Kyaxares w succeeded by his son Astyages (Ishtuwigu). The la ruled up to 650 B.C., when his kingdom was over and conquered by Cyrus, the Persian.

The Medes and the Persians to which nati Cyrus belonged were cognate peoples. The Persians, they rose, occupied the Elamite country as the lat moved westward. The older capital of Elam w Pasargadae (Agbatana) and the later capital was Su which place Cyrus chose as his capital. The ol kingdom of the Persians was known as Anshan. Cyr belonged to the family of Hakhamanish or Achaime the founder of the family, who reigned in the last pa



Scene of a battle between the Elamites and the Assyrians

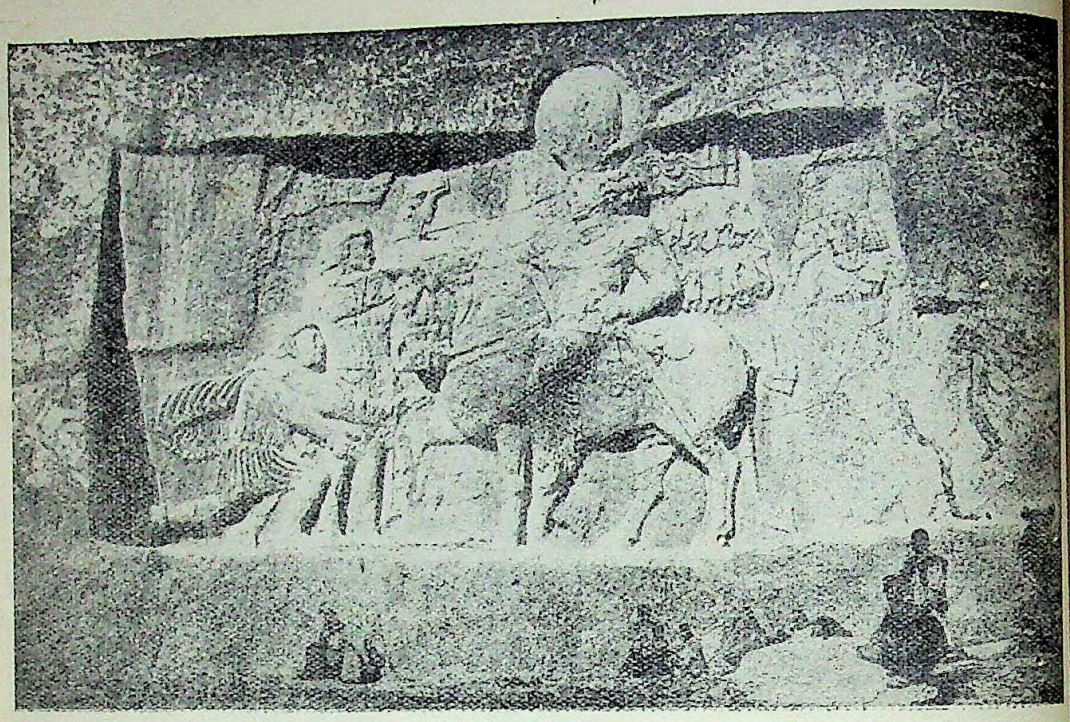
Digitized by Arya Samaj Foundation Chennai and eGangotri

of the 7th century A.D. The family of Cyrus was, according to Hall, perhaps Aryan by race, allied to the Mitannians and the Kassites, of a thousand years ago. The names of the family-members are known in usual distorted Greek form as Cyrus, which should really be "Kurush", an Indo-Aryan name (*cf.* "Kuru" of the Mahabharata legend). Thus Cambyses was really "Kambujiya," Ariaramnes was "Ariyarama," Darius was "Darayavaush" and Arsames was "Arshama."



Cyrus or Cyrus II was a great monarch. After defeating king Astyages of Media, he defeated king Croesus of Lydia to whose aid the Ionian Greeks, the Babylonians and the Egyptians came to fight against the Persian king Cyrus. But it was of no avail. Cyrus then put under submission the Greeks, the Babylonians, the Parthians and a Scythian tribe of Central Asia. After the death of Cyrus, his son Cambyses subjugated Egypt and posed as the Pharaoh. He died in 522 B.C. and having no issue was succeeded by his relation Darius I. On ascending the throne Darius had to face rebellions on all sides, which he quelled one after another with a strong hand. Thus, he put down the revolts of Babylon, of the Caspian steppes and of Egypt as Behistun (Bisitun) tablet discovered by Sir Henry Rawlinson in 1837 shows. He then subjugated Asia Minor and took Samos Island to check the refractory spirit of his Greek subjects and even attacked and punished the Scythians of the Russian steppes, himself leading an expedition there. He also put under subjection Thrace and Macedon. These countries were inimical to the Persian power. After this his Ionian Greek subjects revolted and burnt his fair city of Sardis which caused a prolonged warfare (between Persia and Greece) against the mainland of Greece itself. Simultaneously, Egypt revolted and his first attention was drawn to that country. In the midst of these troubles he died in 485 A.D. Darius I was the most renowned, tactful and ablest monarch of his line. The eastern frontier of his empire included the Punjab in India which he conquered in about 510 B.C. Darius was succeeded by his son Xerxes who was an antithesis to his great father. He was weak-minded and despotic. He tried to carry out the programme of his father and attacked Greece as the piratical nature and repeated revolts of the Greeks were troubling the peace of his empire. This war which is known as the Persian War was harmful to the interest of Persia and Persian prestige. Though the Persians were successful in the first stage of this war and sacked many places including Athens, the naval battles, ultimately, were decided in favour of Greece, and Persia lost her hold on Greece. The two land-battles of Marathon and Thermopylae and the four naval battles of Artemisium, Salamis, Mycalae and Eurymedon became very famous in history. After Persian wars the Peloponnesian war between Athens and Sparta followed on account of which Persia recouped her power over Greece considerably. Xerxes on his death was succeeded by his son Darius II who was succeeded by his son Artaxerxes. During the reign of Darius III, the successor of Artaxerxes, Alexander the Great of Macedon invaded the Persian empire and conquered it, the last battle with Darius being fought at Arbela or Gangamela in 331 B.C. Alexander followed his successes up to India to the east, defeated a king of the Punjab (Porus) at the battle of Hydaspes (Jhelum) and finally advanced up to the river Sutlej beyond which his tired troops refused to advance further. So, he had to return sending part of the troops by sea after defeating the Mali tribe and himself reached Susa by land in 325 B.C. He died in Babylon in 323 B.C. It may be observed, the invasion of Alexander gave very little culturally to India while Greece learnt much from this country. As Alexander had no issue, his vast empire was partitioned among his able Generals, and in this manner Selucos received as his share the thrones of Syria and Bactria. He came into collision with the celebrated Maurya Emperor of Magadha, Chandra Gupta. He was utterly defeated and had to make a treaty with the Maurya Emperor. In a later phase, many Indo-Bactrian or Greek rulers occupied various thrones of South-west Asia and culturally some of these came under the Hindu-Buddhist culture of India. One of them was Minander who ruled a part of the Punjab. He became a staunch Buddhist and his religious queries are incorporated in the Buddhistic Pali

(From a bas-relief at Naksh-i-Rustam)

work known as *Milinda-Panha* (Questions of Minander).

On the background of the above political and cultural contacts of Ancient India with the countries of the South-West Asia one may see that India was practicaly a part of this region. In ancient time this contact had four phases, *viz.*, (1) Racial, (2) Political, (3) Religious and (4) Commercial.

Racial and political phases have already been dealt with. Now let us deal with the remaining two phases, religious and commercial.

As regards religion, many of the Vedic-Aryan and the Mitannian deities were the same or similar which leads many scholars to consider the former as originally living in Mitanni-land and thus migrating to India. Of course, there is an opposite theory to this showing that the Vedic-Aryans or Indo-Aryans migrated to Mitanni-land from India and there spread their own religion. Thus, the gods Indra, (the god of Lightning), Mitra (the Sun-god), the Nasatyas (the twin physician-gods—Aswins), and Varuna (the god—first of firmament and then of the sea) were once worshipped by both the Mitannis and the Vedic-Aryans. Besides, the mother-goddess 'Ma' was widely worshipped throughout South-West Asia and bore close resemblance to the Greek and Roman goddess Cybele, Rhea (Demeter) and Artemis of Epheseus, "Dyndymene Mother" or "Zinzimene Mother" or only as the "Mother", and "Ishtar" of Mesopotamia. In the Greek and the Roman coins the goddess "Ma" was represented as standing up on a lion being attended by a male deity Attis. The same goddess is to be seen represented in the Rock-temples of Yasil-Kaya (the Near East)* and Crete, the goddess of the latter place being discovered by Evans and both reminding the old Indo-Aryan goddess Durga with her consort Siva and the Egyptian deities Isis and Osiris. Many of these deities were also worshipped by the Indo-Iranians. The coins of the Graeco-Scythian kings of Bactria and Kushan kings (Kanishka and Huvishka) of India (first century B.C.) contain the sun-god and the moon-god.

It was Zarathustra (probably 5th or 6th century B.C.) who made some radical changes in the old religion of Iran. But this reformer, nevertheless, retained many of the old deities common to both Indo-Aryan and Indo-Iranian Pantheons, *e.g.*, "Mah" (moon-god), "Vato" (wind-god), Veretraghna (Vri-traghna or Indra, etc., but used the Sanskrit terms Devas (Iranian "Daevas") and Asuras (Iranian "Ashuras") for gods and demons in quite the opposite sense. The chief god, according to this reformer, is Ahura-Mazda. The reformer is said to be born in a certain stage, from Haoma juice. This Haoma

* See Winckler, *M.D.O.G.* December 1907, regarding ancient Kyul, Oymk and Yasil-Kaya.

Digitized by Arya Samaj Foundation Chennai and eGangotri

nothing but Soma plant of the Vedic literature. The religious philosophy behind the conceptions of birth and death, heaven and hell, merit and impiety—is practically the same with all the ancient peoples of India and the South-West Asia. Indo-Aryan (Sanskrit) names like Dushrata (Dasharatha) and Mundan prevailed in many parts of the Near East as the names of the Mitanni kings will show.

Ancient India had very close commercial contact with South-West Asia.

In Manu's code (Chap. VIII, 156, 157) there is a clear reference of the oversea activities of the early Indo-Aryans. They would visit many countries on the sea-board of the Mediterranean Sea and all around the Indian Ocean. They would even visit distant isles and countries of the Pacific. Constant oversea trade flowed between India, Babylon, Palestine, Phoenicia, Persia, Arabia, Egypt, China, Indo-China, Indonesia and the eastern sea-board of Africa, not to speak of the inland trade connection of Ancient India, *via* land-routes, with Tibet, Mongolia, Central Asia and many other countries. The Indian ports of Barygaza (Baraoch) on the western sea-board and Tamralipta (Tamluk) on the eastern sea-board (in Bengal) were once world-famous, besides some other Indian ports. The muslin, cotton-cloth and silk-cloth of Bengal had once world-celebrity and were in high demand, specially in Europe. Among ancient Indian exports, besides the above, may be mentioned thread, dyes, indigo, spices, diamonds and pearls. Many Indian words like *kof* (Kapi—Sanskrit) and *thukki* (Tokei—Tamil), used by the Hebrews (and possibly by others) were of Indian origin.†

In general culture the ancient world owed much to India. It may well be presumed that the ancient Greek philosophy had drawn many ideas from the old Hindu philosophy, and the same may be said regarding some philosophical thoughts of Iran. It is well-known, as recorded by Elphinstone in his *History of India,* that Alexander the Great met an Indian philosopher named Qalanus in Persia. The Cynic philosophy of Greece and the Sufi philosophy of Persia are cases in point. The story of the meeting of the Greek philosopher Diogenes the Cynic with Alexander the Great is too well-known. Sanskrit astronomical ideas and technical terms have many things in common with those of the Chaldaean and Greek astronomical systems. Of course, it has not been settled definitely as to who was the originator and who were the borrowers. Many mathematical works of ancient times passed from India to many countries of the Near East, including Egypt, by way of translations. Similar was the case of the ancient Indian Sanskrit stories, *e.g.*, of *Pancha-Tantra* and *Hitopadesa.* The word 'yavana' (from the Ionian Greeks) meaning the Greeks and the word 'yavanika' meaning a veil or a drop-scene, show Ancient India's intimate knowledge of the Greeks, and along with them of many other foreigners. We refrain from multiplying instances further.

† See *Periplus of the Erythrean Sea;* Vincent : *Commerce and Navigation of the Ancients;* and Elphinstone : *History of India,* among others.

THE NEED OF A "PROSPERITY INDEX" FOR INDIA

By AMULYAPRASAD CHANDA

A Press report from Delhi, dated the 27th November, 1950, states that the Finance Minister of India indicated in Parliament, "Certain measure of uniformity (in Sales Tax structure) is already being achieved through coming into force of Article 286 of the Constitution." This is very good news for all students of Indian Economics. For, it will now be possible to study scientifically the effects of the economic policies of the Union and States Governments on the people from year to year on the basis of the ratio between the total sales tax earned on certain representative commodities and the total population of the Union or a State, as the case may be.

It would perhaps be good for the purpose if the population of the territory concerned were divided into three groups, the *low income group* (l), the *middle income group* (m), and the *high income group* (h). So far as the first group is concerned, cotton-cloth seems to be the ideal commodity. Any fluctuations in the income of this group will be reflected in the consumption of cotton-cloth more readily than on food. Therefore, $S(l)/P=q(l)$, where P = total population of the Union, or the State concerned at the end of the selected year, S=total sales tax for the year on cotton-cloth, q=quantum, would serve for a formula. In the same way, silk fabrics, razors and razor blades, and cosmetics and scented hair oil may be taken to be representative of the second group in the population from the point of view of elasticity of demand. The formula may be put thus : $S(m)/P=q(m)$. In the last case, $S(h)/P=q(h)$ would do; here the commodities selected are automobiles and jewellery (other than gold).

Obviously, to determine the fluctuations in the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

economic condition of the several groups, from year to year, a standard year, say, 1951, will have to be fixed, and, sales tax fluctuations would have to be compared in terms of the ratio between the quanta for 1951 with those of the year concerned. Naturally, the population figures will have to be brought up-to-date from records of births and deaths all over the country. The required ratio may be expressed thus q(*l*)1952/q(*l*)1951, q(*m*)1952/q(*m*)1951, or q(*h*)19 q(*h*)1951. It will unmistakably indicate to what ex the several groups among the people had benefited the policies of the Governments concerned during period under review.

ART IN INDIA
A Retrospect and Prospect

By P. RAJESWARA RAO, Advocate

At the outset it is necessary to note that Art in India passed through three phases. In the Vedic age it was confined to the celestial region and divine beings. Then the subject of art consisted of Brahma, Narasimham and Nataraja. The radiance of Rama and lustre of Krishna, the beauty of Lakshmi and of Saraswati formed the subject of art. It was then that the Gandharvas and Kinnaras feasted our ears with divine music. To the uninitiated of the West, Indian art has little or no meaning. It is impossible to understand Indian art without understanding the whole culture and historical tradition of which it is the direct expression. It is useless to treat art as an isolated phenomenon apart from life of the people who have made it.

In the Buddhistic period Art came down from heaven to the earth but it was not enslaved to man. Curiously there is no statue or picture of Asoka who strove his utmost to propagate Buddhism. It was then the kings that adored art, but art never sought royal patronage.

In the third stage, which began with the Moghul period, art began to cater to human pleasure.

In India, art is the statement of racial experience and serves the purpose of life or at any rate did so in the past. Thus art and life are root and branch. It has always been produced in response to a demand. It developed as a specific need and dispelled the illusion that it is the privilege of the few or that art is only the productions we see in the museums and art galleries. It was because the system of caste originally combined in itself duty and pleasure, compulsion and freedom, that arts and crafts flourished. Under this great scheme of life, ability and skill were acquired through patient practice directed towards a definite end, whether this end were aesthetical, ethical or useful. The craftsmen had also an assured status in the form of a life contract, more strictly it was an hereditary office. He was trained from childhood as his father's disciple and followed his father's calling as a matter of course. He was member of the guild and such guilds were recogn and protected by law. His domain was never invad by amateurs. The craftsman was inspired with "re rence for quality, with a fear of offending God striking a hammer-stroke or a sweep of the plane a with a blessed dread lest Viswakarma, the Lord of t Arts, should be offended by infidelity to his method

According to Bhagavad Gita, it is by intense dev tion to his own vocation that every man attains h own perfection. The possession of an art is a vocati and a responsibility under the caste system, where nature and nurture co-operated. Referring to t caste system, Dr. Coomaraswami maintained that

> "It is the nearest approach that has yet bee made towards a society where there shall be n attempt to realise a competitive equality but whe all interests are regarded as identical."

To those who admit the variety of age in huma souls, this must appear to be the only true com munism. It was a scientific system of social servi according to the inborn qualities of the individu *birth being a convenient but not an essential co comitant*. It was the antithesis of plutocracy and oc was respected not for what he had but for wh he was. One cannot suddenly alter his subconscio heritage. We cannot put our souls in uniform. Freedo consists in making the best of what we have—o parentage, physical capacity and mental gifts. Evidentl

> "The institution of caste illustrates the spir of comprehensive synthesis characteristic of t Hindu mind with its faith in the collaboration races and the co-operation of cultures,"

as Dr. S. Radhakrishnan epigramatically put i Though it developed later into an instrument o oppression and intolerance and tended to perpetuat inequality, originally it was the outcome of tolerance and trust. In Indian crafts individuality did no degenerate into eccentricity but was schooled by social attention to never fell into artificiality.

While every art embodies the eternal, it is also characteristic of the soil in which it is born and derives sustenance. We find each race evolving its own art according to its own possibilities. Each phase of civilization has produced its own form of art and it is largely from the monuments of bygone generations that we are able to construct the history of man. Indian art derives its basic character from certain ideals associated with the philosophic outlook and religion of the people. India sought to depict the reality of spirit in the various forms of art, through sound, colour, form and particularly symbolism. The symbolism of Indian culture is an attempt at translating spirit into matter, at giving material expression to a firm vision of the spirit. In short, Indian art is the art of impression and interpretation rather than of representation and semblance. Sri Aurobindo summarised the meaning of Indian art thus in a language that cannot be bettered :

> "All Indian art is a throwing out of self-vision formed by going within to find out the secret significance of form and appearance, a discovery of the subject in one's deeper self of the material and natural shape to express the psychic truth of it with the greatest possible purity and power of outline and the greatest possible concentrated rhythmic unity of significance in all the parts of an indivisible artistic whole."

A characteristic feature of the Indian religious life is the socialisation of its arts. In India, it is not the museums and the drawing-rooms that are the repositories of art. Art is reflected in every walk of life, at every step. In the West art is personal and aristocratic. But in India, it has always been impersonal and democratic. It is the art instinct in the Indian people that makes them love their clay pots, their brass utensils and their *lotas* and *chembus* which are extremely artistic commodities and not unlovely and unshapely as the tin mug and the enamelled dish which the educated Indian prefers today. Clothes of fine texture, in endless varieties of colour, tasteful patterns and designs, the delicacy and minuteness of workmanship of ornaments, all these testify to the remarkable artistic feeling which the rich and the poor, the educated and the illiterate share and enjoy in India. It made the life of the nation and the life of the individual full of beauty in the cottage as well as in the palace. When civilization has made of life a business, it should be remembered that life was once an art. When culture is the privilege of bookworms it should be remembered that it was once a part of life itself, not something achieved in stolen moments of relief.

Unfortunately, Indian art has been too long misunderstood through such dull examples as the Banaras brass work which still gathers dust in English country houses. No one possessing a serious knowledge of Indian jewellery could speak of "the massive proportions and primitive character of Indian jewellery." Such jewellery is seen in museums only where anthropologists collect whatever is primitive and barbarous to the exclusion of what is refined and delicate. The goldsmith of southern India or the enameller of Jaipur has much more to teach than to learn in a school of art.

We had the world-famous dyeing and printing art of Masulipatam. Connoisseurs say that our old indigenous dyes cannot be matched by anything in the world for their permanence, brightness and beauty. The powdered lime designs extensively displayed in houses and streets on festive occasions, the turmeric, the vermilion, sandal paste, colouring aids, *pansupari* and the like, are the positive proofs, if any is necessary, of the artistic bent of mind and aesthetic sentiment prevailing among Indians. It is the natural expression and not an extraneous embellishment of life. In its richest form it is available to and appreciated by the poorest. It is the common heritage of the people and not a monopoly of the privileged few. Though excellent in quality it is remarkably cheap, since it is a cottage industry. India endeavoured to live rather than accumulate the means of living. The ideal aimed at was to refine the wants, to increase sensitiveness rather than multiply wants and blunt the finer instincts. The Government Public Works Department from which indigeneous styles of architecture have been rigorously excluded has crushed out the artistic sentiment of the people and deprived Indian artists of their livelihood.

Art is neither a luxury nor a superstition but a way of life. It sweetens life and labour. It is wonderfully of this world and as our eyes grow used to its conventions we become delightfully aware of a generous and healthy love of life in all its form. When life becomes unbearable art can make it pleasant. The purpose of art in beguiling the tedium of labour is seen also in the songs which are still sung while pounding rice, pulling or rowing the country boats and also during the transplantation and reaping of the paddy plants. India is a land of teeming villages whose population are wedded to poverty and misery but having their simple feast of poetry and music which truly reflect their art. Folk-dance, music, drama or folk-lore is a natural mode of artistic response to the environment.

Thus art in India is not a forgotten memory but a living tradition. It has not altogether gone to the museum as a relic of the past. Even the Hindu temple is a ritual diagram on metaphysical foundation which in turn has cosmological and magical implications, and the various gods and goddesses enter into the squares in which the plan is laid out. The various substances of which the temple is built (brick, stone, lime, plaster) carry different symbolic connotations.

It is no wonder that sometimes its purpose is misunderstood and motives are questioned. One current criticism against art in India is that at times it is

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

pressed into service for indecent and immoral purposes. The obscene images on the temples and romantic allusions in songs are condemned by conventional puritans and moralists. But it is necessary to note that an artist is not always a moral teacher and morals change according to times. The morality of a work of art does not depend upon its subject, but only upon the way that subject is treated aesthetically and otherwise. How can we, for example, ascribe morality or immorality to the fact of nakedness? It is the handiwork of God so long as one looks upon the same with frank delight admiring equally the beauty of a womon with that of birds and flowers, content to behold without possessing. Morality and immorality cannot be predicated of any physical objects but only of movements of the will. For example, we cannot call a gun moral when it is used to kill a rushing lion and immoral when a man is shot at.

Art is beyond space and time. The art of love that leads to recreation and procreation has an important place in life. Its taboo and neglect leads to disastrous consequences. The *Kama Sutra* of Vatsyayana still stands unrivalled as a commentary on sexual science. These *sutras* in extenso are sculptured on the sun temple at Konarak in Orissa. In this connection the following explanation of Dr. Coomaraswami is revealing:

> "In nearly all Indian art there runs a vein of deep sex-mysticism. Not merely are female forms felt to be equally appropriate with the males to adumbrate the majesty of the over-soul, but the interplay of all psychic and sexual forces is felt in itself to be religious. Here is no thought that passion is degrading, but a frank recognition of the close analogy between amorous and religious ecastasy. It is thus that the imager speaking always for the race rather than of personal idiosyncrasies set side by side on his cathedral walls the *yogi* and the *apsara*, the saint and the ideal courtesan; accepting life as he saw it, he interpreted all its phenomena with perfect catholicity of vision. Such figures and indeed all the sculptural embroidery of Indian temples are confined to the exterior walls of the shrine, which is absolutely plain within. Such is the veil of nature's empirical life, enshrining one, not contradicted or identified into variety."

At Konarak, the sculptors paid their homage to the beauty of the female form in all the glory of its seductive charms and in an infinite variety of poses and moods. This temple standing alone in a great sandy waste, both architecturally and in details of sculpture, is one of the noblest monuments of In medieval art contemporary with the finest perio European architecture. The carvings there symb the fertilising and creative power of the sun. It hymn of life, a frank and exquisite glorificatio creative forces in the universe. From the point of of art they reveal a commendable mastery of hu anatomy and bodily form in different poses and m ments on the part of those ancient sculptors. myth that Indian craftsmen were and are poor in t knowledge of anatomy stands exposed in these ings. Thus art transcends the narrow rigors of con tional morality.

Like Hinduism, Indian art is a movement and a position, a process and not a result, a growing t tion and not a fixed revelation. It has high spiri qualities which entitle her to a front rank in the r of art. It is essentially a means of *union*. The front erected by politicians tend to break down whene works of art have become freely visible. Among art themselves there is a growing understanding of differ techniques and much cosmopolitan appreciation. Ud shankar is right in prophesying that we are rapi reaching a stage in which we will see Conga steps Bharatanatyam, Cossack and Russian folk moveme in Kathakali, Jaztap dancing in Kathak and Hawa Hula dancing in Manipuri. Though violin is a fore instrument, it is found to be most suited to acc pany a vocalist in a concert. All the Gamas and Bri of the vocalist can be reproduced on it with effe Even Veena, Flute and Gotuvaidyam have cert limitations for accompaniment. That is why violin come to occupy a permanent place in India.

Art reflects the heart of a nation. Its beat sho be rhythmic and regular. The faith and the vision apprehend the intrinsic worth of the artistic herita is also essential. It is necessary to reflect on, feel a caress aesthetics, region by region, period by period piece by piece. There is need to galvanise and electr Indian art in such a way that the perfection alre attained may be preserved while adding new perf tions gathered from our study of the aesthetics other countries. When a living Indian art arises out the wreck of the past and the struggle of the pres a new tradition will be evolved and a new vision find expression.

Book Reviews

Books in the principal European and Indian languages are reviewed in *The Modern Review*. But reviews of all books sent cannot be guaranteed. Newspapers, periodicals, school and college text-books, pamphlets, reprints of magazine articles, addresses, etc., are not noticed. The receipt of books received for review cannot be acknowledged, nor can any enquiries relating thereto answered. No criticism of book-reviews and notices is published.

EDITOR, *The Modern Review*.

ENGLISH

THE SULTANATE OF DELHI: *By Ashirbadi Lal Srivastava, Agra College. Published by Shiva Lal Agarwala and Co. Ltd., Agra. 1950, Royal Octavo. Pp. 550. Price Rs. 10.*

Dr. Ashirvadi Lal's latest production *The Sultanate of Delhi* forms a welcome addition to his earlier scholarly works dealing with the history of the Nawabs of Qudh, with this difference that, while the Oudh Nawabs cover a very recent period, *viz.*, the 18th century, of the history of India, the Sultanate goes back to those dim early days, which can be fittingly described as the dark ages of our country's past, and which roughly extend over the five hundred years following the invasion of Muhummud of Ghazni, that is from 1000 to 1500 A.C. In abridging the story of these five hundred years in his *Sultanate*, the author does not claim to have offered any fresh contribution of original research, but gives a masterly summary in a short compass of all the salient features and up-to-date life-stories of the many eminent personalities, who so materially changed the traditional tenor of India's past. It passes in review all the various dynasties beginning with the Sultans of Ghazni and ending with the Lodis, all bristling with eminent figures of valour, sagacity and statesmanship in varied degrees.

While the rapid Muslim conquest of India has been explained by many a worthy scholar as being due to the fanatical zeal of the Muslims and the apathy of the Hindu masses, no finality has yet been reached in point of complete research of all available evidence. Reading through the eloquent accounts of Muslim writers presented by our author, one easily notices the utter absence of sources of Indian origin, such as those which can be available in Sanskrit and the Prakrit languages, then current in India. So far as South India is concerned, a distinct advance has been achieved by many a worker on this side. What scholars like N. Venkataramanyya have accomplished (see his admirable thesis entitled *Early Muslim Expansion in South India*, Madras University, 1942), has not so far been in evidence as regards North India. The period is certainly replete with an enormous mass of literature in Sanskrit works and local inscriptions, published or unpublished. A persistent and systematic effort does not seem to have been made to secure all available evidence existing in the North Indian languages scattered over vast regions from the Indus to the Narmada and on to the Bay of Bengal. The Persian writers, however worthy and sincere they may be, give only a one-sided picture which cannot be tested without reference to other sources. Indeed, research has greatly suffered for want of scholars and students who combine proficiency both in Persian and Sanskrit. For an accurate version of our past history, we must have workers who know both these languages and local dialects of North India as well. Notwithstanding this grave defect, for which the author is in no way responsible, the *Sultanate of Delhi* is indeed a valuable reference book both for specialists and general readers and a decided advance on Stanley Lane-Poole's *Medieval India*, which appeared nearly half a century ago, a period during which historical research has made enormous progress in all its branches. Another special feature of the *Sultanate* is the dozen illustrative maps laboriously worked out, the absence of which had so long been a great impediment to proper study on the part of students, who had to grope in the dark in this darkest of all periods. A critical bibliography is given at the end; and each chapter mentions books and authorities for special reading. Thus the history of these five centuries has been practically reconstructed in this handy volume. The most admirable part of the whole performance, which has immediate reference to our present needs, is doubtless the author's lucid discussion of the nature of the Islamic State contained in the concluding chapters XVI to XVIII. The Sultanate was a theocracy and not a secular state. It did not recognize any other religion than its own, although the overwhelmingly vast majority of its population was non-Muslim. The bitter antagonism of the two forms the main structure of India's history of that period and continues to baffle statesmanship even today on account of the creation of Pakistan, bringing in its train fresh problems involving world-wide convulsions. The background of this consummation is pithily illustrated in the *Sultanate*, which has appeared not a moment too soon.

A few mistakes of dates will puzzle the reader and need correction, *e.g.*, p. 118, *read* 1206 *for* 1506; p. 266 and p. 277, *read* 1320 *for* 1325; p. 384, *read* 1461 *for* 1447; p. 404, *read* 1336 *for* 1346; p. 407, *read* 1505 *for* 1555.

G. S. SARDESAI

ANCIENT INDIAN HISTORY AND CULTURE: *By J. T. Parikh, Surat, 1949. Pp. 255. Price Rs. 3.*

This little work has been prepared by the author in accordance with the history syllabus prescribed for First Year Arts Classes of the Universities of Bombay and Poona. In some respects it may claim to have fulfilled its object. Written in a simple style, it deals not only with political history but also with social, economic and religious conditions as well as the state of art and literature during the successive centuries. But the title "Beginnings of Hindu Power" applied to the period from 250 B.C. to 200 (*read* 320) A.D. (pp. 198f) is incomprehensible, while the other title "Decline of Hindu Power" given to the period following Harsha's death (p. 249) is inaccurate. Some of the topics dealt with by the author such as the difference between culture and civilisation (pp. 1-2) and social

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

psychology of *varnasramavyavastha* (pp. 86-90) are too difficult for those for whom the work is intended. The book as a whole suffers from a want of proportion, nearly half of it being devoted to the Rigvedic and Brahmanical (sic.) periods, while the period from 600-1000 A.D. is dismissed in about 10 pages. The term Anaryan for non-Aryan (pp. 36-37, 66, 82 etc.) is unusual. There are occasional slips of composition, *e.g.*, 'resulted into' (pp. 36, 37), 'culminating into' (p. 107). In some cases popular tales are quoted as sober facts, as in the story of Chandragupta's being Commander-in-Chief of Nanda's army and making an attempt against his life (pp. 173-74), or of Asoka's building 84,000 *stupas* (p. 178). In other cases the author's statements are contrary to fact, *e.g.*, when he says that Asoka sent missionaries to "Tibet, Malaya and Sumatra" (p. 177) and that "Hindu colonists established (*sic.*) in Burma, Malaya, Java, Sumatra and Combodia" during the 400 years intervening between Harsha's accession and the Muslim conquest of Kanauj (p. 251). The complete absence of maps as well as dynastic and other tables is very much to be regretted.

U. N. GHOSHAL

MAN IN INDIA: *By Prof. Minendra Nath Basu. Dutta Borooah Bros. and Co., Nalbari, Assam. 1950. Pp. 60. Price ten annas.*

The booklet contains a summary of our present knowledge about the racial constitution of the Indian people. As such, it will prove useful for students of Anthropology. A glossary of technical terms would perhaps have made the book more useful for lay readers.

NIRMAL KUMAR BOSE

SARDAR PATEL ON INDIAN PROBLEMS: *Publications Division, Ministry of Information and Broadcasting, Old Secretariat, Delhi. 1949. Pp. 117. Price Rs. 3-8.*

THE BEGINNING OF THE END: *By Harekrushna Mahtab, Premier, Orissa. Published by Book Company, College Square, Calcutta. Pp. 197. Price not mentioned.*

The first book consists of reports of 35 speeches of Sardar Patel, some of these in summary, delivered by him between November 1947 to January 26, 1948. There are three statements—one made on July 5, 1947; the second on June 26, and the third on June 29, 1948. The first forty-two pages are devoted to the subject of the States—their present condition and future; the pages up to 72 are devoted to communal matters; the next nine pages to Industry and Labour; from pages 84 to 117 the topics discussed are Miscellaneous. These speeches and statements will enable readers to understand certain of the problems that have made Bharat what she is today. The States' problem, of their integration and consolidation inside one Republic, has been all but solved in spite of the mischief indicated for them in the Cabinet Mission's plan of April 12, 1946. About 99 per cent of the States' rulers have been pensioned off; their peoples have been given a chance to work out their own destiny. It is too early even now, after about two years of this liquidation of ancient traditions, how the members of the princely families and the peoples will shape themselves. The former being so few may fade out of the picture, the latter counted in millions, about 90 millions, have to show themselves equal to the new opportunities opened out before them. They must agree to pass through a process of re-education, whether it will be long or short will depend wholly on them. Both they and their rulers must avoid the policy of getting results quickly; the neglect of centuries is not made up in years. This Sardar Patel presses home with characteristic clarity.

Shree Harekrushna Mahatab's book deals exclusively with the States' problem, specially with Orissa States. The dispersal of Oriyas under so many administrations had held up almost all progress in the province. Now that historic wrong has been righted all of us can look forward to glorious days for them in view of this stand-point the past has a value as warning only. We should know it; Sri Harekrushna book helps us in this. It also shows that not all British officials were die-hards; they were victims of policy made higher up in the interests of exploitation by alien State. The Appendix prints certain declarations of policy that should be kept in mind always by the people concerned.

SURESH CHANDRA DE

I. L. O. PUBLICATIONS: 1. *Coal Mines Committee 1949: Vocational Retraining of Disabled Miners*; 2. *The Protection of Young Workers Employed Underground in Coal Mines*; 3. *General Report: Metal Trades Committee*; 4. *Record of the Second Session, 1947*; 5. *Inland Transport Committee 1949: Technical Methods of Selections of Workers for the Inland Transport Industry; Asian Regional Conference, January 1950*; 6. *Provision of Facilities for the Promotion of Workers' Welfare*; 7. *Agricultural Wages and Incomes of Primary Products*; 8. *Organisation of Manpower*; 9. *Seafarers' Conditions in India and Pakistan*; 10. *Vocational Training of Adults in Belgium*; 11. *International Labour Conference 1949*; 12. *Migration for Employment Report XI (I), Migration for Employment Report XI (II).*

The International Labour Office, Geneva, is publishing books on various subjects, and its reports are veritable mines of information. It is unfortunate that our scholars and journalists do not pay much attention to these volumes. To illustrate our point, we shall quote a few passages from *Housing and Employment* which show how rent and assessment are inter-connected; and how rent is more or less inflexible.

"Property taxes are fundamentally a survival from a different sort of economy, and act as a hindrance to the development of *better housing standards*. The burden of such taxes is severe."

"For the United States as a whole, the average monthly tax instalment represents about 33 per cent of the average monthly loan payment" to own a house.

"Rents, like costs of land, of construction, of mortgages and of property taxes, are thus likely to be *relatively inflexible*, and changes in them to lag behind and be dependent on changes in the general level of activity; moreover, all these costs are likely to be more flexible in respect of changes upwards than of changes downwards."

In framing the Rent Control Acts, our legislators may with profit read such publications. We need not say more.

J. M. DATTA

THE WHOLE WORLD IS MY NEIGHBOUR: *By E. De Meuldar S.J. Published by J. Van Meenen Proost and Co. Ltd., Turnhout, Belgium. Available in India at Catholic Ashram, Hazaribagh, Bihar. Pp. [illegible] Price 8s. 6d.*

The book under review is a propagandist and polemical work. Its author is a Belgian Jesuit, who has been carrying on proselytising mission in India for over 22 years last at Hazaribagh. The book is a stud

Digitized by Arya Samaj Foundation Chennai and eGangotri

of his post-war tour round the world. It is adorned by a number of portraits and statements of Mahatma Gandhi, Pandit Jawaharlal Nehru, Poet Rabindranath, Sardar Patel and other eminent savants of India. An Introduction in French by Father Pierre Charles is also given in it. One of the seven chapters of the book is entitled "Mother India." In this chapter the author appreciates the greatness of India and esteems her as his second motherland. But his inner motive is nothing but to win over India to Christ. He quotes the tributes of Keshub Chandra Sen, Upadhyaya Brahmabandhav and other Indian reformers to show that India badly needs Christianisation. He goes in vain to the extent of dreaming of a Catholic India and thinking that India will be far better by becoming Christian. In page 136 he remarks, "The outcasts and untouchables of India will find complete satisfaction and new hope in the worship of the gracious and attractive Mother of Jesus and in the ceremonial and artistic richness of Catholicism in place of the terrifying Kali." The author's ulterior motive of Christianising India is exposed through these silly observations. In page 188, the anti-Hindu author makes very uncharitable remarks against the Ramakrishna Mission monks preaching Hinduism in Hollywood as follows: "The philosophical treasures of Hindu Thought are not made of the over-sexed, monistic, westernised brand actually for sale in Hollywood. That sort of Neo-Hinduism smacks too much of Mill, Spencer, Comte and others like Aldous Huxley and Somerset Maugham." If the West can send missionaries to India to preach Christianity, cannot Free India depute preachers to spread Hindu Thought in the West? Why does Mr. De Meuldar become intolerant and upset when he sees the success of Hindu missionaries in America? Does it not prove that Christian missionaries are disguised enemies of India and Christianity as preached by them is more political and commercial than religious? We make bold to assert that Christians have to learn more from Hinduism than the Hindus have to learn from Christianity. If the author has failed to understand this by living in India over two decades, his sojourn in India and study of Indian thought have been utterly futile. It is better for him to leave India and return home. In page 190, the author quotes and supports this fanatic statement of Fr. Johannes, the author of *To Christ through Vedanta*, "Vedanta offers the sight of a heap of loose limbs . . . But in the Catholicism of St. Thomas we have an organic whole. It is one harmony in which the different Vedantic systems find their proper setting and their discordance disappears." From this Mr. De Meuldar jumps to the foolish conclusion that "Jesus Christ is the Crown of Sanatan Dharma!" These two remarks of Fr. Johannes and Mr. De Meuldar make it crystal-clear that their study of Hinduism is doubtlessly shallow and biased. Let Mr. De Meuldar ponder over what Paul Deussen, the German authority on Vedanta has said: "It possesses a significance, far reaching beyond the Upanishads, their time and country. Nay, we may claim for it an inestimable value for the whole race of mankind. One thing we may assert with confidence: Whatever new and unwonted paths the philosophy of the future may strike out, the principle (of Vedanta) will remain permanently unshaken and from this no deviation will take place." If the Christian missionaries of the West become like their die-hard politicians so short-sighted and conservative then Christianity is surely doomed in the Indian Republic.

SWAMI JAGADISWARANANDA

THE WARDHA SCHEME : *By K. L. Shrimali, Ph.D. Published by Vidya Bhawan Society, Udaipur. First edition. 1949. Pages 308. Price Rs. 5.*

Mahatma Gandhi was a practical visionary who devoted himself not only to the elimination of British rule from India but also to the rearing up and further development of India's own culture broadbased on ideal democracy and economic prosperity. He was not a mere political iconoclast but a builder of a Nation bewildered in a halo of artificial life. Mahatmaji gave serious and persistent thoughts to the problem of India's regeneration. Basic or New Education was propounded by him as a means to attain his objective. To him it was the "spearhead of a silent social revolution." As the scheme differs in many respects from the educational system in existence, a great stir was created amongst educationists in India as soon as it was brought to light. The Plan has been assailed from many quarters and praised from many more. When the bickerings end, it will be seen that the Scheme has come to stay. In the book under review Dr. Shrimali has brought to bear the whole wealth of Gandhian literature and thrown a flood of light upon the Wardha Scheme of education from the different aspects from which the originator of the plan had viewed it. The learned author has narrated the background which necessitated the formulation of the plan, analysed the plan itself, discussed its relation with cottage industries and has shown how the New Education is in perfect conformity with Gandhian philosophy of life—social, political and economic. The book provides a complete picture of Basic Education in its theoretical aspects: it is a genuine contribution to educational literature distinguished for thoroughness of treatment, logical analysis of views and lucidity of style. There is little left about the academic exposition of the scheme. Only a few chapters showing the results of the Scheme in the touch-stone of practical operation in different States in India would double enhance its merits. The get-up and printing are excellent.

NARAYAN C. CHANDA

INDIA'S LANGUAGE PROBLEM : *By K. Appadurai M.A., L.T., Visharad, (Hindi). Tamil India Publications, Arunachala Achari Street, Madras 5, Price Rs. 2-8.*

The aim of the book is to make out a case for Tamil as the common language of India. The learned author seeks to point out the merits of Tamil which is supposed to be the 'typical central language of India,' in contrast to what he considers to be the drawbacks of the languages. He goes so far as to suggest that Tamil is the 'basic Indian language' and that 'the antiquity of all Indian languages and their refinement is directly in proportion to their contact with Tamil or Dravidian and in inverse proportion to their contact with Sanskrit' (p. 129). It has been hinted that the proposal for the adoption of Hindi as the common language of India has been at the root of the division of India and its final adoption may lead to a further division between the South and the North of India. It seems the book was written on the eve of the passing of the Indian constitution which accepted Hindi as the national language of India. Advocates of some other languages also came forward with similar pleas for their own tongues. Vituperations against Hindi and its supporters were loud and numerous. But impartial rational people saw through the hollowness of the demonstrations. It is high time that real lovers

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of the various languages and literatures of India should concentrate their efforts on the enrichment and popularisation of their respective regional languages so that these may win the spontaneous respect of the intelligentsia and carve out honourable and glorious positions for themselves on the ground of intrinsic merit which cannot be ignored for long.

CHINTAHARAN CHAKRAVARTI

BHARAT (India): *By R. S. Babasaheb Deshpande. Published by Swadhyaya-Mandal, Killa-Pardi, Dt. Surat. Price Rs. 2.*

This is a compilation of extracts from the speeches and writings of foreigners on India. Its perusal will convince the reader that India evolved a culture unique in many respects. The compiler has taken great pains in selecting the extracts. His labour is laudable and useful too. We stand today at the cross-roads of our history. The old order is assailed on all fronts. The modern inconoclast would however do well to go through *Bharat* and similar literature before he launches on his career of indiscriminate denomination and destruction of the past. A nation's present and future cannot be totally divorced from its past. Babasaheb Deshpande has rendered a distinct national service by drawing our attention to the glory that was Hind. A word of caution, however, seems to be necessary. We must not rest on our oars and exhaust our energies in extolling the past. We have to strain every nerve to equal, nay, to excel the achievements of our great forbears, who are no more.

SUDHANSU BIMAL MUKHERJI

BENGALI

KAUTILIYA ARTHASASTRA (Part I): *Translated into Bengali by Dr. Radhagovinda Basak. General Printers and Publishers Ltd., Calcutta. 1950. Pp. 205. Price Rs. 6.*

Among the milestones marking the astonishing advance of the Sanskrit renaissance in the early years of this century may be mentioned the recovery in quick succession of a number of lost works of first-rate importance, *viz.*, the *Arthasastra* of Kautilya (1909), the dramas of Bhasa (1910), the *Saundarananda-kavya* and the fragmentary *Sariputra-prakarana* drama of Asvaghosha (1910-11). The first of these works was hailed from the time of its appearance as a unique record of Ancient India's contribution to the Art of Government. It has been thrice edited by Indian and German scholars and has been translated into English and German, while the literature that has grown around its problems and contents has been extensive. A much desired Bengali translation of this work was attempted by the late Pandit Asoke Nath Sastri, but was given up after publication of a few chapters. To Dr. Radhagovinda Basak we are indebted for its first complete Bengali translation, of which Part I is now placed before the public. It would be difficult to mention any one more qualified for this task than Dr. Basak. To a sound knowledge of classical literature in all its branches and the technique of Sanskrit inscriptions, he adds the gift of a facile Bengali style which makes his writings attractive even to the general reader. Of the difficulties of his task the author himself is fully conscious, for, as he tells us in his Foreword, the readings are not always above suspicion owing to the paucity of the manuscript material, while the archaic style and abounding technical terms often contribute to the obscurity of the text. On this ground he modestly craves the indulgence of his readers by quoting in part (somewhat incongruously), the famous lines of the poet Bhavabhuti in the Introduction to his *Malati-Madhava* drama. The author has shown good sense in attempting not a literary translation which would have been unreadable, but one interpreting the sense. In the result his work is a marvel of lucidity combined with scholarly accuracy of a high order. To enhance the usefulness of this work, we would, however, suggest the addition, in the second part, of a full list of difficult words with their explanations on the lines of Dr. F. W. Thomas' similar list of words in Bana's *Harsha-charita*. Such an addition, taking account of the already-known explanations of Indian and German scholars, will not only be of great value to students of the *Arthasastra*, but will also enrich the literature of Sanskrit lexicography.

In the Preface the author gives us a running analysis of the contents of the work and then deals with a few problems relating to its date and authorship. He rightly rejects the view of the late Mm. Ganapati Sastri substituting (somewhat arbitrarily) the *gotra*-name Kautalya for the well-known Kautilya as the title or designation of the author. He also gives good grounds for rejecting the late date (1st century A.D. or even later) ascribed to this work by some Indian and European scholars. His own view, suggested with true scholarly caution, is that it was really written (as the orthodox tradition asserts) in the 4th century B.C. by Chandragupta Maurya's great minister.

From the foregoing remarks it is evident that Dr. Basak's work is an outstanding contribution to Bengali literature in recent years. Together with Pandit Jogendranath Tarka-Sankhya-Vedantatirtha's recently-published work *Prachin Bharater Dandaniti* (Science of Polity in Ancient India), it will rank for many years to come as the most authoritative exposition of the subject existing in the Bengali language. We await the publication of the concluding part of Dr. Basak's work with great interest.

U. N. GHOSHAL

HINDI

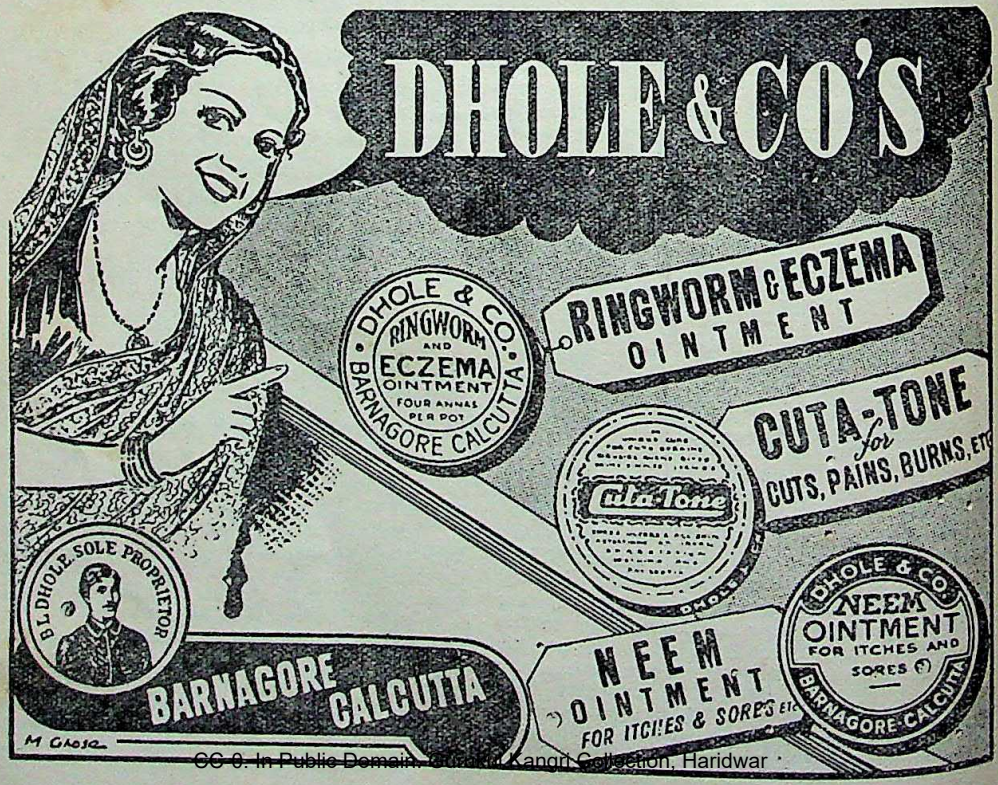
ARTHASHASTRA SHABDA-KOSHA: *By Acharyas Raghuvira and Bhagavatasharana Adholiya and Pannalal Balduva. Published by Govindaram Seksaria Arthd-Sahitya Prakashana Mandala, Wardha, C. P. Pp. 230. Price Rs. 4.*

A very useful Dictionary of Economic Terms, marked by originality and all-comprehensiveness of connotation. It is true it will be a long time before these terms become common currency in the country, but they have laid the foundations of fundamental indigenous terminology, evolved with a scientific turn of mind and overall insight. The authors have done great pioneering work for which they deserve the sincere congratulations of all patriots as well as pundits.

G. M.

GUJARATI

BHAGWAN RUSHABH DEV: *By Jayabhikkhu. Published by the Yashovijya Jain Granthmala, Bhavanagar. 1947. Illustrated cover. Pp. 365. Price Rs. 4-8.*



Jayabhikkhu has about ten notable works to his credit, related to mythology, (Jain) social topics, and historical lore. He writes well and impressively. His imagination is rich, and he describes facts and feelings in an attractive way. Of the two towering personalities of the Jain Sangh, Bhagwan Rushabh Dev was one, the other being Shri Mahavir. The story of Kushabh Dev's life and glorious lead to society is, though well-known, told in the pages in such a romantic and at the same time realistic way, that the reader is not tired of reading it.

INDIAN PERIODICALS

George Bernard Shaw

K. G. Menon writes in *The Indian Review:*

"The young Beggar is getting quite outrageous. I left him this morning roaring and heaving like a bull." So wrote Shaw Senior to his wife about young George Bernard, then one year old. For years thereafter, barring a brief period of mediocrity in youth and middle age, the youngster continued consistently to be outrageous, Enfant terrible shocking the world with epigrams, paradoxes and poses and provoking everyone with outbursts from pulpit, platform, stage and the press. And just as he lived, volcanic energy erupting unpredictably, so he died when we were least prepared for it and after recovering from two surgical operations that might have killed a younger man.

On his ancestry, Shaw himself has enlightened us. His mother—Elizabeth Lucinda Gurly—"was the daughter of a country gentleman, and was brought up with ruthless strictness to be a paragon of all lady-like virtues and accomplishments." Not knowing what marriage meant and having to choose between a tyrannical aunt and an irate father with a second wife, she preferred an impecunious and elderly husband in George Carr Shaw, squint-eyed drunkard, two degrees removed from an Irish baronet. The third child and first son of this union was George Bernard. He had little schooling and was soon office boy and clerk in a Dublin firm. But Shaw was not meant for a musty office and escaped to London where, through a long apprenticeship of failure as pamphleteer, public speaker and novelist, he was sustained by his mother, who taught music. An accidental meeting with William Archer projected him into his new career as art critic, whereafter and especially as critic of music and drama, a new star was born. This Star, G.B.S., was according to Shaw, "one of the most successful of my fictions . . . . . G.B.S. bores me, except when he is saying something that needs saying and can best be said in the G.B.S. manner. G.B.S. is a humbug." We cannot help agreeing, but when he says, "G.B.S. is not a real person: he is a legend created by myself: a pose, a reputation. The real Shaw is not a bit like him," we reserve judgment, as the two pictures seem as different as Augustus John's portraits and Rodin's bust. For, into the composition of that complex personality went conflicting ingredients that produced the brew of a witch's cauldron that Shakespeare never dreamt of. It made Shaw doubt his own sanity, while his periodical public pronouncements left his listeners gaping with equal uncertainty. One of his weakest vanities is the comparison between himself and Shakespeare. Duffin, Frank Harris and other biographers allege that Shaw declared his plays to be better than Shakespeare's. Shaw has denied the allegation, but has certainly said that during his days as dramatic critic, he postulated certain requirements for successful plays and proceeded to excel in them in *unprecedented* fashion. "My plays are no more economic treatises than Shakespeare's," he says in his self-sketches, and "all my plays were written (not) as economic essays, (but) as plays of life, character and human destiny, like those of Shakespeare or Euripides." Shaw is therefore not averse to compulsion [illegible] or criminal, who is human and true to nature and none peare. He is also proud of the socialism of his plays, the plays of ideas he created—with all the earnestness of the Morality plays of old—against the bleak background of 19th century classical melodrama. Against the pedestal on which these plays are set up, "It is useless to talk of Shakespeare's depth now" continued Shaw, "There is nothing left but his Music. Our Bard is knocked out of time. There is not a feature left in his face."

In defence of Shaw, it must be admitted that, in many ways, Shavian drama is unique. "My governess taught me my alphabet," Shaw admitted, "but nobody taught me to write plays, which were denounced as no plays, until they made so much money that the fashion changed and I was hailed as successor to Shakespeare." But the process of successful play-writing was tedious and lengthy. Archer, Isben-inspired, tempted Shaw to collaborate in providing the dialogue for a conventional plot. The attempt was still-born, but when Grein started the Independent Theatre, on the pretext that "there were, in England, hundreds of dramatic masterpieces unacted by the commercial theatres," Shaw "produced the necessary evidence" by building on his previous abortive effort into a three act play. The effort failed, but convinced Shaw (on his own evidence) that he was "a born master of the theatre." "It made a sensation out of all proportion to its own merits or even demerits and at once I became infamous as a dramatist. I had not achieved a success, but had provoked an uproar and the sensation was so agreeable that I resolved to carry on." He therefore pegged away at it, criticised mercilessly the old type "well-made" play, threw into the scrap-heap the problem-crisis-denouement structure and shocked critics and audiences with virile social satire, socialistic philosophy and intriguing and amusing dialogue or even monologue. The comparative failure of the early plays only inspired Shaw to greater effort, until his association with the Court Theatre in 1904 established a vogue for him that has not been paralleled in this century.

Shaw has claimed that the aim of his plays is to make people think. In this task, he succeeded admirably. With an originality and daring unsurpassed even in an adventurer, he turned the stage into a platform and pulpit for "sermonising" his fast growing audience on the widest variety of subjects, covering love, marriage, domestic felicity, science, creative evolution, social evils, religion, politics, and economics. Hence hostile critics complain that Shaw's success—such as it is—is ephemeral and that plays (pleasant or unpleasant) dealing with slum-landlordism, suffragettes, prostitution or jealousy will not endure and are, in Ruskin's phraseology, mere "books of the hour." But Shaw has produced so many plays that even if a few perish and even if readers fail to be attracted by racy dialogue or matters of the moment, who can deny the lasting qualities of his classical comedies, *You Never Can Tell* and *Arms and the Man* and of his historical plays, *Caesar and Cleopatra* and *Saint Joan?*

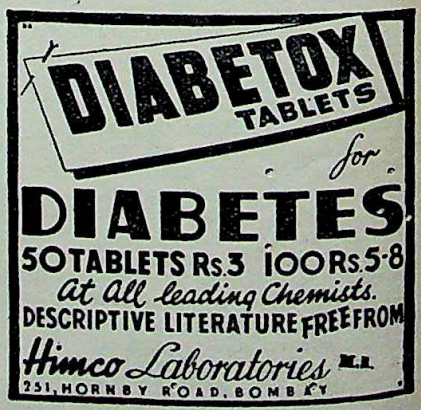
Right through his writings and even when he caricatures himself, he distinguishes in his heroes two personalities, one invested with the halo of divinity or the curse of criminality and the other, the debunked hero

CC-0. Mumukshu Bhawan Varanasi Collection. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the less to be venerated or abhorred because tradition and reality are different. This debunking of popular versions —inverted melodrama, as Bentley calls it—attracted attention as much by its originality as by its moral that divine or super-human attributes—as in the case of St. Joan—are not indispensable or even necessary for a country girl to be a heroine.

But even these tricks were soon out of fashion with Shaw. Once he had established himself as a play-wright, he ceased consciously to write plays in the accepted sense and wrote just as he pleased, with the supreme knowledge that a 'made' man could sell anything. All his favourite themes, even his crazy ideas, for some of which he has left all his property, were ventilated. Thus he publicised his cherished views on phonetics in *Pygmalion*, creative evolution in *Man and Superman*, politics in *John Bull's Other Island* and *Androcles and the Lion*, parents and children in *Misalliance* and the medical profession in the *Doctor's Dilemma*.



The plays soon became inadequate media for the dissemination of Shaw's views. Hence the Prefaces. They have often little or no connection with the plays they preface. Here he was in his element, shorn of all pretense (unless deliberate) and not circumscribed by the requirements of the stage. Here he displayed with proselytising zeal the numerous range of ideas with which he sought to energise the masses out of their inertia. He set himself up as ostentatiously churlish and censorious, spouting unpalatable truths and half-truths, championing lost and weak causes and inviting the disapprobation due to a disagreeable personality and earning Oscar Wilde's rebuke, "He has not an enemy in the world; and none of his friends like him." And yet he surprised the stranger by his amiability and friendliness. As he says of himself, "No truthful contemporary portrait can ignore either this extraordinary power of exciting furious hostility, or the entire absence of any obvious ground for it. It has been said that Shaw irritates people by always standing on his head and calling black white and white black. But only simpletons either offer or accept this account. Men do not win a reputation like Shaw's by perversity and tom-foolery. What is really puzzling is that Shaw irritates us intensely by standing on his feet and telling us that black is black and white is white, whilst we please ourselves by professing what everyone knows to be false." Nor is it true that Shaw disliked to be liked or disliked fellow beings. "My life belongs to the community and I find it a life-long privilege to do everything for the community," a confession totally incompatible with the external bravado in Shaw and revealing unexpected tenderness and concern for humanity.

Shaw's politics and political economy were shaped by Henry George and Karl Marx, but distinctive like all his other creeds and faiths. His brand of Socialism—Fabianism—was a way of life rather than a school of thought and was developed with the assistance of Sidney Webb, Leigh Joynes and Sydney Olivier. And for twenty-seven years he dominated the Fabian Society and helped to keep its flag flying, when other Socialist parties were rent with schisms and splits. For this achievement, Shaw claims, with mock-modesty, that "one Irish element in its management" was responsible!

On Shaw's brand of Irish wit and humour, it is unnecessary to dilate. There is none knowing the English language who is not familiar with sufficient Shavian explosions to keep any company merry. He gave it hard, but often took it back hard. Rejecting an invitation for lunch from Lady Randolph Churchill, he protested, "I will not come. What have I done to provoke such an attack upon my well-known habits?" But he had caught a tartar, for Lady Churchill replied, "I know nothing about your habits, but I hope they are not quite as bad as your manners." Proposing the toast of dramatic critics at a public dinner, Shaw proudly proclaimed that he was a critic himself, whereupon Max Beerbohm, who replied, retorted, "I was once at a school where the master used always to say, 'Remember, boys, I am one of yourselves.' Another well known story, where Shaw does not come so badly, is about Isadora Duncan, who wanted a child with her beauty and Shaw's brains, and was rebuked with the reply that if, by a Mendelian mistake, the child inherited *her* brains and *his* looks, it would be a monster. Symbolic of the cutting edge to Shaw is the story he himself created that an "Indian prince's favourite wife was banqueting with him, when she caught fire and was burnt to ashes before she could be extinguished. The prince took in the situation at once and faced it. 'Sweep up your missus,' he said to his weeping staff, 'and bring the roast pheasant'." That prince was an oriental Shaw. Many of these stories were given currency by Shaw himself, probably with an eye on whimsical self-advertisement. And realising this, he wants Frank Harris to have said that "there is nothing interesting to be said about Shaw that he had not already said about himself!"

No two critical appraisals of Shaw are likely to agree on most points because he was an incorrigible and continuous actor and the sham and real Shaws are difficult to distinguish. This was really the tragedy of Shaw. He put up a façade of levity and buffoonery to attract attention, but when he wanted to be taken seriously, he continued to elicit laughter. The very vehemence of his outbursts made him look capricious and unreliable. "Our laws make law impossible," he said, "our liberty destroys all freedom, our property is organized robbery. Our morality is an impudent hypocrisy, our wisdom is administered by inexperienced or mal-experienced dupes. Our power is wielded by cowards and weaklings and our honour is false in all its points." Such wholesale condemnation of everything that makes life worthwhile without the suggestion of any alternative, the idea that God is a finite force that has not realised itself, that Science is overdone and should be relegated to its proper place, that longevity is proportionate to the number of times one masticates vegetarian food and in fine, that life is life only for supermen of Shaw's type here and hereafter, do not conduce to universal popularity or understanding. Was it frustration at being so misunderstood and criticised that impelled him to write this epitaph for *The Evening News*:

Nepal

The New Review observes :

The trouble-spot nearest to India is Nepal. The case is complex. There are at least four political entities at work. There is, first, the Rana clique headed by the conservative and ruthless Prime Minister and Commander-in-Chief, who, true to the 100-year old Rana tradition, opposes reforms. There is another Rana group which favours democratic evolution and has a vague alliance with the Nepali nationalist movement. The King represents a third force sympathetic to reforms and democracy, this third force stands between the Rana Prime Minister and the Rana dissidents. The fourth force is the nationalist movement represented by the Nepali Nationalist Congress, the Nepal Democratic Congress and the Peasants' Party; these parties are in touch with Indian parties and do not close their doors to the eighty Rana families. They want the King as constitutional ruler and an elected parliament. The Prime Minister means to keep the autocratic powers his ancestors secured a hundred years ago, making and unmaking puppet kings, appointing after a personal interview each and every official (minister, district governor and village chowkidar), purging army and administration when suitable, and ruling on the postulate that a wealthy prime minister means a wealthy country.

Tension is endemic at Khatmandu; in early November it burst out. The King escaped from his palace to the Indian embassy, with the Crown Prince and the Crown Prince's eldest son; the Prime Minister pegged the dynasty down by two notches and put a three-year-old baby Prince on the throne. Nepali Congress forces, relying on their sten-guns more than on the non-violence of the brave, came out in open rebellion. Where these forces came from, nobody is supposed to know. When Sri Nehru heard that the Sri Sri Sri Minister was nasty to the Sri Sri Sri Sri Sri Sri King, he offered the ruler republican hospitality in New Delhi. The sovereignty of Nepal was proclaimed anew, the dispute declared internal and the frontier was closed with red tape.

The early successes of the Congress volunteers did not last long and their advance was turned back at Birganj. Apparently their move did not meet with general support in the country itself as it was ill-prepared.

Korea

The same *Review* observes :

In early November Chinese troops rushed across the Manchurian frontier and launched a vicious flank attack on the U.N. forces who were pursuing the remnants of the North Korean armies. There was an ugly moment of dismay; the U.N. forces succeeded in breaking off the combat and fell back. Had the Chinese attack come a little later and been launched more vigorously, the U.N. armies would have suffered a severe defeat. But the U.N. local commander was nimble enough and his logistics sufficiently elastic to allow a fairly orderly retreat and an early realignment across the neck of North Korea. Soon the front-line was made continuous and the advance resumed with caution.

What was the motive behind this unexpected move of Red China ? Was it to protect the Yalu dams and high-power stations with ground troops, though U.N. bombers could destroy them from the air ? Was it an irresistible impulse of Chinese communism which overflowed into North Korea, Indo-China and Tibet, and had to be contained by orders from Moscow? Was it violent blackmail to force Red China's entry into the Security Council? The answer rests with Peking and with Moscow, and is likely never to ooze out.

The incident did not provoke a general conflagration. Which shows that no nation and no bloc wanted war at the moment. The respite is welcome, though ominous signs of preparation for a world showdown are visible a little everywhere.

Goa Groans Under Portuguese Repression

Free India cannot tolerate the continued occupation of a portion of her territory by a foreign country. Kumari Mukul Mukherjee writes in *Indian Affairs* :

The Portuguese Prime Minister, Dr. Antonio Salazar declared recently that, without intending provocation, Portugal had every intention of keeping her Asian colonies under the Portuguese flag. The Portuguese Government have even declined to discuss with the Government of India the future of their three possessions in India. From this it is clear that the Portuguese have taken a decision to oppose the freedom of the Goan people. This stand will inevitably bring defeat upon them. In this age of democracy this unreasonable attitude of the Portuguese cannot be maintained for a long time. The Portuguese may temporarily succeed in terrifying the Goans and wiping out their movement for independence, but they can never succeed in putting out the flame of freedom and patriotism from the hearts and minds of the Goan people who are today paying the price of slavery.

Goa, with an area of 1,469 sq. miles is the most important of the Portuguese possessions in India, the others being Daman and Diu.

It is situated on the south-west coast of India and bounded by the Western Ghats in the east and the Arabian Sea in the west. Before the advent of the Portuguese, Goa was an independent kingdom ruled by the Kadambas. It was then a very flourishing country. Subsequently it was overrun by the Momamedans. They were, however, compelled to evacuate the country in 1370, having been defeated by Vidyaranya Madhav, whose successors ruled Goa for about a hundred years. In 1470, Goa was conquered by Mahmud Gawan, the General of Muhammad II, the thirteenth Bahmani Sultan of the Deccan, who incorporated it into the dominion of his sovereign. Goa was subject to the Adil Shah dynasty reigning at Bijapur about the time when Vasco da Gama landed at Calicut in 1498. This dynasty retained possession until February 1510, when Goa was conquered by Alfonso de Albuquerque. He met with some opposition in the initial stages but finally managed to establish Portuguese rule in the country.

When the Portuguese conquered Goa it was still a flourishing centre of commerce and was known as Golden Goa. Today, alas, Golden Goa is no more ! In the place of a prosperous centre of trade, there is now a conglomeration of small towns and villages steeped in misery and hardship with no attempt at striving for betterment. Goa consists of eleven districts with the capital at Panjim. Despite Nature's abundant gifts, the people are in the grip of dire poverty. The fine natural harbour, manganese mines and teak forests are undeveloped. Primitive methods of fishing and farming constitute the livelihood of the masses. Out of a population of 6 lakhs, one-sixth goes

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

out of Goa to various parts of India or to Portuguese East Africa to seek employment. The stream of Goans coming into India continues to increase and it can rightly be said that denied the remittances of her people abroad, Goa would die.

In every way Goa is dependent upon the Indian Union. Rice, sugar, wheat, vegetables, coal, wood, building materials, petrol and fertilizers come from Indian territory. The ships and railways which serve Goa are Indian. Without the co-operation of the Indian Government, Goa would be frozen completely. Such is the lack of economic activity within this potentially rich area.

Politically the people of Goa live under a rigid dictatorship.

The administration is carried on by the Governor-General and a Cabinet whose function is purely advisory. The Governor-General exercises supreme authority over the Council and is empowered to veto any of the Council's enactments. He is directly responsible to the Home Government through the Minister for Colonies. Civil liberties do not exist at all and there is no right of free speech or assembly. The press is so completely gagged that even the name of Smt. Vijayalakshmi, India's Ambassador to the U.S.A. is not allowed to be mentioned in any news item. To say *Jai Hind* is a criminal offence. Consequently the newspapers in Goa are not worth reading. They bear the bold impress of the censor's red pencil. Public activity is nil as no public meetings are allowed to be held and no speeches are allowed to be delivered without being pre-censored. There is only one political party, the Uniao Nacional, to which the Government belong and no other party is allowed to function.

The fascist rulers of Goa do not understand the meaning of public opinion. Their word is law and the voice of the people is their most dreaded enemy. The Portuguese rulers, therefore, do not feel any prick of conscience to loudly proclaim to the world in this twentieth century that Goa is an integral part of Portugal and that it will always remain Portuguese, a claim more ridiculous than which it is difficult to find in the annals of world history.

A democratic method of deciding the future of Goa would, therefore, be foreign to Portuguese traditions.

However, even if a plebiscite is held it is bound to be a farce. The result would be definitely in favour of the Portuguese, not because the people desire the continuation of Portuguese rule, but because ballot boxes in Goa possess a strange capacity of altering the decisions recorded on the ballot papers. It also often happens that whenever elections are held in Goa—and they are a rare luxury there—many voters find that their votes have already been cast even before they arrived at the polling booths. Under these circumstances, Goans may be excused if they sound a bit undemocratic when they express themselves against the idea of a plebiscite to decide their political future.

The second alternative, therefore, through which Goans can fulfil their aspirations, is a popular movement. But an unarmed struggle against an enemy, not only armed to the teeth but brutal beyond description, does not offer any prospect of success. Happenings in Goa during recent years have amply proved this.

Public memory is not so short as to forget what happened when Dr. Ram Manohar Lohia, the Indian Socialist leader, had initiated what was called the 'civil liberties movement' which gradually developed into a full-fledged "quit Goa" campaign. The whole of Goa echoed with *Jai Hind* and other nationalist slogans. Goans defied the laws restricting their liberty and boldly faced the consequences. Many of the Goan emigrants returned to Goa to participate in the *satyagraha* movement and Goans outside Goa gave their moral support. The Portuguese were alarmed at this sudden spurt of activity on the part of the otherwise docile Goans and the Government acted with brutal thoroughness. The leaders of the movement like Tristao da Cunha Braganca and Dr. Jose Inacio Loyola and the *satyagrahis* who were peacefully demonstrating were arrested, court-martialled and arbitrarily sentenced to long terms of imprisonment and exile. Many of these pioneers were mercilessly beaten and subjected to most inhuman treatment. Later on, on the attainment of independence by India, Goan nationalists again attempted to bring their political claims to the attention of the Portuguese by means of *satyagraha*. This time also the result was violent action on the part of the local authorities. Leaders of the movement were taken into custody and are still serving long terms of imprisonment in Goa and Lisbon ranging from eight to fifteen years.

Civil liberties, already non-existent, were virtually eliminated and Goa groaned under the pressure of terrible repression.

The Portuguese did not stop at that. They reinforced the military forces with Negro and White troops, and mechanised equipments of warfare still continue to pour into Goa. The Portuguese of course maintain that the troops are being brought for the defence of Goa. This might have been plausible but may we ask the Portuguese why they never thought of defending Goa during the Second World War and got this idea only when the civil liberties movement started?

Portugal has adopted recently some cheap devices to hoodwink the Goans. She has offered autonomy to the Portuguese possessions in India. But the Goans do not want to receive 'some facilities.' They are demanding and will demand complete withdrawal of the Portuguese from Goa. Unfortunately there are still some people with vested interests who pay heed to the sweetly-worded and cleverly-phrased despatches of the Portuguese Government and dance to their tune. They presume that if Goa is absorbed in the Indian Republic they will be bossed over, to use the most common expression. May we remind them that India is a secular State and that every citizen, irrespective of his caste, colour or creed has equal opportunities to rise in life and enjoy all the good things that India can offer to her people? The Constitution of the Republic of India guarantees all this.

As is usual wtih all imperialist powers the Portuguese often raise the bogey of 'religion in danger.' They say if the Goans join their destinies with those of their brethren in India, their religion would be in danger. May we point out to them that India has millions of Christians who are following their faith freely without any hindrance whatsoever? Do they not know that India was the first nation to have a Catholic priest, in the person of Fr. Jerome D'Souza, as one of her representatives in the highest Council of the Nations—the U. N. O.?

The problem of Goa is of vital importance as much to the Indian people as it is to Goans themselves.

For, in the context of India's sovereign independence today, the continued occupation of a portion of her territory by a foreign nation is an anomaly. The Government of India have, on many occasions, emphasized that India cannot and will not tolerate any foreign pockets in her territory. Goa is a place of great strategic importance and it can no longer be allowed to remain under foreign domination without detriment to the stability and security of India. It is urgently necessary therefore that it should be speedily restored to her politically to whom it belongs naturally. Goa must come back to India. And it will come back, whatever the Portuguese might say.

Nobel Prize for Ralph Bunche

The Calcutta Review writes editorially :

The award of the Nobel Peace Prize this year to Ralphe Bunche not only brings into further prominence a personality already prominent in public eye but focusses the attention of the world on the progress made by a group of American people during less than one hundred years. It was not till 1863 that first steps were taken by Abraham Lincoln for the liberation of the Negro slaves of the white Americans. The Proclamation was issued only as a war measure by the President in his capacity of Commander in Chief. When the Civil War started, Lincoln was not an abolitionist. He was out only to save the Union which the Southern secessionists threatened to disrupt. It was in fact by way of achieving this object that he issued the Proclamation. Thereafter when the war ended and peace returned more constitutional steps were taken not only for the abolition of slavery but for the conferment of citizenship rights on the liberated slaves. Law notwithstanding, tradition died hard in the United States as in other countries and inspite of theoretical equality in the eye of law, the Negroes have suffered grievously during the last eight decades and a half from differential treatment. But all the same they have made enormous progress in civilisation and culture. In this regard thanks are due both to private and to Government efforts. It is true that the Government has not looked after the Negro citizens in the same way as it has looked after the whites. But all the same there is no denying the fact that much was done for the education and uplift of the former slaves and their descendants. Private efforts also have been made on a creditable scale. In this connection the name of Booker T. Washington comes uppermost in our mind. Himself a former slave, he was a prince among men and has left his memory enshrined in the famous Tuskegee Institute in the deep south. Today there is not a single field in which the members of this American group have not shown their merit. In art and literature, science and law, they have given evidence of great ability. In the conduct of public administration, in fighting a war and in tackling the problems of peace they have shown equal genius. Ralph Bunche who is a former Professor of Political Science has already impressed his personality upon the activities of the United Nations. He is only forty-five now and has many years before him to devote to the service of humanity. We have no doubt that the increase of his own stature will mean the increase of the stature of the much wronged community he represents.

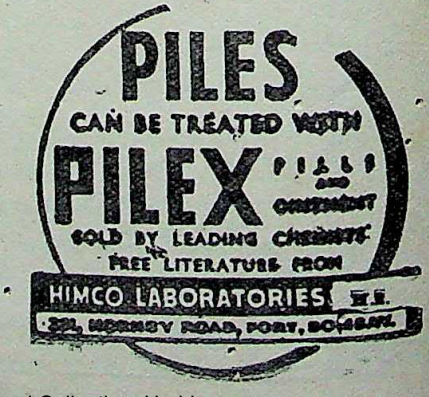
FOREIGN PERIODICALS

China and Korea

Dr. Chen Yao-Sheng delivered the following lecture on China and Korea at the Chinese Institute, London, as published in *The Asiatic Review*, October 1950:

Chinese Colonists first settled in Korea before the Chou dynasty thousands of years ago. They emigrated north-eastwards from the Yellow River Basin into Manchuria and Northern Korea, both of which areas are geographically close to the Yellow River Basin, and the colony which they formed in North Korea became part of China, one of the nine provinces of China. Organized colonization into these regions, however, did not take place until the Chou dynasty (1258-1122 B.C.), when Chi-tse, a prince of the previous dynasty, refused to become a subject of the new ruling house and migrated with his followers into the country east of the Liao River. He founded a state known as Chao-hsin which extended over the region now known as North Korea.



With the downfall of the Chou dynasty the whole of China was divided up into many small states of varying sizes and in the 12th century before Christ there were no less than 1,800 such states. As the nation grew these states tended to absorb one another to such an extent that, by the time of Confucius, (550 B.C.) only 160 existed and in Mencius' time these were further reduced to eight, one of which was Chao-hsin. Unification of the states was further carried out during the Chin Dynasty (258-207, B.C.)—a century after Mencius—by Chin-Sh-Wang-Ti, the first Emperor, who brought this about by extending his influence beyond the boundaries of the old states and, at this time, acquired the allegiance of Chao-hsin.

China was again divided into many states when the Chin Dynasty fell and it was not until the reign of Wu-ti (140-87 B.C.) in the Han Dynasty (206 B.C.-A.D. 221) that China was reunited and attention was again directed to Chao-hsin. By that time the descendents of Chi-tse had long been displaced by another ruling house—the house of Wei's. The latter had fled into Chao-hsin from the old territory of the feudal state of Yen after taking part in an unsuccessful revolt against the Han dynasty. The Han forces invaded Chao-hsin by land and sea, disposed of the Wei's, and turned the country into two prefectures known as Lo-Lang and Yuantu. Long before the establishment of these prefectures Chinese immigration had already reached the south-east part of the Korean peninsula. This part of Korea was colonized by Chinese refugees, who emigrated across the sea when the Chin Dynasty fell, and later by the Chi's who migrated there after they were expelled from Chao-hsin. The two prefectures of Korea which were incorporated into Chinese territory in the Han Dynasty existed throughout several ensuing dynasties. During the Han, Later Han, and Wei periods, no change was made, but in the T'sin period (A.D. 265-313) the southern part of Lo-Lang became a new prefecture called Tai-Fang.

During the period in Chinese History known as the Barbarian Rebellions (A.D. 317-439) China was overrun by Nomadic tribes from the north-east called Wu-huang and Hsien-pei, and from the west by tribes called Hsiung-nu. At the outset, South Manchuria and North Korea fell into the hands of the Mu-jungs, a branch of the Hsien-pei tribe, and with the resources of these regi at their disposal, they began to descend upon the Ye River Basin. They remained in China proper alm until the end of the Rebellions but their position in S Manchuria and North Korea became precarious. Fr the start a Manchurian tribe known as the Kao-ku-li, w occupied territory adjacent to that occupied by the Hs pei tribe in south Manchuria, had set covetous eyes the three prefectures and had attempted, on several oc sions, to occupy these regions. They were driven b on several occasions but eventually succeeded in occu ing the three prefectures of Lo-Lang, Yuan-tu and T fang by taking advantage of a conflict between two of Hsien-pei tribes, the Mu-jungs and the Tobas, and found a kingdom which they named Kao-ku-li or Kao-li. T Tobas were not so interested in that part of the coun as the Mu-jungs and, had they had the intention intervene, it was difficult for them to do so as they we otherwise fully occupied in a struggle against oth Barbarian tribes in the Yellow River Basin. Conse quently, the Kao-ku-li's were able to retain control their kingdom and were further able to annex two oth prefectures in the north. Liao-tung and Chang-li.

During this time the southern part of the Korea peninsula had already reached a high degree of civiliza tion through Chinese colonization. The people, followin the example of the Kao-ku-li, established two separat kingdoms—Pei-chi, on the west coast of the peninsul and Hsin-lo, on the east coast. These two new kingdom together with that established by Kao-ku-li in the north paid their respects to the Chinese ruling dynastics an applied for official recognition. As an instance the Rule of Kao-li obtained official recognition of the Southern Dynasty (A.D. 420-589) and the title "Commander-in Chief of the Forces of Yin-chao, King of Kao-li an Perpetual Duke of Lo-Lang." In this way, Chinese influ ence was extended over this region, not by conquest, bu by voluntary homage by local chieftains who received i return appointments as hereditary governors to rule ove their own people. Thus, the foundation of the system suzerainty was laid.

These kingdoms soon became more independen especially at times when China herself was torn wi internal strife and during the Sui Dynasty (A.D. 581-61 Kao-li made preparations to attack China. Wen-ti (A.D. 581-604), first Sui Emperor, was offended by this disloya

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

act but being a man of moderate nature, confined himself merely to sending the King of Kao-li a personal letter of remonstrance. This, however, did not have the desired effect and China had to resort to force. This task fell to the successor of Wen-ti who was not competent to carry it out and not only failed to enforce the suzerain claim but also discredited China in the eyes of other kingdoms whose attitude towards the suzerainty was also becoming intolerable to China.

In the first years of the Tang Dynasty (A.D. 618-907) no serious measures were taken by China against the provocative actions of Kao-li as she was then engaged with the Tu Chueh nomads who had again got out of control, but towards the close of the reign of Tai-tsung (A.D. 627-649) and the beginning of the reign of Kao-tsung (A.D. 650-683) Chinese rule was re-established throughout the land and her attention was directed eastwards. At this time, Hsin-lo appealed to the Tang Dynasty for protection against attack from Kao-li and Pai-chi and China readily despatched forces to her aid. Pei-chi was conquered in A.D. 660 and Kao-li underwent the same fate eight years later. Following China's traditional policy regarding the enforcement of suzerain claims the Tang Dynasty refrained from annexing these kingdoms and accordingly, when peace was restored in Pei-chi, a son of the deposed King was created "Prince of Tai-fang" and the kingdom was restored to him. Similarly Kao-li was restored to her deposed King in A.D. 677 and in 687 the deposed King's grandson was created "Prince of Chao-shin." Furthermore, in 699, an uncle of the young prince was appointed "Protector-General of Antung."

After the fall of the Tang Dynasty the descendents of Hsien-pei nomads living on the Cherin steppes and known as the Chi-tans began to move southwards. In 924 they conquered Jehol, South Manchuria and North Korea and in 946 reached the Yellow River Basin where they established a Dynasty known as Liao (A.D. 907-1119). Meanwhile, under the leadership of Wang Kien, Kao-li annexed Hsin-lo, conquered Pei-chi and in 936, unified the whole Korean peninsular. Suzerainty with China was resumed and homage was paid to the ruling dynasty in China.

Since the Tang Dynasty enforced China's suzerainty the peninsula was left much to itself either because its right to a separate existence was recognized or because there was no one strong enough to question it. When Kubla-Khan became Emperor of the Yuan Dynasty (1260-1368) the suzerainty exercised by China towards Kao-li was different to that exercised by previous dynasties. Actually Kao-li was no different from the other provinces of China except that she had a king.

When Hung-Wu-Ti (1368-1398) overthrew the Yuan Dynasty and became the first Emperor of the Ming Dynasty, he changed the policy of the Yuans. Instead of maintaining former provincial government rule in Korea he merely announced to the King of Korea the fact of his accession to the Chinese throne and left the ruling of the country entirely to its king. Thus, a new harmonious relation between China and her vassal state was established.

In 1392, the House of Wang, which had been ruling Korea, was overthrown by a new ruler named Li-Chang-Kwei who applied to the Ming Court for recognition and a new designation for his kingdom. His request was readily granted and his kingdom had conferred upon it the old name of Chao-hsin and throughout the Ming Dynasty (1368-1644) Chao-hsin never neglected her duties to the suzerainty. In consequence, when she was invaded by Japan at the end of the 16th Century, the Ming Dynasty readily came to her rescue and when the latter was in conflict with the Manchus at the beginning of the 17th Century, Chao-hsin gave her support.

After the Manchus conquered China and established the Ching Dynasty (1644-1911) no departure was made from the policy of the Ming Dynasty towards Chao-hsin, and the good relations long established between China and that vassal kingdom were continued until the Japanese war of 1894-5.

Having given you a general account of China's historical relations with Korea, I will now endeavour to outline her more recent relations with that country. The Sino-Japanese war (1894) not only changed the destiny of Korea, but also affected China's future as well as international relations in the Far East, hence this period of history is very important. It is necessary therefore, for me to give you a more detailed description.

(To be continued)

Harold J. Laski: A Preliminary Analysis

In the *Political Science Quarterly*, September 1950, Carrol Hawkins attempts at a critical analysis of Laski's ideas of liberal socialism and exposes his failure to solve the eternal problem of reconciling liberty and authority by joining liberalism to Marxism:

To all who are concerned with the scope and function of political authority the ideas of Harold Joseph Laski are of signal importance. Over the course of his lifetime Laski's ideas reflected in many respects the strength and weakness both of those who strive to maintain liberty as the main end of democratic government, and of those who see in equality the fountainhead of democracy which is secured largely through state action. Beginning his public career as an extreme critic of the state, Laski had been for many years prior to his death an outstanding spokesman for collectivism. This vigorous personality was one of the most controversial figures in the academic and political world of the twentieth century.

Here I wish to point out one significant result of Laski's treatment of the old and continuing problem of liberty versus authority in the particular circumstances of the twentieth century in which the problem is posed. For all his freely recognized scholarly contributions, his many services in the cause of democracy, his life-long devotion to equality, Harold Laski to some degree always failed

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the liberal democrat. In particular I desire to call attention to the several unfortunate results of Laski's failure during the years after he accepted Marxism.

Laski's socialism before he accepted Marxism originated in a moral indignation against injustice. As a liberal socialist he was undogmatic in his views, fiercely devoted to the interest of all dissenters and to the free examination and choice of all beliefs, and hopeful for the successful negotiation of differences through parliamentary methods. His view of Marxism and of Soviet communism was one of intelligent skepticism. Concerned with understanding, rather than denunciation, he brilliantly illuminated the appeal of the Marxist-Leninist faith while calling attention to its errors. He rejected Marxism as incompatible with democracy.

This devotion to liberalism and straightforwardness with regard to communism is often absent after Laski turned to Marxism. Despairing of the adequacy of liberalism and liberal institutions to secure that equality which he eagerly sought for the plain man, he attempted to marry liberalism to Marxism. Arguments that capitalists will not accept the peaceful victory of socialism, that it will be necessary to suspend traditional constitutional processes to secure a socialist victory, that parliamentarism can no longer work in our day, that capitalists in a democracy will turn to the Fascists to protect property interests against a successful socialist appeal to public opinion, are repeatedly put forth. Indeed liberalism historically is viewed as an end product of capitalism. In contrast to his liberal socialist views of previous years Laski, *on occasion*, served as an apologist for the monolithic state party of the Soviet Union. *Periodically*, too, he substituted adoration of the "Soviet Idea," for scholarly examination of communism.

Yet, despite instances of his clearly fatal compromise of liberalism, Laski was regarded by many liberal democrats as a democratic socialist.

Laski's brilliant exposes of Communists' totalitarian morality and their conspiratorial tactics and organization, his unsparing sacrifice and devotion to the British Labor party, and his inspiring prose in praise of democratic socialism illustrate his liberal side. Incongruously at the same time there appear assertions of the great promise of democracy under Stalin, and also criticism of the British Labor party and the "Fabian way," of the philosophy of liberalism itself, and of the formal institutions of democracy in what can be described as "neo-Marxist-Leninist" terms. Stirring pleas for e and vigorous and helpful socialist criticism of dem institutions were frequently accompanied by a shocking disregard of the significance of the vital sphere in which the formal techniques of dem operate.

Under the influence of Marxism, liberalism b little more than the excrescence of capitalism. Id ing liberalism as the political expression of capit Laski argued repeatedly that when this political phil could no longer serve the ends of capitalism it wo rejected by the owning class. The business group not accept changes which might result from the tr of liberalism to all classes. For, in Laski's liberalism is "the philosophy of a business civiliz

Having identified liberalism with capitalism further argued that the twentieth-century man choose between liberalism and socialism.

43 YEARS OF DEPENDABLE SERVICE ••

This is a history of achievement and service and, in view of these difficult times, 1949 is the most important Chapter in the unfolding of the history of the HINDUSTHAN CO-OPERATIVE INSURANCE SOCIETY LIMITED

The Society now provides protection totalling Rs. 69,73,23,218 for 3,40,247 policies in India and outside. The carefully invested assets held to meet its policyholders' obligations have now grown to Rs. 15,64,29,771. During 1949, Rs. 71,02,500 was paid to policyholders and their beneficiaries. The new policies amounting to Rs. 13,36,06,243 show its upward stride from year to year.

In the years after the war, despite evidence to the contrary, Laski religiously and periodically re-intoned the Marxist belief that liberalism is the social philosophy of a middle class and will be permitted to serve only that class's interests. The successes of the Labor party and the New and Fair Deal programs in Great Britain and America, respectively, did not change his continuing pessimistic prediction of capitalist counter-revolution, where a serious attempt is made to use liberalism against the interest of the owning class. Continually warning against conservative sabotage of the program of the "welfare state," Laski after the war also argued that the capitalists had little to fear from the way in which the governments were expediting the mandates supported by the workers in Britain and America.

The belief in counter-revolution led Laski to argue that frustrated capitalism would seek to revive fascism and plunge the world into another war. In *Reflections on the Revolution of Our Time*, written during World War II, he had argued that if socialism did not come to Britain during the war the likelihood was that after the war British and American capitalists would push the world into a new holocaust against the Soviet Union. During the last years of his life Laski felt that the greatest potential threat to peace was the danger represented in an imperialist America, influenced by the demands of capitalists seeking to preserve a dying economic order. What emerged from the sharps and flats, assertions and qualifications was substantially this: *At bottom*, despite all her admirable qualities, the United States is the greatest potential danger to world peace. *At bottom*, despite all her sins which Laski often was at pains to enumerate, the Soviet Union, if there is no war, points the way to a new and better world order. For with Marxist Laski, capitalist America must be the potential force of reaction; and with Marxist Laski, the Soviet Union has been frequently identified as the leader of the progressive revolutionary forces let loose in the world as the result of two world wars.

Laski's Marxist analysis that American imperialist capitalism is the greatest potential source of a third world war neglects to recognize sufficiently *at least* two facts. In the first place American capitalists are but one significant interest group influencing the policies of the capitalist democracy of the United States, while only one group, the State Party hierarchy, *does* control the policies of the Russian state. In the second place Laski's description omits the influence of the major shift of world communism toward an aggressive new line which took place in the spring of 1945 under the dictate of Russia disrupting the wartime co-operation and initiating the cold war between former allies.

In perspective Laski's political thought over the years is an expression of a continuous effort at reconciling liberty and authority. The way in which he presented his ideas, however, made that reconciliation impossible. In his earliest years he tried to build a theory of *government* upon what was really a theory of anarchy. The need for adequate and responsible authority lost out to his emphasis upon group liberty. Later, as a democratic socialist and pluralist, he tried in vain to reconcile a theory of positive government with a theory of extreme individualism. Here, in his anxiety to show that his socialism rested upon an abiding respect for freedom, he insisted upon an extreme individualism which really created an insoluble dilemma. As a Marxist, still in many ways an individualist, Laski attempted to join liberalism to Marxism. It has been the special task of this paper to indicate the unfortunate results which attended this effort. Ironically, in a quest for equality which would further extend freedom for all, Laski often permitted the very substance of freedom to be lost in his zeal for state

planning. Especially in his curiously contradictory views of Stalinist communism did freedom lose out to absolutism.

Laski believed most earnestly that the central problem of politics is the problem of authority versus liberty. In his different attempts to solve that ever-continuing problem one may find the particular natures of the theorist's failure to constitutional government. From a chronic fear of the state as an all-absorptive unity Laski eventually went to the other extreme in his rationalizations for the positive state. But few men in our day gave themselves so completely to the struggle to solve the perennial dilemma, which in these times is mainly reflected in the relationship of liberalism to collectivism. One may also hazard the guess that few men in this century will provide so stimulating a challenge to thought upon this problem.

Food Crisis in India

The vagaries of the monsoon, India's annual "gamble in rain," have cost her dearly this year. In contrast to the heavy losses of life and property caused by floods in northern India, including the Valley of Kashmir, deficient rainfall in the Deccan and some other parts in the South has created drought conditions over a wide area, leading to grave shortages of food.

One result of these catastrophes is that India has had to increase her imports of food grains this year from an estimated requirement of 1,500,000 tons. In spite of this, scarcity conditions prevail in certain states, notably Bihar and Madras, where the crop failure has been worst. The Central Government is now having to rush additional supplies of food to these states.

It is thus evident that the program of self-sufficiency in food supplies by the end of 1951, to which the Government of India was committed, has been totally dislocated.

Surveying the position in each state and starting from the north-east corner of India, one notes that Assam has been hardest hit because the earthquake of August 15 upset river levels and caused floods extending over some 10,000 square-miles. Assam is normally a surplus area, but it is now estimated that about 100,000 tons of rice was lost in the floods and the expected surplus has vanished. In its place the Central Government has been forced to send supplies to the stricken areas.

In the adjacent state of East Bengal (Pakistan), as well as in West Bengal, rainfall has been excessive and a good deal of damage has been done to the autumn paddy crop. Whereas East Bngal is self-sufficient in rice, West Bengal is a deficit area, and more than 200,000 tons of wheat has been allotted to it by New Delhi this year. The movement of some 4 million refugees, both Hindu and Moslem, between the two Bengals has disorganized agricultural operations, and the outlook in West Bengal is far from good.

In Bihar the rains have been excessive in some parts but deficient in others. The overflow of the Kosi river damaged the major part of the maize crop amounting to perhaps 200,000 tons. As maize is the staple food of the population in north Bihar this has caused acute shortage. Bihar usually has a slight deficit in foodstuffs and this deficit is now increased; here again New Delhi is rushing supplies of wheat to the hard-hit population.

Madras is experiencing its third successive year of drought and according to the latest reports is in a bad way. Last year it had to depend upon New Delhi for an allocation of 250,000 tons of wheat and rice and this will have to be increased this year. The same applies to Mysore State, which is also a deficit area. Hyderabad State has likewise suffered from drought and has been allotted another 65,000 tons of food grains by the Central Government.

Bombay has had a partial drought. It is a heavy deficit area at the best of times and this year it has allotted 550,000 tons of food grains, which quantity have to be increased.

The only areas of India which appear to be fairly well are the states of Madhya Pradesh and Bharat (formerly known as the Central Provinces Central India states), which have had adequate r and which are normally surplus areas.

Farther north in Uttar Pradesh (formerly kno the United Provinces) rainfall is again excessive there have been some floods. Last year Uttar P was self-sufficient in foodstuffs.

Finally in the state of East Punjab the monsoo been heavier than usual, but in spite of some the state is expected to have a small surplus crop

In terms of human sufferings the floods in no India may not have as grave repercussions as the dr in southern India, where in spite of rigorous ra many people are reduced to living on six ounces of grains a day (600 calories), which is not enough t tain human life. Malnutrition and deficiency di must follow unless the Government of Indi is a obtain more food supplies from abroad.

In this crisis the people of India naturally thi countries with large surpluses of food and their tho turn to the United States where huge food grain surp exist.

For almost a year, since Prime Minister Nehru's to the United States, talks between the governmen India and the United States have been held for the pose of enabling India to buy United States su wheat, at concession prices and extended credits, but obstacle or other has come in the way of these ne tions.

Now that serious famine conditions are feared large parts of India, independent observers feel nothing will do more good to the cause of the we democracies than for the United States to overc hesitation, red tape, and preoccupation with other ma and give priority to India's urgent food requirement *India To-day*.

India — Bharat

The Indian Constitution which came into force January 26, 1950 states in its first article that "India, is Bharat, shall be . . . ," thus embodying the re of those who wanted the name of India changed Bharat as well as the wish of those who wanted the name to remain.

Bharat, so called after the Bharatas, the Aryan ru ders of India, is the term used for "India" in Sanskrit-derived vernaculars and is hallowed by tradi Those favoring the retention of *India*, however, were to show conclusively that the name *India* is based even older a tradition, that of the pre-Aryan indige population in whose language *Sid* (or later as nasa *Sind*) meant "flow" and was applied to the mighty now known as the *Indus*, and to the large region fertile by this river. The Rigveda, reflecting the Ar struggle for supremacy, speaks of the country as *Sapta Sindhavah*, the "seven Sinds," and thus naturally adopts the ancient name of the land occu while calling the state founded in *Sind* by the inva *Bharat*. The Perso-Aryans had difficulties in pronou the initial S in *Sind*. Thus *Sind* in the spoken lang became *Hind*. On its way westward by way of P and Greece to Rome, *Hind* lost the aspirated first and became *Inda*, softened later to *India*.

Thus *India*, apart from being more representativ the Dravidian South, is definitely several thousand y older than *Bharat* which has been allied to it—th in a subordinate position—in the Indian Constitutio

"I Can Make You a Master Writer and a Convincing Speaker!"

—GRENVILLE KLEISER, Famous Speech Specialist

Whatever your business or occupation you need a command of the English language to be successful. It will bring you to the forefront and will help you, as no other single thing can, to reach the goal of your desires and achieve success.

Years of study and experience have enabled Mr. Grenville Kleiser to formulate a course of lessons in Practical English which has been universally admitted to be superior to any instruction hitherto offered on this subject. It enables you by post, in your spare moments at home, to—

Enlarge Your Vocabulary by Thousands of Words;
Use the Right Word in the Right Place;
Correct all Errors of Grammar, Diction and Idiom;
Develop Originality of Style and Expression;
Write Tactful and Forceful Letters, Essays, Advertisements, Articles, Stories, Reports and other Compositions;
Become an Engaging Conversationist and Be Popular in Good Society;
Be a Person of Culture, Power, and Influence;
Earn More Money and Get Better Position.

If it is your ambition to become a forceful effective speaker, enrol yourself for Grenville Kleiser's Mail Course in **Public Speaking & Development of Personal Power.** It will enable you to—

Conquer Timidity and Fear;
Banish "Stage Fright" & Nervousness;
Acquire Poise and Self-Confidence;
Develop Charm and Personality;
Grip and Hold Attention;
Argue Effectively and Winningly;
Talk Convincingly & Be Successful;
Be a Centre of Attraction in Social Gatherings;
Address Meetings and Sway All by Forceful Speech;
Become a Living Force and Win Admiration.

This Course will bring out the best that is in you, by making you a positive, clear-cut, convincing thinker and speaker. Nothing like it is available anywhere in India or abroad.

WRITE TODAY FOR FULL FREE PARTICULARS

There is absolutely no uncertainty—no guesswork—about Mr. Kleiser's methods. He has had years of experience in leading educational institutions and is generally recognised as the foremost teacher of speech culture and English by post. He has had under his tutelage many of the best known men in the public eye. His Mail Courses are his life work. They are for every ambitious man and woman who would use the English language for all one is worth in business and social life. We shall be glad to explain any of these two Courses to you. Send us the coupon above or write for full particulars, enclosing two annas in stamps. Will you do it TO-DAY?

BOMBAY NO. 14.

ROUND THE WORLD

By Mr. J. N. SINHA

(Assistant Conservator of Forests, Bihar)

A most interesting travel book that reads like a novel—valuable and instructive information of the world in the language of story book. The different customs of foreign people, their manners and outlook, are delicately mingled with humorous and entertaining anecdotes.

"There is a certain distinctiveness about the book which sharply marks it off from the ordinary travel tales of this kind."
—*Hindusthan Standard*

"The volume is a record of first-hand experiences in various countries of the world, and is full of information which a large public ought to know."
—*Amrita Bazar Patrika*

34 Photographs & 3 Maps :: 2nd Edition—Price Rs. 7-8

WONDERFUL POWERS OF AN OCCULTIST

Have your Past, Present and Future wonderfully revealed by Prof. M. J. Narsian, B. A., the Famous Astrologer and Occultist. His system of calculation is based upon YOGA-SADHANA (Meditation) and upon Ancient & Modern Science of Prediction. His book *Your Future Thru Astrology* has been eulogised in the Press. Prof. Narsian possesses wonderful OCCULT POWERS, and "Hypnotic Chart" is appropriately designated "The Mascot of Success". Numerous eminent persons have certified his wonderful predictive faculties.

DETAILS OF CHARGES:

Accurate Description of your Life Past, Present & Future up to 1952	Rs. 5-4
Detailed Annual Life Reading for next twelve months	Rs. 5-4
Three Questions Answered	Rs. 5-4
Hypnotic Chart (size 19" × 25")	Rs. 10-8
Hiro-Mantric-Talisman surcharged with Psychic Spiritual Powers	Rs. 10-8
Extensive Astrological Life Reading (Western Astrology)	Rs. 25

DATA REQUIRED:

Birth date, time and place of birth. If your birth date is not known, please mention approximate age, date and exact time of writing.

A copy of your HOROSCOPE drawn according to Western Astrology will be sent with leaflets on "The Third World War" and "Future of First Indian Republic" without extra charge.

Payment may be made by M.O. or Postal Order.

ADDRESS:—PROF. M. J. NARSIAN, B.A.
OCCULT ASTROLOGICAL FOUNDATION, Post Box No.: 25. POONA (India)

MENS PRESS:—Miracally by three doses remove irregularities of menstrual difficulties, no matter how long and what causes Rs. 7-8, Fgn. 20 shs. Guaranteed. DR. SHERMAN, 28, Ramdhon Mitra Lane, CALCUTTA-4

Examinees and Brain Workers should use

NEUROL

An excellent tonic for brain, nerves and heart. It improves memory, relieves sleeplessness and palpitation of heart. It is invaluable to young ladies in headache. In cases of blood-pressure and asthma it is excellent. Price Rs. 3-4. No V.P. Outsiders to send Rs. 4 in advance.
KALYAN KUTIR, 25-4, Rustomjee Street, Calcutta-19

INDIAN ECONOMIC INSURANCE CO., LTD.

Head Office :— MISSION ROW, CALCUTTA.

"Indian Economic" is one of those very few Life Insurance Companies of India which are regularly paying bonus to the policy-holders and dividend to the shareholders.

Board of Directors

S. M. BHATTACHARJEE, Esq., Chairman.
RAJENDRA SINGH SINGHEE, Esq.
T. C. CHATTERJEE, Esq.
I. N. ROY, Esq.
M. M. BHATTACHARJEE, Esq., Manager.

As it is always profitable to take a policy from the INDIAN ECONOMIC, so also it is always profitable to take an agency from the INDIAN ECONOMIC. Well-informed people take Insurance Policies from "INDIAN ECONOMIC" with pleasure. It is the support of the intelligent public that has made the position of the "INDIAN ECONOMIC" so strong to-day.

DIAPEPSIN

Diapepsin is a scientific combination of Diastase and Pepsin which are the two most essential ingredients for the proper digestion of food. A teaspoon of Diapepsin taken immediately with food sets up a chemical action which is allied to early stages of digestion. The rest of the digestive process becomes smooth and you can get the most out of the food that you take.

It is not scientific to strain the digestive mechanism of the body if the digestion is already weak. Diapepsin could give the right amount of aid necessary for complete digestion of food. By this strength will return to the body and the digestive process will begin to function normally. Diapepsin is only an aid to nature to help her regain the lost hold.

The Stomach is lined on the inside with a soft thick mucous membrane and in this lining and underneath it are large number of tiny glands which secrete mucous and produce the various constituents of the gastric digestive fluid. Chemical action of this gastric juice of the stomach contents brings about the early stages of gastric digestion. Diapepsin will be of use where these glands are not functioning normally and indigestion is setting in.

Make This
3-POINT SAVINGS PLAN
Your Charter of Security

1 IN YOUR OWN INTEREST, whatever you have to spend on current needs, you will want to put by something to meet those other calls which arise so unexpectedly. POST OFFICE SAVINGS BANK encourages thrift and offers the most accessible means of banking your small savings Interest is added at 2% per annum free of Income tax asse sment on balances above Rs. 200/-. Security is assured while you can draw readily on your deposits to meet special calls.

2 IN YOUR OWN INTEREST, you will want to make adequate provision for the years ahead. Invest in NATIONAL SAVINGS CERTIFICATES, the most popular investment of the day, for they are guaranteed by Government and yield a high rate of interest More, the interest earned is not only free of Income-Tax but is assessment-free in your returns of total income. Every Rs 100/- invested to-day becomes Rs. 150/- in 12 years. 5 and 7-year certificates which appreciate at 3% and a little over 1½% respectively are also avilable. In case of need you can encash these certificates before maturity They are easy to buy and safest to hold.

3 IN YOUR OWN INTEREST, you will want to contribute to the national effort to raise the general level of prosperity. Put your big savings to work in national development plans. There is no better investment open to prosperity-planners than making a substantial contribution to GOVERNMENT LOANS which are floated from time to time.

Save all you can
and
INVEST WISELY

P-26, Raja Basanta Roy Road,

CALCUTTA.

"Among the makers of modern Ben Ramananda Babu will always occupy an honour place. × × × Like Tagore's the late Mr. Chatterje genius was essentially constructive. × × By publishi this engrossing biography of her father, Srijuta Santa Devi has done a great service to Bengal a derivatively to the whole country. × × No one co have written a biography of Ramananda Babu as s has done. It will certainly remain a source book f future writers and students."

—*Hindusthan Standard*

"An authentic and highly interesting biograph in Bengali of the late Ramananda Chattopadhyay × × The life story of such a man is naturally link up with the main currents of contemporary nation history and we are glad to note that the author h adequately covered this wider background in delin ating the individual's life. The style is restrain and has a homely grace, and a number of fine, pho graphs have greatly enhanced the value of t volume. We are sure the book will be read with pro by those who wish to study he currents and cro currents of Bengal's history tor the last half a centu with which Ramananda wasfintimately associated."

—*Amrita Bazar Patrika*

Rabindranath Tagore

FOUR CHAPTERS

Rabindranath Tagore's brilliantly-written and much-discussed novel CHAR ADHYAY is now presented for the first time in English in book form. Its main interest centres round the story of two Bengali lovers in the opening years of this century: the revolutionary movement in Bengal is shown as providing their love with its special dramatic setting. The passion-charged atmosphere of the period is admirably caught in these pages, and the portrayal of the poignance and pain of their love against the stormy back-ground of the revolution is masterly.

CLOTH AND BOARD. RUPEES THREE AND ANNAS EIGHT.

CRISIS IN CIVILIZATION

Written on the occasion of the Poet's eightieth birthday, three months before his death, the paper has a historic interest as his last great message to the world. He was ill at the time and in agony of spirit at the spectacle of the devastating barbarism of the war then raging, and fearful of the crisis in civilization brought about by greed and selfishness and the insolence of might in the West. With his one-time faith in Western civilization painfully shattered, he yet preserved to the end his hope of the ultimate triumph of Man's Spirit, and prophesied the coming of a dawn—"perhaps from the East where the sun rises"—after the night of arrogant stupidity and unrighteousness.

WITH A PORTRAIT. RUPEE ONE ONLY.

POEMS

In this volume are published translations from the original Bengali poems of Rabindranath Tagore. They were all translated by the Poet himself, with the exception of twelve poems. They have not been published before in any book. References to the Bengali originals are given in the Notes at the end. The poems have been arranged in four sections which roughly correspond to four major divisions in the Poet's writings. This selection includes many songs composed by him during the Swadeshi Movement and ends with his last poems.

ILLUSTRATED. RUPEES FIVE ONLY.

A complete list of Tagore's works will be sent on request.

PRABUDDHA BHARATA
or AWAKENED INDIA

(Started by SWAMI VIVEKANANDA in 1896)

The Premier English monthly conducted by the Monks of the Ramakrishna Order, devoted to universal religion and comparative philosophy; keeps its reader in touch with the cultural side of Indian national life, both ancient and modern.

56th year begins from January, 1951

RABINDRANATH TAGORE: "Admire its writings as contributions to pure Indian culture."

Dr. S. RADHAKRISHNAN: "I have been a regular reader of *Prabuddha Bharata* and can say that its sanity in dealing with religious doctrine and discipline has been its most impressive characteristics."

COUNT HERMANN KEYSERLING: "I think *Prabuddha Bharata* is one of the most interesting and important magazines that one can find today in any country."

Annual subscription: Inland Rs. 5, Burma Rs. 6, Foreign 14 sh., U. S. $ 4.

THE MODERN REVIEW

FEBRUARY 1951

VOL. LXXXIX, No. 2 WHOLE No. 530

NOTES

A.-I. C. C.

Within three years, to the date, of the passing of the Father of the Nation, the crisis that he foresaw on the eve of his *Mahaprasthan*, has come to the affairs of the Congress. Gandhiji advised the dissolution of the Congress, so that it may not be utilized as an artificial barrier against worthy outsiders and likewise as an unmoral means for the advancement of those who are within the pale. The A.-I. C. C. is now facing the crisis, but where is the Sage that can find a solution to this particular dilemma ?

The A.-I. C. C. has concluded its session at Ahmedabad. Two important resolutions have been passed. In one resolution, the A.-I. C. C. has accepted the reintroduction of paid primary membership of the Congress and fixed Re. 1 as the annual fee against the former fee of four annas. The second resolution called upon Congressmen to make every effort to come together "so that they may have the opportunity for co-operative effort and the organisation would become as broadbased as possible." The resolution emphasised that the door of the Congress should be opened even to those who have left it and Congressmen should not only engage in active co-operation among themselves but should also seek the co-operation of others. The following is the full text of the resolution :

"In view of the grave situation that the country has to face, both internally and externally, the A.-I. C. C. is of opinion that there should be the largest measure of unity and co-operation among all sections of the people and every effort should be made to encourage united effort in facing our major problems. In particular, it is necessary for Congressmen, to put aside their differences and co-operate for the larger causes which the Congress represents.

"The A.-I. C. C. has noted with regret that certain tendencies are at work which must inevitably weaken and partly disrupt this great national organisation. While it is natural that, on the attainment of independence, different approaches should be made to our social and economic problems, the immediate problems are such that there should and can be co-operative approach within the larger ambit of Congress policy. This policy has been laid down in successive Congress resolutions and more especially in the Nasik resolutions, in regard to social, economic, communal and international affairs.

"That general policy, in so far as it related to social and economic matters, has to be translated into more specific terms, having regard to the nation's resources and priorities and the urgent problems that confront us in the immediate present. It must, therefore, have both a long-term objective and a short-term plan designed to achieve social justice and to make the country self-reliant and dependent on its own strength and resources.

"It must be based on an increasing productivity both in land and industry, leading to a progressive advance in the well-being of the masses of the country. This will necessarily involve a measure of privation and austerity to begin with and this will have to be endured, so that the basis for future progress may be laid, but the burden should be equitably distributed and must be cast as far as possible, on those most capable of bearing it. In the circumstances of India today, it is the responsibility of the State to take the lead in the reorganisation and development of land and industry. Such a lead can only be fruitful if it is efficiently organised and receives widespread public co-operation. This calls for the utilization of the enthusiasm, free time and other resources of the people on a voluntary basis and a nation-wide scale.

"The immediate tasks of the Congressmen are to help in solving the food problem, in securing a large increase in production by cottage and small-scale industries and in combating social evils, such as black-marketing and various forms of corruption, both in the administration and in public, which have grown up and which degrade public morals and come in the way of progress. For Congressmen there is the urgent additional task of purifying the Congress organisa-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

tion, making it an efficient instrument for carrying out these tasks, and bringing back something of that spirit and will to work and suffer for a cause which enabled the Congress to achieve independence.

"Social and economic programme, so conceived should receive the approval of large masses of our people, even though there might be many varieties of opinion among them, and open out opportunities for large-scale co-operative effort to release it. The Congress itself has during its long history sheltered varieties of opinion but has at the same time succeeded in having a large measure of harmonious working.

"Those varieties of opinion, provided they do not run counter to its basic principles and objectives, may still continue within its fold but in a time of crisis, as today, nothing should be done on partisan lines which may be injurious to the larger interests of the Congress and of the country. The formation of special groups within the Congress, either on the part of a majority or a minority is thus to be deprecated, as they tend to create hostile factions and disrupt the organisation.

"In the great task ahead, every effort should be made to bring all Congressmen together, so that they may have the opportunity for co-operative effort and the organisation should become as broad-based as possible. The door of the Congress should be open even to those who have left it, and Congressmen should not only engage in active co-operation among themselves but should also seek the co-operation of others.

"The A.-I. C. C. directs the Working Committee and all P.C.C.'s to work with this larger outlook, so as to diminish and overcome the tendencies which weaken the organisation, and to make the Congress an efficient instrument in the nation's service."

Intervening in the debate on the question of primary membership, Sri Nehru made an open attack on Congressmen and deplored their deviation from ideals.

He said that democracy could not be purchased with a membership fee of annas two, or four, or with one rupee. If the sort of speeches which had been made in support of the four-anna membership were to guide them, the Prime Minister added, the interests of some other party, and not of the Congress, would be advanced. Sri Nehru said:

> "Some people have forgotten the basic principles of the Congress and have identified the organisation with the cap, khadi and four-anna membership. Alongside this misconception, they have developed the hope that they will be elected to some body. To what depths have we fallen."

Sri Nehru declared that much had been said on the subject of the primary membership and a large number of amendments had also been put forward. He did not understand the "shopkeeper's mentality" which had been brought to bear upon the question of fixing the amount of the primary membership fee. He expressed his complete identification with the Working Committee's proposal on the matter, which had been put forward after mature and careful consideration. Sri Nehru added :

> "After hearing certain members, it has become necessary for us to consider what exactly we mean by the Congress and what are the basic principles for which it stands. Is the Congress a house in which we should live along with our friends and relatives and pass it on to our successors when we pass off the stage ? Certainly not.
>
> "The Congress is a weapon, a sword, whose sharp edge should be used to destroy evil. With it we cut the chains of our bondage, and with it also we must uproot all that is bad. Or, perhaps, the Congress is a motor car or a train which speeds on to its appointed goal and always carries us further on our path."

It was up to Congressmen themselves, Sri Nehru pointed out, to choose whether the Congress was a house, a weapon, a train or a motor car. "It must be clear to all," he declared, "that the Congress is the means through which we advance the interests of the country and its people. These are ordinary things, but evidently we have forgotten them. If the Congress cannot live up to its ideals and fulfil its tasks and its destiny, it must be destroyed. Then it shall be your duty and my duty to destroy it, and to forge ahead with some other weapon." Sri Nehru said:

> "Sri Algurai Shastri says that the cap, the flag and the four-anna membership constitute the fundamentals of the Congress. We have been wearing this cap for the last 30 years, and certainly we have respect for it. But what is more important than the cap itself is the head which it covers. Sri Algurai can have his cap, but I want my head and the brains which go with it."

We may say that the Congress has passed through two phases and is now in its third stage where complete disintegration stares it on the face. During the early period of national struggle, the white cap and the white *khaddar* had stood as the symbols of honesty, integrity and sacrifice. Throughout the length and breadth of the country, Congressmen commanded the greatest and highest respect. The whole country followed them blindly because each and every person in the country was convinced that no Congressman had any axe to grind or any objective beyond the liberation and advancement of his country and its peoples. Office acceptance brought in the second phase. Ambitious persons of doubtful honesty who followed the Congress from a safe but profitable distance, began to flock round the organisation. In the interest of "working the constitution" many of them were admitted into the Congress fold. The germ of dishonesty and opportunity was sown. In the third phase, today we find only a logical development of the second phase. The Congress is today crowded with men who have some kind of personal or other gain as his goal of life. The few men with integrity that are still left find the organisation too rotten for them. The white cap and white *khaddar* today are symbols of nepotism, dishonesty, hypocrisy and corruption. The very emblems that were objects of love and respect only ten years ago are now publicly ridiculed.

Sri Nehru has diagnosed the disease, but has prescribed a futile remedy. He has appealed for unity but has failed to define its objective. He has chastised false Congressmen but has failed to purge the Congress of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

them. He should have asked for solid support for the eradication of corruption and malpractice in and out of office and power to deal with blackmarketing and official corruption. We can cite the Bihar Blackmarketing Bill as a case of official futility. It was passed by the Bihar Legislature but the President, instead of assenting to this much-belated laudable measure, has returned it for reconsideration with the idea that it is unnecessary. The President is a top-ranking Congressman, and as such he cannot escape his personal responsibility for this lukewarm attitude towards blackmarketing. Mr. Mahatab's loudly advertised Anti-Blackmarketing Ordinance has been put in cold storage as was expected.

The power to do infinite good to the people did come into the hands of Congressmen. The entire country waited on tiptoe and wanted them to translate their professions into actions. The Karachi Charter has been cast to the four winds. The objective of the Congress today has come down to the beautifully vague catch-phrase—development of a co-operative commonwealth. Shameless scramble for office, power, permit and license are now the only activities of Congressmen both inside and outside the administration. Impoverished people are getting still further impoverished, standard of public life is getting lower and lower everyday, frustration and distrust of administration is writ large on every face. The Congress is now looked down upon by the people as an organisation of sanctimonious hypocrites. Personal meanness has expanded into provincial jealousies. Sri Nehru has personal knowledge of it all. Under such conditions the unity resolution will be a meaningless farce.

Unscrupulous Congress leaders have established a hegemony for their particular coteries in every public office. Nepotism and favouritism are the guiding principles in all appointments and awards. Greed and corruption has become rampant and the efficiency of all administrative departments has sunk to bottomless depths, as the inevitable consequence. Unless the Congress is rid of these foul vermin that are infesting it, the country will have to break with the Congress. There is no alternative.

Dr. Prasad's Republic Day Message

President Rajendra Prasad broadcast the following message from the Delhi Station of the A.I.R. on the eve of the first anniversary of the Indian Republic :

"Just one year has elapsed since India became a Sovereign Democratic Republic and the Constitution framed by the Constituent Assembly came into force. It is worth while taking stock of what has been achieved and wherein we have failed.

"The early part of the year was disfigured by communal tension and ugly incidents occurred in East Bengal leading to a large exodus of Hindus from East to West Bengal. These were followed by similar incidents and exodus of Muslims from West to East Bengal. A pact was arrived at between our Prime Minister and the Prime Minister of Pakistan as a result of which the situation has gradually improved and a large number of the emigrants have gone back to their original homes. It is to be hoped that confidence will be created so that a repetition of such incidents may become impossible. Minorities must be assured of safe and honourable existence, and given opportunities like others to grow and develop and become contented and loyal citizens of the State to which they belong.

"Side by side with the communal pact, there was also a trade pact with Pakistan which enabled trade between India and Pakistan to flow freely partially. It is to be regretted that on account of the failure to reach an agreement on the question of exchange ratio, trade relation is not yet established on a footing of profit to both parties and each has had to look to distant countries for the supply of some of its requirements and the disposal of some of its surplus goods which could have been done nearer home.

"Disputes with Pakistan continue on some matters which are vital. The Security Council of the United Nations had appointed Sir Owen Dixon as a mediator for bringing about a settlement of the Kashmir question. He spent some months in this country but unfortunately his efforts failed. Recent talks in London have led to no better results. We have always been prepared to let the people of Kashmir decide freely what they want, but we cannot be expected and are not prepared to abdicate our legal right or shirk our moral duty to the people of Kashmir pending that decision.

"The question of evacuee property is of vital importance to us but we have not been able as yet to secure a settlement with the result that our work of rehabilitating millions of people has become impossible of satisfactory accomplishment.

"Apart from our disputes with Pakistan our relations with other Asian Governments have been most friendly and cordial. So also with countries further abroad. We hold and believe that armed conflict and war solve no existing problems but create new ones and with the progress in the invention of destructive weapons now achieved, a war spells ruin and devastation on an unprecedented scale and threatens the extinction of modern civilization.

"With that conviction our Prime Minister has used all the prestige of his great personality and the goodwill of this country to limit the scope and extent of conflict. The deep wounds of the last world war have not yet been healed even in countries which are supposed to have won it—not to speak of those that lost it. We can only hope and pray that humanity will be spared another disaster. The greater and stronger a country, the heavier is its responsibility to do all it can to avoid and avert the disaster.

"Although we are a Republic, we have decided to remain in the Commonwealth and we have maintained the friendliest relations with Great Britain and other members

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of the Commonwealth based on a recognition of one another's complete independence and a mutual understanding of one another's interests and duty. Our regret is that no progress has been possible in securing for people of Indian origin born and settled in South Africa a position as citizens of that country consistent with self-respect and requirements of civilized life.

"Coming nearer home we can take credit for having done whatever was possible within our resources in rehabilitating those who had been forced to leave their hearth and home and properties and estates and to emigrate to India from Pakistan. There were at the end of November, 1950, more than 3 lakhs of persons on dole in relief camps. More than 8 lakhs of displaced families from Pakistan have been allotted land for cultivation. Roofed accommodation in urban areas alone has been secured for more than 21 lakhs of displaced persons either in evacuee houses or in barracks, Government quarters etc., or in newly-built houses.

"Small loans have been given to more than 140 thousand people, the total amount being more than Rs. 9 crores. Big loans have been given to displaced industrialists and business men numbering 5,000. The total amount being nearly Rs. 5 crores. Employment has been secured by the Employment Exchanges for more than 1½ lakhs of persons. Altogether Government expenditure on displaced persons during the financial years of 1947-48 to 1950-51 is estimated at Rs. 98½ crores. The displaced persons have suffered great privations with patience and dignity and have been trying to restart life and stand on their own legs as best as they can. With all our efforts, however, the work of rehabilitation is yet far from being complete, and considering its tremendousness which was added to considerably in West Bengal in the early part of the year. It could not be expected to be. All that I can say is that the Union and State Governments are keen and anxious to do whatever is possible and with the experience that has been gained the work is being tackled with greater effectiveness and speed.

"The financial and economic position of the country has been constantly engaging the attention of our Ministers. It is to be regretted that on account of financial stringency, we are not able to undertake constructive work on as large a scale as we would wish to. Some large projects which are expected to yield great results by controlling floods and providing irrigation and electric energy on a large scale leading to industrial development have registered satisfactory progress. Our only regret is that we are not able to undertake more such works and to spend as much over those already in hand as one would like to. In other directions also greater progress would have been achieved if more finance were available and money market had not been as tight as it has been. Production has not kept pace with requirements.

"This has been so especially in the matter of food largely on account of causes beyond our control. We have had a series of natural calamities which have damaged our crops on an extensive scale. We have difficult and anxious times and need all the foresight, resourcefulness and sacrifice our people are capable of to tide over them. We are trying to have larger imports that we have ever done hitherto, but it is not so much these imports and their proper and equitable distribution —essential as these are—that will really solve the problem.

"It is the will and resourcefulness and determination of the people that will enable us to see things through. The year opened with a large balance of trade against us, but when once we decided to put it right and set to work, we have succeeded in wiping it out. So God willing shall we do with the food problem.

"Our Constitution has come into force, but we are still passing through a period of transition and are being governed by certain transitory provisions laid down by it. This will continue till we have General Elections under the Constitution. Preparations are being made for them, but the work is so vast involving more than 170 million voters and more than 3,500 seats to be filled up that it has not been possible to complete them. It is hoped that we shall be able to hold them in November-December next.

"The work of consolidation of what Indian States before assimilating them to what used to be Indian provinces has gone on successfully and under the Constitution they have as honoured a place and as useful a part to play as any other unit of the country. The burden of this work as also of maintaining law and order in the country was borne by Sardar Vallabhbhai Patel, whose passing away at this critical time in our history, has dealt a stunning blow to us and created a void which cannot be filled up. His farsight, matchless powers of persuasion and organisation, a realistic appreciation of the situation and firmness and determination have brought under one Federal Constitution and one Central administration a larger part of the country than has ever happened in its long and chequered history.

"Our work as a free nation has just begun. We are confronted with difficulties within and the horizon is overcast with dark clouds without. We have to gird up our loins and face them. God helps those who help themselves. Let us deserve God's help."

Sri Nehru's Press Conference in London

Mr. Jawaharlal Nehru, commenting on the recent talks on the Kashmir problem, said: "We had fairly full talks and explored various aspects. Some matters were clarified, but it was not possible then to come to any final agreement."

Mr. Nehru was talking to more than 200 reporters representing newspapers of all nations at a news conference at India House on January 16. "But remember," he went on, "that we have gone a great deal towards agreement already. Many basic facts have been thrashed out in the past, and we agreed to those basic approaches. We all agree it is for the people of Kashmir to decide about their future internally or externally. That is obvious even without our agree-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ment. No country is going to hold on to Kashmir against the will of Kashmir."

Discussing the position as it existed at the moment, he said that one must remember the limitations of the Government of India. "That is to say, we cannot interfere in the internal management. We can advise and help them in various ways, but our chief function, under the terms of the agreement, is the defence of Kashmir against external invasion.

"Of course we can go back upon it and denounce that and say 'we will not defend you in future,' but we cannot interfere internally except by advice, and, therefore, any real agreement must come from the people of Kashmir or their representatives, and not be imposed upon them by us or anyone else. Great difficulties had arisen during the past three-and-a-half years—the invasion, the fighting and so on. If the question had been raised at, or just after, Partition, the position would have been accepted all round whether it was liked or not. Now tremendous difficulties had arisen, and passions had been aroused."

It must be borne in mind, Mr. Nehru added, that no steps should be taken which might perhaps create difficulties in a "somewhat excitable position"—not only difficulties in Kashmir but in regard to the relations of India and Pakistan with each other.

Mr. Nehru said that on Kashmir there was a basic difference of approach between Pakistan and India. Pakistan approached the problem rather on the religious plane. India did not accept that approach. Once they accepted the approach that nationality should go by religion, it would have far-reaching consequences. India have never accepted that approach as the right one. If nationality went by religion then about forty million Muslims still in India and fifteen million Hindus still in Pakistan would become second-class citizens, half-aliens. They could never feel any sense of security. India had a multitude of religions, many of which had ceased to exist in Europe thousands of years ago. India could only be carried on as a secular State, giving freedom to all religions, not making a preference of any one.

The Indian Prime Minister observed that Kashmir brought up this problem: were they to treat Kashmir on a religious basis or on an economic or political plane? Those problems existed long before Pakistan or the United Nations came into the picture. "India says that this matter should be treated on a political and economic plane," Mr. Nehru said. "If the question of religion is brought into the Kashmir problem, it would have its repercussions among the minorities in India and Pakistan. We have to be cautious about any step we take because there is a danger of upsetting the equilibrium which has already been established. We want a stable settlement—not an enforced settlement. The final decision must come from the people of Kashmir and secondly from India and Pakistan. Any other settlement would give rise to a lot of trouble."

Speaking on Korea, Mr. Nehru said that while the entry of the People's Government of China into the United Nations had been discussed, something much bigger had been recognised, and that was that New China was a great power, to be dealt with on terms of equality by the other great powers. "That is bigger than the entry into the United Nations," he said. "The basic fact is that in the last two or three years a great new power has arisen in the Far East, thereby upsetting the previous equilibrium there. The fact of non-recognition has made no difference to China, and many of the difficulties which have arisen are due to the non-recognition of facts."

Many complications had arisen because China was not recognised, Mr. Nehru continued. By adopting the principles of the three-man committee, the U. N. had recognised that China was one of the great powers to be dealt with in deciding Far Eastern questions.

Mr. Nehru said: "Everybody agrees that Korea should be a unified and independent country, but it is not a local settlement that should be aimed at in the Far East but the ending of the worldwide tension that exists, and a world settlement of the greater problems. I am quite certain that no question on Korea will be settled without the consent of China. It affects China more than any other power. We must remember that most of the invasions of China in the past have occurred through Korea and the other powers cannot settle it without bringing China into the picture."

Asked his opinion of the continued U. S. support for the Chiang Kai-shek regime, Mr. Nehru said that he considered this policy was "unrealistic," since it meant the non-recognition of the People's Government of China.

The real threat to the position of the U. N. would be if it ceased to represent such a large part of the people of the world. The recognition of China is more or less a symbolic act; non-recognition becomes an insult and an irritation. In effect, recognition becomes a gesture of peace.

Asked whether he considered the invasion of Tibet as a threat to India, he said: "We do not consider it a military threat to India at all. It is not a thing we have liked—the way it is taking place—because it does bring in certain rather new factors which may cause trouble. While Tibet has been considered under the suzerainty of the Chinese, we consider it should be an autonomous country, and we have expressed ourselves in that way. But for the rest we do not propose to interfere—indeed we cannot."

Asked if he thought that the 2,000-year-old friendship between India and China would form a counter-weight against Soviet influence in South-East Asia, Mr. Nehru said that all friendships were "stabilizing factors," so long as those friendships were not aimed

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

at lack of friendship with others. In the 1,500 years of the history of South-East Asia, all the South-East Asian countries had been greatly influenced by India and China, archaeologically, culturally, politically, etc.—both had left their impression.

Pakistan Premier's London Conference

Talking for over an hour on January 16, the Pakistan Prime Minister, Mr. Liaquat Ali Khan, put forward his country's case.

He told them that his journey to London had not been a waste of time because, so far as the Commonwealth Prime Ministers were concerned, they had all made a genuine effort to help find a solution to the Kashmir problem—"the Commonwealth Prime Ministers have made every effort in this matter and their suggestions regarding the use of Commonwealth forces was a very practical one."

Mr. Liaquat Ali Khan said that the reason he had not arrived in time for the beginning of the Commonwealth Prime Ministers' conference was not because he was non-co-operative. "I do not believe in non-co-operation," said the Prime Minister. "I believe in co-operation between all the peoples of the world, but I felt that the Prime Ministers of the countries assembled in London should devote some of their time to the vital problem of Kashmir."

"It is not just a problem between India and Pakistan, but one that should concern all the peace-loving peoples of the world. The solution of the Kashmir problem is vital to the peace of the world. In the East today you have only two stable countries —I am not casting aspersions or minimizing the importance of other countries in the East—but so long as the Kashmir dispute lasts, neither Pakistan nor India can make any contribution to the preservation of peace in Asia."

"It was because of that conviction that I felt I would not be able to make any contribution to the Prime Ministers' conference unless they were prepared to apply their wisdom to finding a solution," Mr. Liaquat Ali Khan went on. "I was, indeed, grateful to the Prime Ministers when they agreed to discuss the matter with Mr. Nehru and myself and to help us in this matter."

Mr. Liaquat Ali Khan said that everyone had agreed that the question of Kashmir's future should be decided by means of a free plebiscite. It must be the people of Kashmir themselves who decide their own fate, said the Pakistan Prime Minister, and there is no dispute so far as to how the solution shall be made by the free will of the people.

Mr. Liaquat Ali Khan described some of the background events that led up to the Kashmir dispute, and the resolutions made by the United Nations Commission which called for three stages in carrying out the agreement—(*i*) cease-fire, (*ii*) demilitarization, and (*iii*) a plebiscite. The first part of the resolution was carried out just over two years ago, said the Pakistan Premier, but we got stuck on the second part, and the Prime Ministers applied their minds to the problem of what could be done in breaking the deadlock.

Mr. Liaquat Ali Khan said that altogether the Commonwealth Prime Ministers spent about seven hours in discussing the Kashmir problem. It was suggested that some of the Commonwealth countries could provide forces to be stationed in Kashmir for security, and the countries concerned even offered to pay for the maintenance of such a force, which would be withdrawn from Kashmir as soon as the plebiscite was over.

Mr. Liaquat Ali Khan pointed out that another proposal made was that one force of Indian and Pakistani troops might be formed during this period, and a third proposal that the plebiscite administrator, Admiral Nimitz, should have the authority to raise a local force from among the people of Kashmir itself, and all other forces, regular and irregular, should be disbanded or withdrawn.

Stressing that they wanted a peaceful solution, Mr. Liaquat Ali Khan went on: "Now the only hope that one can have for a peaceful solution is in the Security Council. The matter is before them now, and I hope and pray, for the sake of the peace of the world, that the Security Council will move with great vigour and speed in this matter than it has been done in the past. I am not exaggerating when I say that peace in Asia—and not only in Asia but in the world—depends on a satisfactory resolution and a just solution to this Kashmir problem, and so long as this deadlock lasts, there is always a grave threat to the peace of the world."

Mr. Liaquat Ali Khan's statement was followed by a lively discussion on the question of a plebiscite, withdrawal of troops and possible partition of Kashmir (to which, the Pakistan Prime Minister said, both he and Mr. Nehru were opposed). He added that he was quite prepared to entrust the whole business of the plebiscite to any three men of integrity, and concluded that he had full confidence in the robust commonsense of the people of Pakistan.

Nehru's Reply to Pak Prime Minister

In a statement commenting on the remarks made by the Pakistan Prime Minister, Mr. Nehru said:

"I understand that the Pakistan Prime Minister discussed the Kashmir question at some length at his Press Conference today in the course of which he referred, in some detail, to the private talks that took place at his request, between some of the Commonwealth Prime Ministers on the subject.

"I am surprised to see an account of what he is reported to have said at this Press Conference which, I am assured on good authority, is authentic

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

I have been asked to comment on this. All that I have to say is that it is not usual to disclose private conversations. I may say that this was well understood in regard to these conversations also. This is a rule which everyone should respect.

"I might add that some of the statements in the report are not correct and some of the suggestions made are fantastic. India is anxious to settle the Kashmir question peacefully and is ready now, as ever, to let the people of Kashmir decide their future. She has already withdrawn part of her troops from Kashmir and is prepared to continue to do so if Pakistan withdraws her troops as well as the irregular forces.

"India cannot accept the position that Pakistan, an aggressor in Kashmir, should have the same right to retain in or to share in the administration of Kashmir as India.

"India has repeatedly offered to work out with the United Nations' reasonable safeguards to enable the people of Kashmir to express their will and is always ready to do so."

The general impression in Commonwealth circles, until Mr. Liaquat Ali reported the talks as complete failure, was that some of the proposals at least would be considered further. Political observers in London were puzzled, in the first place at Mr. Liaquat Ali's decision to break the well-understood convention not to reveal the details of the informal talks and in the second place, his announcement, contrary to all expectations, that all the proposals had been finally rejected. Neutral observers close to the Commonwealth Prime Ministers commented that none of the proposals reached the stage of detailed examination by the Prime Ministers. They said that the first day's discussions on Kashmir were confined to the clarification by the Indian and Pakistan Prime Ministers of their respective stands on Kashmir. It was during the second day's talks that the Australian Prime Minister Mr. Menzies suggested that the deadlock over demilitarisation of Kashmir might be broken by a Commonwealth force supplied by some of the Commonwealth countries, notably Australia and New Zealand. The immediate Indian reaction to this was that public opinion in India would not tolerate any foreign troops again on Indian soil in any form for any period. Apart from this, stationing of foreign troops in a strategic place like Kashmir could give rise to fear outside that a Western military base was being built up under the guise of policing Kashmir. It is understood that in view of this objection the Prime Ministers did not wish to pursue this suggestion further. The second suggestion then came up that joint force, Indian and Pakistan troops, might be formed for this purpose. Indian reaction to this suggestion was equally categorical. India considers Pakistan as aggressor in Kashmir and the association of Pakistan troops jointly with Indian troops for the maintenance of internal security all over Kashmir would be an extreme submission to aggression. Further, it was pointed out that this kind of joint working had been tried earlier on the borders and it only led to constant friction. It was at the third meeting at chequers that the third proposal of allowing the plebiscite administration to raise a force from among the people of Kashmir was made. These neutral observers said that it was their impression that India did not reject this proposal offhand. India's view on this suggestion was that it involved the consent and co-operation of the Kashmir Government, which was autonomous as far as internal security was concerned. As a State which had acceded to the Indian Union, the Indian Government was responsible for the defence and security of Kashmir. The Indian Government had no authority to delegate this function to any other force without the agreement of the Kashmir administration. These sources said that the impression given to the Prime Ministers was that Mr. Nehru would consult his Cabinet and the Kashmir Government further on this suggestion, and they expressed themselves puzzled by Mr. Liaquat Ali Khan's categorical statement that this suggestion was accepted by him and rejected by Mr. Nehru.

The effect on Pakistan of Mr. Liaquat Ali's manouvrings has been depressing. The section of Pakistan Press which only three weeks ago came out with screaming headlines describing their Prime Minister's "success," now seem to be hard put to it to interpret the failure. Having been instrumental in raising high hopes in Pakistani minds over the result of London discussions, they are now vainly trying to divert their attention to Lake Success. Public resentment, however, at what is described as "Liaquat's stunt" is growing. The *Nawai-waqat*, a prominent Urdu daily of Lahore, has openly charged the Pakistan Prime Minister with having tried to play with the sentiments of his people. It commented that Pakistan had been made to pay a fantastic price for what is nothing less than a farce in the visit of London of Mr. Liaquat Ali Khan.

Sri Nehru's Conference at Paris

Sri Nehru speaking at the Press Conference, reviewed the steps taken towards a settlement of the Kashmir problem. The main argument, he said, was centred on conditions which should govern a plebiscite.

"Why should we supersede the existing local Government in Kashmir in favour of an aggressor, or withdraw our forces completely, leaving Kashmir open to another possible invasion?" he said.

"If the popular Government tells us to go away, we will go away.

"I do not know whether any of you read the Pakistan Press, because that Press is full of incitement to war, and not ordinary war but Holy War—*Jehad*.

"We have told them this is not an atmosphere conducive to peaceful settlement. This is a political or economic problem for the people of Kashmir to decide—not a religious problem. It is not a Hindu and Muslim problem. The conflict in Kashmir is between

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

some Muslims and other Muslims between progressive bodies and reactionary bodies. We are on the side of the progressive party. Even so, we have said, 'Let the people of Kashmir decide'."

Sri Nehru made these replies to reporters' questions :

Q: "After commentary of the Chinese radio to the recent United Nations plan, do you still think a satisfactory solution is possible?"

A: "I am sorry I have not seen the commentary. I cannot say without seeing it. Anyhow, I would rather wait for an official reply than a reply on a radio commentary."

Q: "What is your appraisal of the Far Eastern situation, particularly with regard to limiting the conflict in Korea?"

A : "My reply can be a long-distance or a short-term one. It is obvious that since this last war, very big changes have taken place in the whole of Asia. They have affected the whole balance of power or equilibrium of forces in Asia. Various factors have come into play. New countries have become independent, like India, Pakistan, Ceylon, Indonesia and Burma and then there has been this great change in China. The first thing to appreciate is that these big changes have taken place in Asia and notably in China which make it essential for everyone to understand the new situation and not judge it by the past."

He described the Chinese People's Government as "a new Power which is stable and should be recognised as such." He added, "That is a fact, and fact is no less a fact because some people refuse to recognise it as such."

"What is the basis of a settlement in Korea?"

"You can hardly have any stable settlement whether by war or peace without the concurrence or acquiescence of those countries round about. It is not an easy matter today to force a settlement without the concurrence of neighbouring countries."

"What do you think of United States' acceptance of the possibility of Four-Power talks including Communist China?"

"I think certain definite progress has been made in the direction."

"Should China be named as aggressor if she rejects the latest peace proposals?"

"I think any step taken which make it frightfully difficult to have negotiation in future is a dangerous step because then we bolt and bar the door to a peaceful settlement.

"China made it perfectly clear that if the 38th Parallel was crossed, she would consider the United Nations forces as aggressors.

"China made this clear before the Parallel was crossed. You will remember that China has frequently in the past been invaded from Korea and this fact was fairly well known to various Governments."

"Do you think Peking wants a peaceful solution

"I know what the Peking Government has They have put great stress on Formosa."

"What about the situation in Tibet?"

"The situation for some time has been more or static. No advance of the Chinese armies has place."

"What about a Japanese Peace Treaty?"

"It is always a dangerous thing to delay which has to be taken—the sooner taken the the chances of it being successful. It is obvious is going to be a peace treaty with Japan. It is that the Japanese are a people with a great to recover and a people who cannot be kept in jection for long. So it is better to treat them and give them the freedom to go ahead on their lines. Asia is interested, it would be a good have common peace treaty with all the countries. Otherwise, I suppose the time will when individual countries will have peace treaties Japan."

"What do you think of the plan to rearm Japan"

"I don't know whether you will think that I am going to say is practical or not. I think there a provision in the Japanese constitution—the constitution—that Japan will not rearm.

"This constitution has been passed, I largely at the instance of Gen. MacArthur.

"I believe from the point of view of Japan and the Far East it would be a good thing to stick to provision."

In reply to another question on Japanese rearment, Sri Nehru said, "I think it would be conducive to peace in the Far East if there was no rearmament of Japan. If Japan becomes an independent country and if tensions and a war situation exist, I have no doubt that whether you give permission or not Japan will rearm—if not publicly, in other ways."

"Do you think a durable peace with Japan can be made without China and Russia?"

"No, if there is no peace between China, Russia and Japan there is prospective trouble there."

"Any comment on the recognition of Bao Dai

"So far as India is concerned, we have not recognised any party in Indo-China and we have no intention of doing so."

Q : "You will not recognise Bao Dai, you will not recognise Ho Chi Minh. What solution do you think will be reached?"

A : "That is a big question and I have no doubt that the only ultimate solution is independence of Indo-China with the people of Indo-China deciding their fate."

"What is the feeling of the people of India towards the war in Vietnam and will you raise this question in talks with French Premier Rene Pleven?"

"I have no intention of raising this matter

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

I have enough complicated problems to face—I don't see why we should add to them."

"What about the Dutch-Indonesian problem over New Guinea?"

"It should be decided peacefully. The decision should largely depend on the good of New Guinea, not on the good of other countries, whatever that might be."

"What do you think of German rearmament?"

"Generally speaking, I dislike rearmament anywhere, I recognise of course that one cannot be idealistic about these matters and no Government can take great risks.

"I am not a pacifist. If I was, I would not keep an army in India, though in spite of this world crisis, we have reduced our Army and are reducing it still further, because we want to reduce military expenditure and use the money for social purposes instead.

"It is obvious that rearmament in Germany is a thing which may have very far-reaching repercussions and one has to think things out. One has to balance many factors. Rearmament of Germany is considered no doubt because Western powers are afraid of the strength of Eastern powers in Europe and of possible aggression.

"The surest guarantee would be to try to relieve the present tensions that exist and make the chances of war remote."

On World Government, Sri Nehru said: "There are very great difficulties in the way and at present it is not something I can see emerging anywhere. It is not something which can be brought about artificially —it has to grow."

Later, referring to rearmament, Sri Nehru said: "No Government can take great risks about its security. It has to prepare for contingencies."

He denied that India had sent any Note to Peking.

"We have been in constant touch with our Ambassador in Peking, keeping him informed of developments and he has kept in touch with the Peking Government. There has been no formal or informal Note to Peking from us."

On India's role as mediator and his own part in helping towards a solution of international problems, Sri Nehru said: "I did at one time send a private message to Marshal Stalin on the one hand and another to Mr. Dean Acheson in regard to Korea. I felt it might do some good. Apart from that I have made no proposals, but we have had a certain responsibility cast upon us by the fact that we are one of the very few countries who have diplomatic relations with China.

"We have become a window to the rest of the world in regard to China. But I am not posing as a mediator or arbitrator."

Bali Desecrated

Every one knows with what active sympathy the Government and people of India have been following from its very start the recent struggle of the Indonesians for emancipation from the bonds of colonial rule. In this India has been only discharging her duty to the people with whom her cultural connexions extended for nearly 1500 years in the past. These cultural influences are still preserved in the garden-island of Bali lying immediately to the east of Java where the social and religious life of the people still bears an unmistakably Indian stamp. It was not very long ago that a great French scholar, the late Prof. Sylvain Levi brought out a collection of Sanskrit texts from Bali representing the ancient Indian literature from the Vedas to the Tantras. It is with great concern that we have just received from a reliable source very disquieting reports of the conditions of insecurity of life and property prevailing in the island. We have no doubt that it is only necessary to draw the attention of the friendly government of the Indonesian Republic to that matter straight in the island, should our report turn out to be correct. We would earnestly request the Government of India to move in the matter through its diplomatic channels. The case is urgent and brooks no delay. In our own country we have seen to what length mob-passions can go, if left unchecked by the forces of authority.

Among the smaller islands of the Malay Archipelago Bali is the best known, as in happier, pre-war times it used to be visited by tourists, especially from Australia and the U.S.A.

Extremely picturesque by its palm-sheltered villages and quaintly decorated temples, it attracted many artists from various countries who revealed the beauty of Bali in sketches and water-colours. Scholarly interest is focussed in the remarkable fact that Bali and its twin, Lombok, are the only islands of the Archipelago which up to the present have retained a curious form of Hinduism together with social institutions originating in ancient India. In Java and Sumatra where Buddhism and Hinduism once flourished, these religions succumbed to Islam, leaving many magnificent sanctuaries as eloquent witnesses of their former ascendancy.

Alarming tidings have recently come about the present disturbed condition of this Happy Island. Javanese terrorists belonging to the Republican army have set up a committee of four local men as rulers of Bali under their protection. This worthy quaternity consists of the administrator of the Kirtya Foundation, an agricultural guard, a schoolmaster and a clerk, who owe their present position solely to their pro-Javanese propensities. They have deposed the legal head of the administration of the Island (Kepala Daera) and removed most of the *pungavas* or hereditary district officers. The Javanese soldiery have taken up their

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

quarters in schools, dak bungalows and offices of the Forestry, agricultural and other Government departments. In the name of liberty these so-called nationalists commit all kinds of outrages; murder and plunder are daily occurrences.

It is impossible to decide how far the activity of the dissolute soldiery is due to distinct orders of their superiors or to their own initiative. It may be questioned whether the real power in the Indonesian Republic is not wielded by the Muslim soldiers and their captains who prefer the free and easy life of marauders to the peaceful pursuits of citizens and peasants.

It should however be remembered that the practice followed by the Javanese troops in whose grip Bali is now writhing is in perfect accordance with an *ukase* issued by the Djogya Government as far back as 1948, prescribing that each *daerah* must be governed by a set of their partisans.

Air Accidents

Two very serious air accidents have recently taken place in West Bengal. In one of them four lives were lost and in the other three. The later one took place on December 17 last. Fire was noticed on an Airways India Dakota near Tangail in Pakistan when the plane was flying to Gauhati at an altitude of 7,000 ft. Nitric acid was being carried in a wooden packing case under label of photographic materials. Fire-extinguisher was applied. Instead of stopping the fire, it generated obnoxious fumes which soon filled the plane causing asphyxia to the crew and passengers. The pilot landed the plane on a dry river-bed with no injury to the persons on board. All of them were semi-asphyxiated. The Calcutta Head office was informed of this accident by wireless but they showed extreme callousness in sending any medical aid. The place of accident was within one and a half hour's flying distance from Calcutta. By that evening, one passenger was dead. The first officer expired in the night. Radio operator died next morning. Another passenger was dead by the afternoon. Strangely enough, no news was sent to the relatives of the two members of the crew. Had they been timely informed, efforts could have been made to bring them to Calcutta to give them proper medical aid. It is apprehended that the carbon tetrachloride of the Fire-extinguisher generated phosgene gas or liberated chlorine, both of which are poisons. The carefree callousness shown by the Airways India office in this case may be called criminal.

In the first case, which took place about a month earlier, a freighter air-craft crashed against the Himalayas in Bhutan (several miles north of Hasimara), resulting in the death of all three members of the crew, including Capt. Bearcraft. The air-craft flew head on against the hills and crashed, resulting in 3 deaths. The story circulated in Calcutta, after the accident, was that all the members of the crew fell asleep and so the air-craft went on and on and struck against hills.

It is impossible to believe that all 3 members of the crew simultaneously fell asleep in a running plane as if they were on a suicide trip. It must be remembered that Capt. Bearcraft was one of the best pilots in India. It is rumoured that contraband chlorine had been booked on this plane under false invoice.

Instances of booking of dangerous drugs and chemicals by plane had been earlier reported.

In September last bleaching powder was being carried in an Airways (India) plane bound for Gauhati. The pilot in charge of the plane had to return immediately after take-off, because of suffocation of the crew caused by fumes arising from the chemical.

Sometime near about the same date, a Calcutta firm was sending iodine crystals to Dacca in an Airways (India) plane. The bottles containing the crystals burst in the Aerodrome (probably, due to bad handling of the freight by the Company's porters). This caused detention of the air-craft.

The Port Health Officer, after these two incidents reported the matter to the Controller of Aeronautical Inspection, Calcutta Air-port, Dum Dum. The C.A.I. replied to the Port Health Officer that necessary warning had been issued to all Airline Companies in a circular letter.

The consignee of the packing case which emitted the fumes on the Dakota leading to its forced landing on December 17 was the *Assam Tribune* of Gauhati. Our information is that this firm had been warned previously for getting supplies of inflammable materials under false declaration.

It is absolutely clear that both these accidents have taken place due to the fact that the companies concerned had failed to heed the caution contained in the circular letter of the Controller of Aeronautical Inspection. He had made it clear in his circular that carriage of chemicals like Bleaching Powder, Iodine Crystals, Ammonia, Sulphuric Acid, etc., was forbidden under the Indian Air-craft Rules. The Director-General of Aviation must now come forward to investigate into these cases and satisfy public anxiety. Air travel should not be made hazardous through unscrupulous and illegal practices of greedy companies.

Food

The food position in India is going from bad to worse. For once the Government have taken a very bold step by imposing a 25 per cent cut and for this they deserve to be congratulated. But this cut is localised in statutory ration areas alone. We know of rural areas where people are taking 20 to 30 ounces of food a day. Large quantities of food will be released for procurement if people in these areas could be induced to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

content themselves with at least a 16-ounce diet in the interest of the nation at large. Serious efforts are being made to get food from the U.S.A. The negotiations with that country, however, are still in a fluid state. Meanwhile, attempts should also be made to secure Russian wheat. The rice deal with China has not as yet matured into certainty. Sri Nehru deserves the nation's congratulation in his declaration that no political strings will be attached to the food that India will import. Wastage of food in storage as well as transit is still very high. Serious steps should be taken to reduce wastage to the barest minimum. Arrangements should be made to introduce strict supervision of the work of the procuring and storing agents, which leave much to be desired. No false hopes of whatever description should be held out. The people must be frankly told the real situation so that they might take timely steps to face difficulties.

U.S.A. Technique of Help

The criticism of the *Bombay Chronicle* passed on the "disposal" of surplus in foodgrains or manufactured goods in the country should be an eye-opener to the makers of the Republic's policy with regard to their much-boosted "Point Four Plan" of help to less-developed countries in Asia and Africa. The criticism appeared on December 15, 1950. It should enable them to understand the psychology of bitterness that has been spreading against the "American Way" of life.

"The U. S. refusal to give a large enough price concession to India to enable her to buy 750,000 tons of 'milo' to stave off famine raises again the propriety of destroying food-grains to keep up the price-level. According to an established practice in the United States, all surplus food-grains are bought by the Department of Agriculture to assure fair prices to farmers. The Department of Agriculture is required by law to sell surpluses as close to market price as possible, otherwise dispose it off in any way they please in order to make space for the next year's surplus. It is reported that mountain heaps of wheat, 'milo' and corn are burnt, dumped into the sea or just allowed to rot. This is in addition to food-grains fed to pigs and cattle. Similar destruction of food-grains is reported from other surplus countries. In normal times such a practice may be justifiable in certain people's eyes but to refuse famine-stricken countries at a concession rate surplus food-grains which are otherwise going to be destroyed, sounds inhuman. No high sounding economic theories can justify such an act. One fails to understand how giving away a portion of food-grains from a huge surplus to feed starving millions can upset market rates or hit the U. S. farmers? Such a transaction can be made independently without disturbing the world grain market. We repeat a suggestion made earlier that an international organisation like the U. N. should collect all surplus food-grains from their member countries and supply it to famine-stricken areas either at a concession or even free for the sake of suffering humanity. What better token can one have of the U. N. ideal of peace and world brotherhood? Surplus countries like the United States ought to take a lead in the matter. Instead of looking at it from the narrow national point of view, the U. S. ought to make its surplus food-grains available to scarcity-ridden countries. What better gesture can they show to the non-Communist world?"

"British" Commonwealth Policy Independent of U.S.A.'s

We do not know details of the discussion that took place in the Commonwealth Prime Ministers' Conference during the second and third weeks of January, 1951. We have for some time past been noticing a mounting spirit of criticism of U.S.A.'s handling of world affairs in almost every politically conscious country in the two hemispheres. And we would not be far wrong if we suggest that British politicians have been striving with all their might to build up a policy independent of U.S.A. pretensions and ambitions. The Commonwealth Prime Ministers' latest conference had been, we believe, an attempt in this line. The following cabled from London on December 30 last throws a certain light on this particular development.

"The *New Statesman and Nation* in a front page editorial devoted to an assessment of the Far Eastern situation yesterday condemned the 'gook complex' of American leaders.

"The editorial declared that the first wave of protest against 'the time of acceptance' of the American military programme (particularly that part of it which involved Britain as America's advanced base in Europe) led to Mr. Attlee's visit to Washington.

"It would be a pity if Mr. Truman and his colleagues are now persuaded that no protest from England can ever go farther than this. Beneath the surface the volume of protest continues to grow. The labour movement is today driven by the Government's too ready acceptance of American domination."

It added, "What we need now is an independent statement of British views about a world settlement. It should be drawn up in concert with Mr. Nehru and perhaps with other Commonwealth leaders and it should set out constructive proposals which Britain is ready to bring to the proposed 'four-power' discussions with the Soviet Union.

"We should surely bargain in the matter of the Far East with the bluntest reiteration of the policy already laid down by the Allies in Cairo and Potsdam on favour of the return of Formosa to the Chinese Government.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"This is now the crux on which a cease-fire turns. The British are already committed to support Peking for membership of the Security Council and the U. N. programme includes the evacuation of all foreign troops from Korea which is the third Chinese demand. If we do not want to be treated as 'gooks' we must follow the Chinese in not behaving like them."

Cominform Military Might

Press Trust of India and *Reuter* cabled from Belgrade on December 28 last the following news :

"Marshal Tito told Parliament today, that nearly 700,000 troops, apart from Red Army units, were under arms in the Cominform countries bordering on Yugoslavia.

He gave detailed figures to show that Hungary, Rumania and Bulgaria had violated their peace treaties by increasing the size of their armed forces to 165,000, 300,000, 195,000 respectively.

The maximum strengths allowed by the peace treaties were 70,000, 138,000 and 65,500 respectively.

Albania had increased her forces correspondingly but she was not prevented from doing so by any treaty.

Because of these developments Yugoslavia had been forced to increase her military expenditure to 29,100,000,000 dinars in 1951 (about 200 million sterling) an increase of about 300,000,000 dinars (about 1,500,000 sterling) on the previous year.

Marshal Tito gave details of 1,397 frontier incidents, which the Cominform countries had operated along Yugoslavia's frontier since July 1948.

'We are consistently against every form of aggression no matter if it comes from capitalist or socialist countries. We need peace more than anything else but not peace at any price'."

For about 48 months the world has been kept busy with guessing when the Comminform countries would jump on Yugoslavia. That these neighbouring States have been able to restrain themselves is a proof that they are fully conscious of the dangerous possibilities of the situation. The abuses hurled at one another have, therefore, been accepted as letting of gas, giving an outlet to more explosive activities. The world is thankful for the respite. For, it feels that a day passed in peace is a day gained for peace.

The Malayan Tangle

Since the retirement of Japanese troops from Malaya, the returning British have been finding it increasingly difficult to re-establish their power over the Archipelago in the Indian Ocean. The "5,000 Communists" are said to be at the back of all the turmoil in the country, and the general public being at best lukewarm towards the British regime, the British have been forced to rely on the power of the military to solve a problem which is political, as there is a feeling of resentment against an "External Authority" that during a hundred years and more have mainly been a handmaid of British finance-capital.

A study, summarized from the *Hindustan Standard*, of the ideological and socio-economic groups in Malaya, gives an idea of this jig-saw puzzle. Of the total population of Malaya, inclusive of Singapore, the Chinese number over 3,000,000. The Malay population is slightly less than the Chinese population. The total number of Indians is estimated at 600,000. The population division clearly reveals the entrenched position of the Chinese community and also explains why the Federal authorities are making assiduous efforts to integrate democracy in the country by utilizing the Chinese populace.

The gradual ascendancy of MCA as the mouthpiece of Chinese democratic politics in the peninsula has undoubtedly isolated the Commies, who are mostly Chinese. Only a few Malaya and Indians have gone over to the Red front. Likewise the activities of UMNO have made the Malay population more or less view the Red guerilla resistance as a "purely Chinese affair." But the presence of militant Malaya nationalism, considered leftist in outlook, is the danger point. It would not be astonishing if it veers round to a policy of positive sympathy for the Reds to oppose UMNO and the Federal authorities. In order to prevent such an unholy link-up both the Federal authorities and UMNO are now engaged in reducing the power of leftist nationalism.

Of late UMNO has increased its following among the Malays and encouraged by the Government it has become the radiating centre of "stop the Commies" efforts and Anglo-Malaya political co-operation. On the other hand MCA is steadily expanding its field of activities. To date its total membership has reached 170,000. It is expected that the membership will mount to 200,000 within three to four weeks. Moreover, the chambers of commerce of different communities—European, Chinese and Indian—as well as the planters' association and the mining interests are supporting all official measures concerning suppression of "Communist banditry."

A new plan has been set in motion by the new Commander-in-Chief. The enforcement of the Briggs Plan shows the determination of the Federal Government to hasten the termination of the protracted Red guerilla warfare. Under the plan, manpower will be used selectively to provide recruits for the security forces, particularly the police force. The plan does not intend to conscript masses of the population as "such action is not considered necessary." The draftees will be required to perform services for a longer period than three years or the duration of the emergency whichever is less.

The plan provides for the direction of labour and the control of workers, but it is intended to keep this power in reserve for the time being. In the police and military forces only persons between the ages of 17 to 45 will be induced. The new man-power conscription move amounts to a selective comandeering of civilian services to put an end to Red disturbances.

The plan also provides for collective punishments

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

but it is contemplated that these will be imposed in well-defined and comparatively small areas where the inhabitants have clearly failed to do their duty either by not preventing the commission of crimes when they could or by failing to assist the police in discovering the miscreants. However no collective punishment will be imposed until a proper magisterial inquiry has established that there has been a real and culpable failure of the kind indicated.

Burma Republic's Third Year

Our Burman neighbours celebrated the 3rd year of their life as independent Republicans on January 4 last with due pomp and ceremony. Our felicitations are offered on the occasion.

The year has been one of struggle and strain, the chief of these being the Karen revolt and the Communist group's armed insurrection. The Karen revolt is easy to understand. They demand on behalf of about 30 lakhs Karen an "autonomous" State. But it is difficult to understand how they propose to consolidate their 30 lakhs dispersed throughout Burma. The Karen revolt would have melted away long ago if it had not received encouragement and help from British groups, civil and military, with long experience of Burma acquired from residence in the country during British regime. U.S.A. people—very few—have also been found helping the revolt. After the death of Saw Ba U. Gyi, an outstanding Karen leader, once a member of the Thakin Nu Cabinet, the revolt appears to have lost its momentum and popular appeal.

The Communist attempt to disrupt Burma's economy is also easy to understand. But the fratricidal strife between the White Band and Red Band is not easy to unravel.

A brief newspaper survey of the insurgent groups will not be out of place in order to have a better perspective of Burma's political pattern. So far as the two major groups, namely, the White P.V.O's and the K.N.D.O's are concerned, much of the danger from them, a year ago, has now dwindled though their existence still constitutes a danger to the country and the people. After the death of their leader the late Saw Ba U Gyi, much of the fighting spirit has been knocked out of the K.N.D.O's. About sixty per cent of the White P.V.O's have returned to the Government fold and about twenty per cent more of them are expected to take advantage of the Amnesty, yet twenty per cent, ensconced in their jungle hideouts, continue their resistance against the Government. However, it is hoped that the Peace Missions sent out by what are called the repentant P.V.O's will be able to bring in this recalcitrant group.

The M.N.D.O's who formed a minor insurgent group, according to one of their leaders, have undertaken to give up their resistance and to co-operate with the Government after Independence Day. Thus we are left with one main insurgent group, namely, the Communists who are divided into two parties, the White and the Red. The White Communist dubbed "Stalinist" by the Foreign press for their particular brand of communism of a milder type, are led by Thakin Than Tun and are widely dispersed all over the country. They seem to be well-equipped, well-supplied and very much active. The Red Flag Communists who are termed the "Trotskyists" are led by Thakin Soe.

The Red Flag Organisation was an off-shoot of the Burma Communist Party, though personal rivalry between the two leaders had begun with the inception of the Communist party itself. In Thakin Soe's views, the Communist party being meant for a struggle was only for those who believed in a struggle. On the other hand, Thakin Than Tun maintained that politics is a game where diplomacy has a place alongside the struggle. Differences of opinion between these two leaders culminated in a split in the Communist Party in March 1948 when Thakin Soe issued a manifesto accusing Thakin Than Tun and his then Lieutenant Thakin Thein Pe of compromising with the imperialists and opportunists. It was further suggested by Thakin Soe that the majority members of the Communist Party should be composed of those of his followers. This was, of course, unacceptable to Thakin Than Tun, and Thakin Soe and his followers left the party to form the Red Flag Organisation. The usual recriminations and personal slander were indulged in by both the leaders, culminating in the Red Flags resolving to exterminate the White Flags, the rivalry being so acute as to place this resolve above Thakin Soe's objective of fighting against the imperialist and the liquidation of the A.F.P.F.L.

Thakin Than Tun, leader of the White Flag Communists, was the first Secretary-General of the A.F.P.F.L. His primary objective then was to turn the A.F.P.F.L. into a Communist front. His first acute disappointment was when the A.F.P.F.L. formed the Provisional Parliament under the leadership of Bogyoke Aung San. It was then that with the co-operation of its chief Lieutenant, Goshal alias Thakin Ba Tin, an Indian born and educated in Burma and a member of the Communist Party of India, he made endeavours to wrest the leadership of the A.F.P.F.L. by various means resulting in widespread strikes and agrarian agitation. With the expulsion of the Communist Party from the A.F.P.F.L., Thakin Than Tun went underground and up to the time of writing he continues to be a very real danger to the future of the country. A year ago Thakin Than Tun's White Flag Communists dominated the entire area upward from Toungoo until they were dispersed by a Government offensive.

The White P.V.O.'s or the People's Volunteer Organisation was an offshoot of the Liberation Army and the Burma Defence Army of the Japanese days and lastly the Patriotic Forces which drove out the Japanese Fascists from Burma.

While the A.F.P.F.L. and the Communists led by Thakin Than Tun were wrangling over different issues, the P.V.O.'s as mediators did not hide their sympathy for the Communist cause. With the failure of their

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

mediation efforts the P.V.O.'s went underground in July 1948. Even among the P.V.O.'s a split occurred on June 13, 1948, as a direct result of Thakin Nu's 14-Point Programme advocating "Leftist Unity." The Yellow Band supported Thakin Nu's plan while the White Band was prepared to support their own. The A.F.P.F.L. Supreme Council held a meeting on July 1 and 2, 1948, where, after a heated debate, Thakin Nu's Plan was adopted and ratified, while the P.V.O. Plan was turned down by an overwhelming majority of votes. Refusing to accept this decision, the White Band P.V.O.'s continued to convince the country of the practicability and utility of their plan. The A.F.P.F.L. resolutely tried to bring round the P.V.O.'s to its views. It had even offered to transfer power to the P.V.O.'s should they undertake to carry out the programme prescribed by the A.F.P.F.L. Refusing this offer, the P.V.O.'s ultimately went underground.

Thakin Than Tun is reported recently to have surrendered. And the prospects of comparative peace in Burma appear to have brightened.

The much used "ludu" which means the mass of the people has been treated to various political stunts and changes which, apparently, had taken them by surprise. It is imperative that, if the "ludu" are to keep their heads above the stagnant waters of Burmese politics, they should gain a clearer perspective of all that is going on in the political arena, and that they should not be swayed by ideological differences of which they are ignorant.

The Burma Peasants and Workers' Party which had been formed by the members of the Socialist Party who walked out of it is meant to be a party for the general mass of the people and its outlook, undoubtedly, will be influenced by Marxism as its guiding ideology.

This picture of Burma may be taken as fairly representative of conditions in the country. And hopes entertained by outside friends that Thakin Nu's Government is on the way to re-establish control over the whole country is nearer realization now than at any other time after 1945.

South Africa's Dangerous Policy

Addressing the Congress of the Convention, a federal body of African organizations in the Union of South Africa, Mr. W. T. Tsotsi, President of the All-African Convention, envisaged on December 17 last a war—a war between European colonizers and colonials, between exploiters and the exploited :

> "It is a war in which the millons of Asia and Africa, who have for generations been groaning under the yoke of foreign domination and oppression, are at least rising to throw off their shackles and come into their own."

The All-African Convention "was part of a vast world army which had pledged itself in the name of Democracy and peace to fight tyranny and oppression."

Africans should avoid isolated clashes and conserve their forces for a concerted struggle.

For non-Europeans, South Africa was always a Nazi or Fascist State characterised by the Herrenvolk (master people) ideology, with ruthless suppression of human rights and different systems of laws for ruling and subject races. The coming into power of the Nationalist Party of Dr. Malan has emphasised the Fascist nature of the South African State.

Both the Government and the Opposition are "heavy with the wine of racial superiority," and sooner or later nemesis would overtake them, Tsotsi warned.

Non-Europeans were the only group in South Africa capable of defending Democracy. Because they were denied the constitutional means of fighting fascism a dangerous situation existed.

Transforming Yugoslavia

Mr. R. N. Brailsford, the noted British publicist and consistent friend of India, has written an article on Yugoslavia that has appeared in the January issue of the *People* (weekly) of Delhi. It is an attempt to assess the success of the measures which the ruling authorities of this Federation of States have been making to repair the war damages and improve the material and mental improvement of the people. Five-Year Plans have been the order of the day. But a revolt is in progress against every form of bureaucratic centralization" and Marshal Tito has been forced to declare that there "will be no second Five-Year Plan."

Mr. Brailsford passed two months in Yugoslavia and has had opportunity to observe how the people have fought against the conditions created by a "third summer" from February to the end of October. But with "the imaginative audacity" that had enabled them to fight the Hitler hordes, Tito's "young men" set to use their "assets" to the best purpose. The "more prosperous peasants were . . . discontented and half-hearted." And Marshal Tito had to declare that the area under cultivation was last spring still 1,75 acres "below the pre-war level."

But this is not the whole story; there was a brighter side, and it showed itself in Macedonia, the most neglected of the areas of the new Federation. The description of the transformation of Macedonia is worth reproduction which we do below:

"For my eyes, the happiest novelties in Macedonian life were its *zadrugas*. I use that name because neither co-operative nor collective farm is an exact translation. A *zadruga* meant originally a big patriarchal family farmhouse, in which three generations lived, tilling their common fields under the grandfather's direction. A few of these survivals of an older world still existed when first I knew Macedonia. The modern *zadruga* differs from the Russian collective farm in two respects. It is a voluntary creation formed on the initiative of the peasants themselves, and it is managed, not by a director nominated from above, but by a committee and a president elected by its members. The peasants throw their land and cattle into the common stock and work in teams known as "brigades." The produce is divided according to the number of working days each member has to his credit. Small plots of land

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

however, assigned to each family for its private use, and it may keep its own poultry and pigs. The Republic helps the *zadruga* with credits free of interest and repayable by instalments over thirty years. With such aid it builds its byres and granaries and has the first claim to such machinery as may be available. Chosen members are sent periodically to take courses in scientific agriculture. Methods of farming have been revolutionised by new rotations, the use of fodder crops and silos. I had no difficulty in believing the claim of a *zadruga* near Bitolia, that in four years it has increased production by 60 per cent. The peasants would show us the new houses they are now able to build. In the old days, as they put it, they "used to sleep on the floor, now they have beds." The older *zadrugas* have reserves of grain that will tide them over the drought. But there is something more than a gain in efficiency and material prosperity. Always in the handsome central building, beside the committee room and the cashier's office, there is a "Home of Culture," with a theatre, which will show films when electricity is available, and a modest library. Usually it has its choir and its amateur theatrical company."

One wishes that what has become possible in primitive Macedonia were possible in India—the people taking the initiative and the Government came to their help as and when it became necessary. This *zadruga* system is reminiscent of our old days and is hard to beat as an instance of social responsibility undertaken in a dutiful spirit.

Science in Asia

The 38th session of the Indian Science Congress and the 1st session of the Pan-Indian-Ocean Congress were held at Bangalore during the first week of January, 1951.

Scientists from far and near, specially from the countries having "colonies" in the Indian Ocean region, graced the occasion and took part in the proceedings, apart from those of Canada, United States and Japan. The countries more concerned were Ceylon, Burma, Malaya, Iran, India, Pakistan. The Indian Institute of Science played the host on the occasion. The suggestion for holding the Pan-Indian-Ocean Conference came from the Australian National Research Council.

The General President of this session of the Indian Science Congress was Prof. Homi Jehangir Bhaba, 42-year old Director of Fundamental Research at Bombay since 1945.

The purpose of the Pan-Indian Ocean Science Congress is to discuss and promote concerted action in regard to scientific problems specially affecting industrial progress, agriculture, health and commercial interest of peoples living around the Indian Ocean, which will further help to strengthen the bonds of peace by promoting a feeling of brotherhood amongst scientists and the maintenance of harmonious relations between them.

The Indian Science Congress has been carrying on its recluse existence without being able to make modern science racy of the soil nor contributing in any significant manner to the enrichment of the country's material life. The setting-up of the Pan-Indian-Ocean Science Congress will, we hope, stir it out of its placidity. For, during the days that lie ahead such an indrawn life is destined to failure. We are sure that science can not be put into compartments marked Asia, Europe, the Americas, Africa and Oceania. There may, however, be something in the arrangement beyond an outward division—East or West, North and South. But the problems tackled by modern science are universal in their sweep, in their causation and consequences. Indian scientists, as such, have to recognize anew this development and contribute their share to the common fund of knowledge.

The address of the President of the Indian Science Congress is a proof that Indian scientists are ready to play their part in the quest after the "fundamental" elements of Nature by using the instruments and contrivances of modern research. Shri Homi Jehangir Bhaba symbolizes this youthful urge. In his address, he traced the developments in scientific research during the last half-a-century from "chemical elements" to "neutral pion." And he summed up his address in the following words as we find it summarized in the daily Press :

> "Research conducted after the war demonstrated that the picture was again not so simple as it was then supposed to be, and two types of mesons were identified—the mu mesons, being those seen in cloud chamber hotographs and the pi mesons responsible for nuclear forces. More recent experiments with the large cyclotron at Berkeley and elsewhere had led to the discovery of yet a new elementary particle, the neutral pion.
>
> "We see now that at least nine different types of elementary physical entities exist in nature, while the existence of two more is almost certain.
>
> "The circumstances that there are a dozen different types of elementary particles in nature would lead us to expect that there may be many more, and indeed with our present knowledge we cannot exclude the possibility that there may be an infinite number of them. This does not mean, however, that we shall never be able to obtain a complete description of them all. It is clear we are now penetrating into a new level of Nature which was practically unknown some twenty years ago."

Dr. Bhaba presided over the Pan-Indian Ocean Science Congress also. Its report is not with us as we write these lines. On the last day of its sittings (January 7) it adopted an interim constitution laying down for objective concerted action in regard to scientific problems affecting Indian Ocean people and the strengthening of the bonds of friendship among them. It also agreed to the President, Secretary and the Heads of the Delegations present here to constitute its Interim Council (Dr. H. J. Bhabha is President).

The Congress has already considered draft proposals on subjects of common interest to countries in the region and it was expected that it might set up national committees in each country to co-ordinate its work and make recommendations for new research.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

On agricultural sciences it said, it was necessary to foster a free interchange of personnel and information in the Indian Ocean area. The objective was to secure increased agricultural production, maintain and increase productive capacity of soils and raise nutritional and living standards of the people of the area. To this end it was thought necessary to form a Standing Committee on agriculture within the framework of the Congress.

The Standing Committee would be briefed to direct special attention to soil geography and socio-economic factors, research on water and soil conservation, problems of rain-fed areas and schemes of agricultural research.

On the subject of economic, educational and social sciences, the Congress recommended the use of sample surveys in the fields of population, public health, agricultural and industrial production, level of living, educational and cultural activities and national incomes.

It also recommended pilot projects in education of tribal children.

The creation of a section in human ecology with special reference to prevention of disease and attainment of optimum health was also considered.

The Congress agreed to hold its next session in August 1953 in Australia on an invitation from that country conveyed by its delegate Prof. A. D. Ross.

Geological Survey Centenary

The Centenary of the Geological Survey of India was celebrated in the Calcutta Museum during the second week of January, 1951. The record of work of this department is magnificent and comparable to that of any similar survey organisation. As such the occasion was rightly observed and celebrated with ceremony and oratory. Press releases were given in profusion. We quote below from one of which the co-authors are Dr. A. K. Dey and Shri M. S. Venkataram.

"Geologically India is divisible into three regions: (1) Peninsular region including the Shillong plateau of Assam in the north-east and the Kutch-Kathiawar region in the west occupying nearly 70 per cent of the land area; (2) the extra-Peninsular region—the Himalayas, Kashmir, Naga Hills of Assam, Manipur, Tripura, Andaman and Nicobar islands—comprising 13 to 15 per cent of the area and (3) Indo-Gangetic plains between Peninsular and extra-Peninsular region.

"The Peninsular region is among the oldest land areas of the world. Except for the Cretaceous and Tertiary beds, fringing the east coast and the southern part of the west coast, and more extensive areas in the west and north-west, and the valuable coal basins, and the basaltic lava flows covering its central and western parts, no rocks younger than the Cambrian are known to occur. This region is a stable land mass of great rigidity. The mountain ranges in the areas of old rocks are of relict type, remnants of hard rocks which effectively resisted sub-aerial denudation for long ages, though complicated by block faulting in the south.

"In contrast to the Peninsular region the extra-Peninsular region is a weak and flexible portion of the earth's crust which has been folded, faulted and overthrust. The steepness and depth of Himalayan gorges are indicative of the recent period of their latest uplift. The longitudinal portion of the gorges was determined when the Himalayan region first rose from the Tethyan sea (Trans-Himalaya) and the down cutting of the gorges kept pace with the upheaval and folding of the ranges. In addition to an ancient stratum of rocks (similar to the oldest peninsular rocks) which were deposited in a major pre-Cambrian geosyncline and compressed to form the earlier Himalayan ranges, there are immense thicknesses of marine strata representative of all systems from Cambrian to Tertiary. The floors of the second geosynclines, within which the strata were deposited, subsided intermittently, but on the whole keeping pace with sedimentation. The Gangetic plains, lying between the Peninsular and extra-Peninsular regions, are of alluvium derived especially from the Himalaya; the lower part of this mass may be contemporary with the Siwaliks, etc., which are of similar origin."

The mineral ores of India, the hope of her industries, have found a place in this article from which we quote below:

"India's mineral wealth has a distinct relation to her geological history. During the most ancient period were deposited her wealth of iron-ore, manganese-ore, chrome-ore (chromite) and other metalliferous ores indispensable for the modern iron and steel industry.

"The rocks of the earlier part of the Aryan era are the storehouse of most of the coal which forms the basis of India's industrial potential.

"The later Aryan period also provided coal and lignite, besides high-grade limestones. Oil, which is at present produced only from the Digboi field in Assam, is also an asset of this period.

"India's mineral wealth, though not in proportion to her growing population, is not insignificant when compared with that of other countries. India is fortunate in having within her domain adequate reserves of coal, iron, and metals required for ferro-alloys, which are the basis of modern industrialisation and power.

"Coal-mining in India is centred mainly in Bihar and West Bengal, but other important deposits are in Madhya Pradesh, Madhya Bharat, Orissa, Hyderabad and Assam. The total reserves of coal down to a depth of 2,000 feet are estimated at 66,000 million tons. Reserves of coking coal have been estimated at 12,000 million tons. Besides these, India has potential reserves of lignite in Bikaner in Rajasthan and South Arcot in Madras.

"In petroleum, India has limited resources. Proved reserves in the proved oil field in Upper Assam should be sufficient to yield a declining production over

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

several years to come. India at present produces about 7 per cent of her consumption.

"The vast deposits of iron-ore are most extensive in Singhbhum of Bihar and adjacent districts of Orissa, with others in Bastar, Madhya Pradesh, Madras, Mysore and Hyderabad. The total known reserves of high grade iron-ore in India are of the order of 10,000 million tons.

"India produces manganese-ore of high grade quality, and although the principal deposits are in the Madhya Pradesh, others are widely scattered in Bihar, Orissa, Madras States and Panch Mahals. Reserves are not known but are undoubtedly considerable.

"Production of chromite in India is from Bihar, Mysore, Madras and Orissa.

"Reserves of tungsten-ore are small, confined to Jodhpur and Bankura; these should be able to provide much of the local requirements for ferro-tungsten alloy industry.

"India is a leading producer of ilmenite, the principal ore of titanium. She has large reserves of vanadium-bearing titaniferous iron-ores in the Singhbhum district of Bihar and Mayurbhanj district of Orissa.

"India is of world importance with regard to mica, kyanite and sillimanite. The main regions in which mica occurs in India are the Hazaribagh-Giridih-Gaya region in Bihar, Nellore district in Madras and Ajmer-Merwara in Rajasthan, but the amount and quality of production in Bihar far exceeds those of the other two regions. The mica is literally found in thousands of veins of various sizes. New ones are found as old ones are worked out, and depth limits of mines are gradually increasing. Hence the determination of reserves is practically impossible; all that can be said is that, although the deposits have been worked since the eighteen-seventies, there is no sign yet of exhaustion. On the contrary, production has shown a progressive tendency to increase. Production in 1949 was 151,696 cwts. and export 270,518 cwts.

"Perhaps the largest deposit of kyanite in the world occurs in Kharsawan (Bihar), where the minimum reserves are of the order of a quarter million tons. The same may be said of sillimanite, for the world's largest concentration of this mineral occurs in the Khasi Hills (Assam). Minimum reserves have been estimated at 25,000 tons. Deposits of sillimanite are also known to occur in the Rewah district of Vindhya Pradesh."

Power Projects in Punjab

"The first stage of the Bhakra-Nangal project will soon be completed. Like the completion of other great ventures, it will not bring with it a sense of fulfilment but will bring the State face to face with new tasks to fulfil. One task will be to utilise some 300,000 kwts. of electric energy. Experts have pointed out the imperative need of exploring in advance proper ways of using this power. Failure to do so may leave the State with vast power on its hands but with no plan to make productive use of it. A warning against such a prospect has been given to the Punjab Government by the outgoing Director of Industries, Mr. S. N. Kapur. His words must carry a chilling realism to those who have watched the Punjab Government's struggle with the energy produced by the Mandi scheme. Out of the 30,000 kwts. being produced today, 8,000 kwts. are sold to Pakistan. A comprehensive, well-considered plan of industrialisation is, therefore, called for in order that the energy may be delivered and used in areas which are most in need of it and are ready to make purposeful use of it."

The "refugees" from West Punjab, we have been told, are a vigorous and enterprising set of people. We believe that prior to partition they were large-scale users of electricity. Why they have not found profit in using electric energy in their new homes and industries is a question that requires a reply. If they are going short of electricity then of course the picture is different.

Electrification of Madhya Pradesh Towns

A Nagpur telegram sent out on December 27 last announced a forward move in the State of Madhya Pradesh, the object of which is the "immediate" electrification of 16 towns. The announcement was as follows :

> "An important step in the implementation of Madhya Pradesh Government's Plan of providing the nucleus of a State Electric Supply System was taken today (December 27) when Dr. Rajendra Prasad, President of India, before a large distinguished gathering, declared the Khaparkheda Thermal Station open.
>
> "It is one of the two thermal stations feeding the southern grid. Khaparkheda is on the right bank of the Kanhan about thirteen miles from Nagpur and five miles from Khamptee.
>
> "Sixteen towns with a population of over 10,000 each will, for the first time, get electricity supply from Khaparkheda.
>
> "8,20,000 people living in urban areas will receive immediate benefit of Khaparkheda supply which is ultimately expected to be extended to 3,428,476 people.
>
> "The rural area proposed for early development is nearly 2,000 square miles."

So far as we know the State has been lagging behind in the provision of modern amenities. But it has been straining hard to make up for lost time. And it appears to be succeeding well.

"Electricity is food," said a Serbian aged woman of the working class to Mr. Brailsford. In the case of the Madhya Pradesh, we hope that apart from the lighting of towns the Khaparkheda scheme will increase the food production of its area, thus easing the food position not only in the State but in the whole of India. Madhya Pradesh is a surplus area under food. But during the present crisis, it has a more extended

India's Ports and Harbours

The Central Minister for Transport and Railways had a two-days' conference on board the Calcutta Port Trusts' vessel *Bengal* on the 7th and 8th January last. The chairmen of Port Trusts of Calcutta, Bombay and Madras and Heads of administration of the ports of Vizagapatam, Cochin and Kandla, top officials of the Central Ministries of Transport, Food, Finance and Commerce and the Collector of Customs, Calcutta, attended. The conference discussed among other things the question of introduction of a single Central Act for the administration of the ports of Cochin, Vizagapatam, Kandla and such other ports as might, in future, be declared as major ports, direct representation for shipping and countrycraft interests on existing Port Trust Boards and the allocation of elected seats on Port Trust Boards.

It reviewed the present allocation of elected seats of Trustees on the Port Trust Boards of Calcutta, Bombay and Madras. It was stated that shipping was under-represented in the existing Port Trust Boards and the time had come to give them direct representation. The conference recommended that the position should be rectified and that in the case of Bombay, countrycraft interests should be given a direct representation as an appreciable percentage of trade at that port was handled by this type of shipping.

A detailed discussion then took place on a draft Bill providing for the administration of the major ports of Cochin, Vizag and Kandla. The intention of this legislation is to empower the Central Government to provide for the development and administration of these ports either directly as a department of the Central Government under an Administrative Officer or through a Statutory Port Trust Board such as is functioning at the ports of Calcutta, Bombay and Madras. The Bill was discussed clause by clause and the conference is stated to have generally approved the principle of the draft legislation.

Another item discussed at the conference related to the provision of officers in Port Administration to give financial advice on the various port expenditure schemes. This proposal was a sequel to the recent discussion in Parliament during the debate on the Bill to amend the Calcutta, Bombay and Madras ports legislation. The principles governing municipal taxation of Port Trust properties and the question of introduction of uniformity in the levy of port charges on foodgrains at all major ports in India were also discussed at the conference.

The matters discussed were all confined to the external efficiency in these institutions. But the inner corruption and inefficiency of these statutory bodies have become a standing disgrace to the country. Pilferings at the Ports and Railways have been adding to the misery of the people.

"Hindi in a Hurry !"

This was the heading of an article in a Bombay daily in criticism of the speech of Shri Jay Chandra Vidyalankar as President of the 38th session of the Hindi Sahitya Sammelan's Rashtra Bhasa Parishad at Kotah in Rajputana during the last 4 days of 1950. Our Bombay contemporary has accepted the logic of the step taken by the Constituent Assembly when it decided in favour of Hindi as the State language. But he finds it difficult to share the "hurry" of the Hindi enthusiasts. Shri Jay Chandra made a grievance of the fact that the State has not been doing its proper bit for Hindi, but we have found nothing constructive in his criticism except the fact that the State has been putting off the constitution of the Federal units on "what has come to be known as the "linguistic basis."

We have ourselves made this criticism since the beginning making it clear that this postponement will be leading to tensions that in this formative period of our State should have been avoided. The point of our own criticism was that the constitution should provide for the learning of one of the major languages of India other than the mother tongue on every aspirant for Federal appointments. We are glad to notice that Shri Amar Nath Jha, Chairman of the Federal Public Service Commission, has made the same suggestion in course of a speech he delivered at Mathura on December 26 last to the students and staff of the K. R. College. We gladly make room for this part of the said speech. The report said that Amarnathji "emphasized the need that each State must learn at least one of the major State languages because Gujrati, Bengali, etc. are richer than Hindi." The effect of this idea would be to counteract the rise of "Hindi imperialism" against which feeling has been already rising.

We do not write of such a danger without reason. Shri R. R. Divakar, Minister of State for Information and Broadcasting inaugurating this particular conference on December 27 last, made pointed reference to this. The issue is so important that we reproduce these portions of his speech as reported in the Press :

> "Some of the people from the South are generally afraid of a certain kind of 'language imperialism' from Hindi. Certain other genuine difficulties in learning Hindi also are there.
>
> But I do not think that it is beyond the ability of the people belonging to Hindi-speaking States to do it. abuse others of all misunderstandings. It should be possible for Hindi-speaking people to give the South as much time as is necessary for them to master the Hindi language.
>
> They must also make them feel that they would have their own contribution to make for building up Hindi as the "lingua-franca."
>
> No Hindi-speaking States will be justified in trying to lay down the rule or dictate the terms on which Hindi should develop. Hindi-speaking people can also create confidence among the Southerners by themselves learning one of the southern languages and by trying to promote some of them.
>
> Translation of works of merit in the southern

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

languages into Hindi would be another way which would make Southerners shed their distrust."

"If there was a proper approach by the Hindi-speaking people and patient effort made to induce confidence in the people of the South there would be no difficulty in the spread of the language faster than we imagine."

Shri Chakravarti Rajagopalachari was more forthright in the expression of this apprehension :

"On the other hand, let me respectfully warn Hindi lovers, not to depend upon the coercion which a numerical majority of an ill-knit continental population can at the moment exercise. It will lead to disintegration and hostility rather than unity. Let us remember that for thousands of years many languages lived and grew side by side in India, and Hindi did not succeed in ousting other languages by force of its dominant momentum.

"This negative historic phenomenon should guide us in our steps. Let there be no indecent haste."

"My fear is that such haste will give the people of the East and South an impression that those whose mother tongue is Hindi are seeking to use their language as an instrument of oppression and domination in public affairs. This should be avoided at all costs. The slower but the surer pace of a voluntary synthesis is far wiser than the haste of enthusiasm.

"I have said perhaps what may not please but I am earnest and I claim to have worked for Hindi in the South for the last thirty years and am not a lukewarm about it."

Compost Production in West Bengal

In the production of compost in rural areas West Bengal has a encouraging story to tell. A Government communique issued by the Directorate of Publicity describes details of the minor success attained which we publish below:

"West Bengal's target of production of compost manure in the rural areas, in 1949-50, was exceeded by 17,000 tons, the total production being 1,17,000 tons. Of this quantity, at least 1,04,000 tons is known to have been actually utilised during the year. As many as 1492 persons qualified themselves for award of prizes of Rs. 15 each; 1448 for prizes of Rs. 10 each and 277 for the special prizes of Rs. 50 each.

This year again, the Government of West Bengal in the Agriculture Department have offered prizes for encouraging production of compost manure from rural refuse, including household waste, farm refuse and cattle-shed sweepings, etc., in the rural areas. This year two prizes of Rs. 15 and Rs. 10 each will be awarded to the best compost producers in each Union. In addition, all cultivators producing 1,000 cubic feet of ripe compost, equivalent to 20 tons, will be awarded special prizes of Rs. 50 each.

Another scheme for encouraging eradication of water-hyacinth and other aquatic weeds and utilising these for production of compost manure has been sanctioned by Government. Each cultivator preparing compost manure out of these weeds will be entitled to payment of Rs. 1-8 per ton of ripe manure from Government and any one preparing 100 tons or above of ripe manure will also be eligible for a prize of Rs. 100. This would, it is hoped, encourage larger number of people in the rural areas to eradicate these weed-pests for preparing valuable compost for their food crops—and thereby add their mite towards the food self-sufficiency of the State."

It must be pointed out, though, that these are but small beginnings. Millions of tons of compost are needed, where a bare hundred thousand tons are produced.

"Earn While You Learn"

The Education Department of Uttar Pradesh has taken one step forward in the sphere of the "self-help" content of basic education. It has prepared a scheme for production and marketing of certain useful articles in the primary schools and junior and secondary schools. The scheme will be introduced in 25,000 schools. The State Training in handicraft already forms a part of the curriculum of the basic education. The Education Department has opened camps in the eastern districts for training of teachers in spinning, weaving and carding. The Government have instructed the heads of the educational institutions asking them to get articles of every day use prepared by the students according to local needs.

Presiding over the 25th session of the All-India Educational Conference at the Osmania University on December 29 last, Dr. Zakir Hussain, Vice-Chancellor of the Aligarh University, emphasized the same point by declaring that the achievements of the Indian Universities fell short of what our circumstances required; it was not enough for them to have some scholars and scientists of eminence: they should have leadership in all walks of their national life, men with a grasp of reality and who appreciated the needs of life and dedicated themselves to their fulfilment.

What Indian Universities needed today was a re-orientation of their functions in national life, functions that were to be assigned to them. It would be most prudent if the needs of Universities could be studied and provided for with a view to making them effective means of national reconstruction. The key-note of University work should be social responsibility—but social responsibility freely undertaken and not under duress.

There was nothing more urgent than the introduction of basic education throughout the country today. They should know that the resources of the State would not render this possible for yet some time to come. They should organise well-thought-out programmes of basic education in selected schools and in compact areas; make use of all available non-official agencies anxious to put forth their best for this important task; give them liberally the resources they lacked; organise an eight-year course as one integral whole basic education, so that running expenses of the school were met by the sale of useable articles produced by children.

"Scalping"

The Association on American Indian Affairs has through its National Films Committee brought forth

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

evidence, says the *World Interpreter* of New York, to show that "white men," not the Indians, started the practice of scalping. Millions of people in the West have grown up on this belief for 2 to 3 hundred years. Thus have western historians done injustice to Red Indians who number today more than 2 millions.

The paper quotes authorities to prove the truth of this charge against the white man. James Mooney of the Smithsonian Institution wrote in 1910 : "Scalping was continued originally in North America to a limited area in the Eastern United States and the lower St. Lawrence region. It was absent from New England and much of the Atlantic Coast region, and was unknown until comparatively recent times throughout the whole Interior and Plains area. It was not found on the Pacific Coast or the Canadian Northwest."

Another expert, Georg Frederici, also writing for the Smithsonian, pointed out that the New England Puritans, in 1637, were first to offer premiums for native heads. He asserts, besides, "The acme of the custom was reached after the institution by whites of scalp premiums, accompanied by the employment of natives for scalp gathering, and scalping by the whites themselves." Frederici says that during the later wars in which the colonists were concerned, "scalp hunting was incited to still greater intensity. The premiums were large, ranging up to 100 pounds for one scalp; and they applied to Indians as well as to white enemies....Members of friendly tribes, and even the white countrymen of the scalpers were not safe, and even graves were made to yield victims."

Pennsylvania offered a regular schedule of scalp prices on July 7, 1764, through Governor Penn (not to be confused with William). Rates varied from $50 to $150, according to age, tribe, etc. In June, 1755, General Braddock guaranteed his soldiers and Indian allies five pounds for every enemy scalp.

Sinclair Lewis

Sinclair Lewis, the American novelist and creator of "Babbitt," died at Rome on January 10 last. Lewis earned fame by his bitter satires on American urban life, on the hypocritical clergy of his time, and on the outlook and the ways of American businessmen in particular. The Nobel Prize for literature first to be given to an American, was awarded him for qualities which were summed up as "his great and living art of painting life, with a talent for creating types, with wit and humour." He effectively exposed the myth that life in his country was only noble and happy.

To us in India his *Babbitt* was an introduction to U.S.A. life bursting with prosperity. We were enabled by him to have a glimpse into the dark abyss created by modern industrialism with its sacrifice of human beings at the altar of plutocracy.

Further acquaintance with the dark forces at work came when Sinclair Lewis exposed the judicial murder of Sacco and Venzetti, two Italian-born miners employed in Pennsylvanian coal mines. The police had put them up as Communists. This exposure was as searching as that by Emile Zola of the Dreyfus scandal precipitated by high officials in the French Army moved by their prejudice against a rising Jewish officer.

Thakkar Bapa

On the 19th January last was snapped another link with the Gandhian Age by the departure of Amrit Lal Thakkar from this world at his 82nd year. From 1869 to 1951, his life has covered the most dynamic years of India's recent history, and in it Amrit Lal Thakkar has played a most constructive part.

Born at Rajkot in Gujarat, he passed out in life as an engineer from Poona. Thereafter he saw service in Bombay City and finally in East Africa from which he returned in 1914. He joined the Servant of India Society, and true to the vows of initiation he served the lowly, the poor and the voiceless in India to the last days of his life.

Later he came under the influence of Gandhiji who ever found in Amrit Lal a never-failing friend in every department of social service. As Secretary of the Harijan Sevak Sangh, of the Kasturba Memorial Fund he carried all responsibilities, and shunned all honours. But these dogged him, and only a week or two before his death, he was made President of the Managing Committee of this Fund in the absence of Vallabhbhai Patel pre-deceasing him by 34 days only.

His silent service to the "tribals" in India, about 2 million souls, will earn him a place in India's history. A pioneer in this line, Amrit Lal demonstrated what a single man can do by persistence in changing the minds of men—exploiter and exploited. He has died full of years. We may not mourn for him but may best commemorate him by following the path indicated by him. May his soul rest in peace!

Shiv Narain

Death occurred here at 1 p.m. on December 10 last of Lala Shiv Narain, one of the oldest members of the Delhi Bar Association and a former President of the All-India Kayastha Conference. He was 74 years old.

He was a leading advocate of Delhi and was connected with many welfare and charitable organizations. For many years President of the Delhi Bar Association he was one of the senior Vice-Presidents of the Foreign Relations Society.

He died of cerebral haemorrhage. He leaves behind his widow, two sons and three daughters.

Lala Shiv Narain was associated with the Reception Committee of the Indian National Congress special session held in Delhi in 1918. He had been a member of the Delhi Municipal Committee for a long period. He defended Congressmen during the non-co-operation movement, the two civil disobedience movements and later in 1942.

Lala Shiv Narain has died full of years and full of honours. May his soul rest in peace !

DIRECTIONS IN SCULPTURE

Digitized by Arya Samaj Foundation Chennai and eGangotri

By D. P. ROY CHOWDHURY,

Principal, School of Arts and Crafts, Madras

Every action is initiated by a purpose which aims at an objective. Art functions as one such action. The objective of plastic or graphic art is to seek an expression which is forged by a strong emotion and released through a concrete pattern. The pattern has a message to give. Therefore it is significant. The significance relates to the interpretation of an experience gained by coming in direct contact with an object that excites the artist to respond to the call for an expression. Therefore, it is strictly personal.

The expression thus released usually has a mission to communicate to one who is ready to receive it. In the circumstances the means of communication is endowed with the quality of a language which is not only expected to be knowledgeable but should also have the driving force to convey the spirit of the message without being trapped by abstrusiveness. In the absence of this essential quality in the medium of communication, the purpose of expression is lost.

I have dragged the explanation to this length in order to collect vital points that relate to modern trends in sculpture in our country. These trends represent a new language that intends to stay. I have said "New Language" because it is distinct from that of our traditional motives and the conventional patterns, of the West, as well. The language of sculpture, whatever pattern it may refer to, scrupulously avoids vagueness in its message on account of its defined articulation, which is composed of silhouettes all around the structure with clear-cut sharp lines. It has no background of its own to rely on for an atmospheric effect. Nor is it supported by any description easily obtainable in literature. Facilities to exercise the imagination in a three dimensional language are therefore curtailed to the minimum. In painting, the accessories of a background are part and parcel of the picture, of which the pattern is designed to enhance the importance of the main theme. Here the imagination of the observer has a tremendous scope for growth. The accessories in the background remain just dull and dumb to give importance to the subject which is destined to play the leading role. Literature is also no less privileged because a simple suggestion can help to exercise the imagination to a long range. But suggestion in sculpture drawn from any source other than its own does not work to an advantage unless deception is acclaimed as an achievement. It is so, because correct presentation of sculpture depends on the quality of the light, and its cordial reception on various planes of the surface. Sculpture in its true characteristic, associates itself with massiveness. It is severe, yet serene, and stands as a symbol of reverence. It leaves no room for those possibilities of favourable accidents that often render service to a composition in colour. The demand of sculpture is to be left alone to create an atmosphere for its assertive existence. The expression in a three dimensional language is therefore exhaustive within its own form. To the image of beauty thus fashioned belongs the sacredness of a shrine. Hence expression through this medium cannot fall in line with what can be produced by a sketchy appeal in a picture.

An imposing stature on a gigantic scale is an essential quality of a sculpture. When reduced in size to fit in with an interior decoration, it is helplessly exposed to damaging interpretation or takes shelter under an illusive effect. The effect is created to add a quality that perhaps never existed in the content of the original. The aid thus made available serves its purpose well from a particular angle, but at the cost of the whole truth. It is well suited for a deceptive presentation and so the planning involved is mischievous. This trend is fast developing into a trade to meet the needs of drawing-room accessories.

Many sculptors of our country have been dragged into taking up the occupation as a lucrative business. They cannot be blamed because the artist must sell to live. The principal seductive agents in this respect are unassimilated ideals worked up into "isms" gathered from the West. When superficial approach is the only means of understanding, discrimination has to be abandoned. It is a convenient adjustment since discrimination when it leads up to a conviction, looks for reasoning which is based on sincere study and correct assessment of values. But there is strain in such a pursuit; therefore, the task is made easy by accepting the currents of the raging fashions of the day. The tide of the time having come to the rescue, decision is pawned for intellectual gambling on abstract themes. These themes serve certain purposes on occasions, no doubt, but they fail to meet the objective, to the extent desirable on account of the equipment of language being defective. It would not be irrelevant if I say that the development of a reliable language is not achieved in a day. Its stability is built up by currency of long standing. Since generation after generation contributes to the making of language, every language is a collection of signs created to identify things or suggest different meanings to familiar objects or intentions. But the new language of art, as it is being evolved in our country, is ambiguous. Hence its utility is unpredictable until it has survived trials for a considerable time.

I feel sorry to add that the borrowed progressive outlook falls short of expectations as to what is due from a higher form of art. I have to emphasise here that the gift from the artist is not to be merely a passing phase or just submission to current fashion. Art must live for posterity. Professions of progress of the modernists have not been realised in practice for the reason that there has been no sincerity of purpose. I, however, hope that artists who have been led astray in their pursuit of quick recognition will be more serious in their attempts of expression, otherwise the ambitious project welcomed in haste may suddenly collapse on account of the greater speed of the changing fashion.*

WILLIAM SHAKESPEARE
A Layman's Humble Tribute

By C. L. R. SASTRI

"Not marble nor the gilded monuments
Of princes shall outlive this powerful rhyme."
—Shakespeare

I am perfectly aware that it is the "very sea-mark of the utmost sail" of impertinence to attempt to write on Shakespeare at this time of day. One is stricken dumb at the sight of the huge mass of Shakespearean criticism; and still it goes on and on without any hope of respite. No wonder that, before it, "gorgons and hydras and chimeras dire" lose somewhat of their quality of frightfulness. Even to peruse a list of the volumes that deal, directly or indirectly, with that master-mind is enough to drive one mad. What a progeny he has, indeed! He himself was careless of fame to a degree; and after finishing his plays was sublimely indifferent as to what might happen to them afterwards. He had a job to do, and he did it. It was no business of his to rack his brain over the probable nature of their appeal to posterity. That consideration, apparently, did not weigh with him in the least. His concern, rather, was wholly with the present: that is to say, with *his* "bank and shoal of time." No author, we are compelled to ruminate, could have been so little vain. Those who ply the pen are not, usually, given to such a philosophic disdain about their productions: they do bestow an amount of thought upon their likely reception by the public—both the immediate public and the remote—that, at whiles, appears as the apex, apogee and apotheosis of absurdity. One is led to exclaim: "Have they no sense of proportion?"

The Vanity of Artists

Their incessant care is about their own work: the likelihood or otherwise of its popularity, of its permanence. Perhaps their dreams also are mainly of these. Nor is this, let me suggest, very unreasonable. Your literary man is a sort of creator: yes, even if he is only a critic and an essayist and a writer on miscellaneous subjects. His every sentence, if he is a scrupulous artist, is "one entire and perfect chrysolite." It admits of no interference at the hands of anyone. It was not jerked off lazily, as a thing of no consequence, and deserves to be respected on that account alone. It requires some more than common talent to cultivate your own manner of writing out of the rubbish-heap of words that is lying about for everybody's use. This is the first step in the process. The second is to make that chosen instrument of yours so distinguished and so much a part of yourself that discerning readers can at once find it out to be yours wherever it is seen.

Your professional author is, therefore, naturally a trifle self-conscious with reference to his work; and his eyes see far into the future. But Shakespeare did not suffer from this last infirmity of noble minds. Beyond a shrewd guess that he was such a lord of utterance as "never was on sea or land," that no marble nor the gilded monuments of princes would outlive his powerful rhyme, he did not ponder painfully over questions relating to his probable place among the world's singers. That itself is, I submit, highly suggestive. Your true Olympians have a nonchalance about themselves that puts to shame the self-pomposities of the lesser rabble of mortals.

Shakespearean Commentaries

I have remarked that the number of commentaries on Shakespeare that have achieved print is well-nigh legion. He has been surveyed from *every* possible point of view: except, maybe, from the point of view of having been a woman, as Samuel ("Erewhon") Butler profoundly prognosticated about Homer. There are those that would like to foist his work on Bacon. There are those that argue that he was a crusted Conservative—the late Mr. Charles Whibley, a gifted writer, was chief of these—and those (like the inimitable Mr. Robert Lynd) that are equally vehement that he was a fiery Radical. There are those that hold him as a thing "ensky'd and sainted," as Lucio says of Isabella in *Measure for Measure* (there are many passages in his plays that are peerless for moral excellence and for philosophical penetration); and there are those again—and the late Mr. Lytton Strachey was the leader of *these*—that taunt him for words and phrases, for "the ithyphallic fun," as Mr. Logan Pearsall Smith calls it, that would meet with short shrift at the hands of the censor even in our notoriously lax times. Finally, there are those that regard him as having been a model of sanity and those that will have nothing to do with this theory.

Now, *is* there much sanity in these words that he puts into the mouth of Othello, when he raves that he will never flinch from his determination to punish Desdemona?

"Never Iago. Like to the Pontic sea.
Whose icy current and compulsive course
Ne'er feels retiring ebb, but keeps due on
To the Propontic and the Hellespont;
Even so my bloody thoughts, with violent pace,
Shall ne'er look back, ne'er ebb to humble love,
Till that a capable and wide revenge
Swallow them up."

His Capacity for Wringing Tears

As for his capacity for wringing tears from our eyes,—why, he has no equal. *King Richard II* is a compact of pathos. One cannot read it without a lump in the throat. King Richard's:

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

". . . of comfort, no man speak:
Let's talk of graves, of worms, and epitaphs;
Make dust our paper, and with rainy eyes
Write sorrow on the bosom of the earth . . . .
For God's sake let us sit upon the ground,
And tell sad stories of the death of kings";

his parting words to the Queen his wife:

"Join not with grief; fair woman, do not so,
To make my end too sudden: learn, good soul,
To think our former state a happy dream:
From which awak'd, the truth of what we are
Shows us but this: I am sworn brother, sweet,
To grim Necessity; and he and I
Will keep a league till death";

and the most shattering lines of them all:

"Part us, Northumberland; I towards the north,
Where shivering cold and sickness pines the clime;
My wife to France, from whence, set forth in pomp,
She came adorned hither like sweet May,
Sent back like Hallowmas or short'st of day":

are these not unequalled sobstuff? And the scene between Arthur and Hubert in *King John*? Is it not a worthy pendant to these? And Constance's outbursts of grief?

His Many-sidedness

There is, unfortunately, a strain of jingoism in our bard that cannot but be matter for our abiding sorrow. His partiality for that ne'er-do-well, King Henry V, is too palpable; and old John of Gaunt's rhapsody about England, "this royal throne of kings, this sceptred isle," etc., in *King Richard II*, which every school-boy knows, and the equally chauvinistic vaunt of the Bastard Falconbridge, in *King John*:

". . . nought shall make us rue,
If England to itself do rest but true,"

are sickening in the extreme.

As for his wit and humour, the two parts of *King Henry IV* are replete with them. Take Falstaff away, he that was not only witty himself but that was the cause of wit in others, and how poor does Shakespeare become! And then look at those tragedies.

Those Tragedies

Any *one* of them would have assured immortality of fame to an author. And how to choose among them? *Hamlet*, of course, is the prime favourite. But is *King Lear* below it in grandeur? And is *Macbeth*? And is *Othello*? And is *Antony and Cleopatra*? To me each one of them is more or less equally good. One quality is pre-eminent in one, and another in another. For sheer intellectuality *Hamlet* does bear away the bell: for pathos, *King Lear*: for a sort of macabre splendour, *Macbeth*: for that green-eyed monster, jealousy, *Othello*: and for verbal fireworks *Antony and Cleopatra*. I have already quoted from *King Richard II*. What about these lines from *King Lear* in the matter of the *utter* breaking down of one's feelings? Lear is saying to Cordelia:

"No, no, no, no! Come, let's away to prison;
We two alone will sing like birds in the cage:
When thou dost ask me blessing I'll kneel down
And ask of thee forgiveness: so we'll live,
And pray, and sing, and tell old tales and laugh
At gilded butterflies, and hear poor rogues
Talk of court news; . . .".

Cut-and-Come-Again Quality

There is a kind of cut-and-come-again glory about these tragedies that is a perpetual wonder. Read them for the hundredth time and not a jot or a tittle of their beauty is abated. And let us give up comparisons. I like even the three parts of *King Henry VI*: I have read *Titus Andronicus* and am not visibly the worse for the experience. There is not much of Shakespeare there, it is true, but what of that? If he has merely *looked over* a sheet of blackened paper,—blackened, that is, with writing,—then that moment it takes on a prettiness all its own. He is free, indeed—though others abide our question; and he is really not of an age, but for all time.

Speaking for myself, I have long since ceased to regard him as a mortal, flesh of our flesh and bone of our bone. Rather should he be described as a demi-god —one who lives in the suburbs of Paradise and was born into this world just to instruct us in the art of adding word to word in such a manner as to bring forth, finally, an inimitable verbal orchestration. Anyhow, it is certain that there was a divinity that shaped his language—rough-hew it how he would, on occasion. It may be remarked about his utterance that it

". . . robs the Hybla bees,
And leaves them honeyless,"

as he himself caused it to be said of Antony's. His command of words was, to put it at the lowest, not of this earth. It came "from afar"; and was "apparell'd in celestial light." Who can sing his glory,—that glory which he himself defines in the First Part of *King Henry VI*, as being like

". . . a circle in the water,
Which never ceaseth to enlarge itself
Till by broad spreading it disperses to nought?"

Can Range the Whole Gamut of Human Experience

His pen can range the whole gamut of human experience with a sureness of touch that would be incredible if we had not the proof of it by our side. Wherefrom he acquired that knowledge, and wherefrom he picked up that vocabulary, it is not for the likes of me to suggest; and, perhaps, even acknowledged scholars may be hard put to it to explain adequately, either to themselves or to others. He was a man-about-town and could be, in his own fashion, very busy. He had his theatre to attend to and his plays to be written; and, besides, there were the hours to be spent in carousing in the Mermaid Tavern and in breaking a dialectical lance with glorious 'Ben.' What says Fuller?

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

"Many were the wit combats between Shakespeare and Ben Jonson which two I behold like a Spanish great galleon and an English man-of-war. Master Jonson, like the former, was built far higher in learning, solid but slow in his performance. Shakespeare, like the English man-of-war, lesser in bulk, but higher in sailing, could turn with all tides, tack about, and take advantage of all winds, by the quickness of his wit and invention."

HE WAS CONTENT TO REAP WHERE HE DID NOT SOW

It is true that he was not under any tyrannical necessity of inventing plots, because he was not too nice in the matter of filching them from the older authors—especially from Plutarch. Plutarch's *Lives* was a veritable mine of information for him. He was content—nay, supremely content—to reap where he did not sow, and to let that ancient Greek do the journeyman's work for him. Probably, Enobarbus's famous description of Cleopatra's barge (wherein she first met Mark Antony on the river Cydmus) is nothing but pure Plutarch in metrical form. Where detail was concerned Shakespeare was—let the horrible truth be confessed—often enough a most "omnipotent" pirate, even as Poins was a most "omnipotent" villain, according to the worthy testimony of Falstaff: though, to be sure, it is not to be denied that when he was *in the mood* he could riot in detail as well as the next man. Here is Mistress Quickly, for instance, standing up to Falstaff anent his proposal of marriage to her:

> "Thou didst swear to me upon a parcel-gilt goblet, sitting in my Dolphin-chamber, at the round table, by a sea-coal fire, upon Wednesday in Whitsun week, when the prince broke thy head for liking his father to a singing-man of Windsor; thou didst swear to me then, as I was washing thy wound, to marry me, and make me my lady thy wife. Canst thou deny it? Did not good wife Keech, the butcher's wife, come to then and call me gossip Quickly? coming in to borrow a mess of Vinegar; telling us she had a good dish of prawns; whereby thou didst desire to eat some; whereby I told thee they were ill for a green wound? And didst thou not when she was gone downstairs, desire me to be no more so familiarity with such poor people; saying that ere long they should call me madam? And didst thou not kiss me, and bid me fetch thee thirty shillings? I put thee now to thy book-oath: deny it, if thou canst."—*The Second Part of King Henry IV.*

A MAGICIAN WITH WORDS

This is, certainly, circumstantial evidence gone crazy. Our bard, then, could be inventive when he was so minded. But, for the most part, he did not, so far as the piling on of such items is concerned, scruple to borrow right and left: he must have been indolent to a degree. The fact to be borne in mind, however, is that he never let the process stop there: he could always be relied upon to transform that base metal into gold of the finest. His real *forte* lay in converting the raw material to hand into the immortal stuff of poetry. Shakespeare, in short, was a magician with words: with his Prospero's wand he could summon them, as it were, out of the vasty deep. He had "a poet's eye, in a fine frenzy rolling"; and thus could give

> ". . . to airy nothing
> A local habitation and a name."

HIS TEEMING BRAIN

That he had a fertile imagination can be easily proved. Imagination is of two kinds. That which we commonly meet with is the imagination of, if I may call it so, *incidents;* and for the highest of that kind we have to go to the detective novelists and fiction writers generally. The other kind is the imagination of, again if I may call it so, *ideas.* In this latter kind Shakespeare was supreme. In his teeming brain one idea begot another, and that one another still, and so on till we have a mosaic of ideas that had for its starting point that first idea; or, contrarywise, we have, not the mosaic of ideas just now spoken of, but the self-same idea distended to its furthest dimensions, the self-same idea on which, in the process of development, "the light that never was on sea or land" is focussed. The "to be, or not to be" soliloquy of Hamlet is, I think, an ideal example of the former kind. Of the latter kind there are any number of instances. What about this in *Macbeth*? Macbeth is asking the physician to cure his lady of her "thick coming fancies":

> "Cure her of that:
> Canst thou not minister to a mind diseased;
> Pluck from the memory a rooted sorrow;
> Raze out the written troubles of the brain;
> And with some sweet oblivious antidote
> Cleanse the stuff'd bosom of that perilous stuff
> Which weighs upon the heart?"

DIFFICULT TO QUOTE

Note here how the same idea had been expressed in *several* ways. Quotation is really difficult because the text of Shakespeare's plays is full of this kind of thing; and that, too, both in prose and in poetry. The chief trouble with him is, indeed, this of quotation. The quotations come, not single spies, but in battalions. Almost every alternate passage clamours to be quoted; and this, not only in the more celebrated plays, but even in the less. Sometimes one cannot see the wood for the trees. What about this, again, from *Antony and Cleopatra?* Cleopatra, in Walter Pater's celebrated phrase, is "expanding" her notion of Antony's manly nature "to the measure of her intention":

> "His legs bestrid the ocean: his rear'd arm
> Crested the world: his voice was propertied
> As all the tuned spheres, and that to friends;
> But when he meant to quail and shake the orb,
> He was as rattling thunder. For his bounty,
> There was no winter in't; an autumn 'twas
> That grew the more by reaping: his delights
> Were dolphin-like; they showed his back above
> The element they lived in: in his livery
> Walked crowns and crownets; realms and islands were
> As plates dropp'd from his pocket."

Digitized by Arya Samaj Foundation Chennai and eGangotri

On looking back, I find that there is still a lot more to be written and that there is no space to write it in. I have not said anything about Shakespeare's heroines, and that beautiful play, *Twelfth Night*, has not been so much as mentioned. I have passed by *Troilus and Cressida* and *Romeo and Juliet* and *The Tempest* and that favourite of my own, *Measure for Measure*. The famous *Merchant* has gone the same way of non-recognition. It cannot be helped. It is not easy to do justice to every point within this small compass. Shakespeare is a "tun" of an author, as Falstaff was a "tun" of a man, and he cannot be adequately treated inside a few pages. My article is in the nature of a sincere tribute and should be taken as such and as nothing else.

"The Noblest Roman of Them All"

My sole excuse is that I admire him "this side idolatry." I have spent many happy hours in his company; and the more I read of him the more he rises in my estimation. I am, as a rule, an enthusiast of English *prose* rather than of English poetry. But when Shakespeare and Wordsworth are "in the case" the matter becomes entirely different. I am sorry that much attention has not been paid to Shakespeare's *prose. Well, it is as good as his poetry.* He makes Falstaff not merely witty but spout glorious prose. The prose passages in *Hamlet* are every whit on the same level as the poetic ones.

But let me stop here; and conclude, as several others have concluded before me, that Shakespeare is, and ever will be, "the noblest Roman of them all"; and that, for the perfect utterance of beautiful words, he is, in the late Mr. Maurice Baring's memorable phrase in another connection, "the Pillars of Hercules of mortal achievement."

———:O:———

FISHERIES RESOURCES OF INDIA

By Prof. CHATURBHUJ MAMORIA, M.A., M.COM.

The term fishery is usually applied to the taking of all forms of life from the rivers or the seas. It thus includes the catching of lobsters and crabs, the collecting of oysters, the hunting of whales and seals, gathering sponges and corals as well as the capturing of true fish—which is edible. It is with this last fish that we are concerned here. Fish is the easiest available food whose supply is said to be inexhaustible if properly exploited. It has been estimated, for example, that in the world as a whole fish form less than 3 per cent of animal food consumed by man, but in places, such as Iceland, Newfoundland and parts of Norway and Japan they form a far higher percentage. The proteins and fats in the fish are easily digestible and compare favourably in nutritive value with beef. Fish fats and specially fish livers contain valuable vitamins which are essential in the prevention of rickets and other diseases arising from the deficiency of vitamins A and D.

It has been well said that "measured by the labour involved" fish is among the least costly of all protein foods. Fish can be easily caught because in raising the harvests of fish man has not to incur so much expenditure as in agriculture or industrial pursuits. The breeding of fish does not tax in any way man's pocket or efforts. There are no fields to plough and cultivate, no seeds to sow and no cattle to tend in order to reap the bountiful harvest. The only cost incurred in obtaining fish is in catching it or in preserving it for future use at a distance from the place of production. In this respect it is the cheapest available food-stuff. It supports a high population in those countries where land is not hospitable as in Norway or Japan or western Columbia.

Coming to our own land we observe that during the last few years there has been an acute food shortage in the country, as a result of which only 39 per cent of the people are well-fed, 41 per cent poorly fed and about 20 per cent are badly nourised. Besides this, majority of our people do not afford a nutritive diet. What matters most is that a high percentage of the Indian population does not get enough to eat and still a higher percentage does not get the 'right type of food.' This is, in main, due to lack of food resources. In India only 0.72 acres of land per capita is sown, of which only 0.57 is under food crops, which is quite inadequate for this purpose. In terms of nutritional potential this area is miserably small. Dr. O. E. Baker (Agricultural Expert from U.S.A.) has calculated that the per capita requirement in respect of cultivated areas for different standards of dietary is as follows :

Emergency Restricted Diet	..	1.2 Acres.
Adequate Diet at Minimum Cost	..	1.8 „
Adequate Diet at Moderate Cost	..	2.3 „
Liberal Diet	..	3.1 „

Not only this, agriculture seems to have reached its maximum production under the present condition. Fisheries can, therefore, I am confident, supplement food supplies to a great extent providing all the essential ingredients required for body-building. It is claimed that after agriculture and livestock, fisheries constitute the most important industry. It may be emphasized that the fisheries resources of India are very rich, both in regard to the variety and numbers of edible fish.

Fisheries in India are found dispersed throughtout the entire length and breadth of the country and along our vast coastal belt. Numerous concentrations of fishermen are found in small villages. Indian fisheries yield a mere fraction of what they could, were they exploited

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

in a fashion comparable with those of Europe, North America or Japan. Indian fisheries are among the richest in the world. The 3,200 miles long coastline is margined by a shallow water area, within the 100 fathom line, of nearly 1,15,000 sq. miles. But we have as yet touched a part of the narrow strip of 5 to 10 miles only within the sea. In a country of the size of India with its extensive seaboard, perennial rivers and irrigation canals and innumerable rain-fed tanks and *jhils*, the physical and geographical conditions under which fisheries exist are very varied. As many as 1500 varieties of fish are known to exist in Indian waters but only certain types are caught in appreciable quantities. It has been rightly suggested that in India we have been able to tap only 5 to 6 per cent of the entire fishable marine area.

Kinds of Fisheries

As said above we have vast resources of fish inside and along the coasts of the country. Fish is caught wherever available from any piece of water. Indian fisheries may be conveniently divided into four main types :

1. The Sea fisheries
2. Fresh water fisheries
3. Estuarine fisheries
4. Pearl fisheries

The sea fisheries are confined to the coastal water from 5 to 10 miles from the shore. Besides these, we have vast resources also inside the land borders. The inland fisheries of India include two sources of fish development, first, the fresh water sources like rivers, canals, irrigation channels, lakes, tanks, ponds, etc. These are known as the "Fresh Water" or "Riverine Fisheries." Secondly, they include those sources in the delta areas where the rivers meet the sea or the back-water areas where the sea runs into the land. These are known as "Estuarine or Deltaic Fisheries."

In the following table the total annual fish production from the important sources has been estimated as below :

Fish Production in India

Type	*Quantities in lakhs of maunds*	*Value in lakhs of rupees*
Sea fish	116.7	302.7
Fresh water fish	62.6	742.3
Total	179.3	1045.0

It will be evident from this table that the sea yields almost double the harvest but from the point of value fresh water fisheries are more important. Sea fish does not fetch as much price as fresh water fish because most of the fishing centres on the seacoast are inaccessible from the consuming markets and also because more sea-fish are generally caught than can be consumed fresh. Fresh water fish, on the other hand, are caught in limited quantities in thousands of small inland centres in India. The quantities landed in any particular centre are easily absorbed in the fresh condition.

It is a well-known fact that fresh water sources, at present, produce about one-third of the total production of fish in India, the sea-water sources producing the remaining two-thirds. We have to develop both these sources of fish supply. Rivers, lakes, ponds, tanks and similar enclosed waters are scattered throughout the country. Artificial ponds can also be constructed for fish culture. China, Central Europe, the Balkans, the Islands of the Pacific, southern and south-western parts of U.S.A., have all extensive systems of farm ponds and in the latter country artificial enclosure of water created as an incident to soil conservation programmes or irrigation projects have been converted into breeding farms of fish. The annual average yield of some species of fish from the farm ponds of U.S.A., has been reported to be as high as 150 lbs. per acre, which figure has sometimes risen to 400 lbs. and even to 1,000 lbs. *i.e.*, about twelve maunds per acre. These farms are usually about an acre each. In a country like India where vast areas are under heavy rainfall, a programme of fuller utilization of ponds, tanks, and paddy fields for the development of fish culture ought to present less difficulties.

1. Sea Fisheries

The sea fisheries are generally confined to the coastal water from 5 to 10 miles from the shore in the provinces of Sind (Pakistan), Gujarat, Kanara, Malabar Coast, Madras, Coromandal Coast and the Gulf of Mannar.

During the monsoon months sea-fishing is generally poor, squally weather conditions in the sea and increase in the flow and volume of water in rivers and tanks respectively being responsible for this. As sea-fishing is confined to the coastal waters, the fishing boats ply only when calm weather prevails. The fishing season starts more or less simultaneously at all fishing centres of the west coast immediately after the conclusion of the south-west monsoons. The season reaches its height in some years in October, and some years in November. It is at its lowest in February from when onwards there is a progressive decline in the quantities caught. On the east coast the conditions are slightly different, because this part of the coastline is not within the belt of south-west monsoons. The fishing operation is, therefore, more or less uniformly spread throughout the year, and during the months of May and June when fishing is very poor on the west coast appreciable quantities of fish are caught here.

The chief catch of the east and west coast are prawns, jew-fish, mackerel, mullets, salmon (Indian pomfret, cat-fish, seer, sardine, rays, flying-fish—all of which are edible. These varieties are caught on a limited scale as there is little demand from the rural areas. The fishing implements are very old and include drift and cast nets and stationary nets, etc.

The following table gives the total annual production of sea fish in various provinces :

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Estimated Production of Sea Fish in India

Provinces	Total catch in maunds	Per cent of Indian total	Value in lakhs of rupees	Percentage of Indian total	Number of fishermen	Catch per head
Sind	390.2	3.35	21.0	6.93	7,130	50
Bombay	1,361.1	11.68	73.0	24.12	32,991	41
Madras:						
West Coast	2,897.4	24.82	50.7	16.75	42,371	68
East Coast	1,769.5	15.17	31.3	10.34	91,530	28
Cochin and Travancore	3,215.7	27.56	81.0	26.76	38,248	80
Bengal and Orissa	2,032.3	17.42	45.7	15.10	——	—
Total	11,666.3	100.00	302.7	100.00	——	—

It will be noted that all the fishing grounds are not equally productive. The west coast is about 1,150 miles but 66 per cent of the total catch is landed here while the Bay of Bengal coast, although it stretches over 11,700 miles produces only the remaining one-third. Along the west coast, again, the south Kanara and Malabar districts of Madras Province—with a coastline of 215 miles account for roughly a quarter of the Indian total. It has been estimated that the total annual production of sea fish in India is 11.6 million maunds valued at 302.7 lakhs of rupees. Of this 71 per cent is produced in India and Pakistan and 29 per cent in the Indian States.

Important Sea Fisheries Areas

(1) In sea fisheries, Madras holds a highly creditable record. Its coastline of 1,750 miles is surrounded by 40,000 sq. miles of shallow sea water, wherein the hardy Madrasi fishermen make good catches of mackerel, cat-fishes and sardines on the crude catamarans (which are built of logs tied side by side). The area of their operation is limited to only 3 miles from the coast as these cannot carry farther than this distance. Thus the fishing area is confined around Ganjam, Gopalpur, Vizagapatam, Cocanada, Masulipatam, Nellore, Madras, Pondichery and Nagapatam in the east coast and Calicut and Mangalore on the west coast.

The Madras Fisheries Department is the best organised in India and has in its charge a wide range of activities connected with this industry. The Department has reformed manufacturing processes in fish oil trade by introducing a simple process for the extraction of oil in which fish is boiled into open vats and the resultant mass is bagged and put into a hand screw press, while the residue serves as good manure known as "Fish Guano," which is largely used in the tea gardens of South India, Ceylon, U. K., and Germany. It also manufactures isinglass, pearl buttons and shell-bangles. The fish oil is used in jute mills and in the manufacture of soap, candles and paint manufacture. The department has also established a cannery, developed a variety of canned fish and opened oyster farms under hygienic conditions. There are 100 fish-curing yards along the coast and as much as 1,210,907 maunds of fish were cured during 1937-38.

It has also organised the working of fish and is running a number of factories to manufacture fish oil, manure and soap, etc. The Krusadi Biological Station, Paniban, rears pearls and oysters. Rich chank-fisheries are also exploited in one of Asia's best aquariums in Madras.

(2) Bombay stands second in order of importance in sea fisheries. Here the fisheries are connected almost entirely with the exploitation of sea wealth. Bombay has many advantages over other provinces. It has a long coastline dotted over with excellent harbours for fishing craft, and fair weather season of more than seven months and fishing population more alive to their opportunities and more daring than those of other provinces. The harbour gives shelter to small fishing boats which are durable and can remain on the sea for days together. The fishermen of Ratnagiri are among the most enterprising in India. They make a large catch of soles, pomfret, sea perches. Now motor transport is used to bring the fish to the markets from the catching fields and for this purpose four Government launches and eight private ones are employed.

(3) The Cutch and the Kathiawar coasts are also famous for sea-fishing. A large number of small fishing vessels ply over these coasts between Surat and Bassein. Large factories have also been opened by Tata and Sons at Ernaculam to manufacture sardine oil and tinned fish. For some time past ice factories have also been started at Chendia (in the Kanara district) and at Malwan (in Ratnagiri district) which can the fish and thus obviate the necessity of carrying large quantities of fish direct to Bombay. The government has also undertaken the breeding of small fish for the promotion of inland fisheries and these are supplied at nominal rates to all. Co-operative Societies have improved the financial conditions of the fishermen besides bringing them in touch with the modern and scientific methods of curing, canning and oil manufacture.

The Bombay Government's post-war scheme for the improvement of fisheries includes the construction of an acquarium with research facilities in Bombay and two more along the coast and a technological laboratory; the procuring of specially designed vessels for cruising over a wider range in search of fish; the establishment of ice factories and cold storage depots in Bombay and along the entire coast, and adoption of effective measures to increase the efficiency and welfare of fishermen.

(4) With the combined coastline of over 200 miles and 4,000 sq. miles of shallow water within the 100 fathom line the Travancore and Cochin States have well-organised fishing industry. Monsoons check year-round fishing in these waters and at present only catamarans are in general use. Here pomfrets, seer, tunny, whiting and mackerel are caught. Shoal fisheries are of great

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

importance and during favouable seasons butter-fish, ribbon-fish, white bait and cat-fish are so abundant that large quantities of them are salted and dried both for home consumption and for export to Ceylon, Burma and Straits Settlement. A refrigerating plant has been installed in Trivandrum for the storage of fresh fish. The Government Fisheries Department also manufactures shark liver oil.

2. Fresh Water Fisheries

After the sea water fisheries come the fresh water fisheries. The fishing season is somewhat different in fresh water. In the large rivers of Northern India, there is generally not much fishing during the rains and the season begins in October with the subsidence of floods. The demand for fish in the plains is small during summer months. Hence, during summer and monsoon months. fishing is generally poor in most parts of the Punjab, Uttar Pradesh and Central India. Tanks are best fished when the water level is low. It is noteworthy that in Madras, Hyderabad-Deccan and Central Provinces where tanks represent the chief source of supply, the largest quantities are obtained from April to July.

The chief fish caught in fresh water are cat-fish, saw fish, herrings and mackerel.

The total estimated marketable surplus of fresh water fish is 6.25 million maunds valued at 742.3 lakhs. Of this about 94 per cent of the available fresh water fish is marketed in the Indian provinces and the balance is disposed off in the Indian States. Bengal leads both in production and in value of the fish caught with 50.1 and 58.32 per cent respectively. Bihar ranks second, Assam is a close third and the three provinces of Bengal, Bihar and Assam together account for 77 per cent of the total Indian fresh water fish marketed in India. It may be noted that Madras, which is the leading province in the production of sea-fish, produces only three per cent of the fresh water fish in India.

The following table shows the supply of fresh water fish in the chief producing areas :

Production of Fresh Water Fish in India

Provinces	Production in mds.	Percentage of total catch	Estimated value in lakhs of rupees	Percentage to total
Assam	721.6	11.5	46.22	6.23
Bengal	3,133.2	50.1	432.92	58.32
Bihar	959.5	15.3	95.99	12.92
Madras	187.0	3.0	13.96	1.88
Orissa	326.0	5.2	34.92	4.70
Sind	266.5	4.3	38.56	5.19
C. P.	156.0	2.5	16.28	2.19
U. P.	147.0	2.3	22.77	3.07
Bombay & others	113.2	1.8	14.87	2.01
States	248.9	4.0	25.84	3.48
Total	6,258.9	100.0	742.33	100.00

Important Fresh Water Fish Areas

The main areas of fresh water fishing are Bengal, U.P., Travancore and Madras.

(1) The fisheries of Uttar Pradesh are prolific as well-distributed as a large number of big rivers and their tributaries flow through the province. The chief them are Ganga, Jamuna, Sarda, Gogra, Rapti and Betwa. Almost all districts have lakes, ponds and tanks in which fishing is resorted to. The important fish comprise mahaseer, rohu, hilsa, katla, kalabans, mahseer, English trout and prawns.

These fisheries, though rich, are not yet adequately developed and properly exploited for the demand. There are great possibilities of trout-culture in hundreds of miles of streams in the Himalayas.

(2) The Bengal province has some of the richest fishing grounds in India. Nearly one million Bengalis subsist by fishing or selling fish and there is no caste prejudice against fish-eating in Bengal. The principal rivers together with numerous small rivulets and branches offer vast opportunities of fresh water fishing. A vast amount of rohu, hilsa, katla are caught, but river fishing is considerably handicapped by the climatic conditions of Bengal, as the usual breeding-time of fish is the rainy season when the water area expands and the eggs of fish escape in a large number of creeps and paddy fields, where with the drying up of water they perish.

Fish culture is also practised in tanks far away from the rivers, but the supply of fish from these tanks is not very reliable as the number decreases with the approach of summer season when the depth of water goes down.

(3) In Travancore among fresh water fisheries the lake fisheries—which extend from the borders of Cochin to Trivandrum are important. The largest lake measures 30 miles in length and a maximum width of 10 miles. Because of proximity to the sea and the influence some varieties of fish and prawns migrate to these lakes at times. Prawns are the most important catch here.

(4) Fresh water fisheries of the Madras province are very extensive and cover an enormous area. The most important rivers suitable for fishing are the Godavari, the Kistna, and the Cauvery, the westerly draining flowing into the Arabian Sea and the streams rising in the Nilgiris. The upper reaches, particularly the deep gorges of the rivers flowing into the Bay of Bengal serve as fish sanctuaries. Tanks and reservoirs also serve important fisheries, although they are primarily intended for irrigation.

Trout-culture in Nilgiris has proved very successful. They now abound with a large quantity of food material and provide sport and large income to the government.

3. Estuarine Fisheries

The estuaries of the Mahanadi, the Ganga, and the Brahamputra stretching from Puri to Hooghly is famous for fishing. This area provides cock-up, hilsa, pomfrets, prawns, catla, catfish, and rohu. These are caught in

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

trawl nets, drift nets and gilling nets. Among the estuarine fisheries the delta of Bengal holds a prominent position. Here the estuarine fisheries are mainly developed in the grounds covering an area of about 5,800 square miles—which consist of swamp forest, estuary islands, a multitude of rivers joining with each other by a number of small channels. Estuarine fishing is being carried on in 24 Paraganas and the district of Khulna from which areas over 40,000 maunds of edible fish are transported to Calcutta. The chief drawback in the proper development of these fisheries is the lack of transport facilities. These fisheries are situated far away from the ordinary traffic routes and hence fish have to be brought over long distances to the despatching centres with the result that putrefaction sets in very quickly. Moreover, as the fishing boats are very crude and poor in design they are incapable of being sailed in the interior of the Sunderbans and this fact restricts the extent of the fishing areas.

4. Pearl Fisheries

Commercially very valuable fishing consists of pearl-fishing. According to the National Planning Committee on "Fisheries," "The waters of the gulf dividing Indian Union from Ceylon and of the Arabian Sea near the edge of the Kathiawar Peninsula, as well as in the Gulf of Cutch, are rich in oyster beds, yielding highly valuable pearls."

In the Madras province the pearl oysters are reared near Krusadi Island, Panban with the possibility of producing cultured pearls.

In Bombay province, small pearl fisheries exist within the harbour of Bombay. Pearl oyster fisheries are found at Thana (20 miles from Bombay). Pearl fishing is also carried on in the gulf of Cutch.

Present Condition

The above description leads us to believe that in India only a few varieties of fish are caught as the people are greatly accustomed to the consumption of a certain variety of fish and that only. Though Indian waters are vast storehouses of varieties of fish, we have been able to tap only 5 or 6 per cent of the entire fishable area. This situation is due to a number of factors which are given below:

(1) The fishermen are part-time cultivators and hence, they do not take care and precaution to improve the fishing methods. Moreover, they are heavily indebted to the mahajans who dominate the whole trade and dictate terms. Being illiterate they are badly disorganised.

(2) Lack of transport facilities and introduction of new methods or varieties have checked the proper development of fisheries here.

(3) The fishing rights are generally leased out and hence the landlord loses any interest in developing the present as well as the potential fishery resources.

(4) The old methods of fishing according to which fish is intensively caught in small areas—also leads to destruction and exhausts the stock of fish in the locality.

(5) Owing to the increase in population and the development of agricultural practice, the land is being reclaimed by filling jhils in Bengal. This results in the reduction of fish supply as well in the water area.

(6) The expansion of jute cultivation in new areas has further aggravated the situation because the steeping of jute makes the water injurious for fish.

(7) Neglect of tanks and other sources of water supply consequent on the development of better irrigation facilities.

(8) Pollution of streams and waterways in general by sewage water.

How insignificant is our effort in regard to the proper development of fisheries, whether marine or inland, becomes patent when one observes the widespread organisation for the statistical research, technological, training and marketing aspects of the fisheries industry, which has grown up in some of the more advanced countries. When we note the latest available production figures, we realise equally vividly how backward we in India are in the matter of development of fisheries. Leaving aside Iceland, Newfoundland and Norway which have special facilities and where the annual production per head ranges from 680 lbs. to 6,223 lbs. and taking only some of the countries to which India could be potentially comparable, we find that Japan produces 111 lbs. per head per year, Canada 109 lbs., Denmark 63 lbs., U.K. 49 lbs., Portugal 37 lbs., Spain 37 lbs., U.S.A., 35 lbs., Germany 20 lbs., France 20 lbs., Soviet Union 18 lbs; and India together with Iran and Burma only 5 lbs. This low production in India is due to the causes enumerated above.

Consumption of Fish

According to the National Planning Committee, "Notwithstanding the prevalence of vegetarianism, a large number of every caste and creed in India are accustomed to use fish in their daily diet." In India the average per capita consumption is only 3 lbs. per annum. West Bengal, the leading consumer, having 6 lbs. per capita consumption. In the East Punjab it is 0.9 lbs. and in Bihar 2 lbs. per annum. This means that the daily consumption of fish per head in India could only be one-seventh of an ounce. In plain language this means that of this protective and vitamin-supplying item of food an Indian is able to take daily only 1|28 the quantity which his Japanese brother takes.

One half of the total production is consumed as fresh fish; one-fifth is cured by salting; another one-fifth is simply sun-dried, while about 10 per cent is converted into fish fertilizers. Fish fat is rich in vitamin A and D and hence large quantities are used as food for man. Surplus fish is converted into oil and fertilizers. Two kinds of oil are obtained, *viz.*, the "medicinal oil" from the livers of sharks and other fishes; while "fish oil" is got from certain marine or fresh water species. Certain industrial products like fish-meal, fish-manure, fish-mews and shark-fins, isinglass are also obtained from fish in India.

In India fish is preserved by dessication with or

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

without salt and by the use of antiseptic preservations, such as brine and vinegar. The Indian fishermen practise dessication by drying fish in the sun as the process is simple and handy. During the rainy season when sun-drying is difficult, salt-drying is used. Fish is also canned and put in cans filled with oil. Canning of sardines and prawns and mackerel is practised on a limited scale in Madras and Bombay.

Trade

Practically speaking there is no import of raw fish in India, but large quantities of dried fish—both salted and unsalted, and canned fish and fish products like cod-liver-oil and fish-manure, of the total annual average of Rs. 16 lakhs are imported from Norway, Sweden and Arabia and Muscat territory. India also exports preserved fish to China, Burma, Ceylon, and Straits Settlement to the value of Rs. 10 lakhs every year.

Suggestion for Improvement

As has already been stated the fisheries of India are very extensive, varied and rich, but to meet the demands of the increasing population of India they are very inadequate. It is, therefore, imperative that the fisheries of India should be fully explored and properly developed.

For the further and full development of Indian fisheries the following suggestions may be offered :

(1) As the problems of conservation and development of the fishery resources of rivers generally concern more than one Provincial or State Government, the Central Government should invite the Provinces and States to confer and to formulate joint measures for the conservation and development of their fishery resources as a whole, in order to ensure uniform methods of research, control and exploitation in all contiguous Provinces and States.

(2) Since the conservation and development of the fisheries is essential in artificial reservoirs, the Central Ministry of Agriculture should in consulation with the Central Waterworks Irrigation and Navigation Commission Authorities set up the necessary machinery for the framing of and implementing programmes of conservation and development of fishery resources.

(3) As fry and fingerlings of carps and other species of fish suitable for stocking are the first requisite for the working of any scheme of fish culture, the Provincial and the State Governments should set up carp fry collecting and distributing centres from which fry and fingerlings may be supplied to the areas which are deficit in this respect.

(4) All provinces and states should immediately carry out and extend surveys of culturable waters with a view to stocking all such areas with carps or other suitable species of fish.

(5) Urgent steps should be taken by the Governments concerned to intensify and extend stocking operations particularly by (*a*) utilisation of all culturable waters whether owned by the Provincial or State Governments or under their control; (*b*) encouraging and assisting by advice and supply of fry the proprietors of privately owned tanks to take up fishing; (*c*) establishing fry collecting centres and arranging for supply of fry to fish farmers at concession rates; (*d*) controlling unrestricted fishing by legislation; (*e*) and establishing demonstration fish farms in selected areas.

(5) With a view to utilisation of all fishery resources it is necessary that all tanks, ponds, beels, and other culturable waters as are left fallow at present should be taken under the control of the respective Governments by legislation.

(6) The Governments should give subsidies to owners of derelict but culturable tanks for the repair and improvement of these tanks for pisciculture.

In regard to marine fisheries, the Indian Fisheries Conference (1948) urged the Central Government and the Governments of the maritime provinces the necessity of taking the following measures :

(1) The Central Government should carry out pilot experiments in off-shore and deep-sea fishing to test the suitability of different kinds of craft and gear for Indian waters and determine fishing seasons, fishing intensities and undertake extensive surveys for locating and charting fishing grounds; (2) Central, Provincial and State Governments should take steps to improve harbour facilities at all important fishing centres; (3) Provincial and State Governments should encourage local enterprise to undertake fishing by powered vessels fitted with cold storage facilities and other modern equipment.

No scheme of development of India's fishery resources can hope to succeed unless the transport and marketing problem is also solved. As large quantities of fish caught in coastal areas can not be transported to the consuming centres in fresh conditions and are processed by unscientific factory methods and under unhygienic conditions, it is necessary that the Governments of the maritime provinces should take urgent measures to establish fish-curing yards where required and to improve such yards by providing (*a*) cement platforms with super-structures for curing and drying of fish; (*b*) adequate quantities of water, and salt of suitable quality at concession rates; and (*c*) temporary storage facilities and (*e*) supervisory and technical staff to help the curers.

(2) In view of the very great disparity of prices received by the fishermen and those paid by the consumers, and for safeguarding the interests of the producers and consumers, Government should, as far as possible, encourage marketing by organising co-operative societies of fishermen, wherever practicable.

(3) In view of fish being a highly perishable commodity and the urgent need of making an increasingly large quantity of fish in a wholesome condition available to consumers all over the country it is necessary that the Government should make arrangements for adequate supply of ice to the fishing industry for use from the time of the catch to its ultimate disposal; and should set up or encourage private enterprise to put up cold storage plant for fish preservation at all the large coastal

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the use of insulated or refrigerated road van; and should provide refrigeration experts to help the Governments of the maritime provinces to prepare schemes for the cold storage of fish.

(4) In view of the urgent need of quick transport of fish from the catching and collection centres to the consuming centres all over the country, (*a*) the Governments of the maritime provinces should introduce and popularise the use by the fishing industry of fast motor carrier boats; (b) they should also encourage the use of motor vans for the rapid transport of fish by road, and they should help to obtain motor vans, trucks, equipment, motor and fuel oil, and it should give high priority and special facilities for the transport of fish and fish fry by fast trains at concession rates.

Finally, we may suggest the following measures for the improvement of the social and economic status of fishermen :

(1) Government should give loans and subsidies to needy fishermen, preferably through co-operative societies, for building boats, making and repairing nets and other fishery equipment.

(2) Government should open schools for the children of fishermen, and teaching in these schools should have a distinct fishery bias.

(3) Provincial and State Governments should establish centres for the higher training of literate fisher boys in navigation, use of mechanised vessels and improved fishing technique.

(4) The Provincial and State Governments should survey the existing proprietary rights of the fishermen in the waters fished by them and devise suitable measures in order to give the fishermen security of tenure which is vital for effecting improvement in production.

(5) Provincial and State Governments should establish services through which technical and other information might be widely distributed among the fishermen.*

KOREA THROUGH AGES

The Genesis and Nature of Korean Conflict

By Prof. S. B. MOOKERJI, M.A.

The two Koreas—North and South—have been at war since June 25 last. During the post-war years a regular tug-of-war has been going on between Russian Communism on the one hand and American Economic Imperialism on the other. It was foreseen long ago that the two Koreas representing two conflicting ideologies would, sooner or later, come in conflict with each other.

Immediately after the hostilities had broken out, the Security Council of the United Nations went into session to consider the United States' complaint of "aggression against the Government of South Korea" by North Korean forces. On June 25, the invasion of South Korea by the North was branded as an act of aggression by the Security Council. The Council further called for a cessation of hostilities and ordered the Northern forces back over the border. President Truman proclaimed his country's firm resolve of supporting vigorously the efforts of the Security Council to end the serious breach of peace in Korea. General MacArthur was ordered to rush all available arms aid from Japan to South Korea. Next came the order to rush all possible supplies to help the South Koreans. The Security Council in its resolution of June 27 recommended "that the members of the United Nations furnish such assistance to the Republic of Korea as may be necessary to repel the armed attack and to restore international peace and amity in that area."

The North Korean army, trained by Soviet instructors, is reported to have been equipped with rifles, mortars, heavy guns and ammunition by the U.S.S.R. Russian fighter and reconaissance planes, bombers, light tanks and light naval aircraft are also believed to have been lavishly supplied to it. It is estimated that 70,000 North Korean troops and 70 tanks took the field in the opening round of the conflict. South Korea's defence fell like ninepins before the onslaught of the North. The U.S.A. in the name of the United Nations fought, unsuccessfully though, to stem the onrushing tide from the North. The 'alias' however deceived nobody. Kim Ir Sen, Premier of North Korea, in an appeal to the commanders of South Korean troops over the Pyangyong Radio said not long after the outbreak of hostilities:

> "Now you have no Government, National Assembly, nor General Staff. Who is now issuing orders and leading the army which you are commanding? It is the General Staff of the American Army."

Strenuous eflorts of the U.S.A. notwithstanding, the Northerners won the first round of the contest. It was *vini vidi vici* for them. The Government of South Korea abandoned its capital Seoul almost immediately after the commencement of hostilities. The greater part of South Korea was overrun. The Southerners

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and their allies were on the run on all fronts. But then there was a turn in the tide. It was now the turn of the South to hit back and hit back effectively at that. The Northerners yielded ground to the counter-offensive and retreated as quickly as, perhaps more quickly than, they had advanced, the enemy following closely behind. The end of the conflict seemed within sight. It was decided by the United Nations that its troops should cross the 38th Parallel—the artificial line of demarcation between North and South Korea—and re-unite the two Koreas. The infant Indian Union was against this and warned that in that case the conflagration might spread. But she was outvoted and the Anglo-American bloc had its own way. Its army moved northward. Everything seemed to be proceeding according to plan. The American troops were assured that they would be back home before the Christmas. But then China came to the rescue of North Korea. Chinese 'volunteers' in overwhelming numbers were thrown into the conflict, 400,000 of them are today fighting in Korea. The U. N. troops and their satellites, the South Koreans, are in full retreat. A repetition of Dunkirk seems to be in the offing.

Two days after the outbreak of the war President Truman sent a note to Russia asking her to use her influence to persuade North Korea to withdraw her troops. Marshal Stalin in his reply to this note made it clear that it was not North Korea, but the South, that had struck the first blow.

Competent authorities have in the meanwhile challenged the validity of the Security Council's resolution of June 27. Article XXVII of the United Nations Charter lays down that measures of a coercive nature by the United Nations against any state require the approval of all the five permanent members of the Security Council, *viz.*, America, China, England, France and Russia. But at the time the resolution was passed, Russia had temporarily withdrawn from the Security Council. She staged a come-back only in August. The Kuomintang-appointed Chinese delegate at Lake Success did not and do not represent the Chinese people.

All the members of U. N. General Assembly with the exception of Byelo-Russia, Czechoslovakia, Poland, Russia, Ukraine and Yugoslavia approved the resolution under reference. This, in short, is the genesis and history of the Korean conflagration.

Korea, consisting of a peninsula and more or less 200 islands, forms a part of Further Asia. To the Koreans, their country is known as Chosen or Morning Calm. Bounded on the north by the Tumen and Yalu rivers, the Japan Sea on the east, the Strait of Korea on the South and the Yalu River and the Yellow Sea on the west, Korea has an area of 86,000 square miles. Northern Korea is intensely cold and thinly populated. Southern and western Korea is warmer and more populous and prosperous. Agriculture is the principal occupation of the Koreans in general and of Southerners in particular. The people, descended from the Mongolian family, speak a language which belongs to the Turanian group. Unlike the Chinese and Japanese in physiognomy, they have dark and straight hair, slanting eyes and a yellowish complexion in common with both. They numbered 23,000,000 in 1[illegible]

It is not new for Korea, a strategic bridge between Japan and the Manchurian mainland to find itself the unhappy cockpit of Far Eastern power-politics. It has caused two major Far Eastern conflicts in the last 60 years, *viz.*, the Sino-Japanese War of 1894-95 and the Russo-Japanese War of 1904-5. Japan is within 120 miles of Pusan on the South Korean coast while from the farthest point on the north-western coast Vladivostok is not more than 100 miles.

Korea's history has all along followed a pattern all its own. In the past she has been reduced to slavery again and again after a brief spell of independence as a consequence of conflicts between two large and powerful States. In the early centuries of the Christian era Korea was a feudatory of the Han Emperors of China. It was China that sowed the first seeds of civilisation in Korea. With the fall of the Hans, Korea slipped into the hands of China to be overrun by barbarians from the Siberian Steppe. The ancestors of modern Koreans, a mixture of the conquerors and the children of the soil, were known as the Korai and North Korea [illegible] was called by the same name. The name Korea, a derivative of Korai, was subsequently applied to the whole peninsula. The Tang Emperors of China conquered Korai in 668 A.D. Before them the Suis had made futile attempts in this direction. Korai re-gained freedom after the decline of the Tang Empire in the 10th century A.D. Since then Korea has never been directly ruled by China; but she has paid tribute whenever a strong ruler was on the throne of the celestial kingdom. Japan next became a menace to Korean independence. During the regency of Hydeoshi Japan made a bid to conquer Korea in 1592. China came to her help. Due to internal troubles following Hydeoshi's death in 1598 Japan retreated, for the time being, from the Korean scene. Korea was a tributary of Manchu China. Peace prevailed in Korea during the Manchu regime in China and after.

In 1860, the Manchus surrendered the northern province of Ussuri to Czarist Russia bringing the latter a European power to the very borders of Korea. Later in the 19th century Korea was opened to various Western powers, as a result of treaty engagements (*Cf.* Treaties with England, America and Germany in 1883, with Russia and Italy in 1884, treaty with France in 1886 and with Austria in 1892). It was about this time that Japan again began to cast longing looks at Korea. The Sino-Japanese War of 1894-95 led to a elimination of Chinese influence from Korea. It [illegible] Korea to become a bone of contention

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

between Russia and Japan. Their rival interests in the country involved them in a war in the opening years of the present century. Fortune favoured Japan. Korea was annexed to the Japanese Empire in 1910. Since then Korean delegations composed of exiled Korean citizens have knocked at the doors of one international conference after another for a hearing of Korea's case for independence. But this hearing was never granted.

Korea has a bitter memory of Japanese rule. Japan tried her best to stamp out Korea's individuality in all walks of life. The economic life of the country was regulated by the Japanese plutocracy. Japanese became the state-language of Korea. Instruction in Korean language and history was banned.

World War II marks the beginning of a new epoch in the history of modern Korea. In September, 1945, American forces landed at Chemulpo, occupied Seoul, the capital of Korea, and the whole of southern Korea. In the meanwhile Russian troops had advanced to Kinko on the 38th Parallel in the north. The two armies met here. In the light of the decision of the Yalta Conference Korea was subsequently divided along the 38th Parallel. The two Koreas—North and South—were ushered into existence. Pyangyong became the capital of North Korea and Seoul, that of South Korea. According to a decision of the Moscow Conference of the anti-Axis allies held in December, 1945, a Russo-American Commission was to set up a provisional Government for the whole of Korea after consultation with the democratic parties in the country. The Commission could not agree as to which of the Korean parties and cliques were democratic and, which, not. The U.S.A. placed the case of Korea before the United Nations. The General Assembly recommended a general election in Korea under the supervision of a United Nations Commission. Russia opposed. But hers was a voice in the wilderness. The United Nations Korea Commission was appointed in November 1947. It was composed of representatives of Australia, Canada, India, Nationalist China, France, Ukraine, Syria and various other countries. Mr. K. P. Menon of India was appointed Chairman of the Commission, which was boycotted by Russia. The North Korean Government refused all facilities to the Commission in its own territory. In the South Korean election held in May, 1948, the Korean Democratic Nationalist Party under Dr. Sygman Rhee came to power. The Republic of Korea was born and admitted to the membership of the United Nations. In a resolution of December 12, 1948, the General Assmebly requested both Russia and the U.S.A. to withdraw their troops from their respective spheres of influence in Korea. Within a fortnight the U.S.S.R. announced the withdrawal of Russian troops from North Korea. The North Korean People's Republic had come into existence long before this withdrawal. The U.S.A. army evacuated South Korea in June, 1948. A Military Aid Mission was however left behind. A Russian proposal for the dissolution of the Korea Commission and the admission of North Korea to the United Nations was turned down by the General Assembly.

Koreans themselves have never supported the partition of their country. They are eager for the unification and independence of the two Koreas. The clash of interests, the conflict of policies of the U.S.A. and the U.S.S.R. have stood in the way. They too want Korean unity—unity in their own patterns. Each wants the Korean State organised on its own model. Hence the universally sought-after consummation is yet to be achieved. In the north a State has been organised on Russian model with more economic and perhaps less personal and political liberty for the people. In the South, on the other hand, the State is of the American type and supposed to be democratic from a political point of view. In reality it is a Fascistic police state, which, in common with all democracies, upholds the principle of economic oligarchy.

The Korean Democratic Nationalist Party, like the Kuomintang of China is a champion of landed aristocracy. Not a few of the South Korean leaders of today were Japanese puppets not long ago. Before the outbreak of the present war reactionary youths patrolled the streets of Seoul, shouting pro-Government, rightist slogans. These demonstrators may be compared with the Blueshirts of the Kuomintang. Two thousand teachers have been sacked by the Rhee Government. The victims were alleged to have slightly leftist political leanings or ill-defined political views. The Government declared some time back that no anti-Government paper would be tolerated in South Korea. Corruption reigns rampant in all walks of South Korean life—social, economic and political. Social corruption and political bickerings have brought the country to the edge of the precipice. In its desperate efforts to remain in power the Rhee Government have let loose a veritable reign of terror by an endless chain of ruthless, repressive measures. Before the outbreak of present hostilities there were 14,000 political prisoners in South Korea. Many of these have been since put to death. The U.S.A. have all along tried to bolster up this re-actionary Government of South Korea. Last year South Korea received 120,000,000 dollars in Marshall Aid. This year the U.S.A. has allotted 100,000,000 dollars to her in economic assistance. In the current year she has already obtained 10,000,000 dollars in military aid. Besides, when the U.S.A. army left Korea in June, 1948, it left behind considerable quantities of arms, ammunition and military equipments. But everything has gone down the bottomless pit of inefficiency and corruption.

It is not always easy to get at the state of affairs in North Korea behind the iron curtains. The People's Republic of North Korea was ushered into existence,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

undoubtedly with Russia's blessings, after the general elections on the basis of universal adult suffrage and vote by secret ballot held in 1946. The Communist leader Kim Ir Sen is the Premier of North Korea. The first thing done by the new Government was the re-distribution of lands, which freed the peasantry from age-old bondage. Principal industries, such as transport, communications and banks, have been nationalised. The country has been industrialised. Labour legislation has reduced working hours in factories, workshops and in offices. Employment of workers below 14 years of age has been tabooed. Equality between the sexes has been achieved. The People's committees have 11,509 and the Supreme People's Assembly of North Korea has 69 women deputies. A two-year plan has already been executed. The standard of living has gone up.

An armed clash between the two Koreas, as noted above, was a foregone conclusion. The Korea Commission lay the blame at the door of North Korea. For all the 52 border incidents from January, 1949, to March, 1950, mentioned in its report submitted in March, North Korea has been held responsible. But not a few are doubtful of the Commission's impartiality.

Brigadier-General William Roberts, Former Chief of the U.S.A. Military Aid Mission in Korea, told a press conference at Los Angeles on July 14, that America had not given heavy military equipment to South Korea before the war mainly because the Southerners wanted very much to attack their compatriots across the border. In the General's own words "To prevent them from attacking we gave them no combat air-force, no tanks and no heavy artillery." South Korea has, of course, contradicted the statement. But contradiction alone does not negate a truth.

The war in Korea is, on the one hand, a conflict between Russian Sovietism and American Economic Imperialism. Korea is but a pawn in the Russo-American game of power-politics on the Far East chess-board. Russia wants the elimination of America from Korea. But it is vitally necessary for the U.S. to stay on at all costs in Korea. Looked at from this angle of vision the conflict in Korea is the latest—we do not believe it to be the last—phase of the Russo-American tug-of-war for the conquest—ideological or otherwise—of the Far East. But the conflict has another facet. The Korean war is a determined bid of the "neglected estates" of humanity to free themselves from the vicious coils of bondage and exploitation, alien and indigenous. That the masses of South Korea are no friends or admirers of the U.S.A. or its puppet Dr. Rhee becomes evident when the speed of the Northern advance is taken into consideration. Without the moral support, and, in some cases at least, active co-operation of the people of the invaded country its defence cannot collapse as "quickly" and as completely as did that of South Korea before the onslaught of the North. Viewed in this light, the Korean war is an important and significant episode in the grand drama of the struggle for human emancipation steadily reaching a climax in the Eastern and South-Eastern Asian amphitheatre.

Will the spark originating in obscure Korea develop into a global conflagration? It is for the pundits in international politics to attempt an answer. The course of events however has fanned the flames and seems to have drawn the world to a dangerous proximity of another World War. One thing, however, is clear. The conflict in Korea is a preparation—a full dress rehearsal—for World War III. It is besides an attempt by the potential principal actors in the supreme tragedy-to-come to gauge each other's strength and preparedness. It is moreover a move to ascertain beforehand the probable alignment of powers when the dreaded conflagration starts.

———:O:———

"In the long pull over several thousand years the human race has had enough experience to produce the principles which we need to live happy lives and to build a good society. There have been men of wisdom and genius who have reflected on the experience of the ages and have come up with some great ideas. These ideas when taken together form our civilization. A civilization is a working system of ideas. Liberal education is a civilizing force because, in addition to imparting certain skills, it transmits to us the tradition in which we live. It provides the traditional liberal principles in the light of which men can unite in deliberation about the issues which divide them. It is the education which all men ought to have who have a voice in the ruling of a community."

—Raymond H. Wittcoff, member of the board of directors of the Great Books Foundation.

THE RELATION BETWEEN THE EAST INDIA COMPANY AND THEIR SERVANTS IN INDIA

[*Based on the original documents preserved in the Archives of the Government of India*]

By Prof. R. M. LAHIRI, M.A., D.Phil.

We have noticed in the course of the Government of India's dealings with the Court of Directors that on many occasions the prohibitory orders passed by the Court as the ultimate authority were not carried out by their servants in India. Striking instances of ineffective protests by the Directors abound in the correspondence on Assam affairs. For the purpose of study the early British period (1826-38) of Assamese History is most suitable.

On the occasion of the transfer of the eastern part of Cachar (1832) to Gambhir Singh, the Prince of Manipur, the Court of Directors strongly disapproved of the measure, but their intervention proved ineffective. When again the principality of Jaintia (1835) was annexed by the Calcutta authorities without any reference to their masters at home, the Court not only protested against such annexation, which they condemned as "impolitic and unjustifiable," but also in their anxiety to prevent such recurrences, gave a distinct ruling that in future no territory of a native prince should be annexed without their previous sanction. Their protest this time also went unheeded. The Court again, as mentioned above, on the eve of the resumption of Purandar Singh's dominions (Upper Assam) reminded their agents in India of their newly promulgated ruling and told them to regard all such annexations as provisional measures liable to revision. Their servants in India, contrary to all expectation, even carried out this measure in the teeth of the opposition of the Home authorities.* No step was taken against what appeared to be a "misdemeanor" on the part of their agents in India. The Court of Directors again seemed to climb down. Such instances can be multiplied.

From the above it appears that the authorities in Leadenhall Street were helpless against the wilful disobedience on the part of their servants in India and that they had no power to prevent what they considered to be wrong or unfair. But what appears to be true is not true and an incidental discussion of the position of the Court in its relation with the Government of India will help us in understanding the real situation. A detailed discussion of the above matter is not possible here because the subject-matter covers a greater period (1773-1858) than that undertaken by us.

Though the Court of Directors were supreme authorities over the affairs of the East India Company in India, they used their powers with wise restraint; certain extraneous circumstances and the nature of the functions they were entrusted with, regulated all their activities with regard to the management of Indian affairs.

As regards the general management of Indian affairs, much was left to the discretion of the local Government because, situated as the Home authorities were at a vast distance from India, the orders transmitted by them rarely reached India in time. Events in India sometimes succeeded one another with such bewildering rapidity that, what to speak of the authorities in England even the 'men on the spot' could not foresee the course of events and they had to act on many occasions on their own responsibility as the exigencies of the time dictated.[1] And as happened in those circumstances, sometimes they had to act contrary to the wishes and directions of the Home authorities as when the Calcutta authorities had taken Cachar, an independent principality, under the Company's protection without reference to the Court of Directors. But "circumstances in many cases rendered such disobedience a virtue."[2]

Then again it must be remembered that "the Court of Directors was not so much an executive as a deliberative body." Its main function was not to direct the details of administration but to scrutinize and revise the past acts of their servants in India; to lay down principles and to issue general instructions for their future guidance.[3] We have also to bear in mind that in most cases the decisions of the men on the spot were just and ultimately conducive to the interests of the Company. Far away from the actual scene of

operation; the Court of Directors could no doubt take a detached view of things which was so essential for the fair discharge of duties, but at the same time their lack of first-hand knowledge of the affairs of India justly precluded them from taking a realistic view of the situation which was equally essential for the speedy and efficient performance of duties.

The appointment of Lord Cornwallis marked the decisive preference for sending men of high families from England to fill the office of the Governor-General. The noblemen sent from England had a wider grasp of foreign affairs and politics generally than could be expected of the servants of the Company; they had higher moral standards and their views, even their hostile criticisms,[4] were generally received with far more respect by the Directors than those of the former servants of the Company.[5]

The Court of Directors again as the Supreme authority had certainly power of revoking the decisions of their servants in India, nay, they had the power of recalling their Governors-General as they recalled Lord Ellenborough and drove Wellesley to resign.[6] But on many occasions they shrank from taking such drastic steps because public revocation of the measures issued by their servants in India or sudden removal of the highest officers from office in the midst of great public duties would have placed them in some degree of embarrassment and humiliation.[7]

Lastly we must take into account another factor which is overlooked by many. Though the Board of Control as constituted by the Act of 1784 (better known as Pitt's India Act) was to be strictly a Board of Control, "it gradually employed powers not merely in the way of superintendence and control but also in systematic and active management," which was strongly resented by the Court of Directors[8] and during the later part of the Company's administration the evergrowing conflict between the Court of Directors and the Board of Control and the waning power of the former body[9] (so ably discussed in Philips' East India Company) had their unhappy repercussion on their servants in India. Even some of the Governors-General were adroit enough to play off one against the other[10] and were thus less inclined to respect the orders of the Home Government. Lord Ellenborough regarded the Court of Directors as nothing more than a channel of communication between the Governor-General and the Board of Control and openly said "Supreme authority does not reside in the Court itself."[11] Lord Dalhousie had a poor idea of the despatches sent by the Home Government and alleged "These were penned for the most part by head clerks and signed by many without being read."[12]

All the above factors and circumstances "unavoidably regulated but did not exclude the controlling authority of the Court of Directors"[13] and during the period under review the Company through its Court of Directors still remained an important factor in the system of Indian administration.[14]

Had all the prohibitory orders and judgments passed by the Court been accepted in toto by their servants in India and had they regulated their conduct accordingly, strict discipline would have been maintained no doubt, but "an empire more magnificent than that of Rome" would not have arisen. Wellesley and Lord Hastings were bold or rash enough to ignore the principles of Indian policy laid down by the Home authorities and it was they who had most extended the Company's possessions in India. Nevertheless these judgments and prohibitory orders had had their value. These orders by serving ultimately as rules for the future guidance of their servants in India and "by acting as a brake on the speed of the Company's expansion, benefited its power in India which was thereby afforded periodic intervals of peace in which to consolidate and organise its resources."[15]*

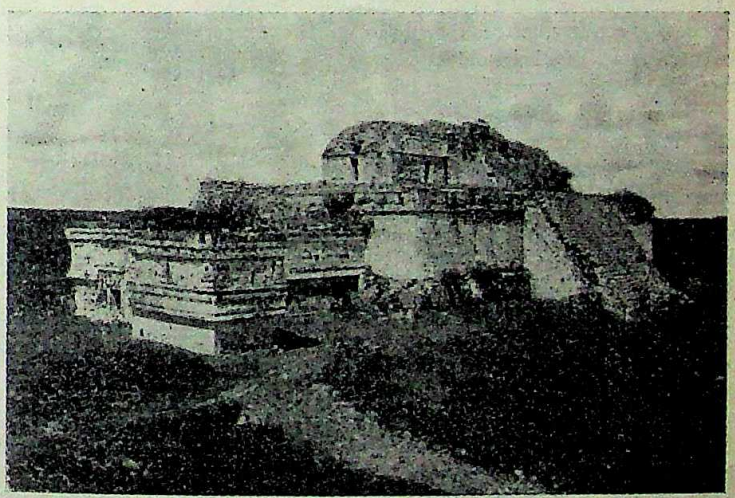
INDIAN GODS AND TEMPLES IN AMERICA

By S. P. SHOME

When Columbus discovered America, there lived in that New (?) World an ancient people who were definitely brilliant in every department of human pursuit. They were living in all the States of America, specially in Mexico, and had a magnificent civilization which profoundly surprises the modern world.

The Temple of the Thousand Pillars (Chichen Itza). This temple resembles the Sahasra Stambha temple at Madura



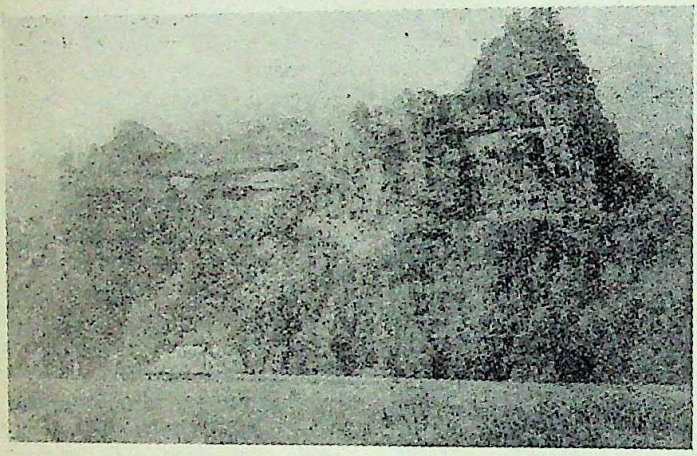
The region where it developed includes the States of Tabasco and Chiapas in Mexico, in Guatemala, and just along the western frontier of Honduras. This region, now overgrown with a dense tropical forest, had been cleared by the aboriginal Indians and put under intensive cultivation. Great cities had flourished on every side. Lofty pyramid-temples and splendid palaces of cut stone, spacious plazas and courts filled with elaborately-carved monuments of strange yet imposing dignity, market-places, terraces, causeways were to have been counted, not by tens and scores but by hundreds and thousands.

Indeed, before the white settlers came to America, it is not improbable that the country had been very densely populated. Nor did the arts and sciences of the people lag behind architecture and sculpture of the modern world. Hard metal, it is true, the people of this so-called New World did not have, but the lack of it did not prevent them from carving such a hard substance as jade, which they made into beautiful pectoral plaques sometimes six inches square, showing their principal deities and rulers in acts of adoration or sacrifice.

Necklaces, anklets, wristlets, ear-rings, nose-ornaments, beads, and pendants were fashioned from the same refractory material, which, even without the aid of metal tools, seems to have presented little difficulty to the ancient people of America.

Exquisite wood carvings, delicate modelling in stucco, ceramics, painting, weaving, and gorgeous mosaics made of brilliantly-coloured feathers were some of the other arts in which, so far as the native races of the New World are concerned, are equal, if not superior, to the achievements of the Old World. And when one comes to a knowledge of the abstract sciences, such as arithmetic, chronology, and astronomy, they have few peers among their 'bosses' even in the Old World.

It would carry us too far astray to explore these fascinating fields of ancient American learning, and it must suffice for the present occasion to point out that their system of keeping account of past time—that is, their chronology—was more accurate than anything known in Europe, Asia, or Africa before the fall of the Roman Empire, and it is an open question whether



The Palace of the Itzen Rulers (Chichen Itza)

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

West Indian chronology, in the field of elapsed time, is not more accurate even than the modern Gregorian Calendar.

But the Dark Ages appeared when the white settlers began to blaze their way through the country; and art, architecture and learning soon suffered an eclipse—and from which the people never again fully recovered.

Tlachtli-ground or the Ball Court. It constitutes a splendid open air auditorium capable of accomodating 5,000 people. The interior walls are entirely covered with elaborate sculptures portraying lines of marching warriors

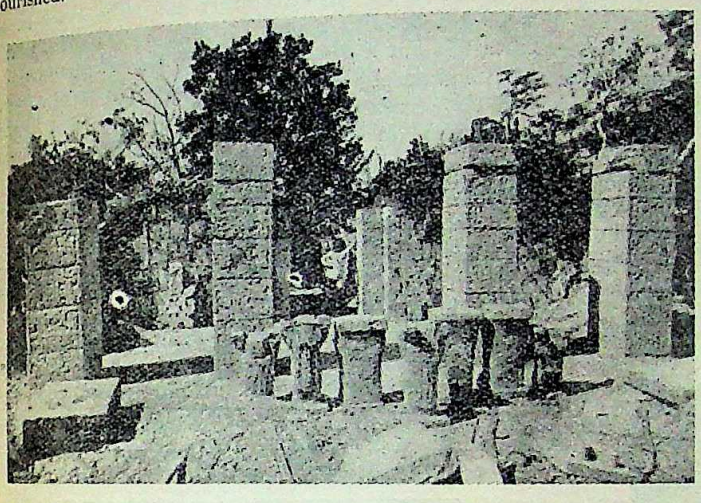
The American-Indians during the eighteenth century, were forced to abandon most of their old regions, where they had wrought so laboriously and had achieved so splendidly, and to seek new homes elsewhere. The cause, or to be precise, causes of this great Indian exodus are not difficult to understand. The incessant tide of expansion of the whiteman's dominance had hewed a clearing by diminishing the ancient tribes of America, until from Canada to Mexico the whiteman's rule became supreme. Today their standard of life has been artificially lowered by the whiteman, and in his private dealings with the Indians, he has never allowed them the rights and treatment to which they are entitled, and considers them 'inferior beings' or objects of contempt and exploitation.

The agricultural practices in vogue among the ancient American-Indians were such as gradually to improve the productivity of the land available for cultivation. Planting eventually became impossible, as

the repeated burnings, which alone served to clear ground for the white settlers, literally forced them search for new homes. No lesser calamity than it would seem, could have driven a whole nation such a drastic step as the complete abandonment the regions wherein they had expended such tremendous effort.

Whatever may have been responsible for gradual extinction of the Amer Indians, the fact itself is sufficie clear that in the beginning of eighteenth century the Indians w pushing northward toward the and even still, unexplored forest Canada, looking for a new and promising land in which to fo their homes.

When men like Grenville, H kins, Raleigh and Drake swept from the Devon coast "West Ho" in search of adventure gallons of gold, they were somew disappointed as they landed at place in America, which was parched and waterless land. The was no surface water, and there we no rivers or streams nearby only one or two lakes. The coun was of limestone formation, wit subterranean water supply. He



The Cenote of Sacrifice. The water in this great pocket is 70 feet deep and remains at the same level practically all the year round

and there about the country a few natural openings wells had been formed, great holes in the ground, some times several hundred feet in diameter, places where the limestone crust had become undermined and

fallen through, exposing subterranean water. These the Indians called *cenotes*, and wherever they existed, there, by the very force of circumstances, important centres of white population were established and later flourished.

The Temple of Warriors (Chichen Itza). The ceiling of the temple was supported by four square columns, all sides of which were covered with elaborate sculptures representing gods, rulers, priests and warriors

Although there is some confusion as to the exact date, the civilization of the American-Indians was in existence between 471 and 1530 A.D., and the "Holy Men of the Mayan tribe" as they are almost worshipfully called in the native chronicles, the Books of Chilan Balam, set up their tribal deities, their Lares and Penates.

Before settlers began to fringe the eastern coast of North America, the Indians lived in the shadow of the great temples, let us say, surrounded by all the manifestations of the highest native civilization this continent had, and were secure in the protection of their gods, rulers, and priests. Before the whiteman raided the coasts of America, the Indians were living in peace and security and were pushing onward into the region of the unknown for greater safety, more confidence, and more comforts of life. Their early struggle with the white settlers must have been acute. Their old buildings and temples suggest that they were forced to abandon their old cities on account of wholesale massacre by the whitemen. Towns and cities were littered with skeletons in the raids by the white settlers and human blood and wilderness reigned where there had been gardens.

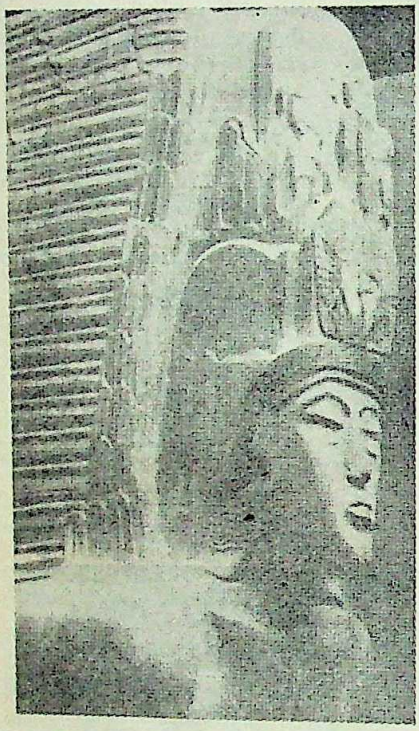
II

In 1004 A.D. the three largest city-states—Chichen Itza, Uxmal, and Mayapan—formed a tripple alliance, under the name of the League of Mayapan, by which agreement the government of the peninsula was divided equally among the

period of true Indian Renaissance. Under the peaceful conditions and general prosperity brought about by the league, art and architecture flourished. Great buildings of cut stone, elaborately decorated with sculptures, were put up on every side. No town or village was so small and unimportant as not to boast its pyramid-temple and chief's house built of stone. It was in every sense a true Renaissance, and under its quickening influence the Indian aesthetic instinct blossomed forth anew.

Chichen Itza does not seem to have felt this stimulation as strongly as her sister state, Uxmal, for example, although there are a number of buildings at the Itzan capital which date from this period—the Akab'tzib (House of the Dark Writing), the Chichanchob (Red House), the House of the Deer, and parts of the Monjas (Monastery)—in fact, most of the middle section of the city, that part lying south and west of the Temple of the Thousand Pillars.

In 1201 A.D. the political structure of the country was shaken



A Ganesh-like God from a temple in Central America

to its foundation and the League of Mayapan violently disrupted by war within itself. In that

Digitized by Arya Samaj Foundation Chennai and eGangotri

year Hunnac Ceel, the ruler of Mayapan, made war upon Chac Xib Chac (the Very Red Man), the Itzan ruler, because of "certain banquetings with the ruler of Izamal," according to one of the chronicles, and aided by his Toltec-Aztec allies from central Mexico, inflicted a crushing defeat upon the Holy Men of Itza.

A Vishnu-like God from a temple in Central America

The chronicles do not enlighten us further as to what end overtook the "Very Red Man." Perhaps he fell fighting bravely, as his name might imply, in the defence of his capital. Concerning the fate of the city itself, however, archaeology leaves us in little doubt. From this time onward until its final abandonment in 1448, Chichen Itza was held in thrall by the Indian rulers, the Toltec-Aztec allies of Hunnac Ceel.

III

The intercourse between the different Indian tribes of America, gave to these pioneers of civilization new customs, new aesthetic inspirations, a new architecture, even a new religion, all of which reacted powerfully upon the ancient people and raised their civilization to a position of honour and sanctity never enjoyed by them before or since.

The ancient people of America worshipped the fair golden-haired god, Quetzalcoatl, the "Feathered Serpent." They raised temples and sanctuaries to [illegible] new god, all adorned with highly realistic repres[illegible]tions of the Feathered Serpent (which is also similar to the Hindu god, Nagaraj Basuki)—in colu[illegible] balustrades, cornices, and bas-reliefs—until his sinu[illegible] trail was to be seen on every side. The cities ex[illegible]rienced a building boom. The so-called Castillo, w[illegible] in fact is not a castle at all, but the principal te[illegible] of Kukulcan at Chichen Itza, covers an acre of gr[illegible] and towers more than 100 feet above the level of [illegible] broad plaza at its base, overtopping the highest t[illegible] Four balustraded stairways ascend its terraced si[illegible] and the sanctuary on the summit is entered thro[illegible] a doorway flanked by feathered serpent columns.

Another enormous construction of the Indian [illegible] and sculpture at Chichen Itza is the Temple of [illegible] Thousand Pillars, a vast architectural complex enc[illegible]ing a central plaza consisting of more than five [illegible] and composed of pyramid-temples, colonnaded h[illegible] sunken courts, terraces and platforms; and here, [illegible] everywhere may be seen the trail of Kukulcan, t[illegible] Feathered Serpent, patron deity of the Indians.

A dancing god reminiscent of Hindu God Siva (Guatemala)

Other buildings of importance are the Tlach[illegible] ground or Ball Court and the Temple of Hamb[illegible] the Caracol or Astronomical Observatory, the Te[illegible] of the Warriors, the High Priest's Grave, the s[illegible] altars, which prove the remarkable efficiency of [illegible] American-Indians in those days. Their progressive [illegible] vigorous outlook gave to that really old world a [illegible] impetus which showed a crowning distinction in [illegible] field of art and culture.

The Toltec-Aztec Indians were the first to ev[illegible]ize successfully the semi-sacred character of [illegible] which was acquired in the passing centuries. This

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

done by inaugurating at its brink a gruesome sacrificial rite, which was destined to attract pilgrims thither from all parts of the land; no less, indeed, than hurling into its gloomy depths the young Indian maidens to appease the wrath of offended deities.

Another image of God Siva found in a temple at Guatemala

Along with these human sacrifices all sorts of valuable personal objects were thrown into the pool, which until the present day bears the name of Cenote of Sacrifice. Gold and jade ornaments, beautiful pieces of pottery, carved wood, in fact everything of the highest value found its way thither, there to lie for five centuries or more, until rescued from oblivion by the dredge of an archeologist.

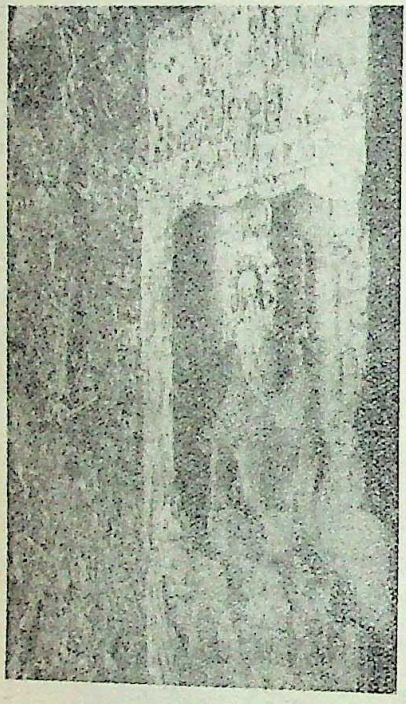
The very spectacularity of this cruel rite—the maidens at the brink of the dark pool, the incensing of the priests, the sides lined with waiting thousands, a push, perchance a startled cry, a splash below, and silence—all combined to arouse a general interest in the ceremony. Pilgrims came from far and near to hurl their personal treasures into the depths. Pendants and bells of gold have been found here which are known to have been made no nearer than Costa Rica, and pottery of peculiar type, not unlike Indian ware, which could only have come from the north-western States of America. Such was the fame and appeal of this death by water.

The Indian rulers of the country on their part had spared no efforts to give the ceremony a proper setting. The great Temple of Kukulcan had been located with special reference to this pool of sacrifice—that is facing it—and connected with it by a stone causeway or 'Via Sacra', a quarter of a mile long, 30 feet broad, and in places built up 25 feet above the level of the plain. Other temples had been erected in the immediate vicinity, including two elaborately decorated dancing platforms, and at the edge of the cenote itself there was a small shrine for the last solemn rites.

The sombre natural beauty of this deep pool, with its chalky white sides covered with clinging vines of green, the imposing temples, and other buildings associated with it, the long procession of gorgeously-robed priests leading their victims to the brink, the spectacular sacrifice itself—a dramatic hurtling through the air into the dark, silent water below—all combined to affect powerfully the Indian mind. Thousands were attracted thither, until by the early fifteenth century Chichen Itza had become, because of this great ceremony, the most holy city in the continent of America—nay more, the Mecca of the Indian World.

This God found in a temple at Guatemala might easily be mistaken for Hanuman, the monkey-god of India

IV



For a decade now the Carnegie Institute of Washington has had under consideration a plan for the intensive study of the ancient civilization of the American-Indians. Several preliminary expeditions had been sent to the different parts of the continent to ascertain the precise nature of the practical as well as the archeological problems involved, and in June, 1923, a formal plan of study covering a period of not

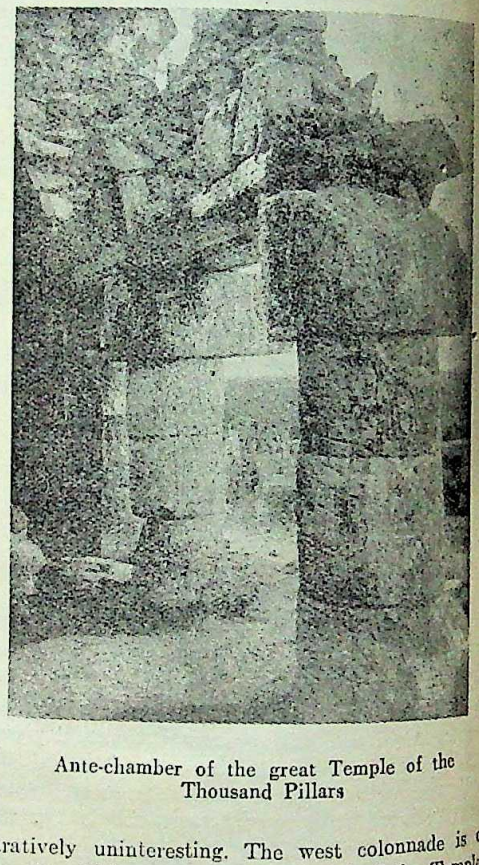
CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

less than 10 years was presented to the Mexican Government.

This plan having been approved by the Director of Anthropology, who has jurisdiction over all archeological remains in the Republic of Mexico, an agreement was reached under the terms of which the Carnegie Institute was granted the privilege of carrying on archeological investigations at Chichen Itza and other places for a period of 10 years, or more, beginning from January 1, 1924.

Interior of the Temple of Warriors at Chichen Itza (Mexico)



The principal work since 1924 was the excavation of the place where the Temple of the Thousand Pillars, an enormous construction with all of its parts, is situated, covering more than twenty acres. This temple is named the Thousand Pillars because its chief architectural features are the pillars, some of which are square, others round, some sculptured and others plain. In the different colonnades, porticos, temples, halls, and minor courts surrounding the great Temple of the Pillars, the architectural centre of the temple, more than a thousand different pillars have already been counted, ample to justify the name chosen for it.

The Temple of the Thousand Pillars covers five acres of ground. Originally it was paved with a hard lime-plaster, traces of which still are to be found at the edges, though towards the centre this pavement has been destroyed by the forest which has everywhere thrown a green mantle over Chichen Itza.

its final abandonment in the middle of the sixteen century.

The north and west sides of the temple bounded by two very long colonnades of round pil with square capitals, five pillars with square capi and also other five pillars. The remaining sid are occupied by even more imposing buildings greater complexity of ground plan, and it was in of these, the actual excavation began on May 28, 19

The gateway on the western side seems to be com

Ante-chamber of the great Temple of the Thousand Pillars

paratively uninteresting. The west colonnade is only two steps higher than the floor level of the Temple of the Pillars, and this gateway seems to have been a simple passageway between the pillars of the colonnade without sculptural embellishment at either end.

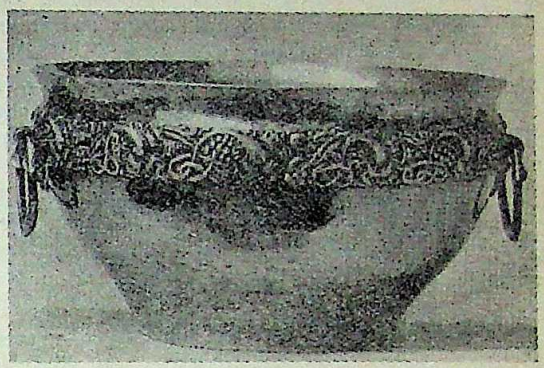
The northern gateway appeared to be more interesting. The North Colonnade surmounts a terrace 7 feet above the level of the temple, and it is through this terrace, or platform, underneath the colonnade proper, that the northern gateway passes. Both ends of this it was found, had been decorated with flanking sculptured panels; the panels on the eastern side at each end had the image of Hanuman carved upon them, whereas the western jambs were carved with macaws or parrots. Round shields and other animal and bird figures completed the sculptural decoration of this gateway, which was paved with well-cut flagstones.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

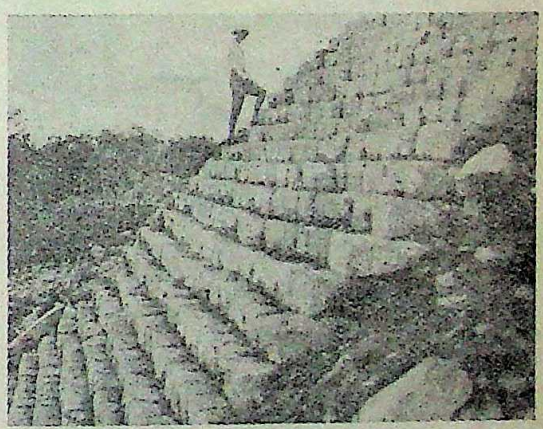
The eight pillars across the front divide the facade into nine doorways. All the pillars are made alike—that is, in sections composed of large dressed blocks of limestone—and all are plain save the four central ones at the back, which are elaborately sculptured and enclose a sculptured throne or platform.

Three round shields, one above the other, come next, and judging from the large number recovered in the excavations, these must have been a frequently recurring element in the decoration of the facade.



Tigers and birds on the wall of a temple at Teocali, Mexico

Above the next to the last doorway, at each end, there is a human figure fastened to the wall by a tenon at its back. These are gorgeously clothed in feather-work cloaks, panaches of plumes rising from their head-dresses, embroidered girdles, and jade necklaces, pendants, ear-rings, wristlets and anklets completing the costume. The right hand grasps a spear decorated with tufts of feathers, and the left an embroidered disc or *chakra*.



The building is surmounted by a cornice of the same style as the medial one. These two cornices are themselves extremely decorative. They are composed of three members, the top and bottom ones being plain, the former sloping upward, the latter downward. The middle member, however, is sculptured with a pair of intertwining rattlesnakes, a head and tail with plumed decorations at one end of the cornice and the other head and tail at the other end.

Imagine, then, this facade in its entirety; the nine ample doorways separated by solid square pillars, the two rattlesnake cornices, the masks, shields, human, animal, and bird figures, this long and elaborately carved panel being painted from one end to the other with a variety of colours—red, blue, green, and yellow, —the whole constituting a picture of dazzling and heroic splendour difficult for the modern eye to visualize, however accustomed it may be to chromatic riot by our own flaming billboards.

A decorated bowl found in the Temple of the Thousand Pillars

Passing into the cool shade of the colonnade through the middle doorway and walking towards the back, one passes between the outer pair of sculptured pillars, also painted, and stands before a dais or throne, the sides of which are sculptured with rows of warriors, and the cornice with intertwining rattlesnakes running around the top. It is flanked by the inner pair of sculptured pillars.

Stairway ascending the western face of the Temple of Kuklucan, Patron Deity of Chichen Itza

All four sides of these four pillars are sculptured, making a total of sixteen panels. Most of the sculptured subjects are warriors elaborately clothed in feather-work, embroidered cotton stuff, and jade jewelry, and armed with spears, clubs, and shields. An interesting exception is the front of the back pillar at the left, which is carved with the representation of Kukulcan, whose likeness is to be found in India in the Sahasra Stambha Temple at Madura, while the Temple of Warriors is reminiscent of Naga sculpture. The

Ganesh-like god and the Vishnu-like god of Central America and the monkey god Hanuman in the temples of the American-Indians are of the same types as are usually seen in India. The dancing god of Chichen Itza is reminiscent of Hindu god, Siva. The important feature in the construction of temples and gods of the American-Indians is the striking similarity between the ancient architecture and statuary of America and those of ancient India. The sculptured fragments of temples and palaces, the crude workmanship scattered here and there in South America, Mexico and Honduras, tell us the tale, eloquently enough, of Indian civilization spreading its wings over the remotest parts of America in the past. Attempt should now be made by the Oriental scholars to study the ancient civilization of Am... from two sides. In the first place, they must writ... accordance with the modern investigation, an auth... tative history of the ancient people of Amer... While, of course, I do not say that nothing of ... kind has been undertaken, it seems to me that ... ancient history of America has been written mo... by Euro-Americans without making due refere... to the ancient civilization of India. In the sec... place, they will have to revivify the arts and ... ture of the ancient people of America, with a ... outlook, which alone will make those poor ... great again in their own country. If these two thi... happen, we can prophesy a great future for ... indigenous Indians of America.

ERIC GILL
The British Sculptor and Designer

By IRIS CONLAY

The sculptor of the Stations of the Cross in Westminster Cathedral in London, the creator of the stone figures of Prospero and Ariel on Broadcasting House,

Eric Gill at work in his studio

the Headquarters of the British Broadcasting Corporation, the designer of ... [illegible] ... cutter of letters, the book illustrator, the philosopher and writer—all these are aspects of a man whose ... and activities were one. It is the essence of Eric G... that he did not value being an artist above being ... man—a workman is what he called himself, and ... aim was to create a 'cell of good living.'

His life began in Brighton in 1882. Brighton ... both prosperous and fashionable in those days, but ... Gill family were neither. They lived in one of a ... of houses that backed on to the railway station. T... father was a Nonconformist clergyman, and educati... was accounted of more worth than wealth. Eric ... therefore sent to school young. He records his earli... experience of an art class :

> "We have been making little mats by inte... weaving strips of shiny blue and white paper—... exciting but intelligible. Then the teacher starts ... on clay modelling. She gives me a lump of grey ... clay, about as big as a plover's egg, and sugges... that I shall make something by squeezing it abou... She shows me how to do it, but does not tell ... what or why. I am miserable and bored. I remem... clearly the grey light and my impotence. If only ... could have told her it was not in my line !"

It was certainly not in his line. The five-year-... Eric of this period afterwards became one of the fi... artists in Britain for many generations to wo... directly on to the stone without clay models. He ... this, not to impress, or to strike an attitude among ... contemporaries, but because, having been trained as ... mason, working directly on stone was natural to him.

"Art for art's sake" was an abomination to ... Gill. All his achievements as an artist grew out of ... achievements as a workman. Tombstones and letterin... on shop fronts are generally workmen's jobs, and Eric ... took a pleasure in perfecting these things. He was only

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

given the job of carving the Stations of the Cross at Westminster Cathedral because he was a mere mason.

He was hardly known then, but a perceptive architect believed in his ability and potentiality. At this time, too, he had only been a Catholic for a year, and, allied to a rare gift for linear grace, he brought to his work the fresh vision of a Christianity newly-found. The results are the deeply satisfying and simple ikon-like plaques which are perhaps the most living things in Westminster Cathedral today.

Lying safely stored in the last studio that he worked in, is another piece of sculpture for Westminster Cathedral—a magnificent Hopton-wood stone reredos for the English martyrs' memorial chapel. Few people have seen this, Gill's last work, but those who have believe that it is the peak of his production as a sculptor. In the centre is Christ crucified, and on either side stand the martyrs, St. Thomas More, Lord Chancellor of England under King Henry VIII, and St. John Fisher, Bishop of Rochester in the same reign.

From a shop front painted by Gill, Stanley Morison discovered a type-designer for Monotype, the mechanical type-composing company. Morison liked, the Sans-serif letters he saw over a bookseller's window in Bristol and commissioned the artist, who was Gill, to complete the alphabet. He subsequently designed eight founts of types.

After that there were book illustrations for the Golden Cockerell Press, of which the 60 engravings for Troilus and Creseyde are the best-known, more type-designing, and other sculptures including a memorial to the servants of the Victoria and Albert museum in South Kensington; a Deposition in black marble (his favourite work) in Canterbury; a St. John the Baptist at Oxford; Prospero and Ariel on Broadcasting House; ten panels on the New Museum at Jerusalem, and a creation of Adam at Geneva.

This bas-relief of Adam in the foyer of the League of Nations council hall is a particularly magnificent conception. It is a frieze 55 ft. (17 metres) long and about 8 feet (3 metres) high and Gill's original idea was to fill the space with what he considered a worthy subject—the turning-out of the money-changers from the Temple. Eyebrows were lifted high at such a suggestion, and the more tactful alternative of the creation of man was selected. Under a great text pro-claiming the over-mastery of God, Gill's colossal representation of Adam, the man before the Fall, spreads majestically. It is flanked on either side by panels of children and animals in the same perfection of untainted nature.

But it was never the importance of the work which mattered to Gill. 'What I achieve as a sculptor is of no consequence,' he once said to a fellow artist, 'I can only be a beginning—it will take generations, but if only the beginnings of a reasonable, decent, holy tradition of working might be effected—that is the thing.'

Eric Gill with his magnificent bas-relief of the reclining Adam, which he designed and executed for the frieze in the foyer of the League of Nations Council Chamber

To create the holy tradition he fought constantly against the "machine" State. He wrote books, he lectured, he lived in protest against it. First at Ditch-ling, then at Capel-y-ffin in the remote hills of North Wales, and finally at Pigotts, he surrounded himself by a community who set out first to praise God by their work and then to live a complete and satisfying human life. When Ditchling became over-publicised as a show place for gaping pilgrims, a retreat was made to the Welsh Mountains. They proved too remote for the contacts necessary for work, and Gill's last home was Pigotts, in Buckinghamshire. Here he had a private chapel, shaping the stone altar himself and all the chapel's furniture. Here a happy band of students and family were gathered round him. Against a wall in the courtyard, enclosed by his farmhouse, leant his own tombstone carved by himself, waiting for the day. . . .

The day came on November 18th, 1940. The plain-chant Requiem Mass was sung by a choir of his own grandchildren, and his body was conveyed on an open farm cart drawn by the domestic pony down the long hill to the cemetery at Speen.

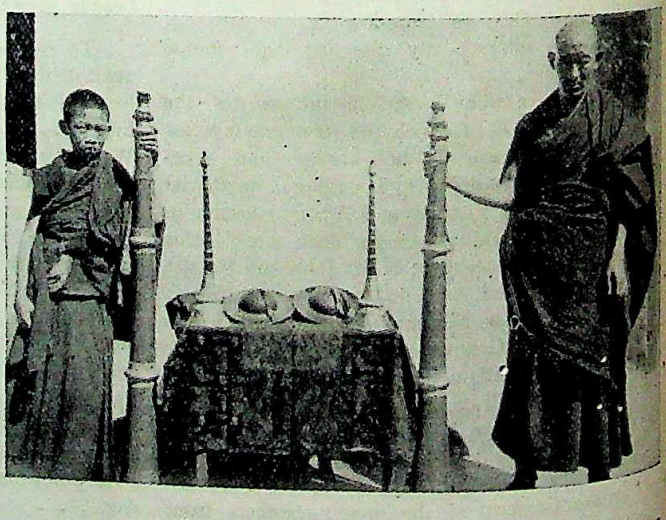
TIBETAN MUSICAL INSTRUMENTS

By ANAGARIKA SASANA RATANA

STRANGE and full of mysticism are the religious ceremonies of the Buddhist priesthood in the "Land of Snow." Day by day, from early morning till late at night, in thousands of Tibetan monasteries the monks assemble to worship the innumerable deities of the Lamaistic pantheon. Gathering in the mystic darkness of the temple-halls, they chant their prayers and perform the prescribed rites. Weird are the appliances for these ceremonies—thunderbolts, little bells, magic daggers and ritual knives—and not less queer are the musical instruments played to accompany the prayers.



A Lama playing the Dungring trumpet

Several experienced Lamas—their number varies according to the size of the congregation and the religious service which is being held—form the temple orchestra. The music they produce sounds to the uninitiated noisy and untuneful; it, however, follows strict and orthodox rules. A form of musical score depicted by wavy lines with small marks indicates when each instrument has to be played and how the choral accompaniment rises and falls.

The most striking among the musical instruments used in Tibetan monasteries are long telescopic trumpets, called Dungring, which may be up to 14 [illegible] long. Their deep boomings, from the roofs of [illegible] temples, herald the dawn, summoning the devotees [illegible] morning prayers. They are supposed to reproduce [illegible] trumpeting of elephants, [illegible] according to Tibetan religious [illegible] liefs, guard the main quarters of [illegible] world.

The flageolets produce a [illegible] melodious sound; they are [illegible] Gyeling and a minimum of two [illegible] to be found in each [illegible] orchestra. Some of these flutes [illegible] good examples of Tibetan [illegible] manship as they are frequent[illegible] wrought in silver and studded [illegible] semi-precious stones. To play [illegible] a straw has to be inserted into [illegible] mouthpiece.

Other instruments used in [illegible] gious services are the cymbals [illegible] simplicity themselves, which have, however, to be handled in a [illegible] minutely prescribed manner. Further[illegible] more, huge white conch-shells, called Dungkar, usually set in an ornamental holder, and gong and rattle-

Some Tibetan musical instruments

the last mentioned being generally applied in Tibetan religious dances—are used. Various drums are incorporated in the orchestra. Some of these are round, flat and mounted on a stick, which is held vertically

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

They are played with a long, curved stick tipped with leather. The most extraordinary Tibetan drum is the Damaru, shaped like an hour-glass; it bears a remarkable resemblance to the hand-drums of the Shamans of Siberia. It consists of two domes of human skulls, attached so that the hollow surfaces face outward, the open parts being covered with stretched human skins. Two short strings with a small wooden ball on each, are fastened to the neck formed by the junction of the skulls. When the drum is jerked to and fro, they strike against the skin surface producing a high rattling sound. The Damaru is generally used during the ordinary religious services for indicating the pauses between the various parts of the ceremony.

This drum is, however, above all an important instrument of the Tibetan magicians, who apply it in their rites when calling or frightening away inimical demons. These wizards usually use the Damaru in connection with another instrument also made of human bone, which is called Kangling. The Kangling is a trumpet made from a thighbone and the Tibetans claim that especially those trumpets made of the left thighbone of a 16 years old girl, of criminals or people who died a violent death, are most efficient in the performance of secret rites. It is also claimed that the Lama who makes the thighbone trumpet, has to eat a piece of the skin covering the bone in order to give the Kangling the magic power to summon the demons.

Compared with the variety of musical instruments played by the Lamas, only few instruments are used

The Tibetan temple drum

by Tibetan laymen. Small drums and rattles are carried by Achelhamo, the travelling dancers and actors of Tibet, and a three-stringed, long-necked guitar is played by the wandering troubadours who make their way across the "Roof of the World," chanting merrily the old ballads of heroes of a past age.

———:O:———

GETTING ON THE CONTOUR

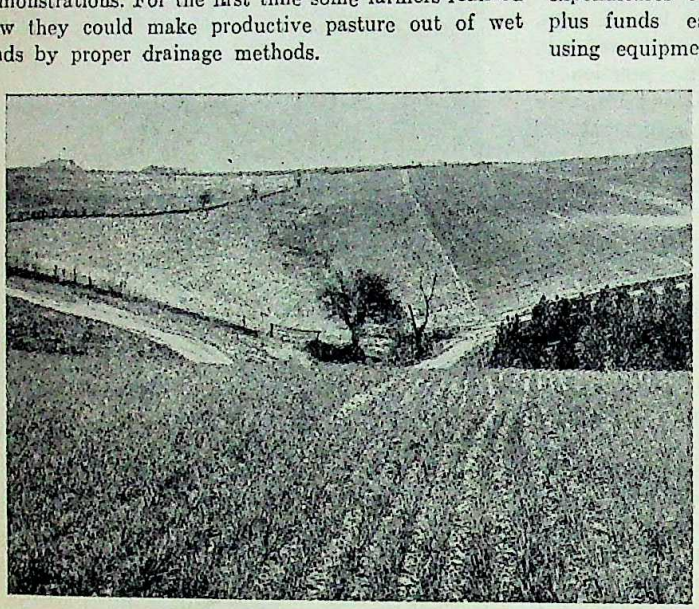
By NORT BASER

This is the story of a soil conservation district and its approach to the land-use problem—how American farmers and soil experts are working shoulder to shoulder to obtain permanent maximum productivity of the land, according to its capacity and needs. Specifically, it is the story of the Harford County Soil Conservation District, one of the first to be established in the United States. Nestling in the northeastern part of the east coast State of Maryland, it is typical of the more than 2,000 soil conservation districts which now blanket the nation, making good land-use practices, in the democratic manner, available to 4,500,000 farms.

Thus the Harford district's story is essentially the same as that of any other district in the U.S.—differing only in the names of the people and in the character of some of its strictly local problems.

The experts will tell you Harford County's productive topsoil was originally 9 to 10 inches deep. Now it averages only 5 to 6 inches. In some hilly spots it has disappeared entirely. Nor will they fail to remind you that it took nature from 500 to 800 years to build 1 inch of that precious soil.

The Harford soil conservation program was designed primarily for the smaller dirt farmer. Examples are legion in the area. In fact, one Harford County farm in every four has a soil conservation plan of one kind or another, the total area amounting to roughly 69,500 acres, one-third of the district area. This new pattern of land-use has grown rapidly, chiefly on its own merit, since it was first introduced in the county in 1939 with the establishment of a demonstration area. The demonstrations were under the supervision of the U.S. Soil Conservation Service with the concurrence of the Maryland State Advisory Committee.



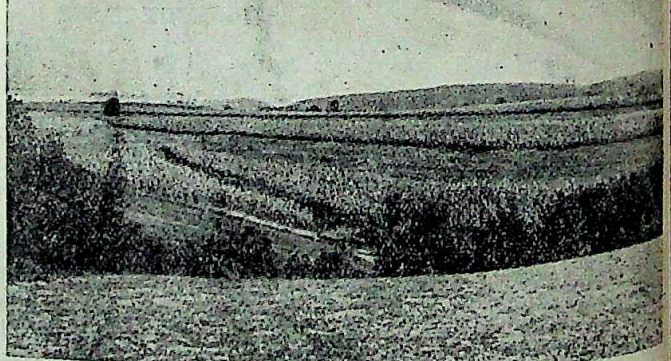
Farmers in the area began to see that plowing of straight furrows up and down hill was the cause of their erosion problems. They observed that those same sloping fields could be plowed on the level so that the curved furrows would serve as a trough to catch rainfall and allow much of it to soak into the ground. They saw the value of diversion channels on the steeper slopes to check wasteful run-off of soil and water.

The advantages of strip cropping were also intro-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

duced. Contour strips of close-growing plants, like ladino clover or grass, between alternate strips of clean-tilled row crops proved a wonderful antidote for erosion. The use of cover crops, crop rotation, fertilizer, and lime was made more popular through these demonstrations. For the first time some farmers realized how they could make productive pasture out of wet lands by proper drainage methods.



View of an American firm before contour strips were laid out

By the summer of 1939, techniques had so improved and farmer interest had so increased that both Harford and neighbouring Baltimore counties were organized into one district. This spurred even greater activity and resulted in more requests for assistance than the limited technical staff assigned to the area could handle. Then in May 1944, a referendum of landowners dictated the dividing of Harford and Baltimore counties into separate districts. This meant more technical assistance, and besides it was felt that a group of supervisors representing only their own county would be in a better position to understand local problems and to obtain more support from county governments. Thus, since 1945, the number of farm plans in the Harford district has grown from 200 plus to more than 500.

Key to this soil-saving program's popularity are the supervisors, five in number. All are active farmers, three being elected by the men they represent and two being appointed by the State Soil Conservation Committee. It is the responsibility of the supervisors to give the landowners they represent the maximum control over the program. They guide the policies, meet once a month to assign priority to requests for assistance on various farms, and to help settle other problems which may arise. They also control expenditures of district funds allocated by the State plus funds earned from assessments to farmers using equipment assigned to the district to install drainage ditches and diversion terraces.

Local technicians in the employ of the U. S. Soil Conservation Service take over from there. Occasionally they help the supervisors recommend revisions in farm plans, but they never set foot on a man's farm unless requested to do so. They want the program to prove itself—which it is doing. Headquarters for the Soil Conservation Service in the Harford District is at Bel Air county seat. The technician in charge has earned the confidence of the farmers and townspeople who recognize the fine job he is doing and like his easy, friendly air of co-operation. Early in 1949, he received a request to lay out a conservation plan for a 156-acre farm. First he had the soil surveyed to learn its present condition, how much erosion existed and its degree of slope. Then he drew up a land capability map, all to scale and in color. Armed with this, he visited the farm. He learned that there were 68 head of dairy cattle and 10 heifers, and that both pasture and more corn was needed.

The farmer and the technician then walked together over every acre of the farm, discussing what the map indicated

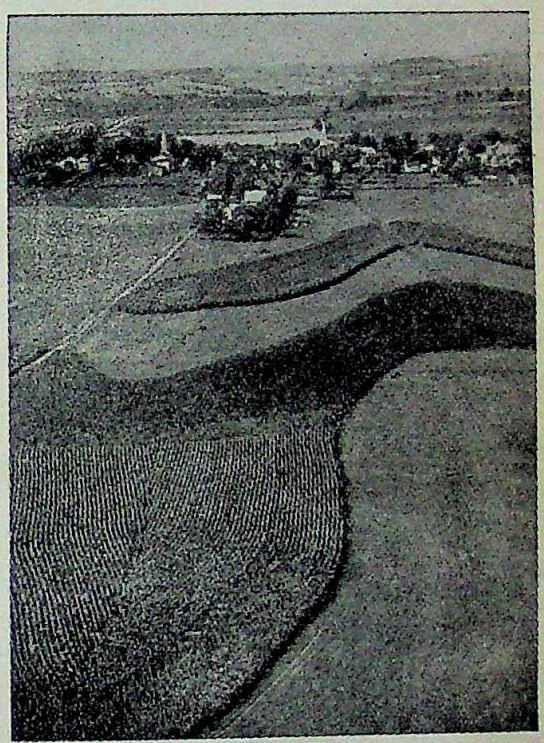
An American farm showing contour strips with grass water-way where there had been a gully 2 feet deep six years ago

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the best use should be. The farmer agreed that contour strip cropping would help him in a couple of the hilly fields and that another would be better suited to pasture. He saw he would have to change several of his fences and put in some drainage tile in one low field. When all the details were worked out, the soil conservationist wrote them into a plan for the farmer to sign. The contour lines were tentatively outlined in April, but they were not layed out until after hay harvest. When they were established, each plowed furrow was at right angles to the slope so that rain would no longer wash the topsoil away but would sink in around the roots of crops. New fence lines will not be established until the present fences need repair.

That is how the program works. This particular farmer's problem is typical of most farms in the district—but sometimes conditions are much worse and more drastic measures of control must be recommended. Too often farmers do not become alarmed until they notice ugly gullies eating away their fields. They fail to realize that sheet erosion can cause great damage if it is not halted by strip cropping, diversion terraces, cover crops, fertilization, crop rotation, or other measures.



In many cases the local conservationist finds it profitable to seek the aid of other agencies. The University of Maryland Extension Service or the county agent are always ready to help with farm plans for erosion control. The State Soil Conservation Committee will advise on points of law and co-operation. Or if improvement of a wood lot is needed, the State Forest Service will lend a hand. These technicians stand ready to advise the farmer. After that, it is up to him.

Usually the farmer discovers he must spend a considerable amount of effort and some money over a period of several years to get his farm back into the maximum productivity of which it is capable. But sometimes he is agreeably surprised—especially if he has a healthy wood lot.

Often a wood lot helps provide the lumber for upkeep of farm buildings or nets a modest sale of timber to offset soil improvements. Farmers without such windfalls must make more of a sacrifice, though actually the cost of putting in a farm conservation plan is nominal. A farmer can put in the recommended contours and strip cropping himself during slack periods. Changing fences is not usually advised until present lines need repair. Of course, measures such as correcting deep gullies, putting in drainage tile or buying large quantities of lime and fertilizer are more costly.

What does the farmer gain by making all these improvements? One American farmer answers this question: "My yields have increased 40 to 50 per cent on some land that was formerly badly eroded. Now all my cropland is producing equally well because the fertilizer, seed and manure stay on the slopes instead of washing off."

Another farmer says, "Now that I am farming in contour strips all the gullies are healed over and my grass waterways are gradually levelling up. The water that comes from my fields is now clear. My yields have increased by one-fourth on the average—and I am saving time and effort through increased efficiency of equipment."

View of part of an American farm which is co-operating with the soil conservation services in the eastern State of Maryland

And another sums it up with, "I think the curved rows of contour strips make a farm and the countryside in general so much more beautiful that farmers take more pride in their work and want to do a better job of farming. I know it has made a better farmer of me." Besides getting 50 per cent more corn from his hillsides, he notes that springs which used to go dry in summer now have a small trickle all summer long.

That is why more farms in the Harford district are taking on a new look. Each convert brings the over-all conservation pattern nearer to completion. There is no doubt that the conservation movement in the United States is progressing at a pace fast enough to point a definite pattern of land use for the future farmers of America, as well as demonstrating the value of soil conservation methods to the farmers of other lands.—From *American Forests*.

THE EKTESWAR TEMPLE

Archaeological Survey Report of Bankura District

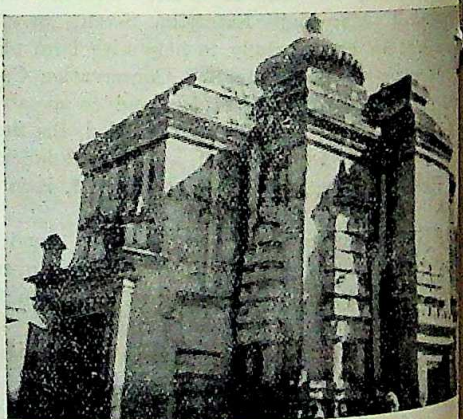
By RABINDRANATH CHAUDHURI

On October 23, 1949, I paid a visit to the Ekteswar village two miles from Bankura, B. N. Railway station, to see the oldest temple of Bengal, Ekteswar. The antiquity and architectural simplicity of the temple attracted me so much that I could not help going there again on November 2, 1949 to study in detail mensuration work and the features of ancient architecture of the early mediaeval period (the word 'mediaeval' will mean roughly between the eighth and the thirteenth century A.D.) in Bengal.

The image of Khandarani or Goddess Durga under the diadem of Sapta-Naga or Ananta-Basuki

Before I proceed further I must acknowledge my indebtedness to Sri Jogesh Chandra Ray, M.Sc., Vidyanidhi, the eminent educationist, who gave me first-hand knowledge of the history of the temple.

The Temple



The Ekteswar temple is built upon a hillock with heavy red-stone, and is surrounded by a strong and well-built stone enclosure. The character of the temple seems to be of the simple fort and primitive type. But much of its primitive original grandeur has been replaced by a thorough repair by the Pandas in 1920 A.D. They used in repair ordinary lime and thick sand mortar. Generally 6 ft. × 4 ft. × 2 ft. and 4 ft. × 4 ft. × 2 ft. red stone has been used for structure and for the enclosure too.

There is an open chamber (Kunda)[1] inside temple. The image is seen posted in the ch which is 7 ft. deep from the floor level of the A tunnel (8 ins. dm.) is seen just by the side of image. It is about 500 ft. in its length and is conn with the river Darakeswar (or Dhalkishore) ad it and remains full of water, specially during the when the river water gets into the tunnel and the above-mentioned chamber full of water. Thi genious process helps the image to remain for mo of the year in touch with the sacred river water

Among all the existing ancient monument Bengal such a contact with river-water is a pecul in itself and is very different from all other techni that are found in ancient monumental works.

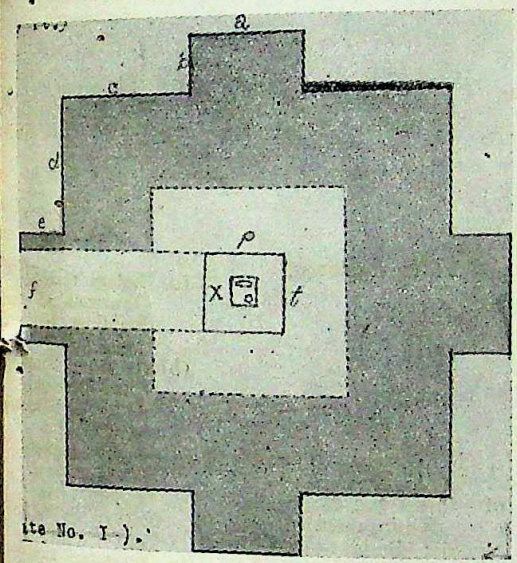
The Image

It is not a set image, the peak of the sm hillock was cut in such a way that it looks like image having a leg shape. The derivation of the

The Ekteswar Temple

Ekteswar is appropriately applied with the view of image; which is derived thus : Ekapada[2], Ekaswar,[3] Ekata-iswar,[4] Ekteswar.[5]

From a reference in the Rigveda it is seen there was a God of the shape of a goat with one the Sanskrit name of the God is Ekapada-Chha Such affinity of the words Ekapadeswar and Ekt Chhaga, in spite of the absence of the word Chha



1. कुन्ड
2. एकपाद 3. एकपादेश्वर 4. एकता-ईश्वर 5. एकेश्व
6. एक-पाद-छाग

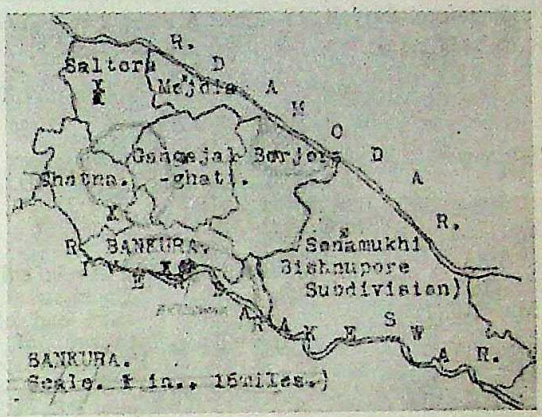
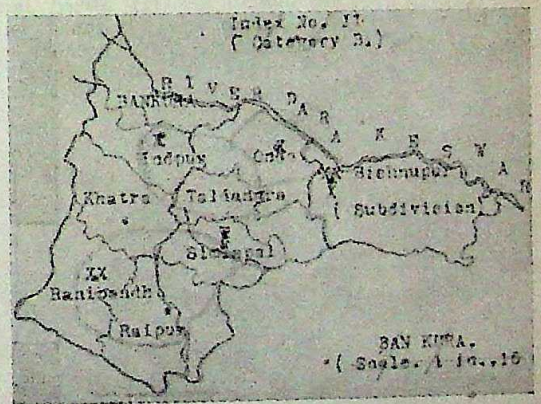
Ekapadeswar, casts reflection of the traditional influence of the Rig-Vedic Brahmanical culture on the image.

In addition to this a cultural colour may be applied to Ekteswar image. From archaeological evidence, it appears that this district was a renowned seat of ancient culture in Bishal-Banga (Greater Bengal), which is supported by the Susunia Rock Inscription of King Chandra Varma of Pushkarana, Barjora P.S., Bankura district, C. 350, and was specially under the influence of both, (*i*) Brahmanical and (*ii*) Buddhist and Jain faiths. The northern part of this district was under the influence of Brahmanical and Buddhist faiths, and the southern part of partly Jain and partly Tantric Buddhist faiths, the border line being the river Darakeswar.



The plan and elevation of the Temple is exhibited here :
1. Seat of the Temple: 2025 sq. ft. (*a*) 8 ft. 10 ins., (*b*) 4 ft. 6 ins., (*c*) and (*d*) 11 ft., (*e*) 4 ft. 6 ins., (*f*) Gateway.
2. Inside Area of the Temple : 256 sq. ft. (16 ft. × 16 ft.) (*p*) 11 ft. (*t*) 16 ft. (*x*) : The image and the tunnel. (Depth of the Chamber 7 ft.)



This divergence of cultures sometime in the early mediaeval period came to a halt and they mingled with one another. It was a union of the Brahmanical (Siva) and Buddhist and Jain cults (Siva-Buddhist cults). By this time the Jain faith was completely merged into Buddhism. The line of demarcation of different faiths being the river Darakeswar, this union took place in the centre, that is, at the site of the existing temple. This union did away with different ideologies and they mingled into one of mystic shape that is Ekata (unity) Iswar (God), *i.e.*, Ekteswar (unity of gods).

This union of faiths is also supported, though in a somewhat different form, by a local legend that at the site of the existing temple the ever-conflicting Rajas of Vishnupore and Chhatna (in this district) shed off their inimical attitude and brought in an *ekata* (unity) among themselves.

The Rajas are of 14th century A.D., but the age of the temple appears to be 11th century A.D., so the legendary colour loses its strength in regard to its being accepted.

Taking into account the time-factor there might be some deviation of the legendary view about the time of the union but there is one thing in common which is Ekata (unity) amongst them. Yet the age of the temple leads one to accept the former view that is unity amongst the then two prevailing and important mediaeval religions in Bengal.

The Pandas (priests)

There are two classes of Pandas who serve here as priests, one is called Deghoria[7] and the other Dhamatkarani.[8] The former does the work of actual priests and the latter the less important works relating to the worship of the idol. The word Deghoria and Dhamatkarani are derived thus : (*i*) Deghoria (Brahmin):

7. देघोरिया 8. धामात करनी

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Deva-Griha (Temple)[9], (*ii*) Dhamatkarani: Those who work in the Dham (sacred place).[10]

During my visit to the historical Ekteswar temple, I found some other images collected by the local people from different places for their worship and kept inside other temples built by the Pandas between 1920 to 1932 A.D. The descriptions of the images are given below: (*i*) Ganesh Murti, (God of success—Siddhi)[11] with four arms, sitting on a rat. Mediaeval period (12th century A.D.)—(3 ft. 8 ins.× 2 ft., carved out on sand stone).

(*ii*) A slab showing a bull, *bahana* (carrier of Siva).

(2 ft. 5 ins. × 1 ft. 4 ins. ×2 ft. 8 ins. height). Mediaeval period 10th to 11th century A.D.

(*iii*) Two slabs showing the goddess (4 ft. 2 ins. 2 ft. 6 ins. × 2 ft. 6 ins. and 1 ft. × 10 ins.) with twelve arms with weapons standing under the shade of Sapta-naga[13] (serpent of seven hoods). The People worship the images as Khanda Rani and Angar Basuki,[14] though the Vedic name of the image is Durga.[15]* Mediaeval period 9th to 10th century A.D.

THE PRESIDENT OF INDIA

By K. K. BASU, M.A., LL.B. (Cantab.), Barrister-at-Law

Prof. Banerjee's rejoinder* to my article hardly affects my main arguments and it would not have merited any reply but for the fact that it is based on palpable misappreciation of some of my views.

Practising lawyers, I am sure, will be grateful to Prof. Banerjee for suggesting that they should familiarise themselves with political science. May I also do a like service to "keen" students of political science by pointing out the importance of some knowledge of the canons of construction of a Constitution in such students when they undertake to interpret a Constitution? Knowledge of political science, however admirable and necessary to frame a Constitution, has little or no bearing when provisions of a Constitution have to be construed. And I would remind the eminent Professor that the field of a practising lawyer is interpretation, and not extension or abridgement, of such provisions. It may also be left to the seekers of advice in matters constitutional to explain why they admittedly prefer the advice and opinions of practising lawyers on such matters to those of "keen" and "serious" students of political science whose sphere of activity is limited to the instruction of the young.

I

While disapproving my observation that both in origin and effect a written constitution radically differs from an unwritten constitution Prof. Banerjee chose not to deal with some of the implications of a written constitution specified by me[1] by way of elucidation of the said observation. At the risk of repeating myself to a certain extent, I may point out that a written constitution differs in *origin* from an unwritten constitution inasmuch as it is created at a time and as a whole by the conscious exertion of the people. It (written constitution) differs from the other in *effect* because of the doctrine of *ultra vires* implicit in Constitutions with "controlled" legislatures like the American and the Indian. These distinctions pertain to the very nature of such Constitutions, and are therefore fundamental. They have been emphasised as such by Marshall C. J. in *Marbury vs. Madison*.[2] Relevant portions of his judgment are set out below:

"That the people have an original right to establish, for their future government, such principles as, in their opinion, shall most conduce to their own happiness, is the basis on which the whole American fabric has been erected. The exercise of this original right is a very great exertion; nor can it nor ought it to be frequently repeated. The principles, therefore, so established, are deemed fundamental. And as the authority from which they proceed is supreme, and can seldom act, they are designed to be permanent.

"This original and supreme will organizes the government, and assigns to different departments their respective powers. . . .

". . . The powers of the legislature are defined and limited; and that those limits may not be mistaken, or forgotten, the Constitution is written . . .

"Certainly all those who have framed written constitutions contemplate them as forming the fundamental and paramount law of the nation, and, consequently, the theory of every such government must be, that an act of the legislature, repugnant to the constitution, is void.

"This theory is essentially attached to a written constitution, and is consequently to be considered, by this Court, as one of the fundamental principles of our society . . . ."

I do not forget that the great Chief Justice, not being known to have been a student of political science, "serious", "keen" or at all, must have, according to Prof. Banerjee's reasoning,[3] "betrayed . . . . lamentable ignorance of elementary constitutional matters . . ." His aforesaid judgment has however been accepted ever since as *locus classicus* on the nature of a written constitution, and should, in any case, outweigh isolated views of any number of publicists, the more so when such views are cited without reference to their contexts.

In spite of Prof. Banerjee's eloquence, lucidity, and erudition I am constrained to say that he is definitely mistaken about the nature of political usages to be found in states having written constitutions. I explained in my article[4] why these usages can never aspire to be conventions of the English type. In England various legal rules anticipate and assume the existence of some of these conventions, so that non-observance of such conventions very often results in violation of legal rules themselves. In fact, whatever may be the motive for observing these conventions, and whether persons observing or breaking them realise or not, the conduct of the executive government in England, except in terms of such conventions, must result in contravention of substantive law.[5] There can be no such inevitable legal consequence in respect of breach of political usages in

states with written constitutions. In these latter cases the legality of these usages, however long standing or invariable they may be, remains patently and inherently precarious. The political usage regarding election of an U. S. President, so stressed by Prof. Banerjee,[6] is certainly no exception to the above proposition. The fate of the usage of a President not seeking re-election more than once, one of the oldest political usages in U.S., was cited by me as one of the illustrations. One such illustration is enough.

It was to show that some of the express provisions of our Constitution cannot be reconciled to a scheme of government of the English type that I referred to Art. 78(c).[7] The terms of such provision are as hereunder :

> "78. It shall be the duty of the Prime Minister—
> (*a*) . . . . . ;
> (*b*) . . . . . ;
> (*c*) if the President so requires, to submit for the consideration of the Council of Ministers any matter on which a decision has been taken by a Minister but which has not been considered by the Council."

It will be seen that the direct contact between individual ministers and the President as contemplated therein is not in any manner restricted or qualified. Such right of access to the King as individual ministers have in England is severely restricted, and is in practice limited to minor departmental matters.[8] There can not therefore be any real analogy between such English practice and the above provision in our Constitution. It should always be borne in mind that this provision is peculiar to our Constitution, and constitutes a conscious departure from other systems, including the English. Prof. Banerjee thinks[9] that the President will not "overstep elementary decencies of his constitutional position (*sic*) . . ." and the individual ministers will not be given to "mean" or "base conduct." That may be so. But the possibility of this provision working otherwise than in a manner desired by us should not be overlooked. In such a contingency Art. 75(3), which provides for collective responsibility of the ministry to the House of the People, is no safeguard at all. In fact, in spite of, or rather, because of this latter provision, if the President takes advantage of Art. 78(c) in the manner indicated, there must be a deadlock. It is not possible in any case to disregard Art. 78(c) even though the mischief apprehended therefrom as aforesaid may be a bare possibility. When we are examining the nature, extent, and limits of the powers of the President under the Constitution we have to test the same more by extreme than by commonplace examples, and relation more to abnormal than to normal situations.

II

I had myself drawn the attention of readers to the fact[10] that the invariability of "advice" hitherto been tendered to the President cannot possibly be insisted on in view of clause 2 of Art. 74 of our Constitution. As Prof. Banerjee had not dealt with this aspect of the matter in his first article no question of "admitting" anything could properly arise. The language of Art. 74(1) is as follows :

> "74.(1) There shall be a Council of Ministers with the Prime Minister at the head to aid and advise the President in the exercise of his functions."

It is on such express language that I reached the following conclusion:

> "*Aid* signifies collaboration, and necessarily includes *advice*. If, therefore, any function of the President under the Constitution has to be exercised at all, it must be done with such aid, unless the Constitution itself provides otherwise, either expressly, *e.g.*, in Article 53(2), or by necessary implication, *e.g.*, Article 75(1) and (4). Exercise by the President of any of his functions under the Constitution without such aid, except as aforesaid, clearly amounts to a violation of the Constitution for which he is liable to be impeached."

Opinions cited by Prof. Banerjee do not advert to the word "aid" at all, and thus miss the point. Excepting for giving the dictionary meaning of the word "aid," and asserting that it has to be taken along with the word "advise" Prof. Banerjee himself says nothing about the implication of the word. Taking it along with "advise" does not mean that no meaning is to be given to it, or that it should be treated as non-existent, redundant, or mere surplusage as Prof. Banerjee apparently treats it. Such a construction has been consistently discouraged even in case of ordinary statutes,[12] not to speak of an express provision in a Constitution. It is difficult to see how the eminent Professor can conclude[13] that "the text of the Article here is not explicit . . ." after he himself has failed to take into consideration the express language of the text.

Prof. Banerjee has posed the following question as underlying "the essential point":

> ". . . is . . . the President *legally bound* under Art. 74(1) of our Constitution to accept the advice of his Council of Ministers in all circumstances?"

I have discussed the position of "advice" in connection elsewhere.[15] But substitute the word "aid" for the word "advice" in the question and the answer

must be in the affirmative. This has been my contention all through.

As will be seen from the extract of my previous article cited herein above, my main contention has always been that non-conformity with Art. 74(1) on the part of the President amounts to a violation of the Constitution for which he can be impeached. Art. 53(3)(b) was referred to in this connection as a provision which may be utilised by Parliament *inter alia* to make a recalcitrant President fall in line without recourse to the drastic remedy of impeachment. To say that my reference to the said provision is the basis of my main argument betrays therefore an entire misconception thereof. Whether such provision was referred to in the debates of the Constituent Assembly, and whether the provision lends itself to other uses as well, and whether a similar provision under the Government of India Act 1935 was not likewise utilised, are clearly irrelevant to the issue whether the actual language of the provision permits its being employed in the manner suggested. The provision reads:

> "53.(1) . . . .
> (2) . . . .
> (3) Nothing in this article shall
> (*a*) . . . . ; . . .
> (*b*) prevent Parliament from conferring by law functions on authorities other than the President."

It is curious that Prof. Banerjee should be so emphatic about the "object" of this particular provision when, according to his statement,[16] there was no reference to it in the debates in the Constituent Assembly.

The repeated references by Prof. Banerjee to opinions of individual members or officers of the Constituent Assembly for the purpose of construing the express language of the Constitution are misleading. These opinions appear to overwhelm Prof. Banerjee as evidenced by his fulsome comments, *e.g.*, "not intended by the authors of our Constitution. . ."[17] "We should not presume to know more about our Constitution than its authors,"[18] "Mr. . . . (an officer) is expected to know more about the true nature of our Constitution than many of us."[19] "As I have said before we should not presume to know more about our Constitution than its authors,"[20] "more authoritative views,"[21] etc. In the construction of a Constitution there is little scope for such superstitious veneration for individuals and their opinions, expressed within the Constituent Assembly or outside.[22] The Constitution is not the work of any individual, but that of the Constituent Assembly as a whole, and unless there is an ambiguity, the actual language used in the Constitution is the acid test, irrespective of considerations of policy,[23] expediency or political exigency,[24] the intention of some of the framers or the possibility of abuse of power[25] and the like. The Constitution speaks for itself, and in the absence of confusion, the words must be taken in their ordinary literal sense. A competent court interprets the provisions of a Constitution according to well-settled canons of interpretation including the one delineated above, and after such interpretation the provisions should be given that "received" meaning.[26] The cryptic observation of Hughes C.J., cited by me, and taken exception to by Prof. Banerjee,[27] was based on these well-known propositions. The judiciary has necessarily the last say in the matter of interpreting a Constitution. We have a recent illustration of the above when Section 14 of the Indian Security Act (Act IV of 1950) was declared[28] void by the Supreme Court of India. Parliament that passed the Act containing the said section, and the executive that was giving effect thereto until declared void as aforesaid, must have thought that the section was valid in law. But the Supreme Court having thought otherwise the said section has ceased to have any effect at all. A useful and reliable exposition of the entire law regarding the construction of a Constitution is to be found in the judgment[29] of P. B. Mukharji J. in the recent *habeas corpus* matters before a Full Bench of the Calcutta High Court. Interested persons, including students and teachers of political science, can profitably turn to the same for instruction and guidance.

IRRIGATION DEVELOPMENT IN INDIA

By S. V. S. RAO, M.A.

Water is good, water indeed is sustenance; so was it said in the ancient Vedas. The value and respect that were bestowed on water by the people then as now is easily understood in a country as ours, where agriculture constitutes the life source of vast numbers of people. For nothing could be more suicidal to the progress of a nation than to leave its land parched and in a state of neglect; yet this was perhaps, to a great degree, true of Indian agriculture, which had ever remained deficit, marked only by its annual variations in distress. The forces that influenced agricultural production were literally beyond the control of the simple peasant, leaving him with little incentive and a lot more of frustration. It is only in recent years, with the food crisis deepening its shadows and rising demographic curve, that there has been a nation-wide awakening to the need of planned utilisation of our water wealth to expand in great measure the produce from Land. We are apparently on the threshold of a new era in agricultural development.

Before attempting to assess the future possibilities in the field of irrigation, it is well to consider briefly the development to date. Irrigation was not unknown in India, for long before the advent of the British, major irrigation works were known to be in existence. According to the Report of the Indian Irrigation Commission, the "Grand Anicut" stretching across the width of the Cauvery river in Madras and known to be the greatest engineering work in the pre-British era was in existence at the close of the second century. Consisting of a solid mass of stones over 1000 ft. in length, 40-60 ft. in breadth and 16-18 ft. in depth, it was a master engineering achievement, which was in operation as late as 1830. The large number of wells and tanks, some of which are still irrigating a few thousand acres in South India as well as the old irrigation channels in the North speak well of the irrigation sense of our early rulers.

However, modern irrigation could be said to have started with the opening of the 'Grand Anicut' across the 'Coleroon' river in the Madras Presidency and West Ganges canal in the North by the two great pioneers in the field, Sir Arthur Cotton and Sir Proby Cautley, who could well be described as modern 'Bhagiraths' for the ordeal they did go through, to make these schemes possible and successful. With such beginnings, irrigation development made steady progress during the latter half of the last century. By the end of the century nearly 43 million acres or about 19.5 per cent of the average area then annually cultivated in British India, *i.e.*, about 222 million acres, were reaping the rich dividends of irrigation. In the same period, the total investment in state irrigation works was of the order of Rs. 40 crores, an investment of no small significance.

At the turn of the century it became necessary to review the development as well as to suggest a programme of long-term extension of irrigation. In this connection the meeting of the Irrigation Commission (1901-1903) was a landmark in the history of Indian irrigation. For their comprehensive study and valuable recommendations they have rarely, if ever, been surpassed. The major works that were launched in the period 1920-35 were largely the result of the Commission's recommendations. Yet it is surprising, however, that the pace of development particularly in the field of state irrigation, in the period following the Commission's Report should be far from inspiring. As for example, while State works enabled extension of irrigation to more than 8 million acres in the 25 years before 1900, they have been developed to serve only about 12 million acres over the succeeding 40 years. Among others, the major factors determining the slow pace were perhaps: (1) The general tendency to avoid major financial commitments particularly in view of the rigid financial principles laid down by the Commission and (2) the absence of forward planning subsequent to the Irrigation Commission. At present the Indian Union has about 49 million acres under irrigation or approximately one-fifth of the net area annually sown. Of this area nearly 26,800,000 acres receive water from State irrigation works. The figures are far from encouraging in the context of our requirements. This is largely due to the partition which might be said to have had disastrous effects on our irrigation development. According to the Planning Commission India has lost to Pakistan nearly half of the total water carried by its canals in undivided India which was approximately 400,000 cusecs. At the same time Pakistan has retained as her share more than half of the whole irrigated area of 33 million acres from Government works.

It is little comfort to learn that India leads the world in irrigation, when we realise that only 75 million acre ft. out of a total surface flow of 1353 m.a.ft. *i.e.*, approximately 5.6 per cent are being currently utilized for irrigation and power development. Contrast this with the river Nile, where it has been estimated that nearly 46 per cent of the total run-off have been diverted into irrigation channels. One can scarcely estimate at this stage the extent of increase in wealth that would be made possible by full utilisation of our vast potential that is at present running waste or periodically flooding the countryside involving great damage to life and property. However the following illustration might help in assessing, somewhat approximately, the contribution that irrigation has been making to the agricultural income of India. In the year 1938-39, the value of crops irrigated amounted to Rs. 109 crores. It has been estimated

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

that at present prices the value would be approximately of the order of Rs. 500 crores,* which is about the same as the total capital at present invested (construction cost) in these works. On this assumption it is evident that utilisation of 1 per cent of the total run-off will generate income in crops alone, of the value of Rs. 100 crores, not to mention the wide-spread benefits to the community as increased trade, employment and business opportunities.

It is precisely this realisation of the usefulness of irrigation that is significantly evident in the many river valley and other irrigation schemes sponsored by various Governments in recent years. There are at present about 257 major and minor schemes under various stages of construction and investigation and estimated to cost well over Rs. 1,900 crores. Among these are 135 schemes costing between themselves Rs. 590 crores which are well under way to completion. These schemes are expected to irrigate about 13 million acres within the next ten years thus adding to the present stock of food by about 4.3 million tons. Besides nearly 2 million K.W. of electrical energy will be made available for industrial expansion and rural electrification schemes. Included in this category are the following 12 major projects which hold out great promise of increasing regional wealth in manifold directions. The following table shows estimated expenditure involved as well as corresponding irrigation and power benefits of these schemes.

		Benefits	
Project (State)	Total est. cost (Rs. lakhs)	Irrigation 1,000 acres	Power 1,000 K.W.
Damodar (Bengal & Bihar)	67,90	9,00	3,73
Kakarpara (Bombay)	12,16	66	24
Tungabhadra (Madras & Hyderabad)	60,79	9,91	1,22
Hirakud (Orissa)	47,81	19,95	3,25
Bhakra & Nangal (East Punjab)	132,91	30,00	4,00
Harike (East Punjab)	13,80	Not available	
Sarda Power House (U.P.)	11,21	Nil	41
Mor (West Bengal)	15,50	6,00	4
Chambal (Madhyabharat & Rajasthan)	28,00	7,00	1,50
Lakavalli (Mysore)	18,00	1,80	13
Electricity show (Madhya Pradesh)	12,63	Nil	Nil
Machkund (Madras & Orissa)	17,97	Nil	1,03
	438,68	84,32	15,55

In addition to the above, there are under active investigation schemes numbering about 122, and some of these may likely be put off in view of the present inadequate finances. Together these two categories of schemes will extend irrigation to an area of over 42,000,000 acres and so make possible additional food production of the order of 14 million tons.

Evidently the financial provisions of these schemes present a hard problem, involving careful planning and technique of execution. In view of this, the Planning Commission have recently formulated a 15-year plan for Irrigation, whereby the schemes are broken up into different categories on the basis of cost and present stage of investigation and overall expenditure is spread over a period of 15 years. The annual demand on the Public Exchequer thus would amount to Rs. 109 crores, after making due allowances for execution of the schemes by stages. It is not easy to reckon with this very sizeable outlay in view of our present limited internal finances but in this more than in any other sphere, the social dividends as well as returns in a more limited sense of the term, are expected to balance well over costs. Even on narrow financial considerations the past investments have earned attractive returns. For instance, in 1945-46 the net return after deducting necessary interest charges amounted to 4 per cent of the capital outlay, *i.e.*, more than the gross return of 2.4 per cent provided by the new railway convention. In the Provinces the return was higher varying from 3 per cent in Madras to 18 per cent in Bombay excluding Punjab which had always enjoyed exceptional returns. Besides, huge amounts are drained away every year by way of food imports and subsidies and any one of the major projects, when completed, will make a tremendous advance on our present position. There is no denying that the schemes present a just case both in the context of national economy as well as on more conservative considerations.

It has already been observed that a vital consideration underlying many of the major schemes is unified development of the basin, which is untenable without appropriate readjustments in policy and practice. It is irrelevant to suggest comparisons with past projects for the yardstick then has been different. Indeed such ventures as co-ordinated development of major rivers and river valleys have been practically unknown in the past, for want of agreement between various provinces and other administrations. A peep into the history of Tungabhadra Project in the south very well illustrates the endless and futile controversy between the Governments of Madras and Hyderabad, that had to be overcome before the project could be finally launched. A Central authority with statutory powers to prescribe lines of co-ordinated development of major projects appears necessary in the interests of balanced development. Indeed the drafters of our constitution have visualized such a possibility as is manifest in Article 262 which authorizes the Union Parliament to legislate on matters of inter-State rivers

* *Eastern Economist*, Vol. XV, No. 12, 1950.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and river valleys—their regulation and development. It is needless to emphasize that the future pattern of development would be largely conditioned by measures arising out of this constitutional provision. As it is, a Bill to provide for centralized planning in the field of river valley schemes is on the way to the Parliament, where it is expected to be introduced early. The proposed Bill is an attempt to bring under Cen control the various inter-State aspects of the schemes enabling optimum development of natural resources. It is as yet premature to guess shape of things to come but in view of the pres trends we might as well hope for a bright future new life to our neglected lands.

VILLAGE PANCHAYATS IN THE INDIAN CONSTITUTION·

By Principal S. N. AGARWAL

In December, 1947 when the new Constitution of India was being drafted, I had drawn the attention of Gandhiji to the fact that there was, till then, no mention of village panchayats in the future administrative set-up as visualised in the Draft Constitution. Commenting on this point in the *Harijan* (December 21, 1947) Gandhiji observed :

> "It is certainly an omission calling for immediate attention if our independence is to reflect the people's voice. The greater the power of the panchayats, the better for the people. Moreover, panchayats to be effective and efficient, the level of people's education has to be considerably raised. I do not conceive the increase in the power of the people in military, but in moral terms."

Several members of the Constituent Assembly took note of these observations of Mahatma Gandhi and pressed for the provision of village panchayats in the new Constitution. As a result of such discussion, the following directive was also included in Part IV of the Constitution of India :

> "The State shall take steps to organise village panchayats and endow them with such powers and authority as may be necessary to enable them to function as units of self-government."

This directive is surely to be welcomed. But much would naturally depend on the way it is implemented. If the directive is not to remain a pious wish and a paper-resolution, the Government of India should appoint a Commission at an early date to report on a systematic plan of panchayat organisation throughout the country. The Commission should carefully study the working of village panchayats as they exist today in different parts of the country and recommend a suitable scheme for adoption by the State governments. At present several State governments have passed Panchayat or Janapada Acts. But their working cannot be regarded as satisfactory. The Commission should make detailed recommendations with a view to achieving uniformity in basic principles of decentralised democracy and self-government.

One of the main reasons why the village panchayats under the existing conditions have not been able to achieve good results is that the ancient Gram panchayats were founded on the principle of "composite" democracy whereas the modern parliamentary government is based on democracy on party lines. The working of modern Western democracy presupposes the existence of well-knit political parties and a party which captures the majority of seats in Parliament rules the country. India has also copied the same type of democracy under the new Constitution. But this kind of party-democracy runs counter to the genius of village panchayats that existed and flourished in India for centuries. In our country, the panchayats were regarded as the very representatives of God because they represented all the different elements of society. It is true that in some parts of India, the panchayats gradually degenerated into cliques of particular castes or sects. But the fact remains that a majority of the Gram panchayats in ancient India represented the elders of various castes and sects inhabiting the villages. They were, thus, like the nature of coalition governments for the village communities. In the absence of such composite village cabinets, it is impossible to expect the modern panchayats to fulfil the important functions that they are supposed to perform. The organisation of political parties for the Union Parliament and the State Assemblies cuts at the very root of the panchayat system and results in a host of undesirable consequences. This important aspect should be carefully considered by the Commission which may be set up by the President or the Government of India in future.

Mahatma Gandhi was always of the definite view that there should be the widest decentralisation of economic and political power for the real welfare of mankind. Many Western political thinkers like Prof. Laski and Prof. Cole are of the same view. Modern democracy easily degenerates into "Mobocracy" and Totalitarianism. Decentralised democracy is, therefore, the hope of humanity. In India, the toiling millions will never be able to feel the glow of freedom if they have to look to New Delhi for everything. Village self-government along healthy lines would enable them into wonderful constructive activities without which our Swaraj would remain a vacant dream. I am, therefore, confident that the directive relating to village panchayats in the Indian Constitution would receive the most serious consideration of both the Government and the people.

INDIAN POLITICAL SCIENCE CONFERENCE
Calcutta Session, 1950

By MANICK C. DAS

In a purely academic atmosphere in the Senate Hall of the University of Calcutta the Thirteenth Session of the Indian Political Science Conference was inaugurated by H.E. Dr. Kailash Nath Katju, Governor of West Bengal on the 26th of December, 1950 in the presence of Shri Ram Sharma of Sholapur College and distinguished delegates who had come from different parts of India representing different universities and also distinguished citizens of the city of Calcutta.

The Chairman of the Reception Committee Mr. Justice S. N. Banerjee, Vice-Chancellor, University of Calcutta offered a hearty and cordial welcome to the delegates and invitees and in course of his address he said, "Many complex questions have arisen following the attainment of freedom by India.....There is the vexed question, particularly in India here, namely, how far political democracy can succeed unless it is based on both social and economic democracy" and he hoped that the deliberations in the conference would help the citizens of India greatly. Further, he observed that "in order to solve these difficult problems a far-sighted policy is necessary and a thorough grasp of the philosophy of politics. But I would respectfully draw your attention that the amelioration of the condition of mankind and the increase of human happiness ought to be the leading objects of every political institution, and the aim of every individual according to the measure of his power, in the situation he occupies. I would also ask them to remember that when connected with morality and the character and interest of a country, politics is a subject second only to religion in importance. The deliberations will not be complete if the moral side of the question is lost sight of."

Then His Excellency Dr. Katju in inaugurating the session referred to India's great contribution to political thought of the world which had been a system of village republics and that ancient feature had been preserved in the present Constitution.

Shri Ram Sharma then took the chair and delivered his address on the Indian political scene and he observed that people could talk today of the Indian Constitution in 1950 instead of the Constitution of India. He after discussing the salient features of the Indian Constitution came to the Indian Cabinet's real working and said, "The Union Cabinet during the year remained an interesting political phenomenon. It began as a Congress body in principle but a coalition in personnel." He observed that the main difficulty with the advisory bodies was that they lacked in expert knoledge whose judgement the lay cabinet would be willing to follow and again our politicians further created trouble as they would pose to know all that was to be known about all subjects on earth. Referring to the dissatisfaction of the people he characteristically remarked that 'it is due to the fact that the lines of demarcation between the party, the government and the administrative services continue to be blurred' and he was afraid that 'when the success of democratic government depends very much upon the existence of an honest, impartial and fearless set of public servants they were placed at the disposal of party bosses.' And finally Shri Sharma said that "It is, I believe, the duty of those of us who are engaged in the task of teaching or studying political philosophy and political institutions to educate our masters, the people, politically." After a vote of thanks to the Chair the proceedings came to a successful end.

An important and rather interesting part of the conference started just at 8-30 on the morning of December 27, 1950. In the Senate Hall many distinguished teachers of Political Science read their learned papers on the various aspects of the Constitution of India and it was followed by a lively discussion by eminent teachers attending the conference. Dr. B. M. Sharma of Lucknow University read a paper on the powers of the President of the Republic of India. Mr. M. Banerjee of Sambalpur College dealt with the two schools of opinion—constitutional or realistic view and technical or juristic view—with regard to the same question. Mr. V. N. Srivastava of Kanpur College showed that the principles adopted in the Union Executive are both from the Parliamentary system of Government and Presidential form of Government. Mr. Parthasarathy of Madras University observed in his paper that French example has unconciously been incorporated in the structure of the Indian Titular executive.

Talks on Fundamental Rights were also quite impressive. Prof. D. N. Banerjee of the University of Calcutta tried to show how far criticisms like "In fact, what is given by one right hand seems to be taken away by three or four or five left hands; and therefore the Article (19) is nugatory" are really justifiable and he observed that the difference between the Constitution of India and the Constitution of the U.S. so far as fundamental rights are concerned is really 'one of form and not of substance.' Then Prof. J. P. Suda of Meerut College said that the inclusion of Fundamental Rights is a praiseworthy feature of our constitution. The President Shri Ram Sharma was unable to do justice to all the speakers on the papers read

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

on the Fundamental Rights in the Constitution of India as they were many in number. Sri Atul Gupta, a renowned Advocate of the Calcutta High Court, remarked that the Indian Constitution was inferior to the Constitution of the U.S. so far as the chapter on Fundamental Rights was concerned and they were granted to the people of India only to take them away by saving clauses. Then impressive speeches were made by Prof. S. C. Das of Ravenshaw College and Mr. Renuka Ray and others. Other aspects of the Constitution were discussed by learned teachers in the second sitting where Dr. A. K. Ghosal and Prof. N. C. Bhattacharya stood prominently for their dignified speeches.

The deliberations of the 29th December included two important subjects : Twentieth Century Political Thought and Social Legislation in India. Prof. P. R. Pakrisankar of Madras University said in his paper that the absolute value of dignity of human personality, the unmolested and unfettered enjoyment of fundamental human rights as human happiness could be realised only when liberal was accepted as a political philosophy that embraced these things and therefore practised by all. The conference did not deny that a new social order was struggling grimly to be born.

Credit goes to the Reception Committee and to the student-volunteers with their Chief, Prof. Subin Mukherjee for the successful termination of the Conference. And for this the contribution of Prof. D. Banerjee is very large and quite significant. A great and sincere worker he harnessed, as the Local Secretary of the Conference, his unflagging enthusiasm and untiring efforts in attending to all the details of the programme and arrangement both at the conference table and also outside it in the matter of providing suitable accommodation and comforts to the distinguished delegates and invitees in the city.

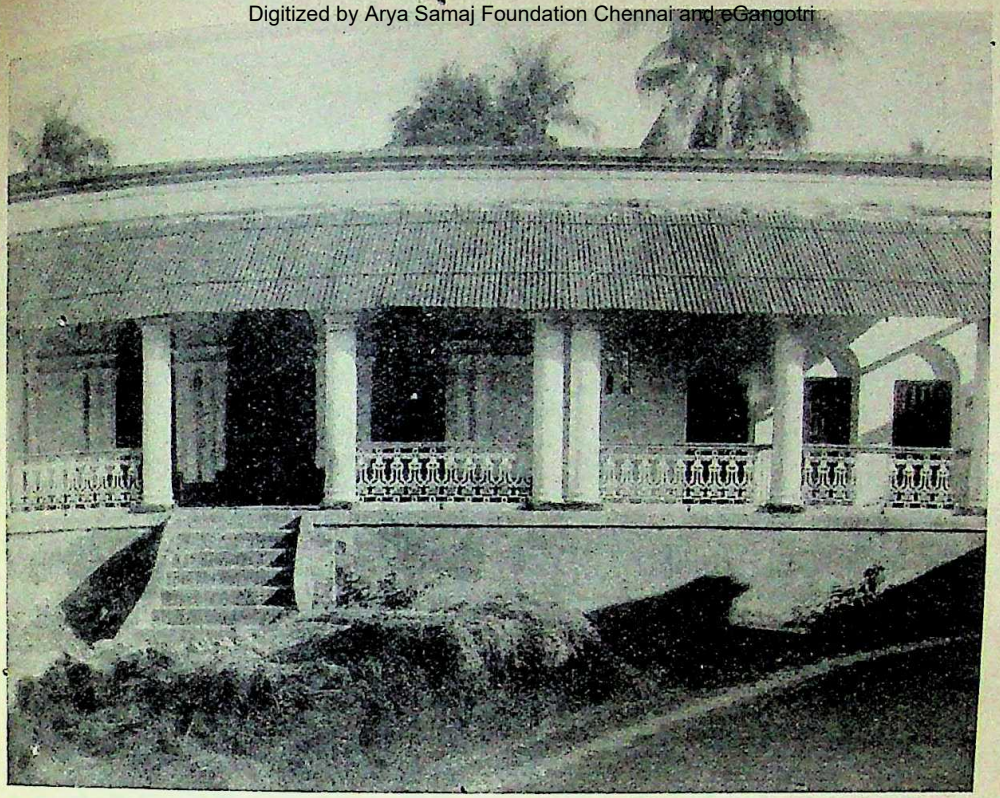
ASSAM EARTHQUAKE RELIEF

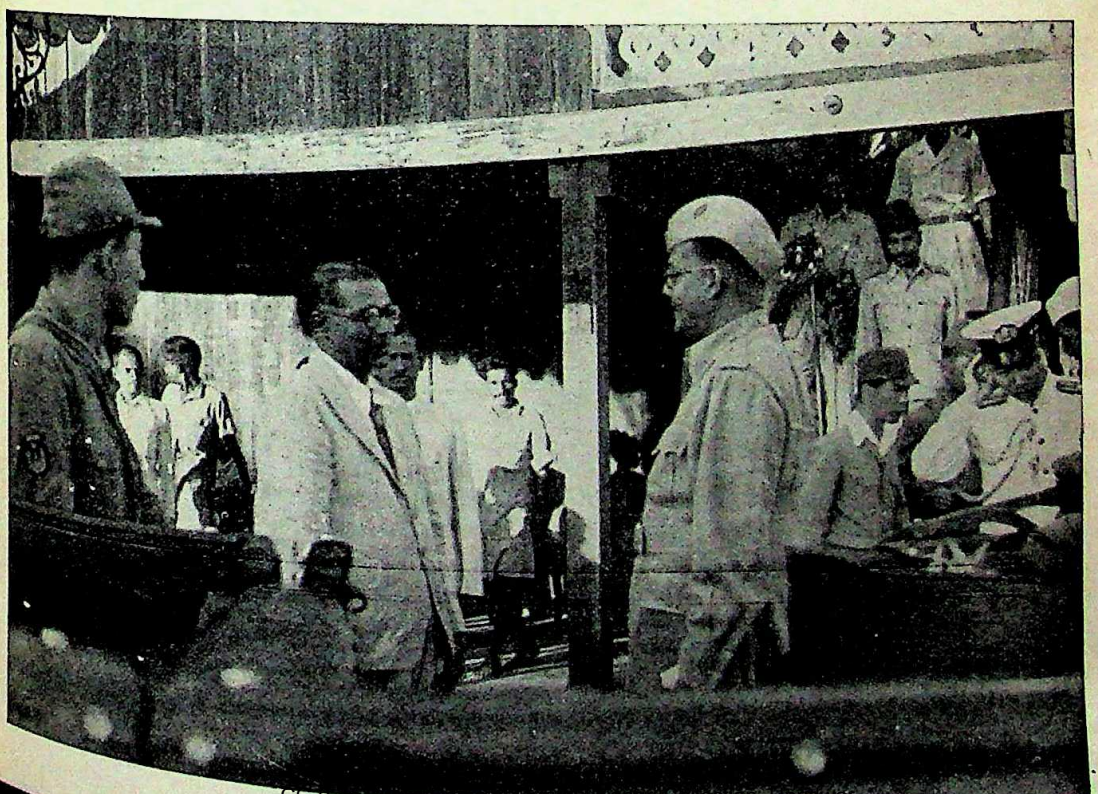
Extreme North-East Frontier

By DAHYABHAI NAIK



Having been deputed by the Servants of India Society, Poona, to be in charge of the Relief Work undertaken by H. E. the Governor of Assam's Fund, I came to Assam in the third week of September, 1950. Ever since then, I have been the Joint Secretary of the Fund and have been visiting off and on the earthquake-affected parts situated at the N.-E. end of the province of Assam.

On the 14th of December, 1950, I returned from my third extensive tour in the earthquake-affected areas of Sadiya plains and Abor Hills plain area and Pasighat districts. I intended to go to Pasighat during my first tour in the last week of September and first week of October, but as the Bonanza plane which was to carry me and one Mr. Hakenson of UNESCO did not arrive at Sadiya on the scheduled date I had to give up the idea and had to return to Shillong for the first meeting of H. E. The Governor's Earthquake Relief Fund Committee held on the 11th October.



Pasighat is the headquarters town of the Abor Hills District which has an area of about 9000 sq. miles and a population of about three lacs mainly of the Abor tribe. Abors are found in the hills and Miris and others are in the plains. Pasighat is situated on the eastern bank of the river Dihang which is called the Sang-Po in Tibet and the Brahmaputra in India, which is really that part of the great river which stretches from Kobo where the rivers Luhit, Dihang and Lali meet it to its mouth. For going to Pasighat one has to cross the Brahmaputra at Rangdoi on the south bank and to go to Kobo on the other, i.e. north bank. I had expressed my desire to visit Pasighat during this tour to H. E. the Governor who had advised me not to take the risk of crossing the Brahmaputra and to contact the Political Officer by Wireless and to instruct him about distribution arrangements to be made in Abor Hills and about taking other ameliorative measures for the Abors. My enthusiasm was a bit damped by his advice. I and my companion Shri Rao wanted to take a chance and a little risk also. After visiting Dibrugarh, Sadiya, Teju and Denning we reached Saikhwa Ghat on the morning of 9th December and went to Rangdoi Ghat, a distance of about 12 miles. Major part of the road leading to Rangdoi Ghat has subsided on account of the earthquake by about 5 to 7 feet, and the road and the surrounding Forest Reserve remained under the flood-water of river Luhit up to the third week of November. The subsidence of the road and the surrounding area has made one wooden bridge hang over the road about 7 feet high. Big fissures in the land are visible even today. When the flood water receded the road was repaired by the Military and has been made motorable for the time being. A country boat with 22-horse-power engine fitted in it was able to cross the river for the first time on the 6th December between Rangdoi and Kobo and carry the first mail-bags after 16th August, 1950. After 6th December, 1950, it is regularly plying between Rangdoi and Kobo. Even then it is a little risky as the velocity of water is 10 to 12 miles

an hour and the high waves and big eddies formed by continuously moving sand in the river-bed make rowing difficult. The people of Abor Hills District were completely cut off from the rest of the world from 15th August to 6th December, a period of 42 days. Wireless communication was the only contact with the outer world but it could not be used by anyone except the Government officers and that too for official work. Rice, salt and tea, the most essential articles of food were being supplied by being dropped from air but it was discontinued from the 10th November as the Dakota used for the purpose was withdrawn by the Central Government who administers this region with H. E. the Governor of Assam as Agent. The suffering and sorry plight of the people need not be described as they can be well-imagined from the fact that the people were wholly cut off from the world and there was absolutely no communication. The Political Officer of Pasighat received his first mail-bags on the 6th December, 1950, containing all the post despatched from 15th August. The huge landslides in the hills (one of them, it is said, was seven miles long) completely destroyed narrow bridle-paths in the mountains through which the Abors slowly trod their ways to Pasighat for purchase of salt, rice, yarn, etc., making the whole area inaccessible for about two months. Food was dropped at certain marked-out points, mainly outposts of Assam Rifles, from where it was distributed to the people. The Hill people slowly repaired the bridle-path and have established contact with Pasighat. To walk even on this repaired track is dangerous; even the skilled Abors have to go on all fours where the track is very narrow and steep.

Articles of relief are being dumped at Dibrugarh and Saikhwa Ghat from where they are being carried to Pasighat from the 6th December. An amount of Rs. 11 lakhs has been provided for relief to the Abors and Mishmis of the Abor Hills District and Sadiya Frontier District. It should be seen that adequate relief is given to these people whom not only man has forsaken but towards whom nature also has been unkind. Huge and terrible landslides have buried for ever many Abor and Mishmi villages leaving no signs of their former existence. The toll of human lives which earthquake took in these hills must be very heavy. It is presumed that it may be between two to three thousands. True figures will never be available as it is impossible to collect them. The official record of the toll of human lives is near about one thousand and that is not complete so far. Pasighat is on the bank of the river Dihang where it debouches forcefully on the plains. The floods due to burst of temporary dams caused by landslides have washed away a fairly large portion of Pasighat region. But even then it has maintained its beauty. It is a very beautiful place in the valley at the foothills of the Himalayas. The beauty has left a lasting impression on my mind.

When I reached Pasighat crossing I felt very happy and felt that a burden has been lifted from my mind. I was able to know the situation first-hand and to study it on the spot. I contacted some of the Abors who had come to Pasighat for purchase of some articles of food and yarn. The Political Officer, Shri Bhuyan and his wife who is a graduate were extremely kind to us and treated us very hospitably.

The Abors are a nice people. No doubt, some of them are addicted to opium, but it is a legacy of the former rule. But they are much less addicted to it than the Mishmis. They seemed to me more intelligent and wide-awake than the Mishmis. I saw among them a desire for education. There are about 25 primary schools in the hills run by the Education Department, some of these have a number of students more than 100 each. These schools have also suffered much, their huts have been demolished by earthquake. Many of them have been temporarily closed down.

The Abor woman never sits idle. Even sitting in the bazar of Pasighat with some roots and oranges for sale or treading her way to her village which may be at a distance of three to seven days track, *i.e.*, thirty to seventy miles, she will be spinning cotton on a bamboo-*takli* and in her home weaving articles having very beautiful designs. When we see an Abor woman weaving articles of variegated colours selected most artistically who can dare say that she is uncivilised?

I have submitted the following three schemes of permanent nature to be financed in the beginning from the Relief Fund for the sanction of Shri Jairamdasji:

(1) Orphanage for 25 orphans of Mishmis at Sadiya to be under the control of Mrs. Miri, Education Inspector for N.-E. F. Agency.

(2) Orphanage for 25 orphans of Abors at Pasighat to be under the control of P.O.

(3) Widows' and Orphans' home at Pathalipam in North Lakhimpur Sub-division for Miris. The original scheme was submitted by Shrimati Amalprabha Das but it has been revised by me in the light of my experience.

I hope these schemes will be sanctioned at least for one year. The future will take care of itself.

I was invited by leading Abors of one village near Sadiya and near a fire-side in a house of their *Gaonbura* (Head Man) each of them related to me their miseries and grievances. I was much impressed with their free expression which I think is due to the training they receive in their tribal councils which settle disputes amongst themselves wherein everybody should express his opinion. I remembered my Bhils of Gujarat, how shy they are! When will they be vocal? I remembered many such nights which I passed near the fire-side in the huts of Bhils. I told them that now that the attention of the Government and veteran social workers like Thakkar Bapa and others is concentrated on tribes residing in the N.-E. F. Agency, their future is bright. They felt very pleased. They gave me a

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

present of a beautiful bag of variegated colours woven by their women-folk. This will be a treasure to me.

The Miris of the plains are being assimilated into the social life of the people. Some of the young Miri boys are in Government service and some are receiving college education. Education is spreading among them and they will come in line with others within a decade or so. But Herculean efforts will have to be made to educate the Abors, Mishmis and Nagas. No doubt some of the Nagas are found in Assam Rifles enjoying high position but the general level of the whole tribe needs to be lifted.

Yesterday, the 15th December was a very sad I passed the whole day in sorrow and in a depr mood. But we have to face such calamities and pare ourselves to bear them with fortitude and cou as Sardar has taught us. That is the homage we give to the departed great soul who made India unified country. We can repay the debt which we to him by emulating his example and carrying on duties with redoubled vigour and courage. May rest in peace!

Shillong, 16.12.50.

———:O:———

AN INDIAN HISTORY OF INDIA

By Dr. U. N. GHOSHAL, M.A., Ph.D.

It is a welcome sign of the times indicating the stirrings of a new national consciousness that the long and varied history of our motherland is attracting more and more the attention of the best of her sons since the historical date of attainment of her independence. Considering the striking differences of language, religion and cultural standards separating large masses of our countrymen, it is but natural that this history should be studied from somewhat different angles by different authors. What is however essential for the Indian historian, to whatever shade of religious or other beliefs he may belong, is to present his narrative with full knowledge of his subject and in a spirit of proper understanding and strict impartiality. Where these essential qualifications are not present in a sufficient measure, the result is bound to be disappointing in spite of the author's shrewdness of judgment of men and events. It may prove even to be a source of positive mischief when the author admittedly aims at enlightening a foreign audience on his subject.

Thoughts like the above are suggested by a perusal of the undermentioned work* written by a veteran educationist and administrator of South India belonging to the Catholic Church, who is adorning at present the high office of Vice-Chancellor of the Annamalai University. Defining the aim of his work in his Foreword, he says that instead of attempting a chronological history he has sought to emphasise the prevailing tendencies of its successive periods so as "to arouse general interest outside India" in the fortunes of the Indian people. But the argument justifying this treatment, *viz.*, that a chronological history is not possible till modern times, unconsciously repeats the century-old verdict of the historian Elphinstone it altogether ignores the vast strides which have taken in the way of reconstruction of India's dyn and royal annals since that time. Writing in this text, the author sums up India's history as that of people whose experience has been unlike that of other" and who have "suffered as no other pe from burdens imposed on her (*sic*) by her children as well as by strangers." And he con with an appeal for "admiration and sympathy o more fortunate fellows among the nations of world" for her efforts to shake off these burdens it must be remembered that among these fortunate" nations of Europe are those who the last 500 years of their history have suffered unspeakable horrors imposed by their own childr well as by strangers as the Elizabethan and wellian wars of conquest and extermination follow the long night of alien misrule under legal forms Peasants' Revolts and the civil wars between the ists and the Lancastrians and between the Cav and the Roundheads, the Hundred Years' War Jacquerie and the Reign of Terror, the 30 Years and its aftermath, the misrule of the Duke of and his lieutenants, the Czarist misrule, the roms and the civil wars between the Bolsh and their opponents, not to speak of the centu serfdom, of feudal anarchy and tyranny, of eccle cal exactions, of practices like witch-burning and savage persecutions by the Inquisition and its o parts in Protestant lands. To these have to be the evils of conquest by powerful Asiatic pe the Turks and the Mongols who kept large sec south-eastern and eastern Europe under their ho centuries. It would thus appear that "the selecti and sympathy" rightly felt for peoples strug

* *India from the Dawn* (New aspects of an old story): By Mariadas Rathnaswamy. Science and Culture Series. The Bruce Publishing Company, Milwaukee. 1949. Pp. 205. Price 3 dollars.

Digitized by Arya Samaj Foundation Chennai and eGangotri

shake off their burdens need not, and must not, be a one-sided affair. To put it in another way, the Indian historian has no need to go round the world with a begging-bowl asking for the world's dole of sympathy for the unequalled sufferings of his countrymen and of admiration for their efforts to overcome the same. On the contrary, he can rightfully claim the world's sympathetic understanding of the lights and shades of his picture on a basis of absolute equality.

The work consists of three Parts bearing the titles: "Hindu Beginnings", "The Moslem Interlude," and "Europe Enters into India." The title of the first part strikes one as singularly inappropriate since it deals on the author's own showing with a period of more than 4,000 years, of which the dim beginnings go back to times which, by no stretch of the imagination, can be called Hindu. Apart from its unfortunate title, the first part suffers from a lamentable want of proportion as it covers nearly the same space as each of the two succeeding parts. It is above all in its contents, as we shall show presently, that it is subject to serious shortcomings.

On pp. 4-6 the author, while describing the prehistoric civilisation of the Indus Valley, points out a number of its links with "Dravidian India." While the case for this resemblance is admittedly weak, the author would have done well to notice the more definite grounds of similarity that have been traced, for example, between the pictographs of the Indus Valley seals and the symbols of the punch-marked coins. In any case, the author's contention that the Indus people "are only an episode in Indian history" cannot be accepted by any serious student of history. In his account of the civilisation of the Aryans (p. 9 *f*), the author declares that "their political and social organisations belong to the pastoral stage" and in short "was patriarchal," while their religion consisted in "worship of the forces of nature." These facile generalisations are not true even of the Aryans of the Rig-vedic period, and they are wholly inapplicable to the more advanced culture of the *Yajus-samhitas* and the *Brahmanas*. Of Buddhism the author says (p. 13) that it challenged the popular polytheism and the hereditary priesthood of the Brahmanas. What Buddhism actually did was to declare the gods equally with mortals to be subject to the law of *karma* and to proclaim the comparative worthlessness of Vedic ritualism. The author's account of political conditions in the Lower Ganges basin (pp. 14-15) is wholly inadequate and in part inaccurate. Facts of history do not warrant the verdict that the Aryans "left the land to the tyranny of its flora and fauna," and that "only one arm of the Ganges, the Bhagirati (*sic*), was held to be holy." While the author is strangely silent about the powerful dynasties of the Palas and the Senas in Bengal and the Varmans in Assam, he makes the astounding statement that what it was admirably suited to be," he overlooks the "only one kingdom and one city, that of Gaur, is memorable in the history of Aryan Bengal."

Describing "the Tamil and Pandya" (*sic*) kingdoms the author (p. 16 *f*) commits himself to a number of rash generalisations. Thus he says that "the Tamils were superior in civilisation to the contemporary Aryans" and again that "from the earliest times they had traded with Arabia, Egypt and Rome (*sic*) in the West, and with Malay and China (*sic*) on the East." It is difficult to understand why he fixes the greatest period of the Cholas in the time of the mythical Karikala, while no mention is made of the overseas campaigns of Rajendra Chola who is passed over in complete silence. His view that "the Pandavas of the Mahabharata were the Dravidian founders of the Pandya kingdom" can only be regarded as a historical curiosity. In his review of the peoples of the west coast (p. 19 *f*) the author is on good ground when he refers to the mixed Aryan and Dravidian origins of the people of Maharashtra. But he falls into a historical solecism when he speaks of "the Sanskrit language" of the "Marhattas" and mentions the Kanarese as an Aryan people of Sanskrit speech. The same inaccuracy characterises his inclusion of the Hoysalas and the Kadambas among the ruling dynasties of Maharashtra. The author's claim that "India came into commercial and political contact with the world outside Asia" through Malabar (p. 23) ignores the tremendous importance of the *role* played by the Indus basin in the times of Alexander and the Bactrian and Indo-Greek kings.

While describing the *role* of the Deccan and South India in India's ancient history (p. 23 *f*) the author makes some unfortunate statements. "Aryan influence," he says, "penetrated as far as the valleys of the Mahanadi, the Godavari and the Krishna on the East and the Narmada, the Tapti and the Bhima on the West," beyond which lay "the darkness of *mlechchha*-land." But apart from the strange reference to the Mahanadi as a river of the Deccan and South India, it is an undoubted fact that the valleys of the Kaveri and the Vaigai likewise felt the impact of Aryan influence, while the distinctively aboriginal belt was confined to a narrow, inland area. In the result the author's strange verdict that "a long night descended upon the Dravidians of the Dakshinaprastha (*sic*) till light shown [*read* shone] upon them again from the West in modern times" (p. 24) reads more like a certain type of Christian missionary propaganda than sober history. The contention that the South "gives India a place in the history of the world" altogether ignores the importance of the great land-routes connecting the north with western lands from early times. The author's account of the essential geographical unity of the country (pp. 25-26) is a sound statement of facts. But when he proceeds to lament that "this country, destined by nature to be one, has throughout refused to become

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

essential unity in diversity of its peoples and cultures which has not escaped the notice even of observant foreign historians.

On p. 27 *f*, the author, after a cheap gibe at "the patriotic Indian historian" attempting to rebuild the political history of his country after the fashion of other lands, boldly states that not only India's historical documents but also the facts of her history were also few. Now it will be news to the author to learn that long before "the patriotic Indian historian," to quote his amazing words, "snatched from his British predecessor the right to narrate the history of his country," this last was reconstructed in essential outlines by the labours of generations of European scholars beginning with the illustrious Sir William Jones, the discoverer of the identity of Sandrocottos with Chandragupta Maurya. It is not under the urge of a sham patriotism but strictly on scientific lines that the best of modern Indian historians have been seeking with the advance of knowledge to put the coping-stone upon the magnificent work of their "British" and other European "predecessors." And no one has accused them, till the author appeared on the scene, of experimenting in a spirit of childish vanity "to make bricks without straw." While on this subject the author commits himself to a strange inconsistency: for after proving to his own satisfaction that the historical documents were "very few," he admits the existence of "the large corpus of inscriptions on rocks and temple-walls" (Why not also on copper-plates?), not to speak of "the chronicles, the Puranas and other documents." If the author had cared to look into these sources, he would have found in them not "a monotonous succession of kings, their births or their deaths or their era, their long and legendary history," etc., but a mine of authentic and valuable data bearing on contemporary religion, social life, economic conditions and administration. He would have likewise found that these kings instead of "strutting on the stage of history and then disappearing leaving not a rack" left behind institutions and practices which continued to operate even under succeeding dynasties, witness the general type of bureaucratic administration almost with the same nomenclature prevailing in Northern India at least from the time of the Imperial Guptas onwards. To compare Indian attempts at Imperial expansion with "the waves of the surf that beat on the Indian coast, one or two occasionally rising higher than the rest," but always being thrown back upon themselves (p. 35), is to indulge in a misreading of Indian history. The fact is that the Imperial idea instead of being represented by examples "few and far between," as the author thinks, was ever present in the minds of ambitious rulers, though it did not always assume the violent form of uprooting existing dynasties and paving the way for "a country-wide sovereignty." How often the idea was realised in practice is proved by the author's own list of Indian empires which is far from being exhaustive, as it does not include, for instance, the dominion of the Gurjara-Pratiharas of Kanauj. The author himself [illegible] proof of the excellent organisation of one of [illegible] empires, *viz.*, that of the Mauryas, in the fact that [illegible] central [*read* local] government was organised [illegible] administrative boards" and that "Kautilya's *Arthas*[illegible] shows a detailed system of administration bey[illegible] great activity on the part of Government," though [illegible] lamentable inconsistency, he declares elsewhere (p. [illegible] that "the statements of Kautilya in regard to [illegible] organised administration are denied by the facts [illegible] history."

After deducing from his own interpretation of [illegible] history of Indian empires, the corollary of "a perp[illegible] political frustration" in ancient India, the author (p. [illegible] *f*) proceeds to discover the causes of this phenome[illegible] The first of these causes, according to him, was [illegible] that the idea of the State did not fill any large [illegible] in ancient Indian thought and life, the vacuum [illegible] filled by society. Proof of this astonishing statemen[illegible] sought to be found in the fact that "the epics, [illegible] dramas and the fables refer only to the most elemen[illegible] political matters," that the chronicles and the numer[illegible] inscriptions narrate nothing but "the waging of wars, [illegible] the making of conquests, the founding of temples, [illegible] endowments of Brahmins, purely administrative [illegible] etc., that Kautilya's *Arthasastra* which admittedly [illegible] with a well-organised system of administration is "[illegible] like a didactic manual of administration" that [illegible] actual description of the same. Now when [illegible] is remembered that India in pre-partition days was [illegible] in size to all Europe without Russia, it would [illegible] by the author's line of reasoning, that the succes[illegible] failures of Charles V, Louis XIV, Napoleon and W[illegible] II to build "a lasting edifice of countrywide sovereig[illegible] was convincing evidence of "a perpetual political [illegible] tration" arising from a very imperfect developme[illegible] the idea of the State in Europe. This idea must [illegible] been altogether absent for centuries in the case of [illegible] and Germany, which, though meant by Nature to [illegible] one, attained political unity only after the middle [illegible] the 19th century. When the author confidently de[illegible] the absence of the State idea even in ancient In[illegible] thought, he forgets that kingship is again and again [illegible] clared in our literature to be the essential institu[illegible] not only for promoting the whole life of the pe[illegible] but even for ensuring their bare existence. Again, [illegible] blissfully ignorant of the various classifications of [illegible] State-systems and types of diplomacy and foreign [illegible] known to Indian literature onwards from the time [illegible] the *Arthasastra*. As to the epics and the fables, lessons [illegible] "the organisation of government, the relations bet[illegible] the centre and circumference, the impact of Govern[illegible] upon peoples" and the like, instead of being practic[illegible] unknown to the Mahabharata, are widely scatte[illegible] through the same, while they form the theme of [illegible] Pañcatantra and at least of a few of the *Jatakas*. A[illegible]

discourses on statecraft form a regular feature of the Sanskrit Kavya literature from the time of Asvaghosha to that of Magha. As to the chronicles and inscriptions, the author's strange verdict is belied, *e.g.*, by the valuable side-lights on almost every aspect of life and culture in ancient Kashmir that is found in Kalhana's *Raja-tarangini* and the precious data about the working of self-governing village-assemblies that can be gleaned from the inscriptions of the Imperial Cholas. Where the chronicles and inscriptions deal with administrative acts and matters of routine administration, it is the task of the true historian to draw from them, as far as possible, a complete and consistent picture of the whole.

While insisting upon the all-embracing influence of caste (p. 32 *f*). the author is oblivious of the fact that heterodox sects with powerful monastic organisations have flourished since the times of the Buddha and Mahavira, that the *Jatakas* and other works as well as the inscriptions have preserved for us pictures of caste-conditions not completely agreeing with that of the Smritis, that caste-rules in the Smritis themselves are sufficiently flexible to take note of the existing social conditions. The author's view of the origin of caste (pp. 38-39) that "the Aryans, adopting the Dravidian belief in transmigration as a philosophy of life, metamorphosed class into caste," is a too simple solution of a very complex problem. The author's estimate (p. 40 *f*) of the effects of the caste-system, on the whole, does credit to his sobriety and balance of judgment. But his statements (pp. 43-46) that there could be no great expansion of ancient Indian States with the armies and populations supplied by caste, that "the ancient Hindu State was a State of villages," and that "there was always a hiatus between the village and the Central Governments" are belied by the facts of history. On the contrary, the large size of the Indian armies and the numerous Indian cities have been noticed by foreign observers from the time of Alexander's historians down to those of the Arab and mediaeval European writers, while inscriptions and other sources enable us to trace a chain of provincial and district officers linking the central with the village administration from the Maurya period onwards. The author's summing up that "caste did for India what Christianity did for Europe—it kept society distinct from the State" (p. 46) is admirable. His final judgment on Hinduism that "with its doctrines of an absolute god, of *karma* and *maya*, it is the least objectionable adventure in the purely pagan religious quest of man, as apart from divine Revelation" (p. 53), is as fine an appreciation as can be expected from a devout Catholic of his stamp.

On the effects of Buddhism and Jainism the author makes some sound remarks. "Buddhism," he sums up (p. 56), "was not so much a reform of Hinduism as an improvement of it" (*sic*) : "its influence was in the direction of gentleness, humanity and peace: it has not been in the direction of social organisation or political progress: its influence was more personal than institutional: it has done more for man than for society or the State." "Jainism," he continues, "has been a much more human and a much more social religion than Buddhism." But in the same breath he observes (pp. 54-55) that Buddhism was "a reform movement against Hinduism, but it was no revolutionary attack on it" [which is indeed perfectly correct and that it gave "a new impulse" to the State, since "it strengthened the spirit and institutions of self-government" and it provided a motive for extension of empire [which give an altogether erroneous idea of the tendencies and characteristics of Asoka's dominion].

Turning to the general influences of religion, the author says (p. 58), "While caste represented the most important institutional influence among the Hindus, their religion was for them the greatest influence in the world of ideas." Again, after defining Dharma as the whole duty of man, he proceeds to illustrate by concrete examples how the dominating influence of religion has tended to retard social reform, to promote "the autocracy of native Indian rule," and in short "has become the Nessus shirt of Hindu law and society." Not only the literature, but also the art of the Hindus, continues the author, has been dominated by religion. Now apart from the fact [recognised by the author himself in the same context] that caste itself has a religious origin and sanction, his mistake lies in attributing to the Smriti rules a degree of rigidity unknown to them in their best days. This is shown by their explicit recognition of custom and approved usage among the sources of Dharma and their frequent relaxations of rules and even their very contradictions. Instances like admission of the widow's right to inherit the husband's property in the absence of sons show that they were not incapable of improvement upon the older law. Incidentally, it may be observed that the author is wholly wrong in saying (p. 59) that under the Hindu law "only sons could inherit" and "*stridhana* was the only form of property a woman could keep" and that "the early marriage of boys is due to the rule of the Hindu religion." The author quotes Manu's dictum of kings being formed from particles of the gods, but he forgets to refer to other passages tending to impress upon the king his duty of protection and, what is more, to derive the same as a corollary from his collection of taxes. He also completely ignores the equally authoritative texts of the Mahabharata inculcating the King's responsibility for just exercise of his rule to the point that subjects should abandon an incapable ruler as a useless burden and they are justified even in slaying a tyrant "like a mad dog afflicted with the rabies." In making the reckless statement (p. 61) that "very little secular literature hails from ancient India," the author overlooks the whole mass of Sanskrit technical literature represented by grammar, lexicography, medicine, astronomy, astrology and mathematics, *Kamasastra*, *Arthasastra* and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Silpasastra. It is a gross exaggeration to state that modern scholars have had "to dig in mines of religious literature" for their "theses on political and social sciences of the ancient Hindus."

The author's summing up of the tendencies of the Hindu period (p. 64 *f*) is chargeable with a number of rash generalisations. Premising that "religion and culture fill much the larger part of ancient Indian history," he says that "the political history of the Hindu period may be written out in a page or two," that there is no history of civilisation, for "civilisation is produced in cities, and in ancient India cities were scarce" and that "the religious emphasis in the Hindu's life imbued him with a Manichaean contempt for creature comforts." Of these statements, the first three are too sweeping to be taken seriously and the fourth is directly contradicted by the evidence of literary documents from the time of the Pali canon downwards. On the subject of foreign influences the author stands on firm ground, when he remarks (p. 70) that they "did little to revolutionise Hindu thought or life." The result of the long period of Greek sovereignty in the Punjab, according to the author (p. 71), is shown by the combination of Indian and Greek ideas on the coins, a general moderation in architectural styles (especially in Kashmir), and the dominating personality of the Buddha in Gandhara sculpture. But in the same context he laments that Greek influence, which was "a temporary flash from the West," had no time to "affect Indian art in the direction of simplicity and restraint, of nature, truth and personality." Apart from the inconsistency involved in these two statements, it may be justly charged against the author that he overlooks the radical dissimilarity between the Indian and the Greek genius which is testified to by such a high authority as Sir John Marshall, while his complete silence about Gupta art with its admittedly "classical quality" is an inexcusable slip. His reference to the combination of Indian and Greek ideas on the coins, (which strangely enough makes no mention of their bilingual character), marks not the spread of Greek influence, but the beginning of that process of Indianisation which was to culminate in the adoption of Brahmanical and Buddhist faiths by the Greek settlers.

Before leaving our notice of Part I of this work, it is our painful duty to draw the reader's attention to the heavy list of errors that disfigures it almost from beginning to end. Of errors in the translation of Sanskrit names, we have examples in "*Dasyu* or black" (p. 9), and "*Varnasrama-dharma*, the law of the society of colours" (p. 32), and of inaccurate transliterations in *Chattri* (pp. 24, 28), *Asvameda* (pp. 24, 29), *Viswa Devas* (p. 44), *Matrubhumi* (p. 47). *Grihaspati* (p. 48), and *Brahmin* (for the Upanashidic Brahman) (p. 61). On p. 44, "the Adityas, the Viswa Devas (*sic*), and the Devas" of the Atharva-veda are wrongly referred to as historical tribes of the Punjab. The references to "the laws of Manu, Yajnavalkya and of the Aryans" (p. 58) and to "the dancing Nataraja of Lakshmi" (p. 62) are meaningless. The description of "the Kali cult of Calcutta" as an example of "primitivism" is a grotesque perversion of a faith which numbers its votaries by millions and has produced a Ramaprasada and a Ramakrishna Paramahamsa. Of chronological slips we have examples in the dating of the Maurya period "about 500 B.C." (p. 16), of the Kadambas, "A.D. 1200-1400" (p. 21), of the Graeco-Bactrian rule in North-West India "300-180 B.C." and of Yavana (*sic*) rule "200-53 B.C." (p. 70). Violence is done to geography by the description of the Hindu Kush as "the northern range of the Himalayas" (p. 7) and the location of Rajagriha on the banks of a tributary of the Ganges (p. 13) as well as the identification of Saurashtra with modern Gujarat (p. 20) and that of Indo-China with ancient Champa (p. 67). It is not known on what authority "the Panjakni" and "Prabhasi" are said to be ancient names of the modern Tapti river and the modern Konkam (*sic*) (p. 20), and "Pale in the East" is stated to be a Jaina temple-city (p. 57). The misspelling of proper names unfortunately is too frequent, witness the examples Rama and Keonghar (p. 2), Tritus (p. 10), Goghen, Paramasa, Goudwana (p. 12), Sunderband (p. 14), Dakshinaprastha (pp. 15, 19, 24, etc.), Mauraram and Kshtriya (p. 21), Selucid (pp. 28, 70), Sylvan Levi (pp. 51, 64), Gapuon (p. 67), Milanda (p. 70), Marland (p. 71). To illustrate the large number of historical inaccuracies, it will be sufficient to mention the statements that Taxila was a centre of the pre-historic Indus Civilisation (p. 4), that Samudragupta "violently uprooted the kings of the South as far as Malabar" (p. 13), that Chandragupta Maurya "destroyed Selucid (*sic*) rule in the Punjab" (p. 28), that Harshavardhana conquered the modern Punjab (p. 29), that "the Sanghas, the Parishads and Mahaparishads" were assemblies limiting the power of the king (p. 45), that "no Hindu state was founded in ancient Burma" (p. 65), that "India was first brought into contact with foreign influences by Alexander's invasion," that "the empire of the Selucids (*sic*) included off and on most of North-Western India," that the Saka invasion "broke the Greeks in the Punjab into petty kingdoms which lasted from 160 B.C. to 50 B.C." (p. 70).

Our review of this work has grown so much in length that we have not space enough in the present paper to deal with its Parts II and III. Suffice it to say, these Parts likewise contain many shrewd and sensible observations couched in the author's crisp vigorous style. They are, however, not free from the irregular spelling of proper names and the historical inaccuracies which abound in Part I. The author's

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

tion (pp. 145-46) does not carry conviction, while his dictum (p. 147) that the Portuguese "practised the doctrine of equality between races and between the rulers and the ruled" is sufficient to raise a smile of incredulity in most readers. The author's estimate of "the assembling and working of the administrative machinery under a unifying political system" as constituting "the great service rendered by British rule to India" (p. 181) is just and proper. But his excuse for the failure of that rule to promote "the material prosperity, civilisation and culture" of the people in any appreciable measure betrays a lamentable blindness to such features as the systematic economic exploitation of the country onwards from the days of the Company's rule. While describing the benefits conferred by Christianity on India, the author claims that Ram Mohun Ray "took his inspiration from the Bible" and he suggests that the Bhakti cult of the South was influenced by Christianity. Both the claim and the suggestion are contradicted by the facts of history. The author's obsession with the exclusive importance of Western influence is illustrated on the one hand by his shallow reference to "higher education through the English language" as being responsible for "a Ramanujam, a Ramun (*sic*), a Jagadish Chandra Bose, a Rabindranath Tagore and a Ghandi" (*sic*) (p. 176) and to the break-up of "the mediaeval isolation of India" through British rule (p. 182) and on the other hand by his complete and inexcusable silence about the movements for religious revival led by Dayananda and Ramakrishna and for revival of art begun by Abanindra Nath Tagore. Of a piece with the above is his very imperfect and one-sided account of the Indian nationalist movement (pp. 195-8) culminating in the wholly unfounded charge that "the absolute nationalism of the Congress as well as the Hindu character of the political philosophy and methods of Gandhism have provoked the Muslims" into claiming to be a separate nation. Finally, it is impossible to endorse the author's wholly one-sided verdict (p. 201) that the present division of India is an indication that "the native forces of caste, the dead hand, national or tribal religion" have won the day over the world-forces of unity and progress. Measured by the same yardstick the continuance of the old division of Spain and Portugal, of Holland and Belgium, of Norway and Sweden, not to speak of the separation in our own times of Eire and Northern Ireland as well as of East and West Germany would be an indisputable evidence of the native forces of reaction triumphing over the world-ideas of progress.

We cannot conclude this paper without noticing, if only for the sake of its venomous onslaught against India and her people, the slight Preface to this work written by Joseph Husslein, S.J., Ph.D., the General Editor of the series. Beginning with the characteristically impudent remark that "India has become a center of international anxiety," he summarises the whole history of the country in words indicating at once his colossal ignorance and his malignant hatred of its past. "For millenniums of years," he says, "it was a large-scale application of the old immemorial law of the jungle. . . . To this was added the lust for battle and the urge of a nomad's life." After this no one is surprised to read his verdict on India's future which is couched in language recalling the worst features of the Christian attitude towards other faiths. For after referring to "the notion (*sic*) of caste" and the doctrines of *karma* and *maya* prevalent among the people, he says, "The one thing that now is most needed for their freedom, liberty and progress is the full light of that Christian Faith which the Church can bring them." We make bold to reply that the one thing that is certain to alienate for all time to come all self-respecting Indians from the Catholic Church and its brand of Christianity is the propagation of vile slanders of the type above quoted. Indeed it would appear that while the British government for the best of reasons has thought it fit to give up its imperialistic grip over India, fanatics are not wanting who dream of imposing a deadlier imperialism, that of the spirit, upon its people. Only on this supposition can we understand the critic's deliberate falsification of the history of a people whose outstanding contributions to the cause of civilisation have been testified to by thinkers the latchet of whose shoes he is unfit to unloose. In vain has India won her independence, if she cannot hinder such stuff from passing current in lands which claim to be in the vanguard of civilisation. Will the Government of India, the proper custodian of our national honour, move in the matter? Needless to say, its worth will be judged by our countrymen by the extent of its success in countering pernicious propaganda of the type above indicated, and not by the number and scale of its embassies abroad.

Book Reviews

Books in the principal European and Indian languages are reviewed in *The Modern Review*. But reviews of all books sent cannot be guaranteed. Newspapers, periodicals, school and college text-books, pamphlets, reprints of magazine articles, addresses, etc., are not noticed. The receipt of books received for review cannot be acknowledged, nor can any enquiries relating thereto answered. No criticism of book-reviews and notices is published.

EDITOR, *The Modern Review*.

ENGLISH

REVOLUTION BY CONSENT : *By Dr. Dhirendra Nath Sen. Published by Saraswaty Library, Calcutta. Pp. 345. Price Rs. 10.*

The theme of the book under review is the Indian revolution both in its external and internal aspect which the author describes as a 'revolution by consent' as opposed to revolution by violent upheaval. Up to the time when the book is written it manifested itself mainly in its external aspect, that is, for liquidating foreign rule, but in the author's opinion the revolutionary forces cannot stop here; it will end in a social revolution by bringing about a change in the existing productive relations and a new equilibrium based on a socialistic order which he describes as the internal aspect of the revolution. The first three chapters of the book are mainly analytical and descriptive. Here he attempts to explain the external aspect of the revolution by tracing the process of march towards complete transfer of power through changes in the attitude of British Government under the stress of political forces at work in India and world events since the historic pronouncement of August 1917, right up to the Constitution of the Constituent assembly under the Cabinet Mission plan and the British Government's announcement of February 20, 1947. In this connection the course of Indian politics during the eventful years of Indian history, 1942-47, is subjected to searching analysis and critical examination by an erudite scholar on constitutional law and one thoroughly conversant with political developments and trends in the country by his long journalistic experience. Of course as the book is written in quite a different setting from the present the issues discussed here have considerably changed their complexion by subsequent developments. There is an illuminating discussion in Chapter VI of the problem of nationalities in its general aspect as well as in the peculiar context of the Indian situation. In the author's opinion the Russian way of solution of the problem is particularly instructive and may prove helpful to its solution in this country. In the concluding chapter (Chapter VII) the author sets out his own suggestions in the light of his survey in the previous chapters about the form of the Indian state of the future and an outline of the constitutional framework and the procedure to be adopted for framing and enforcing the Constitution. In brief his recommendations are as follows. An Act of Succession is to be passed by the British Parliament for divesting the Crown of its powers in relation to India and nullifying all Parliamentary statutes applying to this country. The Act is to be followed up by a Treaty between a Committee of the Constituent Assembly or a Provisional Government to be ratified by each of the contracting parties. The Constituent Assembly is then to decide upon the form of the State and its constitutional framework and the Interim Government is to be empowered by an Act of Parliament to enforce the decisions of the Constituent Assembly. The author's preference is definitely for a socialist democracy as in his opinion the only alternative to it is in the existing socio-economic set-up, a Fascist order. There is to be a reconstruction of the administrative units on linguistic and cultural basis to be knit together in a socialist republican federation. Before the constitution of the Federation no bar is to be placed on the right to non-accession or secession by such territorial units but the decision to exercise the right should only be taken by a democratic process. After the institution of the Federation, however, there is to be adequate centralisation of powers. Democratic centralism on the Russian model instead of a loose federation is his ideal. The appendices at the end of the book are very useful throwing lurid light on the course of political events in the most eventful and pregnant period of Indian history.

The author's treatment of the subject is characterised by clear thinking and lucid exposition and a courage of convictions. He has not accepted blindly the solution of the Indian problem envisaged by the Indian political leaders. He has laid much greater emphasis on the social content and the factor of productive relations in the Indian problem rather than purely formal and liberal democratic approach for its scientific solution.

On such controversial questions as those discussed in the book there is bound to be difference of opinion both as regards interpretation of facts as also conclusions. For instance, many would question the author's appraisement of the causes of communal dissensions in India. He holds "India's mediaeval social patterns and Hindu revivalism" more responsible for this than the sinister machinations of the third party. "There has been much too mechanical, sometimes unimportant, insistence that British imperialism as the third party has fomented and fostered divisions by using the Muslim League leadership as a brake on Indian progress, etc.", (p. 187) he observes. As a matter of fact, however, the problem is almost entirely the product of the policy of "divide and rule" purposefully initiated by British imperialism as a last ditch to fight resurgent Indian nationalism which is amply borne out by the history of the growth of communal representation since the beginning of the century although it has to be admitted that there were weaknesses in the social and economic structure of Indian polity which the British rulers took the fullest advantage of. It is also true as he says on page 172 that the Congress leaders have not offered sufficient resistance to separate electorates and on several occasions have even compromised with reactionary communalism but that is

not because the Congress leadership was not sufficiently nationalistic in their outlook but as they found themselves constrained by the situation created by British rulers to make concessions to forces of communalism as a necessary evil and as a temporary expedient for mobilising support of all elements of population and thus presenting a united front to British imperialism. The author himself remarks: "The Congress as an organization has striven hard and long to bring the different communities in India on a common platform with a view to liberating the country from foreign rule and setting up what it has conceived to be an independent, democratic Indian State with guarantees in respect of the protection of the minorities" (p. 186). Of course, the wisdom and efficacy of that policy of appeasement of Muslim communalists is open to question. Subsequent developments have demonstrated the utter futility of that policy.

The author seems to apportion equal blame to the leaders of both Congress and the Muslim League for being "hustled into policies which lead nowhere." But it is common knowledge that the Congress went to the utmost length even in the face of adverse criticism in the country, for coming to a settlement with the League even at the cost of compromising its creed of nationalism, but it was the intransigence of the League and its leader Mr. Jinnah encouraged by Britishers that prevented any such settlement. The solution of the problem offered by the author,—setting up a federation of autonomous linguistic and cultural units—was never ruled out by the Congress. In fact, it was an important plank in its programme, but that had hardly any appeal for the Muslim League. Attention may be drawn in this connection to the following extract from the Objectives Resolution passed by the Constituent Assembly on January 22, 1947: "And wherein the said territories, whether with their present boundaries or with such others as may be determined by the Constituent Assembly thereafter according to the law of the Constitution, shall possess and retain the status of autonomous units, together with residuary powers and exercise all powers and functions as are vested in or assigned to the Union, or as are inherent or implied in the Union, etc." On many such questions there is scope for difference of opinion but that does not in any way detract from the value of the work. It is difficult for an Indian to approach many of the questions discussed in the book objectively and dispassionately and so it may be said to the credit of the writer that he has succeeded considerably in bringing to bear on them an academic frame of mind. The book may be commended to all serious students of Indian Constitutional development. The get-up and printing of the book is quite satisfactory but there are certain serious printing mistakes which, we hope, would be corrected in the next edition. We draw particular attention to two such mistakes. On page 157, line 13, the term "Government" is perhaps to be substituted by "Covenant." On page 160, (para 3) some words have been apparently dropped after the second line.

A. K. GHOSAL

EMINENT INDIANS: *By D. O. Dhanapala. Nalanda Publications. 1947. Pp. 180. Price Rs. 7-4.*
PROFILES: *By G. Venkatachalam. Nalanda Publications. 1949. Pp. 309. Price Rs. 8-4.*

The living character sketches of our contemporaries have an interest of their own: not gossip, nor hero-worship, but comparing notes, and a creative imagination takes quick impress of men and women whom one cannot help discussing threadbare. Such a work is bound to please, and it is also educative in a sense. Mr. S. A. Gardiner's sketches naturally prompt us to search for similar work among our own countrymen.

The two books mentioned above cover pretty much the same ground, and invite a comparison. Both are collections of writings already published, "personal impressions of people who have interested the authors." What is more intriguing, there is mutual assessment: Venkatachalam presents a pen-portrait of Dhanapala in his estimate of Lanka's cultural leaders, while Dhanapala devotes one whole chapter to Venkatachalam. Evidently, Venkatachalam's work is more inclusive; it is divided into three parts—the first dealing with individual men, the second with individual women, and the third deals in a wholesale fashion with leaders of Ceylon, Chinese Marxists, and Europeans whom the author had met and who had impressed him with their vivid personality. Venkatachalam thus covers a much wider ground with his book containing brilliant profiles and integral studies, while the literary vignettes in Dhanapala's book are in a chatty style, set off by 12 full-page illustrations. Venkatachalam is an art-critic who knows how to present profiles by brush and pen. Gandhi, Nehru, Sarojini Naidu, J. Krishnamurti, R. K. Shanmukhan Chetty, C. P. Ramaswami Aiyar furnish common ground.

Both the books are delightful reading. One of the best pieces in Dhanapala's book is that on Amaranath Jha. There is a mannered way, however, in that book. Thus, C. R. has a choice assortment of qualities associated with Richelieu, Socrates and Shankaracharyya; C. P. Ramaswami Aiyar is now Faustus and then Machiavelli and Kautilya; Dr. Coomaraswamy is a combination of Marco Polo, Ibn Batuta and Fa Hien. It is time also that our old impression that "India leaves her great men to be discovered by foreigners" should be corrected.

P. R. SEN

THE PROBLEMS OF PHILOSOPHY: *By Dr. Satish Chandra Chatterjee, M.A., Ph.D., Calcutta University. Das Gupta and Co. Ltd. Pp. xvi+345. Price Rs. 6-8.*

Philosophy, once a favourite pastime of the Indian mind, seemed to have withdrawn for some time into a narrowing circle of academic specialists. But the conflict of the world forces has recently been expressing itself also in the form of problems, ideas and ideologies. Consequently philosophical discussions on idealism, realism, empiricism and dialectical materialism have begun to be heard once again not only in all kinds of journals and periodicals, but also among socially conscious young men in the street. There are definite signs of the revival of interest in Philosophy in India and abroad, but there are very few books which can be read by the general reader for a clear grasp of the fundamental problems of Philosophy.

Dr. S. C. Chatterjee has done a distinct service to the academic scholar and the lay reader by writing this lucid, brief and yet dependable book which raises all basic problems of Philosophy, presents the difficult kinds of solutions offered by the famous thinkers of the West as well as of our country and helps the reader with suggestive conclusions. A reputed teacher and a thoughtful writer of note, Dr. Chatterjee brings to his task a mature, but unostentatious, scholarship that silently works its way into the reader's mind to leave some abiding impressions.

One only wishes that the book contained dis-

cussions on other important problems of socio-philosophical interest, as for example, values. It is hoped that he will write on cognate subjects in future. When society is being distracted by the harangues of half-enlightened enthusiasts, the dispassionate wisdom of mature and trained thinkers like Dr. Chatterjee can alone act as an enlightened guide. We heartily commend this book to our thoughtful readers.

D. M. DATTA

POST-WAR GUJARAT: *By A. B. Trivedi, Khalsa College, Bombay. To be had of Shree Ichchasankar Dave, 122, Ummarkhadi Road, Bombay 9. Pp. 282, with Appendix and Bibliography. Price not mentioned.*

This book is a painstaking attempt to collate the facts of Gujarat's economic life and regional possibilities that should be an example to others. The author has made a special study of Gujarat and Kathiawar's material problems, the solution of which waits for the future.

The preface to the book written in February, 1949, about 18 months after India's partition, should have told us of its economic consequences, their good and evil, of the effect of the settlement of Sindhi merchants and entrepreneurs in Gujarat and Kathiawar. The book, however, is a vast mine of data of this region.

THE RAMAKIRTI (RAMAKIEN) OR THE THAI VERSION OF THE RAMAYANA : *By Swami Satyananda Puri and Charoen Sarahiran. Published by Thai-Bharat Cultural Lodge, 849 Silom Road, Bangkok, Siam. Pp. 126.*

Shree Raghunath Sharma, Director of the Thai-Bharat Cultural Lodge, has sent us this book which forms part of the Birla Oriental Series whose aims are "to popularize the contributions of the Orient to the cause of culture and humanity."

The Preface was written by Swami Satyananda Puri, a Bengali Sannyasi, professor of a Thai College, who was also a fellow-worker of Rash Behari Bose, the Indian revolutionary patriot. A melancholy interest attaches to this Preface, as the writer was the victim of an air-crash on his way to Japan in 1943.

The history of Bahart's contact with Thailand has yet to be written. The Preface tells us that "the first introduction of Ramayanic influence into Thailand can be traced to the 13th century only." But Java, Sumatra, Bali, Malaya, and Thailand even have had a longer connection with our country. But that is forgotten today; "the word Ramayana is unknown" to Thai literature. This book, we hope, will renew the old relation.

S. C. DEB

MANUAL OF MEETINGS : *By D. V. Nadkarni. Local Self-Government Institute, 11 Elphinstone Circle, Fort, Bombay 1. Pp. 116. Price Rs. 3.*

Law of Meetings is assuming great importance in our country with the growth and development of self-governing institutions. There are several books on the law and procedure of meetings which are more or less exhaustive and deal with meetings under the various Municipal Acts, and Local Self-Government Acts, and Company Law, etc., giving authoritative decisions and valuable comments. Some of them are not easily available; some again are voluminous, though very good as reference books. Most of them deal with English law exclusively—and it is difficult even for a lawyer to apply them to Indian conditions. Except ing Davar's *Law and Procedure of Meetings*, I am aware of any Indian book dealing with this particular branch of law. A small Manual dealing with the and procedure of meetings of various classes of easily understood by intelligent laymen was a sity. The book under review has removed the We commend it to the public, especially to Mu commissioners, members of boards, etc.

J. M. D

BURMA—OUR NEIGHBOUR : *Issued by Publication Division, Ministry of Information and Broadcasting, Old Secretariat, Delhi. Price Re. 1-8.*

The brochure, a timely publication, deals Burma, our neighbour across the Bay of Ben Within its rather limited compass of less than 50 pa it gives a broad picture of modern Burma against background of geography and political evolution. twelve short, and on the whole well-written cha deal, among others, with the geography, races, poli evolution, economic wealth, art and culture, langua and literature and the socio-religious life of the of peacocks and pagodas. Some of the chapters written by eminent scholars, such as, the late B Madhab Barua, Dr. B. C. Law, Dr. Nihar Ranjan Ra Dr. Kalidas Nag and the like. A work of the type the brochure under review is bound to be superfici Some of the chapters, however, those on politi evolution and on Burmese women, for example, coul have been more informative and better written ev within its narrow scope. Most of the chapters however well-written and amply serve their purpos Liberal illustrations add to the value of the pu lication.

SUDHANSU BIMAL MUKHER

TUKARAM : *By J. R. Ajgaonkar. With a Foreword by the Hon'ble Shri B. G. Kher, Premier Bombay. Published by V. Prabha and Co., Girgaon Bombay. Pp. 161. Price Rs. 2-8.*

Shri Ajgaonkar is a recognised authority on the lives of the saints of Maharashtra. For about half century he has devoted himself to writing and pu lishing the lives of Marathi saints. Since then he h brought out eleven volumes containing 110 lives a covering about 3200 printed pages in Marathi. His of Tukaram, the premier saint of Maharashtra, c out in 1935. The book under review is an Engl rendering of his Marathi work made by Shri R. Maikari and adapted to suit the English reade Tukaram is the most renowned and popular poet-sa of Maharashtra. The Hon'ble Shri B. G. Kher rightly observes in his Foreword to this book that those w do not know Tukaram do not understand the histo of Maharashtra and Marathi language. Hence a English life of the saint was a long-felt want. Th handy volume fulfils this extensive want very creditably. In many respects it is exhaustive and authoritative presenting the subject to the reader in a very simple, substantial and systematic way. Principally it is based on the Marathi work of Mahipati Buwa. Taharabad, the well-known biographer of saints. The book not only contains a connected biography of Tukaram but also authentic accounts of his family disciples and contemporaries, as well as other relevant matters. Many miracles of Tukaram recorded by Mahipati and handed down from generation to generation in Maharashtra are also incorporated in it. Inspired sayings of Tukaram called Abhangs are widely known and recited by the Marathi people.

hundred selected Abhangs of the poet-saint are given in the last chapter of the book. The book deserves rendering into provincial languages of the Indian Republic and perusal by all students of Indian literature.

SWAMI JAGADISWARANANDA

SANSKRIT

TARKABHASA of Moksakaragupta: *Edited with a Sanskrit commentary by Embar Krishnacharya. Oriental Institute, Baroda. G.O.S., Vol. XCIV. Price Rs. 2.*

This is a preliminary work on Buddhist logic closely following and occasionally quoting and explaining the *sutras* of the Nyayabindu of Dharmakirti. The editor deserves thanks of the students of Indian logic for the success he has attained in preparing a readable text on the basis of very imperfect MS. material.

An improved text however will be found in the edition of Sri H. R. Rangaswami Iyengar (Mysore) which contains the fruits of his consultation of more MSS. as well as the Tibetan version of the work.

It, however, reflects credit on the learned editor of the volume under review that many of his emendations have been corroborated by the materials brought into use by Sri Iyengar. The honour of first bringing to light a little known but none the less very important work also goes to him. And the edition has its additional value in the learned and lucid commentary added by him which will be very useful to scholars.

ANANTALAL THAKUR

BENGALI

VATSAYNER KAMASUTRA: *Translated and edited by Nalini Kumar Bhadra. Baijayanti Publishers, 22, Sibnarayan Das Lane, Calcutta-6. Pp. i-viii +1-228. Price Rs. 4.*

Vatsayana has been called a Rishi. A Rishi is one who sees truth. Science deals with truth—with truth based on facts. Sexology is a science. It was only the other day that sexology was recognised as such. It is the twentieth century that brought, so to say, this new science into being. The labour and devotion of Havelock Ellis, Krafft Ebing, Hirschfeld and a few others have done more than anything else to establish sexology as a science. For long centuries people were accustomed to keep silent on sex. They were ashamed to discuss, scientifically or otherwise, matters relating to sex. Modern psychologists and sexologists have tried hard to do away with this erroneous idea of sex. They have tried to teach people that there is nothing to be ashamed of sex. Nearly two thousand years ago there flourished in Ancient India a Rishi who brought in light where there was darkness. Vatsayana is one of the earliest geniuses to impart knowledge in place of ignorance. It was he who laid stress on the fact that sex-education is a matter of vital importance. Those who are ignorant of the *Kamasutra* will necessarily fail to appreciate its value as science. They are apt to confuse sex-psychology with pornography. As regards systematised knowledge the question of morality does not arise. Science is neither moral nor immoral. Modern science differs from older science in this that while the ancients are content to note down only the conclusions from data derived from observations, modern scientists will not rest satisfied till they can present the facts, data and statistics so that any one so inclined may check for himself the conclusions therefrom.

Nalini Kumar Bhadra has done well to introduce Vatsayana to the Bengali-reading public. In rendering the *Kamasutra* in Bengali he has never taken undue liberty. His style is chaste and elegant. We have had other translations of this great treatise. The translators have either slurred over difficult portions or left them as they are. But Bhadra has tackled the difficulties and tried creditably to explain the obscurities. The translation is prefixed with a long and valuable introduction. In it the author points out the scientific outlook of Vatsayana and tries to ascertain the time and place of his birth and the value of his contribution to science; he marks how there were other sexologists of renown before Vatsayana, in Ancient India; he also reconstructs the social life of the time as is to be gathered from the *Kamasutra* and deals with other matters. The introduction is interesting as well as instructive. Those who like to go through Vatsayana in the original can never dispense with Yasodhar's *Jayamangala Tika*. In rendering the original Sanskrit in Bengali Bhadra, to his credit, has taken the fullest advantage of this very valuable commentary. His acquaintance with modern sexology has stood him in good stead in his attempt to present an ancient work on sex in today's language.

SAILENDRAKRISHNA L[illegible]

HINDI

HAMARA SAMAJ: *By Sant Ram. Nalanda Publications, Post Box No. 1353, Bombay. Pp. [illegible] Price Rs. 6.*

For centuries the Hindu society has been burdened with the "curse of Cain"—namely, untouchability—a curse which, thanks to the Herculean endeavours of Gandhiji in rousing public conscience to the inhumanity as well as inhumanity of the crime of brother being "unapproachable" by brother, has at long last begun to be lifted. And yet neither in the scriptures nor in the highest ethics of social life there is any sanction of any kind for imposing such a ban on a member of the human race. The learned author, who has for over twenty-five years been attacking the crusader the citadel of orthodoxy which gives shelter to the "criminals" charged with degrading their fellow creatures, has dealt with the "prickly" problem from every possible point of view and pricked the bubble of *savarna* superiority. And he appeals to one and all to lay the axe to the poisonous tree of untouchability or exclusiveness so that our society may be saved of a healthy growth and be spared any further sorrow of vivisection of which the present unjust and unethical partition of India has been the fruit and the fruit. The get-up of the book, though high standard so far as Hindi publications go, does not, however, have been permitted to stiffen its

G

GUJARATI

ATMA GUNJAN: *By Kismat Kureishi [illegible] nagar. 1948. Paper cover. Pp. 25. Price eight annas.*

Umar Chandbhai Kureishi, whose nom-de-plume is "Kismat," is a young man of 27 years. He is a Muslim and still writes not only graceful Gujarati but elegant Gujarati poetry. This collection of *gazals* and *gits* (songs) is a very promising one. It embodies thoughts and conceits of a high order

Miracle Man with Unrivalled Power

Everybody in this country is aware of the fact that India's unrivalled and greatest palmist, Tantric, Yogi vastly learned in the Astrology and Astronomy of the East and the West, gifted with super-natural power of predictions, permanent President of the Internationally famed Baranashi Pandit Mahasabha of Benares and All-India Astrological and Astronomical Society of Calcutta.

RAJ-JYOTISHI

Jyotishsamrat Pandit Sri Ramesh Chandra Bhattacharyya, Jyotisharnab, Samudrikratna, Jyotish-shiromani, Raj Jyotishi, M.R.A.S. (Lond.), has won unique fame not only in India but throughout the world (*e.g.*, in England, America, Africa, China, Japan, Malaya, Singapore etc.) and many notable persons from every nook and corner of the world have sent unsolicited testimonials acknowledging his mighty and supernatural powers.

This powerfully gifted great man can tell at a glance all about one's past, present and future, and with the help of Yogic and Tantric powers can heal diseases which are the despair of Doctors and Kavirajas, can help people to win difficult law-suits, and ensure safety from dangers, prevent childlessness and free people of family unhappiness. His three important predictions (prediction about the British victory on the very day—2nd September, 1939—of the declaration of last World War, prediction of the achievement of independence by the Interim Govt. with Pandit Jawaharlal as the Premier made on the 3rd Sept., 1946, and prediction regarding the future of India and Pakistan which had been sent to the Prime Minister of India on the 11th August, 1947 and subsequently published in various Newspapers) have proved correct to the detail, amazed people the world over and have won for him unstinted praise and gratitude from all quarters including His Majesty George the Sixth, the Governor of Bengal and eminent leaders of India. He is the only astrologer in India who was honoured with the title of "Jyotish-Siromani" in 1938 and "Jyotishsamrat"—Emperor among astrologers and astronomers—in 1947 by the Bharatiya Pandit Mahamandal of Calcutta and Baranashi Pandit Mahasabha of Benares. —a signal honour that has not been endowed on any astrologer in India so far.

Panditji is now the Consulting Astrologer to the Eighteen Ruling Princes in India.

Persons who have lost all hopes are strongly advised to test the powers of the Panditji.

A FEW OPINIONS AMONGST THOUSANDS.

His Highness The Maharaja of Athgarh says :—"I have been astonished at the superhuman power of Panditji." **Her Highness The Dowager 6th Maharani Saheba of Tripura State says** :—"He is no doubt a great personage with miraculous power." **The Hon'ble Chief Justice of Calcutta High Court Sir Manmatha Nath Mukherji, Kt., says** :—"The wonderful power of calculation and talent of Sriman Ramesh Chandra is the only possible outcome of a great father to a like son." **The Hon'ble Maharaja of Santosh & Ex-President of the Bengal Legislative Council, Sir Manmatha Nath Roy Choudhury, Kt., says** :—On seeing my son, his prophecy about my future is true to words." **The Honourable Chief Justice Mr. B. K. Ray of Orissa High Court says** :—"He is really a great personage with super-natural power." **The Hon'ble Minister, Govt. of Bengal, Raja Prasanna Deb Raikot, says** :—"The wonderful power of calculation and Tantrik activities have struck me with greatest astonishment." **The Hon'ble Justice Mr. S. M. Das, of Keonjhar State High Court, says** :—"Panditji has bestowed the life of my almost dead son." **Mr. J. A. Lawrence, Osaka, Japan, writes** :—"I was getting good results from your Kavacha and all my family were passing a different life since I started wearing." **Mr. Andre Tempe, 2723, Popular Ave., Chicago, Illinois, U. S. America** :—"I have purchased from you several Kavachas on two or three different occasions. They all proved satisfactory." **Mr. K. Ruchpaul, Shanghai, China** :—"Everything you foretold in writing is taking place with surprising exactness." **Mr. Issac Mumi Etia, Govt. Clerk & Interpreter in Deschang, West Africa** :—"I had orderd some Talismans from you that had rendered me wonderful service." **M. B. J. Fernando, Proctor, S. C., & Notary Public, Colombo, Ceylon** :—"I got marvellous effects frrom your Kavachas on several occasions", etc., etc. and many others.

WONDERFUL TALISMANS (Guaranteed). *In case of failure, Money refunded.*

DHANADA KAVACHA OR THE ROTHSCHILD TALISMAN.—Its wearer earns immense wealth with little struggling and it fulfills the desires without fail. Lakshmi resides at his house and gives him son, fame, vast wealth, long life, all-round prosperity in life. **Price Rs. 7-10.** Special for speedy action **Rs. 29-11.** Super powerful with extraordinary effects **Rs. 129-11.**

Is There a Future for Mysticism?

In an article in *The Aryan Path* Katherine Merrill examines the evidences for a return to nobler concepts of Mysticism in our day. She confidently hopes for an ultimate revival of pure Mysticism in its higher aspect of union with the Divine Source, as well as the practical application of spiritual laws to ordinary life, as taught in the ancient Mystery Schools:

With the earliest ancients education sprang from the hearts and minds of Great Teachers, who divided their work into three parts corresponding to the spiritual, mental and physical aspects of man's nature.

The object of this education was the development of the *whole* man, not one-sided in materialism or in religiosity. But the highest object was the merging of man's consciousness into union with the Deific Source of All. This union they called Mysticism, and the teaching of it was protected from ignorance or ill-will by sworn secrecy.

"Mysticism" derives from a Greek word meaning "close-mouthed," secret and silent; and secrecy was practised because the most characteristic and important qualities, powers and laws were too sacred, and through their strength, too dangerous to be known except by those capable of turning them to general human betterment. But mysticism today commonly refers to something not generally understood, something mysterious, possibly fantastic or almost meaningless.

True Mysticism is the highest, the deepest, philosophy; it is philosophy's quintessence, the stimulus and the reward.

True Mysticism recognizes and includes all relations and connections, yet always seeks to rise above them into identity.

That effort is the very nature and particular function of Mysticism; and some perception of identity, of oneness with the Whole, is expressed again and again in the higher thought of today. The writers who send out this thinking belong to all Humanity. Wherever they may live, their importance is not limited to any one country. In them all, Mysticism, as such, is unformed, hinting at what may not be fully understood. Yet the philosophic thought of MacTaggart, the science of Schrodinger, the humanistic reaches of Taylor in *Richer by Asia*, and the not wholly fortunate blending of religion and science in Stromberg's *Soul of the Universe*,—all these, whatever else they contain of much or little value, show their authors to be moved by a common impulse toward the mystical.

This kind of recent thinking represents what in ancient Mysticism was the scientific aspect. At that time this line was kept distinct from the religious and the ethical—distinct, as springing from other powers in man, but not separate or opposed. If the Platonized science of Max Planck draws near the science in old Mysticism as taught in the Greek Mystery Schools, what is the harm in calling it mystical? If Einstein's high physics approaches ideas and facts such as were recognized by ancient Mysticism, the dignity of his work is not lessened by being so classified. A perception that such modes of thought possess mystical qualities permits the word "mysticism" to regain in itself, and to mean for the pubilc, a more universal or synthetic quality than any other word. Pantheism emphasizes the *theos* idea; Pan-humanism, the human aspect. Mysticism combines both. Such thinking, seeming to foreshadow a modern mysticism, thereby clears off some of the dross that has begrimed a noble name.

It must be remembered that genuine Mysticism not only teaches the soul that rises to high mystical states, or even the mind that passes into descriptive analysis of these, but goes out at once into broader service.

Another indication of such thinking is the book called *The Life of Science*, by George Sarton, Professor of the History of Science at Harvard University. To perceive and express that "Life" as Professor Sarton does, is to have joined (however unaware) the host of those who from immemorial time have undertaken the upward climb which makes the mystic.

A third line of similar thought is carried on by a group of philosophic investigators headed by O. L. Reiser, Professor of Philosophy at Pittsburgh University. He is the author of several noteworthy articles and books, one of the latest being *World Philosophy: A Search for Synthesis*. Scientific humanism is the name adopted by the group for the method and goal of their work. The following are some of their ideas:

"Scientific humanism is an attempt at synthesis, an endeavour to collect the knowledge and vision of all ages. The perceptions by past seers of the nature and meaning of life are focused and re-expressed for present understanding; their validity is tested by scientific principles, and an effort is made to extract from the results a pattern for better human existence. Besides, back of such a collectivity of vision purely human, Synthesis points to cosmic or archetypal influences, which provide the unifying force for human evolution. Thus, scientific humanism is rooted in an assurance that we are living in a unified, dynamic and evolving universe, and that there is some hope of an ultimate synthesis of knowledge."

This kind of humanism is as impersonal as any scientific hypothesis and the care taken to shun theological personalizing is proved by a definition of divinity, in a Reiser article, as the power to create, to originate, to grow morally into a larger life of freedom—the dynamic process of growth is the human essence, and the essence of divinity as well.

The author proves himself, in the few lines quoted, a philanthropist and a moralist. He sees philosophy and altruism as identical, and he has recently expanded his idea of the close relation between humanism and morality into a pamphlet, *Scientific Humanism as*

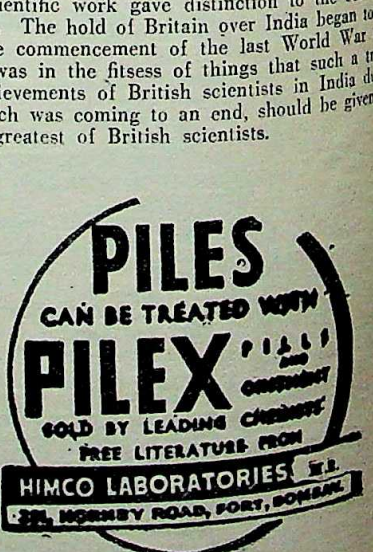
Creative Morality. A crying need of our time is that for moral perception and action from a sound philosophical basis, such as strong, questioning men can accept.

If those ideas of the unity and harmony of all life with its Source had been continued, science would not now be blundering materialism; and ordinary religion, psychism.

Indian Science Congress

Science and Culture observes :

Thirtyseven years ago, the first session of the Indian Science Congress was inaugurated in Calcutta on the 15th of January 1914, when Sir Ashutosh Mukherjee, the great Vice-Chancellor of the Calcutta University presided over its deliberations. The Congress was sponsored by the Asiatic Society of Bengal and was held in the latter's rooms. Sir Ashutosh recalled that it was in the fitness of things that the Science Congress should start on the 130th Anniversary of the foundation of the Asiatic Society by Sir William Jones, whose objective was 'the study of Man and Nature, whatever is performed by the one or produced by the other.' According to Sir Ashutosh :



"The Asiatic Society thus founded has been throughout its long career the principal source of inspiration in the organization and advancement of scientific research of every description in this country, and it is eminently befitting that the first meeting of the Indian Science Congress should be held in the rooms of the Society and directly under its auspices. It is further fortunate that we should be able to hold the Congress simultaneously with the celebration of the centenary of the foundation of the Indian Museum, which had its origin in the activities of the members of the Asiatic Society, and which by the invaluable work of its scientific officers in various departments has justly attained worldwide reputation. The times are manifestly favourable to the establishment of an Indian Science Congress whose object and scope would be similar to those of the British Association for the Advancement of Science, namely, to give a stronger impulse and a more systematic direction to scientific enquiry, to promote the intercourse of Societies and individual interested in Science in different parts of the country, to obtain a more general attention to the objects of Pure and Applied Science and the removal of any disadvantages of a public kind which may impede its progress."

After surveying the facilities for pure and applied research available in 1914 in the Universities with its affiliated colleges, the museums and observatories established by the Government and the different scientific surveys and services maintained by the Government, Sir Ashutosh continued :

"In a domain so vast in extent and diverse in character, it is obviously essential, if the fullest measure of efficiency and success is to be achieved, that the men of Science engaged in study, in instruction, whether individually or in small groups, should be brought into close association with each other; they really constitute an army of workers whose services to the State are materially impaired in strength if they are allowed always to remain scattered and isolated. The advantages of personal intercourse between scientific workers, engaged in the same field of activity or in the pursuit of allied lines of research, are too obvious to require much elaboration. The most beneficent results may be achieved by an instructive interchange of ideas between scientific men; they may, however, not only mutually communicate their ideas, they may also state the advance made in their own respective spheres of action, and indicate to their fellow the special departments which may be most profitably cultivated, the outstanding problems which may be attacked with greatest utility. But personal association amongst scientific men may be pregnant with important consequences, merely by a fruitful exchange of ideas; cultivating Science, by periodical meetings and discussions, may bring their aims and views prominently into public notice, may also, whenever necessary, press them upon the attention of the Government.—a contingency by no means remote, for, as experience has shown, even the most enlightened Governments occasionally require to be reminded of the full extent of the paramount claims of Science upon the Public Funds."

The Science Congress from its modest beginnings continued to grow in its importance till in 1938, on the occasion of the celebration of its Silver Jubilee in Calcutta, the British Association sent a very representative group of British scientists to take part in the celebrations.

The delegation was to have been headed by Lord Rutherford, who, as President elect of the jubilee session had prepared his presidential address. Due to his tragic death, he could not personally deliver his address; Sir James Jeans who was elected President in his place, read this address before the Calcutta meeting. In a portion of his address Lord Rutherford referred to the activities of some brilliant Indian students in Cambridge, viz. Ramanujan, Chandrasekhar and Bhabha. Regarding the last mentioned one he said, 'for the first time a[n] Indian student in Cambridge Dr. H. J. Bhabha, was awarded in open competition one of our senior [1851] Studentship in recognition of the importance of [his] researches in Theoretical Physics.' It would have pleased Lord Rutherford had he lived till now, to know that the recipient of the 1851 Senior Studentship in 1938 would, in 1951, be invited to preside over a meeting of the Science Congress. Prof. Bhabha is probably the youngest of the distinguished group of Indian scientists whose achievements in different branches of science have been recognized by their election to the Science Congress presidential chair. In the course of his address Lord Rutherford reviewed some of the important scientific achievements of this country during the past century; it was in the main a review of the achievements of the scientific services and of the men of British nationality who by their scientific work gave distinction to the services manned. The hold of Britain over India began to weaken with the commencement of the last World War in 1914, and it was in the fitsess of things that such a tribute to the achievements of British scientists in India during the age which was coming to an end, should be given by one of the greatest of British scientists.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Another thing which would have interested Lord Rutherford to note *viz.* the great progress which had been made in this country, by the expansion of government scientific services, the establishment of the Department of Scientific and Industrial Research with its associated nine national Research Laboratories. He had in his 1938 address, stressed on the importance in the national interest of a planned scheme of research in applied science. "If India is determined to do real she can to raise the standards of the life and health of her peoples and to hold her own in the markets of the world, more and more use must be made of the help that science can give. Science can help her to make the best use of her material resources of all kinds, and to ensure that her industries are run on the most efficient lines. National research requires national planning. If research is to be directed in the most useful direction, it is just as important for a nation as for a private firm to decide what it wishes to make and sell. It is clear also that any system of organized research must have regard to the economic structure of the country." He then proceeded to give an account of the way the British Government had aided the agricultural and industrial research in Britain during the period following the World War I. Evidently this portion of his address fell into very receptive ears in India.

Thirteen years has elapsed since the Jubilee Session of the Science Congress and the time is ripe for another review of the activities of this central organization vis-a-vis the specialist societies which have been established since 1914. A committee appointed to draw up draft rules for the Science Congress, has presented its report for consideration by the general body or ordinary members at the 1951 session. This session will also be of special significance due to the decision to convene a Pan-Indian Ocean Science Congress, to be held in 1951 along with the Indian Science Congress. In 1951 one of the most important of the scientific surveys of India, the Geological Survey, which owes its inception to the initiative taken by the Asiatic Society of Bengal, will celebrate the centenary of its establishment in January.

It was a happy thought on the part of the University of Calcutta to have invited the Indian Science Congress to hold its 38th session in Calcutta, which was accepted at the Poona session of the Science Congress. Calcutta with its historic Indian Museum containing unique collections of Anthropological, Geological, and Zoological exhibits, as the head-quarters of several Government scientific surveys, the home of many teaching and research institutes, would have been eminently suited for the holding of a Pan-Indian Ocean Science Congress. Again Calcutta, the capital of West Bengal State, in which about 50 per cent of the ordinary members of the Science Congress Association are domiciled, could provide the best venue where proposals for the revision of the rules could be discussed by a very representative body of ordinary members.

It has been therefore a matter of great disappointment to a large body of ordinary members of the Science Congress Association, as well as to the large number of local sessional members, that at a very late date, in October, the Executive Council of the Association, for reasons not divulged to the public, decided to shift the venue of the Congress from Calcutta to Bangalore. The holding of a session of the Science Congress with its thirteen sections, with its plan for co-ordination of its own scientific activities with those of the proposed Pan-Indian Ocean Science Congress, required a great deal of planning and organizational work. Much of the preliminary work done during the first nine months of the year by the local committee here had to be scrapped, and had to be started *denovo* by their opposite numbers in Bangalore. With the progressive increase in the number of ordinary and sessional members attending the meetings of the Science Congress, the problem of providing accommodation and transport facilities is becoming one of increasing complexity, specially when the session is held in one of the smaller towns. If under such conditions the work of the Science Congress proceeds smoothly and efficiently at Bangalore, it will redound greatly to the credit of the local committee in Bangalore and to their voluntary associates. Should any hitch occur, the responsibility for it would be with the Executive Council, for making their last minute decision.

Social Service Work by Students

The question of engaging students in actual social service work by compulsion involves educational, economical and financial issues. Prof. T. A. Kulkarni writes in *The Social Service Quarterly :*

In India we have very little experience of any kind of conscription much less for social service work. There are some countries in Europe where there is conscription for military training and service for citizens of certain age. It is not known whether the system of conscription for social service exists anywhere. In India we have no experience of conscription even for military training. It may, therefore, be suggested that before we begin our inquiry in detail, Government should be requested to depute a competent person to visit those countries where a system of conscription prevails especially for social service work and make a report on the various issues involved. The report after it is received should be circulated among the public organisations concerned. This will enable them to judge the different questions in the light of the experience of experiments made elsewhere. This procedure may involve some delay but will ensure avoidance of mistakes which is very important. Firstly, any addition of work to a substantial extent imposed upon students is bound to affect the work of ordinary school or college education courses. Secondly, if the compulsory social service work is to be imposed after the student completes his school or college course, the economic

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

question will require consideration. Some students have to begin to shoulder the burden of maintaining themselves or share the burden of maintaining the family. Thirdly, if the conscription is to be imposed to secure necessary personnel for social service work, the finance necessary for training a large number of students for social service work is first to be considered. Secondly, if the students are to be paid for the work they do, the payment also will involve a financial question. The question to be considered will be whether work obtained by way of conscription will be cheaper than work obtained by the employment of fully paid social workers who take social work as a profession.

If the problem is to be taken up for practical enforcement, a preliminary investigation seems to be necessary for the success of the experiment.

Students over the age of 15 may be persuaded to take interest in some kinds of social work and help adult workers in their work or do some kind of social work under the guidance of adult and trained social workers. As students in schools are under the age of 15, only college students may be used for this purpose.

For some kind of social work training will be necessary before the students are given actual work.

Defining social work as any kind of work which the community needs and which is done in the spirit of being useful to the community and not for a selfish purpose, for removing the poverty of the poor, for giving education to the masses or for providing better facilities for public health and care of the sick, field for social work is vast. The actual work to be undertaken will depend upon circumstances—whether the work is to be done while the colleges are in session or during holidays or after the college career is over—and circumstances of the locality where the colleges are located or the students spend their holidays or where the students are to be taken for social work during the periods of the holidays. Collection of information regarding social conditions may be mentioned as being very suitable among the activities to be undertaken by students. There will also be some kind of elementary work in every other field of social work which the students can do under the guidance of trained workers.

If manual work is to be paid for and if persons belonging to the ordinary working class are available to take up the work, employment of students for manual work will cause unemployment among the labourers and this should be avoided. If paid labour is not available, students may be used even for manual work.

Students spend a sufficiently long time in their colleges and they may prefer to be in a different atmosphere for their spare time work which is to take the place of their recreation. But on voluntary basis some college authorities may undertake some kind of social activities for those students who prefer to do social work under the guidance of their professors.

Only work done during holidays or work to be done after the student takes his degree and finishes his career as a student, can be whole time for a continuously long period. Students will not like to take up social work after their college career is over, unless they take up social work as a permanent profession.

As social service work for being done successfully and usefully ought to be done in a disinterested spirit and not for a selfish motive, it should be done on a voluntary basis and not on a compulsory basis.

The scope for such work is very great. The actual programme for such work should be planned by school authorities and social service organisations in consultation with each other. The programme will differ according to the inclination of the students and their physical, mental and moral equipment and also according to the activities of the social service organisations with which they will be working. Very few private social service organisations will be in a position to pay for the voluntary social work which the students may do. Government or Municipal Bodies undertake welfare activities, they will be in a position to pay the students who co-operate with them in their welfare activities.

Compulsory social work is a difficult problem. Social work done under compulsion will be done mechanically and therefore also badly and not in the proper spirit. Social work does not lend itself to being done under compulsion unless it is of a mechanical kind.

Whether payment for work done should be made or not will depend upon the financial circumstances of the parents. Some students have to help their parents in domestic work, some may have to work to add to the family income by taking up some paid work after college hours. Some students may have to take up family responsibilities immediately after their college course is finished. Compulsory social work should be paid for in the case of those students the income of whose parents is less than a certain sum. Compulsory social work after the college course is over will have to be ruled out, even if the work is paid. Young men would like to tape up work for a permanent career as soon as possible.

In Soviet Russia senior medical students and young graduates were expected to do medical work especially in rural areas when the need for fully trained doctors was very great. But after the period of compulsory work was over, these students followed the medical profession. Conscription for military training service is on a different footing, the justification being that in an emergency of war, a large army cannot be otherwise trained and made ready for service immediately. Compulsion in other fields of work will be a very unpopular measure and should not be adopted except in a grave emergency such as widespread epidemic disease or famine.

We do not recommend compulsory social work. Compulsory work for a short period, say for two years, can only be of a very mechanical nature. If students are given work in fields like teaching, most of the period will be required for training. The use of students immediately after they pass their Matriculation for work as teachers is not practicable and will not produce good results. If compulsion is at all to be used, it should be used only for college students either during the college course or after the college career is over.

Compulsion will involve economic difficulties to students and their parents and if the work is paid for, it may not be found to be ultimately cheaper.

To secure co-operation from the local people where work is to be done, advisory committees may be formed.

Only an organisation established by Government can undertake the work for carrying out a scheme for compulsory social work. Government will have to have detailed plans ready to provide work for different batches of students. No private agency can cope with this work and no agency which is not responsible to the legislature should be entrusted with this work. As compulsory social work will have to be paid for in the case of poor students, the responsibility for payment will rest on that of Government. Generally private agencies will not even accept conscripted work if it is paid fully and where there is great scarcity of labourers or of other persons. Handing over the work to private agencies will not be desirable and not practicable.

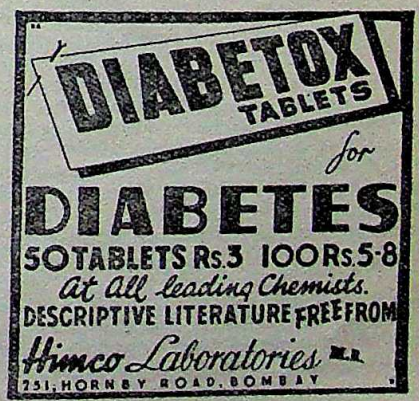
FOREIGN PERIODICALS

China and Korea

Dr. Chen Yao-Sheng delivered the following lecture at the Chinese Institute, London, as published in *The Asiatic Review*, October 1950 :

II



Prior to 1858, Japan was a federal kingdom. In that year, however, the House of Togugawa collapsed and a new regime commonly known as the Restoration was established. After she had concluded Treaty relations with the West she desired similar relations with China and in 1870 her approach was accepted by the latter resulting in the Treaty of Tientsin 1871, a feature of which was the reciprocal granting of extra-territorial jurisdiction. The following year the question of jurisdiction over the Liu-Chiu islands arose and as a result of ignorance on the part of government officials, China lost her jurisdiction of these islands. Japan made the King of Liu-Chiu "Lord of the Japanese Empire," transferred Liu-Chiu affairs to her Ministry of the Interior and prohibited Liu-Chiu from sending her bi-yearly tribute mission to China. This action caused great alarm in China and realizing Japan's ambition, began to defend her vassal states from further encroachment.

As early as 1868 Japan had begun her activities in Korea when she sent a mission to review relationship. This was refused by the Korean Government, but later in 1875 Japan asked China to grant credentials for a mission to Korea. The Chinese Government, considering it improper to order Korea to receive the mission therefore declined to grant credentials. On the suggestion of Li Hung-Chang, Viceroy of Chi-li, however, the Japanese request was communicated to Korea, resulting in the Mission being received and a Treaty concluded in 1876. By this Treaty Japan was given the right to establish a permanent Legation in Seoul; to trade in two ports in addition to Fushan; to station consuls in these ports and to enjoy extra-territorial rights. Foreseeing Japan's ambition as regards Korea, China took precautionary measures and advised Korea to reconstruct her army in readiness for an emergency. China also advised Korea to enter into Treaty relations with other foreign powers in order to weaken Japan's hold on her, and in response to this advice Korea sent a special commissioner to Li Hung-chang to consult with him in person a plan for the reconstruction of the Korean army. Through the good offices of Li, Korea signed Treaties with the United States in 1882, Great Britain in 1883, Italy and Russia in 1884 and Austria in 1892.

Although China wished to make Korea strong enough to withstand any infringement of her rights from Foreign Countries, internal strife in the latter's domestic affairs weakened her position considerably. The King, who had succeeded his uncle at the age of 12, was of weak character. After his marriage he became influenced by his consort and permitted his father Ta Yuan-Chun (the Regent) to be ousted from power. Ta Yuan-Chun naturally could not accept such a personal injury and sought his revenge by taking advantage of dissatisfaction which existed in the Army and incited a palace revolution. At that time, anti-Japanese feeling was high among the patriotic Koreans and they seized the revolution as an occasion to manifest their feelings. They burned down Japanese Legation, the Minister fled to the coast and the Japanese Government despatched large military forces to Korea and entered the Capital. When the news of the Korean disturbances reached China, troops were sent, but by the time they arrived the revolution was over. In the ordinary way, China would not have intervened in Korean internal disturbances, but with Japan involved there were little else she could do. In order to prevent Japan from having any pretext to begin hostilities against Korea, China quelled the disturbance, arrested the instigator Ta Yuan-Chun and sent him to China where he was detained at Paoting. China's swift action in settling the Korean problem left Japan with no excuse to make further complaints so she had to content herself with whatever indemnity she might exact. On August 30, 1882, she obtained from the Korean Government an indemnity and the right to maintain a Legation guard with quarters provided by the Korean Government. A Supplementary Treaty Clause to the 1872 Treaty with Korea was also obtained.

In 1884, China was involved in a military conflict with France over Indo-China, and in consequence was unable to pay much attention to Korea. Some of the Korean demagogues, with the assistance of the Japanese Charge d'Affaires, became active. They staged a coup d'etat on December 4, 1884, on the occasion of a dinner given to the Diplomatic Corps to celebrate the opening of a Korean Postal system. The conspirators murdered six government ministers and seized the King and Queen. Yuan Shih-kai, a member of Li Hung-Chang's staff and Commander of the Korean Army, at once rescued the King and Queen and suppressed the conspirators. Seeing their cause lost, the Japanese Charge d'Affaires burned down the Legation and retreated to the sea coast. Again Japan sent a large military force to Seoul to exact anything they could from the Korean Government, and as a result obtained an indemnity together with a convention by which Korea was to apologize to Japan and to rebuild the garrison barracks.

As China was involved, Japan sent Count Ito Hirobumi to China alleging that China had started hostilities and taken part in the interception of the retreating Japanese guards. He demanded the recall of Chinese troops

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and the punishment of officers connected with the incident. Li Hung-Chang, who negotiated with Count Ito, accepted the request provided Japan would do the same and recall her Legation guards. The other requests he peremptorily rejected. After several meetings a Convention was signed with three articles—the most important one being Article III providing :

"In case any disturbances of a grave nature occur in Korea which necessitates the respective countries, or either of them to send troops to Korea; it is hereby understood that they shall give, each to the other, previous notices in writing of their intention to do so, and that when the matter is settled they shall withdraw their troops and not further station them there."

In the hope of checking the weak King, China sent Ta Yuan-Chun back to Korea in 1885. In addition Li Hung-Chang appointed Yuan Shih-kai as "Trade Commissioner" to Korea with the power to advise the King on behalf of China. For nine years peace reigned in Korea until the Spring of 1894 when an anti-foreign movement known as the Tung-Hsueh Rebellion broke out in South Korea. Failing to quell the rebellion the Korean Government appealed to China for troops. 1,500 soldiers were sent and the Japanese Government duly notified in accordance with the Li-Ito Convention. In reply, however, Japan declared that she had never recognized Korea as a tributary state of China and that she intended despatching military forces to Korea on the grounds that the disturbances were of a grave nature and necessitated Japanese troops there. The Chinese Government pointed out that the presence of Chinese troops was in accordance with practice hitherto pursued by China in protecting her tributary states and that there was no necessity for Japan to send troops. Ignoring China's claim, Japan proceeded to send detachment after detachment of troops and in answer to Korean protests, claimed her right to do so under the convention of 1882 by which Korea consented to Japan stationing guards at her Legation. Until July 18, there were 18,000 Japanese troops around the Korean capital. Meanwhile, the rebels in Korea had dispersed on learning of the arrival of Chinese troops and China accordingly requested Japan to withdraw her troops simultaneously with the Chinese troops as provided in the Li-Ito Convention. In reply to this Japan proposed that both countries should first jointly suppress the rebellion and then appoint a joint commission charged with the duty of reforming the Korean Government administration. The Chinese Government regarded this proposal as completely absurd and insisted on the withdrawal of troops by both countries. Japan's mind was made up, however, and on the very day she received China's note, declared that the interests of Japan in Korea, arising from propinquity as well as commerce, were too important and far reaching to allow her to view with indifference the deplorable condition of affairs in that kingdom and that therefore the withdrawal of her troops should be consequent upon the establishment of some understanding that will serve to guarantee the future peace, order and good government of Korea.

Upon receipt of this Note, Li Hung Chang sounded both the British and Russian Ministers to China as to whether their respective governments might advise Japan to stop sending troops to Korea. The Ministers referred the question to their governments but only Russia was willing to move in the matter. This prospect disturbed Japan and she assured Russia that she had no special motive and would withdraw her troops. She asked both Britain and Russia, however, if they would be willing to act as mediators in the Korean question but both governments replied that they had no such intention. With these assurances Japan felt she could [illegible] in dealing with China, and on July 14 sent a Note to China in the form of an ultimatum, ending as follows:

"The only conclusion deducible from the circumstances is that the Chinese Government is disposed to precipitate complications, and at this juncture the Imperial Japanese Government find themselves relieved of all responsibility for any eventuality that may, in future, arise out of the situation."

Immediately upon receipt of this China took precautionary measures in anticipation of military action by Japan. Great Britain and Russia, by this time, had changed their policy and their Ministers in Peking and Tokyo were instructed to co-operate with the representatives of Germany, France and Italy to effect a mediation on the basis of simultaneous withdrawal of troops from Korea. None of these powers were, however, prepared to offer mediation, for they evidently believed that Japan would abide by her declaration and would not resort to extensive measures. This was latterly also the belief of Great Britain and Russia. But on the contrary, Japan declared war on China on July 23, 1894. She seized the Korean Palace, compelled the aged Ta Yuan-Chun to appear as Regent and attacked Chinese war vessels at Yasham.

During the course of the war China persuaded foreign powers to mediate but from the very beginning Japan was determined to negotiate directly with China. As a result no mediation was affected and China was compelled to sign a Treaty with Japan at Shi-monoseki on April 17, 1895. Apart from many other concessions given to Japan, China recognized the full independence of Korea, ceded the cession of Formosa and Liaotung peninsula in South Manchuria, including Port Arthur and Darien.

The cession of Liaotung peninsula to Japan came as a great shock to Russia as it was always her desire to possess a warm-water seaport, her only other possession Vladivostock, being navigable for only half the year. It had long been her wish to gain control of Port Arthur and Darien and extend her influence in Manchuria. In an effort to prevent Japan gaining control of the two ports and southern Manchuria she induced Germany and France to intervene on April 17, the day when the Treaty was signed but not yet ratified. As a result of this intervention, Japan was compelled to return Liaotung peninsula to China.

It is interesting to note that Great Britain did not join the other powers in the intervention. After examining the Japanese peace terms, the matter was discussed at a British cabinet meeting presided over by the Prime Minister, Lord Rosebery, on April 8. According to records of discussion, Britain was greatly disappointed to discover that China was not such a formidable "ally" against Russia as she had for years fancied.

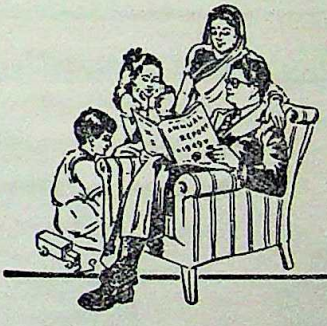
the other hand, she was pleased to observe, that, without any effort on her part, she was to enjoy, through the most-favoured nation clause in her Treaties with China "many additional commercial privileges." But apart from these considerations, she saw nothing menacing her interests in the Far East by the change contemplated by the peace terms, in fact she appeared to see enormous advantages in them. When Lord Kimberley, the British Foreign Minister, was approached by Count Hutzfeldt, the German Ambassador in London, the former was reported to have believed that the danger to China in the cession of the Liaotung peninsula might be lessened by moving the Chinese capital to Nanking, or in other words, by virtually abandoning North China, including Manchuria.



I would like to point out here that Korea was not actually annexed by Japan until after the Russo-Japanese war of 1904. In order to make the history complete I should include an outline of events leading up to this conflict which was caused directly by the Korean problem.

Japan soon realized that Russia was the country she had to contend with especially when, after she had begun to reform Korea, she found that the King had fled to the Russian Legation for protection. Under these circumstances, Japan had to accept whatever terms Russia chose to dictate, and by one agreement dated May 14, 1896, between the two representatives at Seoul, Japan undertake to restrain her political bravos in exchange for the early return of the King and to limit with Russia the number of guards to be maintained in Korea. By another agreement she agreed to come to a common accord on the question of rendering financial assistance to Korea and to abstain with her from meddling with the Korean Army and police forces. In 1898, a Convention, was signed between Japan and Russia providing for mutual abstention from interference in the internal affairs of Korea and from nominating military instructors and financial advisers without having previously arrived at mutual accord on the subject.

By virtue of the Sino-Russian secret Treaty of 1896, Russia acquired special privileges in Manchuria and latterly the lease of Port Arthur and Dairen from China, thus extending her control all over Manchuria. Russia's new position in the Far East naturally caused alarm to Japan and the conflict of the two spheres of interest became inevitable. Both Russia and Japan began preparations for war but before resorting to extreme measures, Japan started a diplomatic manœuvre on July 28, 1903 by inviting Russia to enter upon "an examination of the condition of affairs in the extreme Far East where their interests meet, with a view to a definition of their respective interests in these regions." This request Russia was obliged to accept.

Russia agreed to Japan's original proposal that Japan should recognize Russia's special rights in Manchuria; that both parties should respect the independence and territorial integrity of Korea and to maintain the principles of equal opportunity for the commerce and industry of all nations therein. Russia put forward further proposals (*a*) that Japan should abstain from using any part of the territory of Korea for strategical purposes and from undertaking on the coast of Korea any military works capable of menacing the freedom of navigation in the strait, and (*b*) to consider that part of the territory

43 YEARS OF DEPENDABLE SERVICE ••

This is a history of achievement and service and, in view of these difficult times, 1949 is the most important Chapter in the unfolding of the history of the HINDUSTHAN CO-OPERATIVE INSURANCE SOCIETY LIMITED

The Society now provides protection totalling Rs. 69,73,23,218 for 3,40,247 policies in India and outside. The carefully invested assets held to meet its policyholders' obligations have now grown to Rs. 15,64,29,771. During 1949, Rs. 71,02,500 was paid to policyholders and their beneficiaries. The new policies amounting to Rs. 13,36,06,243 show its upward stride from year to year.

of Korea lying to the north of the 39th Parallel as neutral zone into which neither of the contracting parties should introduce troops.

Japan accepted the half of Russia's first proposal (*a*) referring to the freedom of navigation in the strait of Korea and rejected the other half for strategical purposes and substituted for (*b*) one of hers, constituting a neutral zone extending fifty kilometres on each side of the Korean Manchuria frontier. Russia, however, insisted on her own proposal so Japan further suggested the suppression of proposal (*b*) concerning a neutral zone, also the elimination in (*a*) of the clause "not to use any part of the territory of Korea for strategical purposes" as she had insisted upon before. Russia refused to agree to these suggestions and on February 5, 1904, Japan informed Russia of her decision to terminate negotiations and intended "to take such independent action as she may deem necessary to defend her menaced position and to protect her rights and interests." On February 10, the Japanese Emperor declared war on Russia and at the same time declared that "the integrity of Korea was a matter of concern to his Empire, not only because of Japan's traditional relations with that country, but because the separate existence of Korea was essential to the safety of his realm, and that the absorption of Manchuria by Russia would render it impossible to maintain the integrity of Korea and preserve peace in the Far East." On February 23, Japan drew up a protocol with Korea, by which Korea agreed to place full confidence in Japan and adopt her advice with regard to improvement in administration while Japan agreed to insure the safety and repose of the Imperial House of Korea and to definitely guarantee the independence and territorial integrity of the Korean Empire. On August 19, Japan signed another agreement with Korea by which Korea undertook to employ a Japanese subject as financial adviser and a westerner as diplomatic adviser, both to be recommended by Japan. On May 30, 1905, yet a further agreement was signed by which Korea undertook to transfer and assign the control of and administration of the post, telegraph and telephone services in Korea to Japan.

In her war with Japan, Russia met the same fate as China, and on September 5, 1905, she signed a peace treaty with Japan at Portsmouth, New Hampshire. By this Treaty, Russia "recognized that Japan had predominant political, military and commercial interests in Korea, agreed not to interfere or place obstacles in the way of any measure of direction, protection and supervision which the Japanese Government may deem necessary to take in Korea."

This treaty, together with the acquiescence of Great Britain by the renewal of the Anglo-Japanese alliance in 1905, gave Japan a free hand in Korea. In the next few years, she assumed control of Korea's foreign relations, established a President-General in Seoul in 1905, forced the abdication of the recalcitrant Korean King in favour of his feeble-minded son in 1907, and in 1910 formally annexed Korea.

The Birth of a Masterpiece

The 'Last Judgement' of Michelangelo

On a beautiful day in spring, a very great Architect, who had already made his life famous with his works, left his beloved Florence to go to Rome in order to construct the Cupola of St. Peters. It is said that on reaching the gates of his city, just where the houses give way to the countryside, Michelangelo turned around, and half confessing his inability, he bid good-bye to the Cupola of Santa Maria del Fiore, which in all its grandeur is the expression of the genius of another immortal artist, saying: "I am going to Rome to build your sister, bigger than you surely, but not more beautiful than you." However when he reached the Eternal City, Michelangelo gave life to that wonderful work, which together with Bernini's Columnade, makes of St. Peters Square, the most marvellous symphony of architecture that can be admired in the world.

But yet another work was still awaiting the prodigious hand of this sovereign artist—the Sistine Chapel. Who but he would have been able to worthily crown those walls which had already been honoured by the brushes of Perugino, Signorelli, Botticelli and Ghirlandaio? And behold, having dismissed the painters he had called to help him in the rendering of this gigantic epic work, because they would never have been able to satisfy him, he who was unsatisfied even with himself, set to work alone.

One remains enrapt while gazing at the figures on these walls—up there there are the Sibyls and Prophets! Here there are predecessors of Christ and the Bronze Serpent! Here again above the door-way one sees David and Goliath, Judith and others! Muscular figures, strange poses, members strained to the extreme—all to express both the spiritual and temporal life.

But a baneful destiny did not allow the Artist to complete his work so soon. Rome was besieged by the Imperial troops; Florence itself was encircled by the militia of Charles V, and the Artist felt it his duty to join Ferrucci in the defence of the walls of his city.

After years, calm reigned again, and another Pope, Paul III, wished to see the work begun in the Sistine Chapel terminated. It was the year 1537, Buonarroti, although at that time well over sixty years of age, was at work again; he worked with such zest and vigour that he seemed to have the energy of a boy of twenty. The most powerful scene of the wonderful alfresco, the climax of this glorious symphony, the summit of the highest peak in art, a 'Divina Commedia' in painting was being born —he was painting the 'Last Judgement'!

With what bewildering admiration did the greatest authorities of those days go every evening to gaze at this marvellous work being carried out! Among these persons there were Cardinal Sadoleto and Cardinal Bembo; there were the most learned of foreigners, even the famous poetess Vittoria Colonna was one of the daily visitors. They came in numbers just to get one glimpse, even through the scaffolding, of that magical scene.

Even the malignant Biagio da Cesena came along one fine day, and horror-stricken because the artist had filled his paintings with nudes, he began to criticise him incessantly. Michelangelo, whose pride had been touched by the criticism, revenged himself by painting the figure of his critic as Minos, and naturally he placed him in hell. In vain did the punished man run to the Holy Father to protest saying, "Your Holiness, Michelangelo in his 'Last Judgement'." "I know all, my son, I know all," said His Holiness, "but I also know that nothing can be done to remove you from the uncomfortable place to which Buonarroti has condemned you, if he had at least put you in Purgatory, we could have managed by dint of prayer to remove you from there; but you know as well as I do that once one is in hell, he must remain there forever, without remission....." And so this wonderful work went on—'No other artist, even if he had the genius of a hundred Buonarroti—says Giovanni Papini—will ever be able to put into lines or colours such a supernatural event.'

At the bottom one sees corrupt and false humanity. From the dark mouth of a cave comes the ferocious pitecantrop of the earliest ages, this is the first landmark of human history, which began with the creation. On the same plane, and at a side, there are heaps of tombs and corpses to show the end of the parabola of terrestrial life—the alpha and the omega of our mortal state. Immediately above the rotting carnage in the middle of the scene, there is the first impressive sign of the life that really counts, the life that shall not pass away. One sees the group of Angels descending to the chosen valley to blow their trumpets, and at those sounds the whole picture changes aspect in a very incomparable way. At the first look one sees only a large mass of members, parts of human bodies in an obsessant movement. A confusion of bodies, outstretched hands and legs, muscles contracted to the extreme, necks and faces swollen with exasperation, open hands or closed fists in desperate movements, people cursing, fighting—a great confusion, a motley crowd, a kaleidoscope, a phantasmagoric scene, a parade of maddened humanity.

On looking better, however, the tremendous confusion reveals a well-ordered style, a well-judged and reasoned harmony, almost rational. On the never-ending and cruel

TROUBLED WATERS

by

JOHN O'HIND

AN EXCITING NOVEL on the historical background of the breakup of the Mughal Empire, the decline of Maharatta Kingdom and the first serious attempt to organise an Indian Navy by the Angres . . . by an author famous for his historical romances.

dav depicted, of which a look at the sky is enough to strike fear of that fatal day, on one side one sees the elect going towards their merited prize, on the other the reprobates—crying in vain for a belated mercy—being cast into the lowest abyss, where even Caron the devil, who ferrys the damned in his frightful boat across the lethal river, is pushing and beating them down with his oars towards their eternal punishment. High above this plane, on either side of this twofold scene there are the angels who are throwing down the pillar to which the Divine Martyr was tied and scourged, and raising up the Sublime Cross on which the redeeming Outcast became the Redeemer. In the middle there is the group of the most faithful of the faithful, those who for the love of Him did not fear to face martyrdom, or those who followed Him exactly to the word He taught. At the highest point, on the side of His Worthy Mother, there is the dominating figure of God the Creator, Saviour and Supreme Judge—the God of Justice and Mercy, Who is the reward and the Judgement, the God of Anger, from Whose judgement none can escape.

All the most frightful sentiments and thoughts alternate and cover one another in this way, in this apocalyptical exhibition; all the most tragic and condemning tones sound together in this endless and eerie chorus of colours and shades. There is nothing soft, gentle or serene, everything yells, cries, begs, or orders or shouts. A devilish and delirious wind blows over and upsets those creatures whom the Creator created for their own good, and whom another creator has set down here in the most true and realistic expression, which is the most doleful of expressions—his own personal sentiments as [illegible] and man.

Michelangelo has even painted his own portrait [illegible] one of the embossments on the sheath of St. Bartholomew the martyr who was skinned alive, and who in this fearful picture, together with the other martyr St. Lawrence stands below the Redeemer to give testimony of how [illegible] and what kind of pains he had to suffer as [illegible] happens to the generous and pure innocent souls.

The whole court of Rome, with the Pope at the [illegible] was there to see this superhuman scene on the last [illegible] When Michelangelo had given his last touch to the [illegible] cle, and had come down for the last time from [illegible] scaffolding, which he ordered the workmen to remove, a shout of surprise and bewilderment, of admiration and terror went up from those who were present. All [illegible] together bowed and knelt down before the masterpiece.

'In these past ages, four men have excelled in [illegible] and letters above the whole human race—Dante, Shakespeare, Beethoven and Michelangelo—exclaimed Taine. Maeterlinck enjoined—"The painting of Michelangelo—the meeting of giants—is a part of the heavens where the most masculine scenes, all the most powerful [illegible] all the most burning of passions are reflected," and Fa[illegible] rightly said: "Well could have Michelangelo exclaimed 'My art will create a set of ignorants,' as only he could give life to such masterpieces that surpass all [illegible] masterpieces"—while Sallet somewhat exaggerates saying: 'Michelangelo is like God.'—*Adapted from Sistina by Arnolfo Santelli.*

"I Can Make You a Master Writer and a Convincing Speaker!"

—GRENVILLE KLEISER, Famous Speech Specialist

Whatever your business or occupation you need a command of the English language to be successful. It will bring you to the forefront and will help you, as no other single thing can, to reach the goal of your desires and achieve success.!

Years of study and experience have enabled Mr. Grenville Kleiser to formulate a course of lessons in Practical English which has been universally admitted to be superior to any instruction hitherto offered on this subject. It enables you by post, in your spare moments at home, to—

Enlarge Your Vocabulary by Thousands of Words;
Use the Right Word in the Right Place;
Correct all Errors of Grammar, Diction and Idiom;
Develop Originality of Style and Expression;
Write Tactful and Forceful Letters, Essays, Advertisements, Articles, Stories, Reports and other Compositions;
Become an Engaging Conversationist and Be Popular In Good Society;
Be a Person of Culture, Power, and Influence;
Earn More Money and Get Better Position.

If it is your ambition to become a forceful effective speaker, enrol yourself for Grenville Kleiser's Mail Course in **Public Speaking & Development of Personal Power.** It will enable you to—

Conquer Timidity and Fear;
Banish "Stage Fright" & Nervousness;
Acquire Poise and Self-Confidence;
Develop Charm and Personality;
Grip and Hold Attention;
Argue Effectively and Winningly;
Talk Convincingly & Be Successful;
Be a Centre of Attraction in Social Gatherings;
Address Meetings and Sway All by Forceful Speech;
Become a Living Force and Win Admiration.

This Course will bring out the best that is in you, by making you a positive, clear-cut, convincing thinker and speaker. Nothing like it is available anywhere in India or abroad.

WRITE TODAY FOR FULL FREE PARTICULARS

There is absolutely no uncertainty—no guesswork—about Mr. Kleiser's methods. He has had years of experience in leading educational institutions and is generally recognised as the foremost teacher of speech culture and English by post. He has had under his tutelage many of the best known men in the public eye. His Mail Courses are his life work. They are for every ambitious man and woman who would use the English language for all one is worth in business and social life. We shall be glad to explain any of these two Courses to you. Send us the coupon above or write for full particulars, enclosing two annas in stamps. Will you do it TO-DAY?

WONDERFUL POWERS OF AN OCCULTIST

Have your Past, Present and Future wonderfully revealed by Prof. M. J. Narsian, B. A., the Famous Astrologer and Occultist. His system of calculation is based upon YOGA-SADHANA (Meditation) and upon Ancient & Modern Science of Prediction. His book *Your Future Thru Astrology* has been eulogised in the Press. Prof. Narsian possesses wonderful OCCULT POWERS, and "Hypnotic Chart" is appropriately designated "The Mascot of Success". Numerous eminent persons have certified his wonderful predictive faculties.

DETAILS OF CHARGES:

Accurate Description of your Life Past, Present & Future up to 1952	Rs. 5-4
Detailed Annual Life Reading for next twelve months	Rs. 5-4
Three Questions Answered	Rs. 5-4
Hypnotic Chart (size 19" × 25")	Rs. 10-8
Hiro-Mantric-Talisman surcharged with Psychic Spiritual Powers	Rs. 10-8
Extensive Astrological Life Reading (Western Astrology)	Rs. 25

DATA REQUIRED:

Birth date, time and place of birth. If your birth date is not known, please mention approximate age, date and exact time of writing.

A copy of your HOROSCOPE drawn according to Western Astrology will be sent with leaflets on "The Third World War" and "Future of First Indian Republic" without extra charge.

Payment may be made by M.O. or Postal Order.

ADDRESS:—**PROF. M. J. NARSIAN, B.A.**
OCCULT ASTROLOGICAL FOUNDATION, Post Box No.: 25. POONA (India)

INDIAN ECONOMIC
INSURANCE CO., LTD.

Head Office :— MISSION ROW, CALCUTTA.

"Indian Economic" is one of those very few Life Insurance Companies of India which are regularly paying bonus to the policy-holders and dividend to the shareholders.

Board of Directors

S. M. BHATTACHARJEE, Esq., Chairman.
RAJENDRA SINGH SINGHEE, Esq.
T. C. CHATTERJEE, Esq.
I. N. ROY, Esq.
M. M. BHATTACHARJEE, Esq., Manager.

As it is always profitable to take a policy from the INDIAN ECONOMIC, so also it is always profitable to take an agency from the INDIAN ECONOMIC. Well-informed people take Insurance Policies from "INDIAN ECONOMIC" with pleasure. It is the support of the intelligent public that has made the position of the "INDIAN ECONOMIC" so strong to-day.

ROUND THE WORLD

By Mr. J. N. SINHA

(Assistant Conservator of Forests, Bihar)

A most interesting travel book that reads like a novel—valuable and instructive information of the world in the language of story book. The different customs of foreign people, their manners and outlook, are delicately mingled with humorous and entertaining anecdotes.

"There is a certain distinctiveness about the book which sharply marks it off from the ordinary travel tales of this kind." —*Hindusthan Standard*

"The volume is a record of first-hand experiences in various countries of the world, and is full of information which a large public ought to know." —*Amrita Bazar Patrika*

34 Photographs & 3 Maps :: 2nd Edition—Price Rs. 7-8

WHAT DOES FREEDOM MEAN

It means the surge of pride in the Patriot's bosom which bursts forth in an exultant paean o joy when he sees "Our flag is flying".

It means thousands of young lives sacrificed at the altar of Independence.

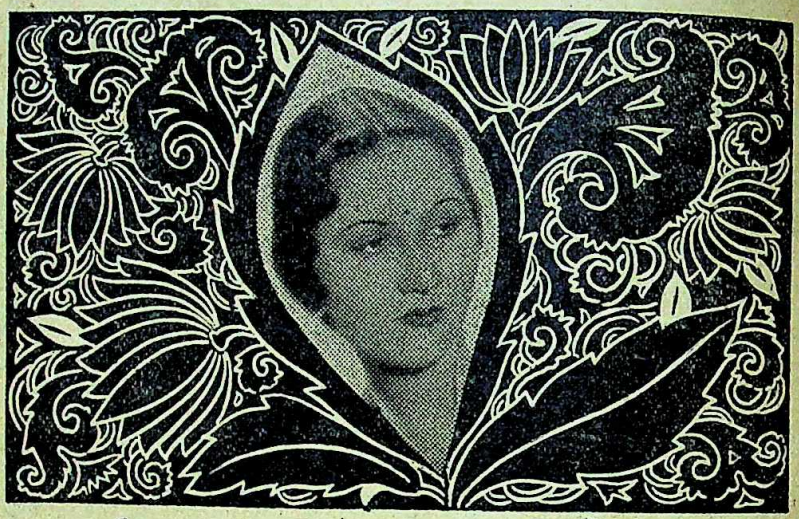
It means the chance of the common man to shape and control the destiny of our people.

It means the unhampered genius of the nation builders.

It means reading free newspapers, listening to a radio catering freely to our national aspiration, telling your neighbour frankly how you would like to conduct yourself as a free citizen.

It means the right to think what you like, to speak as you think and to stand up for a cause in the right spirit, without fear of the consequences.

It means an extra glass of healthgiving milk for the baby and sufficient food and comfort for the family.



It means snowy mountains, bubbling brooks, green fields reaching the horizon all encompassed within the magic name "India".

"It means too the sheltering wing of Life Insurance which shields the family against financial disaster. It means Women and Children first. It means a roof of her own for the widow, School & College for Children, peace and security for the aged." In these latter aims the Hindusthan has for the last 44 years contributed its full share and is still working for the service of the nation, so that freedom may ring for ever.

For Success Against Social Scourge

Possess :—

VENEREAL DISEASES AND PUBLIC HEALTH

By M. H. ZUBAIRY

With a foreword by Dr. A. C. Rebello

Price Rs. 3-12

This excellent book educates the public about the dangers of Venereal Diseases. It teaches how to avoid them and what to do if once contracted. The book is complete in itself and gives what is regarded as very useful information on the signs, symptoms, prevention and cure of Venereal Diseases. The illustrations contained in it are original being photographs by the author from actual cases of Venereal Disease in India.

The book is written in simple language and can be easily understood by all. The book can be placed safely and with full confidence in the hands of young men as well as in the hands of social workers to whom people in distress turn for advice.

CURRENT THERAPHY OF VENEREAL DISEASES

By M. H. ZUBAIRY

With a foreword by Dr. W. N. Welinkar

Price Rs. 6-4

"I have read Mr. M. H. Zubairy's booklet, "Current Theraphy of Venereal Diseases" which has been published now as a supplement to his earlier book **VENEREAL DISEASES AND PUBLIC HEALTH**. Written essentially for medical practitioners and students, this booklet is like a digest of all the latest literature on the up-to-date treatment of Venereal Diseases.

"Recently the advance in the treatment of Venereal Diseases have been so rapid that a medical practitioner who treats a case of Venereal Disease is in a fix to make up his mind as to what line of treatment he should follow in the best interests of the patient.

"This booklet, containing enormous information in the concise form, between its covers, will truly serve as a ready reference. The author, having digested the voluminous literature published in several countries, has given the best to those who will be using this book.

"I strongly recommend this book to the medical profession." —(Dr.) W. N. WELINKAR

The Truth in Your Horoscope

YOUR REAL LIFE TOLD FREE

Would you like to know without any cost what the Stars indicate for you, some of your past experiences, your strong and weak points, etc? Here is your chance to test FREE the skill of Pundit Tabore India's most famous Astrologer, who by applying the ancient science to useful purposes has built up an enviable reputation? The accuracy of his predictions and the sound practical advice contained in his Horoscopes on Business, Speculations, Finance, Love-affairs, Friends, Enemies, Lotteries, Travels, Changes, Litigation, Lucky Times, Sickness, etc., have astounded educated people the world over. GEORGE MACKEY of New York believes that Tabore must possess some sort of second-sight.

To popularise his system Tabore will send you FREE your Astral-Interpretation if you forward him your full name (Mr. Mrs. or Miss), address and date of birth (English Calendar) all clearly written by yourself. No money wanted for Astrological Work, postage, etc., but send 6 annas (Stamps) for Stationery, Testimonials and other interesting literature. Tabore believes in fair dealing and all work for which he receives any payment is on the basis of satisfaction guaranteed or full money refunded. P-26, Raja Basanta Roy Road,

CALCUTTA.

"Among the makers of modern Beng Ramananda Babu will always occupy an honour place. × × × Like Tagore's the late Mr. Chatterje genius was essentially constructive. × × By publishi this engrossing biography of her father, Srijuk Santa Devi has done a great service to Bengal a derivatively to the whole country. × × No one co have written a biography of Ramananda Babu as s has done. It will certainly remain a source book f future writers and students."

—*Hindusthan Standard*

"An authentic and highly interesting biogra in Bengali of the late Ramananda Chattopadhya × × The life story of such a man is naturally link up with the main currents of contemporary natio history and we are glad to note that the author h adequately covered this wider background in deli ating the individual's life. The style is restra and has a homely grace, and a number of fine pho graphs have greatly enhanced the value of t volume. We are sure the book will be read with in by those who wish to study he currents and cross currents of Bengal's history tor the last half a centu with which Ramananda wasfintimately associated."

THE MODERN REVIEW

MARCH 1951

VOL. LXXXIX, No. 3 WHOLE No. 531

NOTES

Indo-Pakistan Trade Pact

The Indo-Pakistan Trade Pact has been signed. India has surrendered to Pakistan in accepting the par value of the Pakistan rupee which she had hitherto persistently refused to recognise. India had stoutly opposed the par value of the Pakistan rupee at the International Monetary Fund and she will now have no face to oppose it there. Her position will be ridiculous at the next meeting of that body. This surrender has caused much resentment in this country as it is bound to do, specially after last February's incidents which were direct results of India's refusal to recognise the Pak rupee.

This bitter humiliation is rendered all the more poignant when we consider what might have happened if the Union had men at the helm who could keep disloyal officials and rapacious Big Business tycoons in control. Last year, when Pakistan was facing a seemingly impassable crisis, the entire nation's cause was betrayed by those who controlled the I.J.M.A., in collusion with a high official whose loyalty to the State was anything but conspicuous in the jute deal, which we consider was little short of an act of treachery to the nation.

We believe we shall not be far wrong if we assume that Pakistan relied in this devaluation trial of strength as much on the tenacity of her ministers and the loyalty and integrity of her high-officials as on the lack of those qualities in their opposite numbers in India, plus the rapacity and treachery of those Indian elements who, through speculation, inhuman profiteering and tax-evasion, have successfully intruded into Big Business. But recriminations are futile, let us consider the humble pie set before us.

The total value of trade that passes between the two countries is of the order of some Rs. 300 crores. Pakistan is an agricultural country. Her disinclination to devaluate her currency and therefore raise her cost of living is a normal sentiment and ought to have been foreseen by our Finance Ministry. India's trade with Pakistan is as important, if not more important, than her trade with the other Commonwealth countries. Rushing towards devaluation without waiting for the decision of Pakistan had been an act of rashness for which the people of India have had to pay very dearly in blood and money. Our former Finance Minister and the present incumbent were the two persons responsible for taking the decision of devaluation without taking Pakistan into account. One has retired and the other succeeding him in office, has completed our humiliation. We consider even revaluation of Indian Rupee to an intermediate level would have kept up the prestige of the Government before the people. Export of commodities which are already in short supply might cause still further hardship to the common people. Revaluation of the Rupee would have been better for the masses, the present arrangement will be profitable only for the capitalist classes. Pakistan is a primary producer of goods of a perishable nature. One year's excess stock in her hands due to non-purchase by India would have pricked the Pakistani bubble and brought her to the position of a distressed seller. Much is made of Pakistan's opportunity to sell jute to countries abroad, specially to England, Germany, France and Spain. The position of jute industry in these countries has been given by Prof. C. N. Vakil in his latest voluminous publication *Economic Consequences of Divided India* (November, 1950). He says, "In the pre-war period, 57 per cent of the total jute looms of the world were

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

being worked in India. During and since the war, the importance of India in the production of jute manufactures in the world increased as a result of the dislocation of manufacturing establishments in Germany, France, Italy and other European countries, except in the U.K." We apprehend that this position, together with India's jute-growing capacity and the limitation of the Chittagong port have not been taken into serious consideration. Dependence of an organised industry on foreign raw material is nothing new in the modern world. If such a dependence were not feasible, Britain and Japan's Textile industry and Dundee's jute mills would have been disbanded long ago. The strange, helpless stand taken by one of the strongest units of organised industry in the world, *viz.*, the Indian Jute Mills, has been a lamentable spectacle. The Government of India have equally vaccillated in their policies in tune with these mills.

The following is a summary of the Agreement :

Being desirous of promoting trade between the two countries the Government of Pakistan and Government of India have entered into the following agreement :

Article. (1) The period of this agreement shall be from the 26th February, 1951 to 30th June, 1952.

(2) The two Governments agree to permit the exportation to and the importation from the other country of the commodities and goods specified in Schedule I which is attached to this Agreement.

(3) In respect of such commodities and goods as are, or may be subject to export or import licence, the two Governments agree to grant upon application duly made, export or import licences up to the quantitative or monetary limits specified in Schedule I, in accordance with the laws and regulations and administrative practices of the Government granting the licences.

(4) In respect of those commodities in which the export trade is the monopoly of the Government in either country, the terms of the agreement will be deemed to have been fulfilled if the supplies have been made at agreed points within or without the country and such quantity of the commodities mentioned in column two of Schedule I as cannot be supplied before the 30th June, 1951, shall be carried forward to the period 30th June, 1952.

(5) In respect of foodgrains the quantities, period and terms of supply will be as in Schedule III to this Agreement.

(6) In respect of raw cotton, the Government of Pakistan have at present no destination quotas, and India is, therefore, free to buy any quantity. If, however, destinational quotas are introduced during the period of the agreement, the Government of Pakistan agree to give India a quota of 400,000 bales in the cotton season 1951-52.

Article II : The two Governments agree that there shall be no import and/or export trade control restrictions on the movement between the two countries in respect of the commodities mentioned in Schedule II.

Article III: In respect of the commodities mentioned in Schedule I to this Agreement the two Governments agree that except where prices are separately negotiated, neither Government will impose any discriminatory supplement or surcharge or any other addition to the export prices of those commodities.

Article IV : The commodities and goods described in Schedules I and II refer only to those that are produced, processed or manufactured in India or Pakistan as the case may be.

Article V: The Government of India and the Government of Pakistan agree not to permit the re-export of any of the commodities imported under Schedule I.

Article VI: Notwithstanding anything contained in Articles I and II, the two Governments agree that export and import facilities granted by each country to the other shall be no less favourable than those applied to any other country in the sterling/soft currency area.

Article VII: In order to facilitate the implementation of this Agreement, the two governments agree to hold periodical consultations with each other in respect of any matter arising from, or in connection with, the supply of commodities or goods between the two countries during the currency of, and in accordance with, this Agreement, and if necessary, by mutual Agreement alter, extend or supplement the Schedules to this Agreement.

Article VIII: This Agreement shall come into force on the 26th February, 1951.

SCHEDULE I

From India to Pakistan

	Up to end of June, 1951	From 1st July, 1951 to 30th June, 1952
	Tons	Tons
Coal	600,000	1,500,000

(*ii*) Rice brokens 1949-50	7,700	up to 30-6-51
(Kangni and Sugdasi) 1950-51	21,300	up to 31-12-51
(*iii*) Wheat's flour 1950-51	9,000	immediately
Total	60,000	

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

(E) *Foodgrains from West Pakistan* :			
(*i*) Rice 1951-52	150,000	up to October, 1952	
(*ii*) Wheat 1951-52	275,000		
Total	425,000	--	
(F) *Gram from West Pakistan* :			
1951-52	20,000	up to April, 1952	
Total	20,000		
Grand total	771,000		

2. Foodgrains shown in Clause 1(a) and (B) will be supplied on "as is where is" ex-godown basis as regards quality and packing, but the Government of India will have the right to reject these quantities if they find the quality to be unacceptable to them.

3. Rice shown in Clause 1(C) will be F.A.Q. of the crop specified therein—clean, dry, in merchantable condition, free from bad odour, infection, infestation, damage and deleterious matter, and shall not be inferior to the specifications for each variety as given in the annexure to this schedule. Any deviations from the specifications will be subject to the scale of allowances laid down in the said annexure.

4. Prices of foodgrains will be as has been separately agreed between the two Governments.

5. Foodgrains mentioned in Clause 1(E) will be supplied, crop permitting.

Prices and other conditions of supply of these foodgrains will be negotiated between the two Governments in due course.

6. As regards gram mentioned in Clause 1(F), the Government of India will not purchase it on their account, or guarantee its offtake by the trade. The Government of India, however, permit the import of the agreed quantity through the traders, it will be for the Government of Pakistan to decide the manner of procurement and export.

7. The prices of foodgrains mentioned in Clause 1(D) are unacceptable to the Government of India, and will be negotiated separately as agreed upon.

8. *Packing*: Rice of 1950-51 crop in new single jute bags.

9. *Shipping Arrangement*: (*a*) For quantities to be delivered F.O.B. Karachi, the Government of India shall be responsible for arranging necessary tonnage. They will give at least ten days' notice to the Government of Pakistan of the date when shipping space will be available for loading at the port of Karachi and the quantity to be loaded.

(*b*) The Government of Pakistan will be responsible for any demurrage or dead freight actually incurred by the Government of India, should the former fail to load in accordance with Sub-clause (*a*) above.

(*c*) Should the vessel fail to be ready to load as intimated in Clause (*a*), the Government of India will be responsible for paying the cost of storing the grain and any demurrage and other costs actually incurred.

(*d*) In case, the Government of India employ foreign shipping for carriage of these grains, they will give first preference to Pakistan ships and will make a request to the Pakistan Government for such ships provided the terms and conditions on which Pakistan ships are offered are not less favourable.

10. *Inspection and Sampling*: (*a*) Check weighment normally 10 per cent but more in exceptional cases at the discretion of the Government of India. The inspection of quality of grain and packing shall be carried out at the godowns where goods are lying in Karachi by an agency acceptable to both Governments, to be appointed by the Government of India at their own expense.

(*b*) Representative samples will be drawn by the inspecting agency daily before loading the bags into wagons for being carried to the ship-side.

(*c*) The Government of Pakistan will provide, at the request of the inspecting agency, facilities for supervision (including the sealing of the wagons).

11. *Period of Delivery*: The periods of delivery shall be as indicated in column 4 of Clause 1. In regard to rice, both Governments agree to endeavour to the utmost to ship up to the end of June 1951 at the rate of 50,000 tons a month.

12. *Payment*: (*a*) For foodgrains to be supplied from West Pakistan, the Government of India will open an irrevocable revolving letter of credit sufficient to cover the cost of four cargo-loads of foodgrains in the Imperial Bank of India, Karachi, in favour of the Government of Pakistan, who will receive payment from the said Bank on present of—(1) Invoices showing the quantity placed F. O. B. and the total amount due in respect of the quantity after allowing rebate for allowances if any, (2) Certificates of quality and weight signed by the inspection agency referred to in Clause 10; and (3) Bill of lading made out in favour of the Director-General of Food, Government of India, New Delhi or certified from an authorised officer of the Government of India.

(*b*) For foodgrains supplied from East Pakistan, payment will be made by the agents of the Indian Government appointed to lift the stocks at the time of taking delivery.

13. *Disputes* : In the event of a dispute in regard to the right or obligations under this Schedule, it shall be settled by reference to the arbitration of the Secretaries of the Food Ministries of the two Governments. The arbitration award shall be final and binding upon both the parties. The cost of arbitration shall be borne by the parties as indicated in the arbitration award.

Sri C. D. Deshmukh, Finance Minister, made the following statement at the Parliament :

As stated by my colleague the Hon'ble Minister for Commerce and Industry in this House on the 19th February 1951, an official delegation, headed by Sri S. [illegible] Pillai, went to Karachi to negotiate a trade agreement

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

between the two countries. As a result of the talks held by them, an agreement between India and Pakistan was signed yesterday, copies of which have been placed on the table of the House.

While the Agreement is for the period ending June 1952, in respect of the main commodities, special provision has been made for ensuring speedy delivery of urgently needed supplies in both countries. The main commodities that would be supplied by Pakistan would be raw jute, raw cotton and foodgrains, while in return India will supply coal, steel, textiles and cement.

In respect of raw jute, Pakistan will grant an export allocation to India of ten lakhs of bales before the end of June 1951 and a further quantity of 25 lakhs of bales for the year July 1951 to June 1952. To ensure the supplies stipulated for the next four months, the Pakistan Government have agreed to sell to us at an agreed price the entire stock of about 3½ lakhs of bales of raw jute held by the Pakistan Jute Board and to place an overall quantitative limit on the export quotas granted to other countries. In respect of raw cotton our mills will be free to buy whatever quantities they can as there are at present no destinational quotas for exports from Pakistan. It is not expected, however, that more than 100,000 bales would be available during the current season and it is doubtful if even this quantity could be obtained. For the next year also the agreement provides that there will be no restrictions on our purchase of raw cotton in Pakistan. It further provides that if the Pakistan Government introduce destinational quotas for the export of raw cotton, they will allocate a quota of not less than 400,000 bales of raw cotton to India from the next year's crop. In regard to foodgrains, we are likely to obtain approximately 250,000 tons consisting mainly of rice and a small quantity of wheat during the current calendar year. For the next year, Pakistan have agreed to supply, crop permitting, 150,000 tons of rice and 275,000 tons of wheat. From India, 600,000 tons of coal will be supplied to Pakistan before the end of June 1951 and another 1½ million tons between July 1951 and June 1952.

The Government regard these broad features of the agreement enabling the resumption of trade between the two countries as satisfactory and in the best interests of both countries.

With the conclusion of a trade Agreement, it was necessary to find a mode of payment to facilitate the exchange of commodities and flow of trade between the two countries. As the House is aware, the question of the par value of the Pakistan Rupee has been under the consideration of the International Monetary Fund for a long time but no decision has been taken. Meanwhile, the economic situation in the world has undergone a radical change in favour of primary producing countries like Pakistan. The demand for raw materials has been greatly stimulated by the hostilities in Korea and this has pushed up the prices of all commodities very high and persons connected with trade have been catapulted into level. The Government of India have, therefore, in the altered circumstance, agrees that exchange transactions between India and Pakistan should be permitted on the basis of the par value of the Pakistan Rupee as declared by the Pakistan Government.

Damodar Valley Corporation

The Damodar Valley Corporation was planned on the basis of the Tennessee Valley Administration. We can say on the highest authority that in the latter the main consideration was the resusciation and rehabilitation of the poor people of the valley and the only dividends that the Federal Government of the U.S.A. looked for in this vast project was in the form of revival of hope and self-respect in a population of 8 or 9 millions, who were collectively going down-hill, having accepted defeat in the struggle against nature. Of the three main objectives, Flood Control, Navigation and Power, the Centre assumed responsibility for the first two, without charging the Tennessee Valley area either for capital charges or for returns through taxation for the Sinking Fund and interest on capital. Power and power alone was planned and supplied on a commercial basis , as the sole source of revenue, and the *via media* for the recovery of Sinking Fund and Interest charges. The Federal Government of the U.S.A. agreed rightly that the dividends measured in Humane values alone would amply repay the nation in the long run even if financially the scheme proved uneconomical. Flood Control and Navigation, it was argued, would benefit the entire nation and as such it should be charged. It is a known fact today, that the T.V.A. has justified all expectations, in that the people of that area are on their feet. Today the Tennessee Valley people are voluntarily relieving the Federal Government of financial burdens that they were not called upon to shoulder, and Income Tax payments are soaring up in areas which gave little or no return. Power Sales have also given returns beyond estimates.

The D.V.C. has all these characteristics, with the added advantage of irrigation in an area that can solve the problem of jute shortage by 80 per cent plus large quantities of cotton and rice. The gain in terms of food and textile raw-materials alone would be enormous. The D.V.C. Flood Control and Navigation schemes are the greatest safeguards for the most congested and biggest traffic area of the E.I.R. and the greatest help in the matter of transport to the biggest industrial area of India. The Power Scheme would re-establish industry on a large scale throughout that area once famed the world over for the skill and production capacity of its artisans.

All these seem to have been lost sight of by our Tin-gods at the Centre. Small men with primitive parochial instincts and an excessive craving for power

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

high positions—for which they have little equipment in the way of farsighted vision, broad grasp of major problems and a capacity to surmount racial or provincial considerations in such matters—through the immense shake-up that followed independence. Hence we find today that the entire scheme is being jeopardized.

The D. V. C. came in for trenchant criticism in the Indian Parliament. The main points of criticism may be boiled down to the following five :

(1) The estimate has been increased.

(2) Main purpose of the scheme, *viz.*, irrigation and flood control, has been neglected and too much attention has been given to generation of power.

(3) Financial control has been inadequate as revealed in the Audit Report.

(4) Participating governments have not been informed.

(5) Wastages and overhead costs have been very high. The overhead cost coming as 61 per cent.

We have tried our best to make a proper assessment of the above allegations. The facts that we have been able to gather suggests that there must be something more behind the criticism than that apparently meets the eye. Let us take them up point by point.

(1) Why the cost of estimate has increased ?

At the request of the Government of India, Mr. Voorduin, a planning engineer of the TVA while Mr. D. Lilienthal was its Chairman, was lent to India to prepare a Multi-purpose project for the Damodar River Valley. His estimate of Rs. 55 crores, his allocation of cost between Power, Flood Control and Irrigation were placed before a specially constituted Board of Engineers in 1945 for examination. The Board consisted of Mr. Khosla, Chairman of the CWINC, Mr. Narasimhaya, Chief Engineer, Mysore, Mr. Reigal and Mr. Schlemmer, experts, respectively, in design and construction of the TVA. The Board approved the project. The Government of India created the DVC to implement the project in July 1948.

Mr. Voorduin's estimate was preliminary, based on the data he collected and his engineering judgment. After preliminary estimates came project estimates. Preliminary estimates were based on preliminary designs. In the meanwhile further engineering data have been collected and the process continues. Project designs have taken shape, and detailed estimates are in course of preparation. It is the modern practice to start construction on project designs, detailed designs keeping ahead of construction.

As designs are taking shape these are being placed before a Board of Consultants appointed by the DVC with the Government of India's approval. This Board consists of two of the most eminent engineers of the USA; one has been Chief Engineer of the Bureau of Reclamation. The third member is the Chief Irrigation Engineer of the State of Madras with direct experience of dam design and construction. The cost estimates of the various parts of the project are based on sound engineering designs.

The rise in cost is due to rise in prices, devaluation and extension of irrigation, a higher capacity of the thermal power station and longer transmission. The scope of irrigation has been enlarged to one million acres. Expansion in the electrical field is based on studies of power requirement in this pre-eminently industrial area and has received the scrutiny and approval of the World Bank which has made a 18½ million dollar loan for [illegible] part of the project, including the Konar dam which is the source of cooling water for the power station. The area the DVC's electrical system will serve, covers all the coalfields of Bengal and Bihar, the Iron and Steel Works of the two States, the mica mines, copper and aluminium industries and the new locomotive factory, among the existing industries.

In view of the rise in prices of materials and labour specially the rise in the cost of machinery and equipment due to devaluation, there seems nothing unusual about the increase in the estimates.

(2) The main purpose has not been diverted. Work on the Bokaro steam station, Konar Dam No. 1, the transmission system and the Tilaiya Project had been taken in hand and it did not suffer for want of funds. The total expenditure in 1949-50 has been Rs. 578 lakhs of which equipment and construction plant cover Rs. 56 lakhs and works Rs. 122 lakhs, the balance of Rs. [illegible] lakhs includes such items as establishment, interest on capital, meteorological and soil investigation, workshop, planning, design, audit, etc. The work on Maithon, Panchet Hill, Durgapur Barrage and the Irrigation Canals had been slowed down for want of funds. Main works on these projects cannot begin unless funds are allocated. The Bokaro Power Station Project had been taken over by the D. V. C. when its preliminaries had already been completed by the Central Electrical Commission. The Project had long been under active consideration and the D. V. C. had taken it over at an advanced stage of preparation. It is therefore only natural that progress on it will be more marked than on the others. Completion of the Bokaro Power House ahead of others is desirable because it will begin earning revenue as soon as it is completed. We are glad to know that D. V. C. expects a revenue of Rs. 14 lakhs from it in very near future. The supervision of erection of the power plant has been entrusted to the Kuljan Corporation, that no "plums with money" had taken place with this Project which came in for the bitterest criticism is testified by the Audit Report itself which states : "The purchase functions include designs, drawings invitation and analysis of bids, inspection, etc. for which a fee of 2½ per cent allowed to the Kuljan Corporation inclusive of all their cost not considered unreasonable." It is therefore quite clear that the main purpose has not been diverted, work is progressing at a reasonable speed and cost. There has been greater progress in respect of the Power Plant, as it had been started at an advanced stage.

(3) Financial control of the Government of India over the D. V. C. has been quite adequate.

The D. V. C. Act provides in Part II Section 6(1) that the Financial Adviser of the Corporation shall be appointed by the Central Government. The Section 7(a) lays down that the pay and other conditions of service as respects the Financial Adviser be such as may be prescribed. Section 8 lays down that the functions and duties of the Financial Adviser shall be such as may be prescribed.

In exercise of the rule-making power conferred by the D. V. C. Act the Central Government laid down that the services of the Financial Adviser may be terminated at any time without giving any reason therefore by giving 3 months' notice. As to the functions and duties of the Financial Adviser, they were defined as follows :

(1) The Financial Adviser shall advise the Corporation on *all matters relating to revenue and expenditure.*

(2) The Financial Adviser shall have the right to attend every meeting of the Corporation, but shall not have the right to vote. He shall also have the right to refer to the Corporation any matter which in his opinion ought to be brought to its notice.

(3) The Financial Adviser shall be responsible for the preparation of the Budget of the Corporation, the compilation of the annual and other financial statements and for supervision of the manner in which the accounts of the Corporation are maintained and made available for audit.

The inter-State meeting held at New Delhi on May 9, 1948 decided to adopt the following special financial conventions :

(1) The Corporation will send to the Government of India before conclusion all contracts or agreements other than those arising as a result of public call for tender or quotations or of which the value is definitely ascertainable at the time of assessment of the contract or signing of agreement.

(2) The Corporation will keep the Finance Ministry of the Government of India in close touch with negotiations involving Government in the provision of foreign exchange.

In view of these conventions and of the establishment of the Advisory Committee the meeting felt it was not necessary to give the Financial Adviser further powers. The Corporation has honoured these conventions and there has never been a serious case of disagreement between the Financial Adviser and the Corporation. Under the D. V. C. Act no expenditure can be incurred without the Financial Adviser's concurrence and when he takes one view and the Corporation another the issue is discussed at great length between him and the Corporation, and either he is convinced that the Corporation's arguments are correct or he convinces the Corporation that he is right. It is therefore wrong to say that the Corporation over-rules him.

(4) Supply of the agenda and proceedings of the D. V. C. meetings to the participating governments had been decided in the same inter-State meeting held on May 9, 1949. The meeting endorsed D.V.C.'s view and resolved to set up an Advisory Committee which would function as a clearing house of all informations and maintain proper contact between the Governments and the Corporation. The D. V. C. had pointed out that mere forwarding of the agenda and proceedings would convey little meaning without masses of files. A simpler procedure mentioned above had therefore been evolved. This decision of the inter-State meeting has been honoured by the D. V. C. The Advisory Committee has received full information on every aspect of the Corporation's activities. It is unjust for any participating State to complain of any lack of information about the D.V.C's work.

(5) Finally we come to the question of overhead cost, wastage and other irregularities. It is only natural that one would jump at the statement, made in the Audit Report, that the overhead cost will be 61 per cent on works. But this requires an explanation which the Auditor himself has accepted. Under the Statute the DVC has been asked to maintain accounts under four heads only, *viz.*, Power, Irrigation, Flood control and Overhead and General charges. The items under overhead bear no relationship whatsoever in its usual sense, such as (*i*) Stores Depots, (*ii*) Timber Workshop for manufacture of doors, windows, furniture, etc., (*iii*) Central and mobile workshops for servicing and repairs, (*iv*) Resettlement Directorate, (*v*) Geological studies, (*vi*) Hydrological, meteorological and soil studies, (*vii*) Afforestation and soil erosion control, (*viii*) Interest charges on capital, (*ix*) Audit expenses, etc. The Audit Report itself states :

"The Overheads and General charges for 1949-50 under the Rules stand at 61 per cent. If the soil conservation and other charges are treated as Works Expenditure, the Overhead will be 31 per cent. And if the advances to the International General Electric Co., Ltd., are also treated as Works Expenditure, the percentage will be 17. If interest, audit charges, ordinary tools and plant charges, etc., are also excluded, the figure comes down to 11 per cent. . . . Without much addition to the Overheads, it is expected to carry out these works (on Power plant) thereby reducing the Overhead percentage at least to half if not to a third." This comes down to something between 6 to 4 per cent almost in the sense in which ordinary overheads are understood. Thus we find how an "Overhead" cost of 61 per cent boils downs to less than 6 per cent. This may not be considered as too high.

As regards stores purchase, the Audit Report says,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"Purchases have generally been made through the Central Purchasing Organisation. Open tenders are not being called for. Quotations are invited from selected firms. There is no approved list of firms either. The tenders when called for should be opened in the presence of the tenderers." In the next paragraph, the Audit Report states, "The Corporation have agreed to call for tenders as far as possible and to have an approved list of suppliers. It was also explained that for the type of heavy stores purchased there are only a limited number of suppliers and therefore, though a so-called list is not maintained virtually it exists. Such purchases are not made by calling for open tenders, *e.g.*, heavy construction equipments, etc. . . . The Corporation stated that they could not always use the agency of the Director-General of Industries and Supplies as the latter could not guarantee delivery when materials were urgently required." The Audit Report has warned that "in such cases it should be seen that prices paid are not higher than those allowed by the D.G.I.S. by obtaining his price-lists." The Auditor never said that the prices paid were higher.

It has been alleged that cement worth Rs. 3 lakhs has deteriorated on account of premature purchase. The Audit Report states that about 4,500 tons of cement stored at Maithan was fast deteriorating. In the very next sentence it states that about 3,400 tons were issued to various works and the manufacture of hollow concrete blocks. The balance of 1,100 tons was deteriorating. This purchase had been made at a time when the time lag between order and delivery was at least some nine months. The cement apparently had been ordered for the Maithan and Panchet Hill Works but as the latter had meanwhile been postponed for want of funds, the cement had to be diverted for other works. We are rather inclined to give credit to the D.V.C. for having made attempts to save at least 3,400 tons.

Railway Budget

Railway Minister, Sri Gopalaswamy Ayyangar, has presented the Railway Budget. The main features of the Budget proposals are (1) Increased passenger fares, (2) Inauguration of the re-grouping of the Railway system, (3) Reorganisation of the Railway Board and (4) Rehabilitation of Railways on an extensive scale. The financial position of the railways has very much improved during recent years. Current year's earnings have gone up by Rs. 30 crores. Due to the increase in the Depreciation Fund from Rs. 11.58 crores in 1949-50 to Rs. 15 crores in 1950-51, and further to Rs. 30 crores in 1951-52 Budget. This alone has reduced the coming year's surplus, without taking the increased fares into consideration from Rs. 17.85 crores to Rs. 2.85 crores. Last year's and current year's surplus stand at a[bout] Rs. 14 crores.

The increased fares would bring a revenue [of] Rs. 19 crores out of which Rs. 17.2 crores will be contributed by third class passengers, Rs. 1.3 crores by inter class, and only Rs. 40 lakhs by the first and second class passengers. The incidence of increase has been the highest on the third and inter class passengers. The arguments put forward by the Railway Minister in support of his proposal for increase in fares are likely to be challenged all-round. His claim that passenger fares have always been unduly depressed and are among the lowest in the world is somewhat unten[able]. The fallacy of this claim will become apparent if a comparative fare chart is made of various railways in relation to the per capita national income. Absolute expense figures, divorced from the income level is meaningless. He has stated that "an increase in rail fares, particularly in the two lower classes, will also be anti-inflationary character." We wonder what data the Railway Minister can produce to show that the income of the poor and lower middle class people has gone up more proportionately than their expenses. In respect of the utilisation of the larger revenue yield, the Railway Minister says, "The revenues accruing from the enhancement of passenger fares are intended for the stabilisation and expansion of the railway undertaking. It might be pointed out that we shall not in actuality be spending the additional funds that we raise. That is so. But those revenues will go into our earmarked funds and be held to our credit they will also earn interest from General Revenues until the latter are in a position to release them in future. Until they are so made available, they will serve to fortify the ways and means position of the Government, and Railways should feel proud of the assistance they are able to render to General finance. The Financial Commissioner has categorically stated at a Press Conference, according to the *U.P.I.*, that the enhancement of Railway fares was "dictated more by the general ways and means position of the Government than by the necessities of the Railways." This goes to show that the poor citizen is thus made to bear the brunt of the feckless spendthrift administration's problems.

The Railway Minister has proposed to start regrouping from South India. With the war clouds on the horizon, the wisest step would have been to undertake immediate regrouping of our frontier railways on the West as well as on the East. The Northern and the North-Eastern Railways should have had top priority. The proposed North-Eastern Railway, as at present constituted with the E.I.R., O.T.R. and A.R., is the most clumsy and unscientific; all movements on these railways are subjected to three widely different controls which very often hamper vital movements

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

is ridiculous to start regrouping on the safest zone, leaving the precarious ones to the wolves.

We give below the salient features of the Railway Minister's speech :

In presenting the Railway Budget, Sri Ayyangar, referred at length to the proposed regrouping of Indian railways into six major zones and stated that the reactions of the State Governments, Chambers of Commerce, the Railway Labour Federations and other interested parties had been obtained.

He informed the House that the reactions of these bodies were generally in favour of the plan though some adjustments had been suggested by some of them.

He also announced that, with the wholehearted and unanimous approval of the Central Advisory Council, it was proposed to start in the coming year the formation of the southern zone by the amalgamation of the M. and S. M., the S. I. and the Mysore Railways. As all these three railways were at present organised on the district pattern, it was not proposed to disturb that pattern but having regard to the route mileage of the combined system and the volume of traffic, the zone would be divided into three operational regions to provide intermediate co-ordination.

The Minister explained that under this plan not only the carrying out of policy of improvement in the administrative pattern and financial control, rationalisation of workshop and other operational arrangements would be promoted but economies in the management and enhanced efficiency in operation would be secured.

He added that there would be substantial reductions of the overheads of the zone as a result of the fusion of the higher administrative organisations of two or more railways into one. The pooling of locomotives and rolling stock in the larger jurisdictions of the new zones would afford more scope for more intensive and balanced utilisation of power and equipment, thus leading to a reduction in the number of locomotives and in consequence in capital and maintenance costs.

Referring to the various steps which had been recently taken to overtake the problem of overcrowding and improve the comforts and conditions of travel, the Minister said that 126 additional trains, including 41 extensions of existing services, had been introduced and 55 short distance supplementary services for third class passengers had been instituted.

The Minister confessed that the amenities provided up till now were not perhaps on a scale he would like, but the problem was being energetically tackled and a minimum expenditure of Rs. 3 crores would be continued to be earmarked annually for the purpose.

The Minister reiterated that Government stood committed to a policy to continually improve the status and ameliorating the conditions of railway workers. He informed the House that the recommendations of the Central Pay Commission had been extended to all railway employees.

He added that the anomalies resulting from the application of the Central Pay Commission scales had also been examined at great length by the Joint Advisory Committee. The bulk of the recommendations of this Committee had also been implemented at the cost of additional recurring expenditure of Rs. 2 crores.

He informed the House that the provision of housing labour was being maintained despite financial difficulties and better facilities for medical relief and education had also been given. The total bill for the year on labour welfare was 7.95 crores.

Sri Ayyangar said that the relations of labour with management had generally been cordial and there was a growing consciousness of responsibility among the great majority of railway workers and this had now found an expression in an improvement in productivity measured by the yardstick of train miles, vehicle miles, etc., from 69.38 in 1949-50 to 78.1 in 1950-51.

"These facts," said Sri Ayyangar, "are gratifying to contemplate and they will, I hope, prepare Hon'ble members for the one mild shock that I shall be administering to them before I have done."

The Railway Minister referred to the unusual difficulties of an economic character which the country was experiencing. Above everything else, there had been the continued deterioration in the ways and means position of the Government as a whole. Their bank balance was running low and much success had not attended their efforts to raise capital resources in the market.

He told the House that, although the railways had lent impressive support through the earmarked funds balances to the general ways and means position of Government, he had willingly agreed to a limitation of the railways' demands for the allocation of Government's capital resources with a view not to starve or severely to curtail the resources that should be made available for developmental activities in agriculture, industry, other forms of transport and in fact all those governmental activities which ensured for security and economic development.

The immediate problem facing the railways, said Sri Ayyangar, was the magnitude of their rehabilitation requirements. The repairs and replacement of railways' assets had been neglected from the early thirties when they were caught in the doldrums of depression. The emergence from the depression and the attempts made to overtake arrears of maintenance and rehabilitation were rudely interrupted by the war which started in 1939. When the hostilities ended the railways were left with major problems which were not susceptible of immediate solution. Long-term plans of post-war rehabilitation and development carefully drawn up were stultified by the effects of partition.

While during the last three years, considerable

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

improvement had been registered in spite of tremendous difficulties facing the railways, he added, a good deal of damage still remained to be remedied. The minimum requirements for a period of five years commencing from 1950-51 were 1,250 locomotives, about 60,000 wagons and about 7,500 passenger coaches.

The Minister further observed that the Government could not be content with mere rehabilitation and replacement. The standard has to be raised in every direction so that railways might stand comparison with railways elsewhere in the world. A vast country like India could not continue indefinitely a policy of starving expansion. The need for construction of new lines to fill gaps and to open unopened country was claimed. All these meant a higher level of expenditure in both revenue and capital.

"We cannot," said Sri Ayyangar, "entirely and always count upon the assistance which can be looked for from general finance. It is in this comprehensive context that the Government had taken the decision to enhance passenger fares."

The Minister explained that the proposed enhancement of fares was also otherwise intrinsically justified by a study of the economics of railway operation. The price level in the country had now risen to about 400 as compared to 100 in 1938 which was fully reflected in the increase in the Wage Bill of the railways. The cost of fuel now stood at 471 taking the figure of 1938 as 100. Against all these, the increase in average freight rates and passenger fares were of the order of 73 per cent and 46 per cent respectively.

Passenger fares in India were rationalised on a uniform mileage for all railways in January, 1948. The passenger fare today was only 46 per cent more than the fare in 1938-39. The freight structure was rationalised in October 1948, when some of the unduly low rates were also raised. The overall increase in freight rates works out of 73 per cent in 1949-50 compared to 1938-39. In other words, the incidence of the increase had been borne mainly by goods traffic.

In considering any further adjustment of the freight rates, it was also necessary to bear in mind the possible inflationary stresses and their inevitable repercussions on the price level in the country both of consumer and industrial goods. On these considerations, the Minister said, it would be extremely inadvisable to raise freight rates further in the context of our requirements of additional finance, and necessarily additional revenue would have to be secured by an adjustment of the passenger fare structure. He explained that the passenger fares in India had been unduly depressed and were among the lowest in the world. They did not bear any relation today either to the economic situation in the country or to the economics of railway operation.

"While in all sectors of the economic life in this country," he said, "we have called upon consumers of goods and services to pay high prices and incur heavy sacrifices, we have continued to acquiesce in the consumers of rail transport not contributing their legitimate share to easing the burden of large increases in the cost of railway operation." The Minister observed that, although his proposal for the enhancement of fares might produce in the minds of the members of Parliament an unfavourable reaction, he had no doubt that when they had applied their minds to the matter in the light of all the facts, they would give their approval to the increase in fares contemplated, viz., 1 pie per mile in third class, 1.5 pies in inter class, 2 pies in second class and 3 pies in first class, to take effect from April 1, 1951.

As regards the current year, the gross receipts are now expected to rise up to Rs. 263.40 crores or an improvement of about Rs. 31 crores over the budget estimates. The original estimate of working expenses, viz., Rs. 166.59 crores is now likely to rise to Rs. 190.8 crores due to several important post-budget developments. The most important of these are the decision to extend the application of the Central Pay Commission's pay and allowances to the staff of ex-State Railways which came under the control of the Centre with effect from April 1, 1950. Anti-sabotage and other security measures for prevention of accidents and repairs to damages caused by natural calamities which have also led to heavy unforeseen expenditure.

Additional provision had also to be made to overtake arrears in repairs and maintenance of rolling stock and track in view of the rapid deterioration in the international situation. Similarly, the acceleration of the implementation of the adjudicator's award and the recommendations of the joint advisory committee approved by Government necessitated increased additional expenditure which had been provided in the budget.

An additional provision of 13 crores for appropriation to depreciation reserve fund has also been made in the revised estimates of the current year as the appropriation to the fund should accord with the trend of withdrawals from the fund, which is of the order of 35 crores per annum. As a result of the variations, it is now estimated that the surplus in the current year will stand at 14.24 crores against 14.6 crores estimated in the budget. Out of this surplus 10 crores will be taken to development fund as originally provided and 4.24 crores to revenue reserve fund.

Turning to the financial prospects for the budget year, the Railway Minister did not anticipate any significant variation in the volume of import or export traffic carried by rail. As regards the internal traffic he stated that though the major industries were maintaining their current position and the crop position next year was unlikely to be worse than that in the current year, there were trends to indicate that we had

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

reached the peak in our earnings in the goods traffic. Receipts from goods traffic have, therefore, been placed at Rs. 2 crores or about 1.5 per cent less than the revised estimates of the current year.

Accordingly, the total gross receipts, on the present levels of fares and freight rates, would be of the order of Rs. 260.40 crores which is 3 crores less than the revised estimates for the current year. The estimate of working expenses for 1951-52 has been placed at Rs. 186.75 crores which is Rs. 6.44 crores more than the revised estimates of the current year. The increase is mainly due to additional expenditure on staff for Rs. 3.86 crores on maintenance for Rs. 2.66 crores and on freight on fuel for Rs. 13 lakhs. Including the additional earning of about Rs. 19 crores which are likely to result from the enhancement of the fares, the surplus for the year 1951-52 is estimated at Rs. 21.85 crores which is proposed to be distributed between the development fund (Rs. 10 crores) and the revenue reserve fund (Rs. 11.85 crores).

Referring to the reserve funds the Minister stated that the three railway reserve funds were well-stocked and the total of the funds balances at the credit of railway would stand at Rs. 160.88 crores at the end of March, 1952. The Hon'ble Minister told the House that the additional revenue resulting from the adjustments of fare structure would go into these ear-marked funds and be held to the railways credit, for which general revenues would be paying interest until the latter were in a position to release them for expenditure in future. The most important fact to remember, he added, was that no fraction of the additional amounts raised would be annexed by the general finance.

The railways' capital programme in 1951-52 would amount to Rs. 66.5 crores. Out of this Rs. 38 crores would be required under rolling stock and machinery, Rs. 26 crores under works, Rs. 1.5 crores for investments in the shares of Tata Engineering and Locomotive Co., Ltd., and Rs. 0.5 crores in road services. The budget provision in 1951-52 for new acquisitions of rolling stock including the orders placed abroad is Rs. 24 crores.

The most important engineering project included in the budget is the Mukerian-Pathankot project for which a provision of Rs. 200 lakhs has been made in the coming year. Rs. 3 crores will go to passenger amenities and Rs. 4.55 crores for quarters and staff amenities.

The Railway Minister informed the House that the prevention of sabotage had been discussed with all concerned, *viz.*, States Governments, General Managers, security police and others and as a result arrangements had been made for the intensive patrolling of vulnerable railway tracks, for the running of pilot engines where the situation demanded it and for the increased provision of armed guards.

Special devices had also been introduced on certain railways in order to make the tampering of track more difficult. Railway staff had also been warned to be more vigilant and a larger delegation of powers had been made to responsible officers to take prompt disciplinary action in cases of neglect of duty.

The services of two French railway engineers, one a specialist on locomotives and the other on track, had also been secured through the French railway authorities in order to investigate into the complaints regarding unsuitability of new locomotives and the deficiency in the maintenance of tracks and their report which had already been received was now under the consideration of the Government.

The Minister next referred to the first locomotive which steamed out of the Chittaranjan Locomotive Works on 1st November, 1950, the function is being blessed by the presence of the President of the Republic. He stated that the factory was making good progress, that the targets of production which had been prescribed had been maintained and that 36 locomotives were expected to be turned out in the coming financial year.

The Minister stated that in the past adequate attention had not been paid for improving standard of performance of the metre-gauge systems giving rise to legitimate complaints from the area served by them. He told Parliament that special steps had now been initiated to remove these complaints. One hundred and fifty improved type Y. P. locomotives, 8,000 metre gauge wagons and 250 metre gauge third class bogie coaches had been ordered for the metre gauge systems.

The Minister stated that, with the constitutional changes and with a Minister responsible to Parliament coming to be in charge of the Railways, the functioning of the Railway Board had altered substantially in the new set-up. He said that he had given serious thought to possible changes in the constitution and functioning of the Board and had come to the conclusion that for the time being, no major changes should be made.

The Minister explained that, under the present arrangement, the Chief Commissioner was not in charge of any specific 'portfolio' and was responsible merely for presiding at the Board's meeting and/or overall functional supervision and co-ordination of work. But in the changed constitutional position, overall co-ordination was actually ensured at the Ministers' level and so the need for an officer in the Board who was not burdened with departmental responsibilities was not by any means compelling.

He announced that with the retirement from 1st April, 1951 of Sri K. S. Bakhle, the present Chief Commissioner of Railways—to whom he paid a handsome tribute—the post of the Chief Commissioner would be retrenched, and the Board would be reconstituted with three functional members and the Financial Commissioner.

Interest Charges	2318	....	....
Dividend to General Revenues	....	3257	3337
Net Gain or Surplus	1459	1424	2185

Communism vs. Democracy

The dictator of the Soviet Union is very reticent in the use of words. Not so President Truman who as leader of a democratic State has to be always explanatory, and invite criticism on his doings and sayings. But Marshal Stalin is freer from this criticism and Communist practice does not allow of any such judgment. His latest interview with the *Pravda* (Truth) correspondent, an "arranged" affair, is a case in point, and the Leader but echoes the general run of the Soviet Press and of the speeches of the Soviet representatives in the United Nations Organization. Their "fellow-travellers" and dupes in the democratic world toe this line, condemnatory of their own leaders and their policies.

In this interview Marshal Stalin has said nothing new except that he has tried to simplify the problem that divides the world into two hostile Blocs. The Soviet Leader appears to think that the differences causing this split have been caused by the "warmongering" of the democratic Powers, headed by the United States and Britain, against which are ranged the peace-loving States headed by the Soviet Union. As a propaganda stunt this thesis may appeal to many millions sick and weary of the disruption of their habits of life and thought by two World Wars in course of thirty years of the present century. But though there may be "innocents" in India misled by this propaganda and succumbing to it, we are rather sceptical and cynical of its *bona-fides*.

And for this reason if for no others. In the Communist practice the class to which we belong are tolerated simply as dupes and instruments by the dispensers of this world of make-belief. Though Marx and Lenin were "intellectuals" and middle-class "effetes," they knew that only these men and women could supply the hot gospellers of their [illegible] faith, and from their ranks would emerge the pa[illegible] finders of their adventure. From amongst them [illegible] the first "puzzled" revolt against the misery and [illegible] injustice brought into a focus by the Industrial Re[illegible] lution. This sensitiveness has been specially active [illegible] the countries under imperialist exploitation. [illegible] Communist leadership has seen to it that it is [illegible] fied in these areas nursing their loss of self-resp[illegible] Hugh Seton-Watson in an article entitled "[illegible] Intellectual's Place in Communism" has explained [illegible] position thus :

> "In England, we are all in the 20th cen[illegible] The workers can look after themselves with[illegible] being led forward by intellectual protectors. B[illegible] still, great scientists and great writers have pres[illegible] If they can be persuaded to speak on behalf of [illegible] Soviet Union, their words carry weight. They [illegible] sow doubts in the minds of their listeners. T[illegible] too, have a place in the Soviet scheme of thing[illegible]
>
> "The job of the pro-Communist intellec[illegible] abroad is to revolt against the capitalist soc[illegible] which surrounds him. His positive beliefs do [illegible] matter very much as long as he thinks that Co[illegible] munism would, on the whole, be an improvem[illegible] He may pick and choose among the dogmas [illegible] Marxism-Leninism, accepting some and reject[illegible] those which do not attract him. He is not req[illegible] to conform. . . ."

Seton-Watson cites the instance of the gr[illegible] French artist Picasso to drive home his point. He d[illegible] not conform, he need not conform. "Yet Picasso's na[illegible] has been a rallying-cry for the pro-Commu[illegible] intellectuals of France. Is not this inconsistent? N[illegible] replies the Communist dialectician. Picasso is faithf[illegible] reflecting the chaos and despair of the decaying cap[illegible] ist society around him, and is quite right to paint [illegible] a style which, if practised in Moscow, would be co[illegible] demned as empty bourgeois formalism."

"But the Communist dialectician, if pressed, wo[illegible] explain that if Picasso were to live for long en[illegible] in the Soviet Union, his art would change. Accord[illegible] to the official view, the environment would have [illegible] effect. He would become a realist painter of So[illegible] reality, and his subject would be Soviet Man, him[illegible] the product of the new Soviet environment, bu[illegible] building Communist society. Rather a violent adj[illegible] ment, you may say. And in practice very few pro[illegible] nent Westerners have yet had to make it. Yet it m[illegible] be made by any pro-Communist intellectual in [illegible] West who has occasion to cross the bridge and m[illegible] his home among the Communist intellectuals of [illegible] East. He leaves behind him a social environme[illegible] where, for him, revolt has been the order of the da[illegible] where established beliefs existed only to be qu[illegible] tioned."

"Beyond the bridge there lies a Communist so[illegible] of certainties and dogmas: a world in which the re[illegible] lution has already happened, in which rebellio[illegible] intellectuals are no longer the star attractions. T[illegible] party, not conscience, thinks for the party line, is the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

who wields the influence. And in this intellectual climate, there is no place for the intellectual who does not conform."

Thus it has come about that we are just "accepted on sufferance," to quote Arthur Koestler's words used in the book—*The God That Failed*—a work depicting disillusionment of five other Western intellectuals—Italian, German, French, British and American. And Seton-Watson has analyzed the position for all of us when he says :

"The Communist technique, then is to get at intellectuals in the non-Communist world by appealing to great words like "peace" and "justice" which mean one thing in the languages of the world and another thing in 'communese,' by exploiting their idealism and worrying their conscience.

"But what of the position of intellectuals in the countries which enjoy benefits of Communist rule? What about the intellectuals in Eastern Europe who in 1944 welcomed the Soviet forces as liberators and voted for the Communist in the hope of freedom and justice? What has happened to them now? Above all, what about the position of intellectuals in the Soviet Union?"

Seton-Watson has something to say on the "Peace" campaign inspired by the Soviet Union's immediate followers. It ought to open the eyes of Indian intellectuals who have toppled over one another to sign the "peace pledge" propagated from Bucharest, capital of Rumania, the seat of Communists' intellectual offensive. At present the Communists of all lands are running a "peace campaign" to support Russian foreign policy. It is specially directed at intellectuals in the West who are appalled by the thought that war may again ravage us, whose consciences are uneasy because America has the horrifying weapon of the atom bomb. The Soviet Union has not got so far as America in production of this weapon, so the Communist "peace" campaign concentrates its attack, in the so-called Stockholm Appeal, on this weapon. Even the emotional rhetoric of the Soviet writer Ilya Ehrenburg cannot conceal this ulterior motive of the Soviet.

And then there is Academician Lysenko, who is held up to us as a great pioneer of scientific research and academic freedom. No one could say he is not frank. "It is the sacred duty," he says, "of all upright scientists and intellectuals in every country to explain to the people that by its very socialist nature, the Soviet Union is not and cannot be an aggressor, an oppressor of peoples."

Ours may be, and is, a "class-conscious" interpretation of an anomalous position. But the fault for this does not lie in us; the "comrades" themselves have whipped in us this class consciousness; they have to thank themselves for teaching us this aberration of a genius. But things have more dangerous possibilities as a consequence of the Communist philosophy, adumbrated by Karl Marx, and set in practice by Lenin and Stalin. With a view to an understanding of these two, we propose quoting from their writings and statements which are today slurred over by Communist propagandists. These will show that neither the Communist philosophy nor their practice are favourable to peace by which they swear today with such violence. The *Communist Manifesto* issued over the names of Marx and Engels made no secret of the purpose and method of the ideology :

> "The Communists disdain to conceal their views and aims. They openly declare that their ends can be attained only by the forcible overthrow of all existing social conditions. Let the ruling classes tremble at a Communist revolution. The proletarians have nothing to lose but their chains. They have a world to win. . . ."

As a faithful disciple, Lenin accepted both this philosophy and practice and is found in his *State and Revolution* to say that "the replacement of the bourgeois by proletarian State is impossible without a *violent* revolution." (P. 33. Italics ours.)

And Stalin in his *Foundations of Leninism* (p. 20) just indicated the natural corollary in the lines quoted below :

> (1) The revolutionary Communist is antagonistic to reform. "To a revolutionary, the main thing is revolutionary work and not reforms; to him reforms are by-products of the revolution. . . . The revolutionary will accept a reform in order to use it as an aid in combining legal work with illegal work, to intensify, under its cover, the illegal work for the revolutionary preparation of the masses for the overthrow of the bourgeoisie."

In their later writings they elaborated the same thesis proving how insincere and dishonest is the Communist plea that their brand of Totalitarianism and the Freedom of the Human personality and, likewise, that Communist rule and democratic rule over States, can exist side by side. Stalin with brutal frankness has laid the course of conduct for the upholders of these two anti-thetical system. The objective of the Communist strategy is :

> "To consolidate the dictatorship of the proletariat in one country, using it as a base for the overthrow of imperialism in all countries. The revolution is spreading beyond the confines of one country; the period of world revolution has commenced.
>
> "The main forces of the revolution: the dictatorship of the proletariat in one country, the revolutionary movement of the proletariat in all countries.
>
> ". . . the semi-proletarian and small-peasant masses in the developed countries, the liberation movement in the colonies and dependent countries."—(*Foundations of Leninism*, p. 91)

From this philosophy and practice follow another tactics that has become repugnant to every man and woman, to decent human conduct. This has been described as "patriotic betrayal." A theoretician of Marxism, M. N. Roy, during his days of collaboration with British imperialism in India (1939-1945) indicated it

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

for us. We will close these remarks with a quotation from him :

> "A theory was constructed out of the Russian experience. Collapse of the established State in consequence of a military defeat is the condition for a successful revolution. Therefore in the case of war, revolutionaries should try to bring about the military defeat of their own countries. The theory has come to be known as revolutionary defeatism."

It was this tactics that the Communists in India adopted during the second World War sabotaging and disrupting Indian unity. That should have been a lesson for all Nationalists in India, and the saboteurs should have had a short shrift. But, we have not learnt this lesson yet. The old adadge is as old today—*Eternal vigilance is the price for freedom.* That vigilance is more than ever necessary today when the Communist is abroad with his insidious ways, his treachery and weapons of betrayal. The wiseacres who are all aflame in defence of the "fundamental rights" of the disruptionists may also pause to consider.

United Germany

It is the Soviet Union and her dupes and victims in the so-called East Germany that are mainly responsible for the disruptions of this State brought into being by Bismarck about 80 years back. This feeling was rubbed in into the reply of the West German Chancellor Conrad Adenaur when he rejected East German Premier Otto Grotewohl's offer for all German unity talks. The news was released from Bonn, West German Republic's capital on January 15 last.

Addressing a Press Conference he said that Government wiuld only start discussions "with those who are willing unconditionally to recognise and to guarantee a regime based on the recognition of law, a form of Government which respects liberty, the protection of human rights and the maintenance of peace."

He declared, however, that his Government would "leave nothing unattempted to re-establish German unity."

Germany

Germany is the pivot of peace in Europe both by its geographic position and the inner strength of its people. The defeat in World War I, and the destruction inflicted on her by the victors in World War II have not been able to hold her down. We have often said that it was a question of time when the victors will in the pursuit of their particular interests start to coax and cajole her. The P.T.I.R. and Reuters correspondent at Bonn, on January 11 last described how the mind of the people had been moving.

The anti-rearmament slogan 'Ohne Mich' (Without Me) seems today to sum up the attitude of an increasing number of Germans towards plans to re-establish a German armed force in a European army as now being discussed between the Western Allies and West Germany.

"Allied observers here and in Frankfurt, headquarters of the United States High Commission, believe that the results of a public opinion poll by Germans just published were a fair reflection of the present state of the German mind.

"The results showed that the number of Germans ready to take up arms, already low, was still falling steadily. By November, 1950, the number of Germans willing to fight had dropped to 13.6 per cent from 27 per cent in June, 1949. In November, 1950, about 53 per cent said they would refuse to take up arms compared with 60.2 per cent in June, 1949, according to the survey.

"The recent Provincial Parliamentary results in the three American Zone States of Hesse, Wuerttemberg, and Bavaria, showed a big swing in favour of Dr. Kurt Schumacher's Social Democrats who decline to support West German rearmament without more 'positive evidence' that the Allies will not leave West Germany 'holding the bag' in the event of sudden Soviet attack.

"More positive support means powerful military reinforcements which would win the first battle east of the Elbe and not the last, according to Dr. Schumacher.

"Anti-rearmament sentiment is being considerably strengthened, Allied observers agree, by the unremitting campaign of Dr. Martin Niemoeller, head of the Protestant Church in Hesse, who is the leading non-political opponent of rearmament in East or West Germany.

"The military performance of the United Nations forces in Korea has not impressed the ordinary German with the idea that he is bound to be on the winning side if he fights with the West.

"Further, the suggestion of new four-Power talks with Russia has not been rejected by the more responsible West German newspapers. Germans seem unwilling to commit themselves openly to actions which the Russians might regard as provocative. Most German men have first hand experience of fighting the Russians, and most Germans know that a new war would be immediately fought on German soil."

This interpretation of developments in Germany appears to have a basis of truth as revealed by latest observers and commentators. One of these happens to be Mr. Alec Read, at present the "special correspondent" of the Birla group of papers. In his first article on "New Germany" rising out of the wrecks of the Allied bombings he says :

> "Three years have gone by since then and I have visited Germany again but what a different Germany from the one that lay prostrate after her second crushing defeat in a little more than a quarter of a century. The hands of time are once more being reversed. Out of the shattered wreck of what was once Berlin, out of the devastation of the Ruhr, which was first Bismarck's, then Hitler's, then also Hitler's, on the arsenal, then the Kaiser's, then also Hitler's, on the banks of the Rhine as she flows swiftly past the West German capital of Bonn, there is a new Germany

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

arising that finds herself in the new amazing position of being wooed by the East and also the West.

In the East, in the Russian Zone, a new creed is being preached which is having an enormous and far-reaching effect on German youth. In the West youth is being told: 'You must rise again to defend your country against Communism.' Everywhere I went I was told: 'We do not want another war—.' And some added the words: 'But, of course—.' That came from those who would benefit from this complex situation and who would see Germany once more a military Power in the heart of Europe."

In his sixth article there was a picture of the "bitterness" of defeat and the determination of the people to regain their own. We reproduce here significant portions; "One day during my tour I stood at a window of the office buildings of the Krupps works in Essen. The sky was overcast and a light rain was giving place to snow showers. Besides me was one of the business executives. 'Have you ever seen such a scene of destruction?', he asked, as we gazed out on a wild array of what remained of machinery amidst the rubble of what had once been vast machine shops. 'And the trouble is,' he continued bitterly, 'after having done all that with your infernal bombers, you won't even now leave us alone.' He nodded towards a group of workmen who were engaged in the demolition of the remains of one of the plants. 'Having practically hammered us to death, we simply cannot understand why you British keep up your destruction.'

"He was referring to the long and every bitter question over dismantlement, which has been such a bone of contention. It is being pursued here and there even to this day while the Germans turn round and ask—'How do you expect us to take part in the defence of Europe if you still insist on draining away our life-blood?'

"I saw much evidence of this and also one outstanding facet of German character. Despite deplorable housing conditions, the rising cost in living and the many traces of the mental and moral shocks of the second World War defeat, there is a determination (which one does not always get even in Britain itself) to revive industry. There were cases, in several towns, where the Germans had said: 'Well, if you must remove our plants, you cannot prevent us from putting up new ones.' And there stood the new factories with better equipment than their predecessors."

The "Paktoonistan" Movement

Janab Arbab Quadir, Secretary of the Anjumen-e-Watan of Baluchistan, has, in an article published amongst others in the *Organizer* of Delhi, thrown light on the running sore that the British regime has left by its legacy of the Durand Line. He has quoted from Hurzerford Holdich's book entitled *The Indian Borderland* to press forward and justify the claim for a "Paktoonistan" of a people numbering more than 70 lakhs. This British bureaucrat had supervized the demarcation of the boundaries of Afghanistan with India, Iran and Russia. Commenting on the Line, he said in page 231 of the book:

> "He (meaning the Amir) did not like it, but he signed the Agreement all the same: silently reserving to himself the right of disputing the boundary in detail when it should come to the process of actual demarcation." Again on page 230 he writes, "And he had omitted to sign the maps which were supposed to be illustrative of the Agreement."

Justifying the attitude of Amir Abdur Rahaman towards this Boundary Line so-called, the writer continued:

> "But Bajaor and Swat and the Mohmand country—were they not full of his own people, who being allied to him by ties of faith, of language, and of kinship, should learn to recognise his direct authority?"
>
> "Under any circumstances they were connected by ties of faith and brotherhood with the West and not with the East."
>
> "Swatis and Mohmands are themselves chiefly Afghans, talking the same language, boasting the same descent from the tribes of Israel, imbued with the same faith, acknowledging the Amir as their spiritual head."
>
> "Afridis and Waziris are allied in tongue and religion with Afghans."

With the then (1893) Afghan King in this mood, is it any wonder that successive generations should have resented this imposition? The British authorities were also fully conscious of the affront offered to a people who prized their freedom above all other earthly good, and they had to maintain "full 3 divisions of their army" to keep the peace of the "settled" districts.

The writer remarks on the Pakistani plea of a common religion as follows:

> "If this claim were put forward, say 1300 years ago, then I would have had nothing to say against it, but to think that such a preposterous formula is practicable in this atomic age is to put it very mildly, extremely frivolous. According to the new Pakistan doctrine, China has a divine right of ruling over Tibet, Indo-China, Burma, and Thailand, while she herself has a Heavenly Charter to possess Indonesia, the Arab States, Turkey, Iran, Afghanistan, Egypt, Libya, Morrocco, and Malaya, because they are predominantly Muslim States. I am afraid that either the Government of Pakistan have not studied history at all or are trying again to conveniently forget that a stronger and more religious Government than the infant Pakistan, namely, the Caliphate of Turkey, could not stand the flood of Arab nationalism. The Arabs followed Lawrence and Allenby eagerly rather than submit to their spiritual and temporal head—the Sultan."

Ceylonization

The All-India Congress Committee during its recent sittings at Ahmedabad during the last week of January last wanted to pass a resolution proposing that the Central Government be requested "to take immediate action to get full citizenship rights for all Indians 'who have been in

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Ceylon before 1949 and have completed five years' residence and their dependants who desire to become Ceylonese".'

"In the case of Indian residents who did not desire to become Ceylonese, the resolution stated, their status and treatment should not in any way be different from, or inferior to, that of residents of any other non-Ceylonese nationality in Ceylon.

"The resolution demanded that if the Ceylon Government did not agree to 'this reasonable demand,' the Government of India should arrange to get all the estate labourers, 'who are the real bread-winners for Ceylon,' repatriated to India rather than allow them to 'live a life of permanent slavery' under the most wretched conditions'."

This is an element of exaggeration in the words quoted above, and the injury to about 10 lakh Indians in Ceylon by repatriation would be worse than the remedy. These people and their ancestors had gone to Ceylon because their homeland could not provide avenues of employment.

We are glad, therefore, that it was withdrawn after a speech by Shri Jawaharlal Nehru bringing into focus the crux of the question. He put the matter neatly when he said : "We are apt to forget that in dealing with Ceylon, in spite of very close contacts, cultural, geographical, etc., we have to deal in effect with an independent nation. It is not likely to help much if the A.-I. C. C. issues condemnations of another nation's policy or gives specific directions in regard to it."

"Indian Opinion"

For some time the *Diwali* Number (November 3, 1950) of this weekly has been lying on our table. The Number has certain articles—"The Ballad of Maqbool Sherwani," the hero of Baramula (Kashmere), "Wake up ! Bantu," the majority people in South Africa, "The Poetry of Gujarat"—that have more than a temporary interest.

The paper was founded by Gandhiji in 1903, and since then it has been upholding the traditions evolved by him through the travail of his "experiments" at the end of which shone Truth, the God at the altar of which he dedicated his life and staked all that people hold dear as human beings. May its ministry for Truth and Godliness endure !

Malaria on the Retreat

The Regional office for South-East Asia of this supernational organization issued a statement on January last from its New Delhi office which contained a gladsome news to malaria-infested peoples of the world. It was given a heading—"Malaria on the Retreat," which our readers will find summarized below :

"WHO experts working with anti-malaria teams in India, Thailand and Afghanistan all report malaria on the retreat in their respective areas of operations totalling 4,000 square miles.

"Although it is still too early, they state, for scientific assessment of results, observations to date indicate the virtual disappearance of malaria, in some cases after only one year's DDT spraying operations.

"In the Sarapee district of N. Thailand, a WHO-UNICEF malaria control team have recorded a drop in "spleen rates" from 70.5 per cent to 31.4 per cent since March 1950. During the same period, the rate remained constant in non-sprayed areas. These comparative figures are accepted as a positive proof of the efficacy of the control, as spleens enlarged by repeated malaria infections are slow to return to normal.

"In the Terai and Bhabar tracts of U.P. (India) the team's examination of 3,000 infant blood smears shows a reduction in malaria infection from 60 per cent to nil.

"Reports from the Jeypore Hills project in Orissa (India), formerly one of the worst strongholds of malaria, show that the malaria-carrying mosquito has practically disappeared from sprayed villages.

"In Malnad (Mysore) India, a large percentage of babies have always become infected with malaria in their first year of life. Since the commencement of spraying operations, all the new-born babies have remained free from malaria.

"The virtual elimination of the malaria-carrying mosquito from an area of 142 square miles in the Western Ghats (Malabar District, India) gives protection to many hundreds of thousands of population in adjoining areas to which malaria was found to be spreading.

"From the Khundus-Khanabad district of North Afghanistan come equally satisfactory reports of progress made in controlling malaria among a population of 70,000 in the short period of six months after the team first went into the field."

Economy in Delhi Secretariat

The Estimates Committee of the Indian Parliament has submitted its report recommending a 23-point economy in the Central Secretariat. One of these is that "officers drawing salaries of Rs. 3,000 a month might be induced to surrender voluntarily the excess over Rs. 3,000," as the summary of the report says :

The Committee has also suggested abolition of the post of Additional Secretary on the ground that it is "unnecessary." The posts of Joint Secretary, Deputy Director-General and the like "which are created for supervisory duties should also be done away with." But in exceptional circumstances it becomes necessary to appoint a Joint Secretary, "he should be given independent charge of work and made finally responsible for it."

The Committee's report on the reorganisation of the Secretariat and Departments of the Government of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

India was presented to Parliament on February 9 last by its Chairman, Deputy Speaker Ananthasayanam Ayyangar.

The Committee has called for "urgent and effective action" to reorganise the work of the Secretariat on better and more methodical lines to secure co-ordination of work and unified control over allied subjects and policies. The work initiated in this regard by the reorganisation wing of the Home Ministry should be expedited and decisions taken soon.

The Committee has also urged that a messenger system should be introduced at once and considerable reduction effected in the posts of Class IV servants (chaprasis, jamadars, etc.).

The Committee does not want employment of stenographers as ornaments to Officers and has, therefore, recommended that for junior Officers, a pool of stenographers or steno-typists should be created at the scale of one steno-typist or stenographer for every two or three officers. At present each officer has a stenographer to himself.

Other recommendations are : The old system according to which officers deputed from States to the Centre had to return to their respective Governments after completion of a tenure period should be restarted.

Posts of assistants created for routine or semi-routine type of work should be down-graded and the less important duties entrusted to second division clerks, which cadre should be re-introduced.

The method of disposal of work in the Secretariat should be so revised that as many papers as possible will be disposed of by the Officers themselves at each level.

Secretariat Officers should, as a rule, confine themselves to questions of policy and should devolve complete responsibility upon heads of the subordinate offices to carry out the day-to-day administration in accordance with that policy.

Financial advisers, economic advisers and other advisers should themselves attend to the problems which they have to tackle and their advice should not be circumscribed by the opinion of assistants.

Appropriate rules should be laid down to ensure that no persons appointed under the Central Government on salaries which are disproportionate to their previous salaries in business or under State Governments.

The field of selection for technical appointments should be broad-based and widened so as to include larger categories of officers. Tests for recruitment of persons should be laid down but these tests should not be so hard that it will be difficult to find any one to satisfy the test.

A list of all the technically qualified personnel should be prepared and added to from time to time so that the list may be consulted when making appointments to the various posts.

In each Ministry a senior officer should be made responsible to see that wasteful methods of working in the Ministry are avoided. Amenities in the nature of library, etc., should be provided to the staff working in a Ministry or Department.

The work load of each person in the office should be laid down clearly and responsibility fixed at each level and on each individual, and steps should be taken to provide appropriate punishments in the case of the defaulters.

Telephones at the residence of the officers should be installed only in such cases in which it is absolutely essential to provide such telephones.

Where telephones are installed at residences, Government should make a rule to pay only for a limited number of calls which should be arrived at by taking an average of the calls that can normally be made on official business on a telephone.

The country will watch with cynical interest how the bureaucrats react to these recommendations. "Yes" or "No," they are being put on their last test.

Development Plans for Madhya Pradesh

The Madhya Pradesh has a clean slate to write its future achievements. It was, therefore, natural that public opinion will demand developments to build up a better life. The local press published the following news on February 4 last :

> The Madhya Pradesh Government have drawn up a five-year development plan, estimated to cost Rs. 57 crores and a fifteen-year plan costing Rs. 11 crores to develop the irrigation resources of the State. The plans which have already been submitted to the Planning Commission, will take effect from 1951-52.
>
> The five-year plan lays emphasis on agricultural and "grow more food" schemes (19 crores), completion of thermal projects with a capacity generation of 82,000 kwt. (14½ crores), construction of 1,000 miles of new roads in the merged areas and development of communications (two crores), improvement of conditions in the backward and aboriginal tracts of the State (two crores) and industrial projects including Kamptee and Korba coal-fields (Rs. 230 lakhs).

Prantiya Raksha Dal

Uttar Pradesh has been forging forward in all constructive activities. We commend, therefore, the letter that appeared in the *Leader* on February 7 last describing the steps being taken to organize and discipline the youth of the State.

"The 'voluntary semi-military force' of P.R.D. was formed after the partition 'as a second line of defence in urban and rural areas for maintaining law and order.' According to Chief Minister Pandit Govind Ballabh Pant, the Prantiya Raksha Dal 'has not only helped effectively in the maintenance of law and order

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and in the prosecution of the grow-more-food campaign but has rendered very useful help to the villagers in various spheres of activities.' Its present strength is 6,24,000. Now, of course, when the entire Raksha Dal will be reorganised as a whole-time voluntary army of constructive workers, it can contribute a lot in furthering projects of increased food production and village uplift, if its discipline is tempered with idealism of national reconstruction. As the Territorial Army is gradually growing as India's second line of defence, every State can form and develop a voluntary army of constructive workers, wholly devoted to executing the schemes of nation-building activities with military zeal. Specially on the food front a whole-time army of constructive workers, raised on a voluntary basis, will be a great asset to the nation, struggling for self-sufficiency in food. In strengthening the village panchayats and popularizing the co-operative movement also such an 'army' can play a vital role.

"In U. P., the Government proposes to increase the strength of P.R.D. to 12 lakhs. It is a bold scheme but attempts should be made to consolidate the present force for fulfilling its new role before enlarging it. A vigorous campaign in the villages by Panchayats and in the cities by Municipalities or other popular organisations can alone create a proper atmosphere for real public co-operation in the formation of a whole-time voluntary army of constructive workers on a large scale. It is difficult to form a strong army and that too of constructive workers on a voluntary basis. An army marches on its stomach ! Even an army of constructive workers cannot be an exception to this rule. If the members of this army are to be whole-time workers, the Government or Panchayats or other local bodies will have to give them necessary financial support."

Research in Ayurveda

This problem has been engaging the attention of the practitioners of the healing art and science of Ayurveda. The Governments of Provinces have been known to have set up committees of enquiry, and Ayurveda Boards to regulate, guide and control this system of treatment of diseases. But while our Kavirajas appear anxious to have State patronage and financial help, they are mighty afraid of the State, with its spirit of interference with their secrets. This is the handicap that appears to stand in the way of Ayurveda receiving State help.

But the greatest stumbling block appears to us to be the way in which even the Kavirajas have been developing into practitioners of Western medicine making their system of treatment too expensive for our people, rich or poor. We cannot off-hand suggest a remedy, but we feel that medical people, Allopaths and Kavirajas, must undergo a change of spirit and cease to think that disease is "a vested interest" of theirs alone, to use the expressive words of a Brit Prime Minister, Lloyd George.

In view of this state of things the following re commendations of the Enquiry Committee appoint by the Bombay Government raise hopes that Ayurved will have a fair deal in free India.

The establishment of a State Research Board Ayurveda and of a Central Research Library is on of the principal recommendations of the Committee appointed by the Government of Bombay, in Marc 1949, to report on the question of research in Ayurveda, Dr. K. S. Mhaskar was Chairman of th Committee. The proposed research Board is for apportioning and controlling the various sections of research and arranging for the training of research workers

The Committee is of the opinion that the methods of research in Ayurveda should be in accord with the Ayurveda system itself and the modern methods of investigation should be resorted to whenever necessary, Authoritative versions of ancient Ayurvedic texts, the Committee says, will have to be collected, carefully, edited and published.

It opines that the psychological doctrines in Ayurveda require study as they appear to have already anticipated the modern trends in Western psychology. It further records that the general fundamental doctrines of (1) *Panchmaha-Bhoota*, (2) *Tri-guna*, (3) *Tri-Dosha, and* (4) *Dravya-Guna-Rasa-Vipaka-Veerya-Prabhav* must be clarified. This will help to elucidate Sharirkriya (Physiology) as well.

It also recommends study of Dharmashastras, Smritis, Grihya Sutras, Darshanas, Artha-Shastras, Vedic literature, Mahabharata, Puranas, etc., from the Ayurvedic point of view in order to make Ayurveda clearer still.

The other recommendations of the Committee are for the standardisation of Ayurvedic teaching, practice, terminology, etc.

Inland Navigation in India

The British regime generally neglected inland navigation in this country in their obsession with the extension of railways mainly designed to encourage British trade in India as well as to facilitate the export of raw materials that served British industries in their homeland. There were notable exceptions, one of whom was Sir Arthur Cotton; great engineer that he was, he was fully conscious of the value of this means of communication in a predominantly rural country. Their value was also inseparable from irrigation facilities, so much needed in India's economy as the years have demonstrated. In his classic book on the subject written a hundred years back he fought the ruling bias of the British bureaucracy. He failed to carry conviction to them. This story has been brought out in a recent pamphlet entitled "Water Transport in India". The report details the plans that are at present in hand or under contemplation for the development of inland navigation.

The fact that Water Transport had all along been a Provincial subject, has been responsible for the lack of a unified policy and of integrated care and develop-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ment. This difficulty has been remedied under the new constitution which has made navigation on inter-State rivers and waterways a Central subject. The responsibility for surveying, planning and developing the country's Water Transport has been assigned to the Central Waterpower, Irrigation and Navigation Commission.

The construction of the Hirakud Dam in Orissa, for instance, would make the Mahanadi navigable for 300 miles down the sea, the Kakrapara Project in Bombay provides for navigation from the sea-face near Surat up to the reservoir of the dam at Kakrapara and 50 miles further inland. Similarly, the Damodar Valley Project in Bihar and West Bengal envisages the construction of a Navigation Canal linking up the lower Raniganj coal fields with the Hooghly River. The Commission is also actively considering revival of water traffic on other navigable rivers, *e.g.*, on the Ganga, from Buxar to Allahabad, and on the Gohra, up to Bahr-am Ghat. Investigations carried out by C.W.I.C. also show that it is possible to connect the western and eastern coasts of India by inland navigation channels. Similarly, it is possible to connect Assam and West Bengal by a dual-purpose water course.

The pamphlet quotes the opinion of Mr. Otto Popper, a navigation expert deputed by the E.C.A.F.E. in 1950, to advise the Government of India on the development of Inland Waterways, that India's waterways "if systematically organised and exploited, could become equal partners to her railways."

The Sindhu Resettlement Work

We summarize from Press reports the valuable work that is being done by the Sindhu Resettlement Corporation and the Government in course of the port at Kandla in the Bombay State :

"The Government of India have decided to spend Rs. 16 crores on the development of Kandla Port, to implement the suggestions of the West Coast Major Port Committee, which found Kandla to be the best natural harbour on the Coast of Kutch and Saurashtra. The Government appointed a Development Commissioner and foreign firms were asked to submit tenders. The Port of Kandla will replace the loss of Karachi and relieve the bottle-neck at Bombay. It will feed the hinterland of Rajasthan, Delhi, East Punjab, Western U. P., Kashmir, Ajmer, Western Gujrat, Gwalior, as these areas will be hundreds of miles nearer to Kandla than to Bombay. The Government of India are also spending Rs. 12,00,00,000 on the two Railways connecting Kandla with the rest of India. These two factors alone will help make Kutch a land of progress plenty and prosperity."

The Sindhu Resettlement Corporation Ltd., was formed three years ago with the chief object of settling and re-habilitating displaced persons from Pakistan, particularly the Hindus from Sind. The main function of the Corporation is to build new towns and colonies where plots of land will be allotted to shareholders on easy terms if they undertake to aid industrial, commercial and agricultural schemes and other public utility projects at the places of settlement and thus provide not only shelter but also sources of livelihood for the new citizens. Acharya Kripalani is the Chairman of the Board of Directors. The authorised capital of the Corporation is Rs. 2½ crores. The first issue of one crore of rupees divided in 10,000 shares of Rs. 1,000 each was over-subscribed long back. Now again the permission of the Government of India has been obtained for a further issue of Rs. 1,00,00,000 shares and they will be divided similarly. The Government of India have subscribed 25 per cent to the first and the second issue. The Government of India have also given a loan of one crore and ten lakhs of rupees for the construction of 4,000 simple houses.

"The blue prints of the town of Gandhidham have been prepared according to the plan by the Italian architect Mario Bachoicci. At present two localities in the town have been developed, namely, Sardarganj, named after Sardar Patel for residential purposes and the factory area called Adipur where factories and industries have been started. A small colony of about 12,000 people has already come into existence. The scheme of water supply of Gandhidham is to be carried out in two stages. The *interim* scheme is to yield 1½ million gallons of water per day and the Pilot scheme when completed will yield 4½ million gallons of water per day. Experimental borings that have gone from 600 to 700 feet deep have shown wonderful results. For power supply, a small station capable of generating about 500 KW is in existence. Further generating sets of 750 KW capacity have been indented.

"Along with the material development of the town, very great attention is paid to look after its social and cultural side.

Rift in Orissa Congress

The *Bombay Chronicle* published on January 11 last under this heading news of a rift in the Congress. The Oriya papers did not, however, publish it. The differences that divided the organization were the usual ones, and we will allow the paper's "own correspondent" at Cuttack to tell the story.

> Since the departure from Orissa of Mr. Harekrushna Mahatab to Delhi as a minister in the Union Cabinet, the group rivalry inside the P.C.C. is becoming more pronounced and time and again both the parties are looking to Mr. Mahatab for guidance and direction.
>
> It was no surprise, therefore, that the decision to hold a Provincial Congress workers' conference on January 22 at Cuttack which was arrived at by the Chief Minister, Mr. Nabakrushna Chaudhury,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and the President of the Utkal P.C.C., Mr. Biswanath Das, has now become a point of dispute, between the leaders themselves.

It is, however, learnt that the Chief Minister is taking the initiative in convening the workers' conference which will be addressed by the former Congress Parliamentary Chief, Mr. Mahatab, on his way back from Madras.

The differences arising out of the formation of rival Congress Committees, *viz.*, the Town Congress Panchayat and the Congress Workers Committee of Cuttack is yet another serious organisational problem because both the bodies seem to be breaking their heads among themselves for getting the official recognition from the P.C.C.

As matters stand at the moment there is every likelihood of the widening of the rift among the Congress workers of Orissa if the unfortunate situation is not satisfactorily settled by Mr. Mahatab.

We entertained the fond hope that our Oriya brethren were a satisfied body as a result of the consolidation of almost all areas where Oriya culture has been predominant. But that hope appears to be unsubstantial.

Andre Gide

A contemporary of Henry Barbusse and Roman Rolland, this leader of French thought has left the world at a time when it is distraught by conflicting ideals and practices. He had his mind stirred by the 1917 Revolution in Russia just as his predecessors in France had seen in the French Revolution a vision of the Kingdom of God on earth. But he lived to be disillusioned; this process he has shown in his book on a Russian visit describing men and measures in the Communist heaven. But he was a great man who rose above his disappointments in life, and continued to work for the coming of the world's redemption in fields of his own choice.

Major M. G. Naidu

The most handsome memorial to this doyen of medical men in the Hyderabad State has been etched by a contemporary when he wrote : "A man who shunned publicity and consistently refused permission to biographers and compilers of 'Who's Who' has passed away as unobtrusively as he chose to live."

These words testified to the quality of the man who departed from this world on February 12 last. Husband of Sarojini Naidu who predeceased him nearly 28 months ago, the flowering of her personality and of their sons and daughters was made possible by their father's self-effacement.

Leader of all social service activities, one of the founders of the National Medical Association of India, Major Naidu has shown how a sense of duty to God and men could rise over the most adverse of circumstances. In his death Indian society has lost one of those individuals who in their life and thought stood for certain old-world virtues that would remain ever green.

C. R. Reddy

In the death of this noted scholar and educationist at his 70th year India has lost a vivid personality.

After completing his education at the British University of Cambridge with marked distinction he joined the Mysore Service as Inspector-General of Education in about 1918. Not a little of the educational progress of this "model State" was due to his drive. From that time on he was marked for higher distinction. As Vice-Chancellor of the Andhra University he helped its growth during its formative years. And from thence he reverted to Mysore Service where he ended his career as pro-Vice-Chancellor of the University.

His interest in politics was that of an intellectual and his rugged individuality disabled him for the wider field in India. We mourn the death of a good man.

G. H. Langley

This British educationalist who made his mark in India as teacher of our youth specially as Vice-Chancellor of the Dacca University has ended his days in his homeland. His interest in India's higher thought and life was proved by his biography of Sri Aurobindo. To the memory of this relation we pay our tribute.

Khurshed Lal

The death at the age of 48 years only of Khurshed Lal, Deputy Minister of Communications in India, ends short a career that had immense possibilities of service to his people. We tender to his wife, sons and daughters our condolences.

Born on March 4, 1903 he topped the list of graduates in 1924 from the Lucknow University and then studied law. In 1926 he commenced practice as an advocate in Dehra Dun. He joined the Congress during the Salt Satyagraha campaign of 1930 and was imprisoned in 1932, 1941 and 1942.

In 1931 he became President of the City Congress Committee, Dehra Dun, and except for a brief break for about two years continued as President till 1946.

He took an active part in civic affairs and was Chairman of the Municipal Board, Dehra Dun, from 1936 to 1946. His interests in the wider interests of his people led him to active participation in public life, not alone politics. He was a member of the Jaunsar Bawar Enquiry Committee to enquire into the affairs of this partially excluded area in the United Provinces. In 1940 he resigned from the Municipal Board as a protest against the resolution moved with the assistance of the European and Muslim League members to remove the National Flag from the Municipal buildings. Towards the end of 1946 he was elected to the Constituent Assembly of India. He was understood to have been offered and accepted the post of India's High Commissioner in Pakistan.

THE PRIME MINISTER OF INDIA

A Constitutional Study

By G. P. SRIVASTAVA, M.A., LL.B., D.P.A., D.F.A. & D.

In a Parliamentary type of Government the office of Prime Minister is the most important of all executive offices. In fact, the Prime Minister is more powerful than the executive head of the State who has only nominal authority and does not exercise real powers of Government. It would be true to say that the Prime Minister is the centre-piece of the whole mechanism of Parliamentary Government. As England was the first country in the world to evolve a Parliamentary system of Government, the office of Prime Minister first came into existence in that country and Sir Robert Walpole was the first Prime Minister during the reign of George II. But for a long time the office of Prime Minister was not recognized in law. It was only in 1905 that the office was officially recognized and in 1917 it was given statutory recognition. Finally, the Salaries Act of 1937 laid down the salary for the office of Prime Minister and First Lord of the Treasury. As the constitution of the Republic of India has adopted a parliamentary type of Government for this country it is both interesting and instructive to trace the constitutional position and powers of the Prime Minister of India.

Article 75 provides that the Prime Minister shall be appointed by the President. As it is a responsible type of Government depending upon the goodwill and confidence of the legislautre the term of the Cabinet has not been statutorily fixed. In fact, it can not be fixed under this system. Therefore, the same article provides that the Ministers shall hold office during the pleasure of the President. In actual practice, the pleasure of the President means the pleasure of the Legislature or Parliament which is supreme over the executive. But the expression 'pleasure of the President' has been inserted in the constitution as in law the President is the repository of all executive powers.* Thus the term of the Prime Minister is indefinite and is dependent upon the fact of his continuing to enjoy the confidence of the legislature. In actual practice, it means that he will continue in office so long as his party forms a majority in the House of the people.

The Prime Minister, like other Ministers, has to take the oaths of office and secrecy before the President. His salary like that of other Ministers shall be determined by the Parliament but until it does so he would draw a salary of Rs. 3000 per month as laid down in the second schedule of the constitution.

The Prime Minister has five important duties under the constitution. But two of them are really very important. The first is that of recommending the names of other Ministers in his Cabinet. It is provided in Article 75 that the other ministers shall be appointed by the President on the advice of the Prime Minister. This matter depends upon a well-established convention in England. In fact, it is the essence of the Parliamentary system and is found in all countries having a Parliamentary type of executive. In this system after the elections of the legislature are over the Head of the State invites the leader of the majority party in the lower chamber to form Government. In England, this principle has been followed since 1923. When Mr. Bonar Law resigned and the turn of the Conservative Party came for forming Government, many people thought that the King would invite Lord Curzon to form Government but instead he invited Mr. Baldwin who belonged to the same party but was a member of the House of Commons. If the leader of the majority party agrees he submits a list of his prospective colleagues for approval to the Head of the State. The Leader becomes the Prime Minister and the body of ministers is collectively known as the Cabinet. In the matter of choice of other ministers the Head of the State, or the nominal executive as he is called, exercises some discretion. Sometimes he may disapprove any name or press for the inclusion of a new name. But generally the Prime Minister has the final say in this matter. That this will be so in India is beyond doubt because the Prime Minister will have the support of the majority in the Legislature and the President will not find any other member who is able to form an alternative Government.

The second and probably the most important power of the Prime Minister is mentioned in Article 74 (1) which provides that

> "There shall be a Council of Ministers with the Prime Minister at the head to aid and advise the President in the exercise of his functions."

This article assigns to the Prime Minister the duty of helping the President in the administration of the country. In England, the Prime Minister enjoys this status and power by virtue of a convention only and

* Article 53 (1)

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

it can not be traced to the letter of law. But in India it has been provided in statute.

Article 78 charges the Prime Minister with three more duties. Firstly, he shall communicate to the President all administrative decisions as well as legislative proposals of his Cabinet. This means that he will serve as a channel of communication between the President and the Cabinet. Secondly, he shall furnish such information regarding the above two matters as demanded by the President. Thirdly, if the President requires—the Prime Minister shall place a matter before the whole Cabinet on which any individual minister has already taken a decision.

Let us study the position of the Prime Minister *vis-a-vis* his Cabinet. Article 75 provides for the collective responsibility of the council of Ministers to the House of the People. In actual practice in every parliamentary type of Government this responsibility is both joint and several. The Cabinet as a whole is responsible for the policies and actions of the Government. But every minister is also individually responsible for the proper working of the Department. Therefore, the Prime Minister along with his colleagues is responsible for the work of his Government but he is also individually responsible for the Departments which are directly under his charge. At present the Prime Minister has the direct charge of the Department of External Affairs.

In England, the position of the Prime Minister is that of first among equals. But this position has not so far crystallized in India. At least there is one instance which will illustrate this point. On the matter of the Indo-Pakistan Pact of 8th April, 1950, a majority of members of the Indian Cabinet was opposed to the point of view of the Prime Minister who favoured such a pact. But he disregarded the opinion of the majority. As a result two ministers resigned from the Government. Without going into the merits of the case it can be asserted that it was a dangerous precedent for a country which was experimenting with Parliamentary democracy. This shows that the position of the Prime Minister in India is much more than that of equality with other ministers. Perhaps this is so because the Prime Minister is the hero of many a battle fought against foreign rule and due to this fact commands a great popularity in the country. The position of other Ministers as against the Prime Minister is further weakened due to the fact that the Cabinet is a heterogenous body. It is composed of not only Congressmen but also of non-Congressmen. No doubt, the inclusion of non-Congressmen was an act of great foresight on the part of the Prime Minister and this fact made the Cabinet truly national but the position of non-Congressmen in the Cabinet is very weak.

Another matter that deserves notice in this connection was the position of the Deputy Prime Minister. Although unknown to the letter of the constitution position was officially recognized. In fact, he played a very important role in the formulation and direction of Governmental policies. This was due to the fact that the incumbent of that office who was no other than Sardar Vallabhbhai Patel occupied a very important position in the political life of the country. But since his death the post has not been filled up although no definite decision has been taken, it can be safely predicted that it will not be filled now and will fall into desuetude.

But the only rival to the power of the Prime Minister is the President. It is, therefore, necessary to study the powers of the Prime Minister *vis-a-vis* the President in order to have a clear notion of their constitutional position and powers.

Article 77(1) provides that

> "All executive action of the Government of India shall be expressed to be taken in the name of the President."

Article 77(2) further provides that the President shall make rules for the authentication of orders and other instruments made and executed in his name. This shows that his powers are intended to be more nominal than real. Article 77(3) provides that

> "He shall make rules for the more convenient transaction of the business of Government of India and for the allocation among ministers of the said business."

But, in fact, he would do so in consultation with the Prime Minister who as the head of the Council of Ministers is charged with the duty of aiding and advising the President in the performance of his duties.

The President has many legislative powers such as those of summoning, proroguing and dissolving the legislature or those of giving assent to a bill, withholding assent or sending it back to the Parliament for reconsideration. But there is no doubt that he will perform his functions in this field on the advice of the Prime Minister. The President, like the British King has also the power of addressing the legislature at the beginning of every session. But the practice in England is that this address is prepared by the Prime Minister. That this will be so in India is obvious. His power to promulgate ordinances during the recess of Parliament is also exercised by him on the advice of the Prime Minister.

But there are many provisions in the Constitution which give the impression that the President is intended to be a real ruler and not a nominal head. One such matter which is found in Article 78 and which has already been referred to is that even after a decision has been taken on a matter by the Minister in charge of the Department the President may require the Prime Minister to place that matter before the whole Cabinet. The second feature is that the acts of the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

President do not require the counter-signature of the Ministers which is the practice in all Parliamentary types of Government. It may be argued that this thing is implied in a Parliamentary system of Government but when various other minor details of administrative action have been provided in statute it is not clear why such an important provision has been left out. The third feature of the Constitution is the provision for the impeachment of the President. This also like the above two provisions, shows that the President is intended to be a real ruler because if he is the nominal head of the executive whose acts are countersigned by his ministers there is no need for impeaching him for any constitutional impropriety. Thus, legally speaking, the President is the real ruler.

But it is obvious that the Prime Minister will exercise a great influence in the election of the President as the majority of one part of the electoral college, *i.e.*, the elected members of the Parliament will be amenable to his control. Article 53(3) (b) empowers the Parliament to confer by law "functions on authorities other than the President" and as the Prime Minister commands a majority in the Parliament, it is, in fact, he who will determine what functions should be conferred on those authorities. Moreover, being the leader of the majority party in the Parliament the Prime Minister will have an effective voice in the decision whether the President should be impeached under Article 61 or not if and when such a proposal is brought before the legislature.

Thus although sovereignty resides in the people, the Parliament which is the representative of the people is the real carrier of that sovereignty. It is clear from the fact that it can not only confer powers "on authorities other than the President" but can also increase the number of judges of the Supreme Court. But sovereignty of Parliament means the supremacy of the Prime Minister in the organisation of Government. In fact as the Government of India is of a Parliamentary type there is no real danger that the personality of the Prime Minister will be dwarfed by the Constitutional position of the President. This is clear from the speech of Dr. B. R. Ambedkar, the Chairman of the Drafting Committee in the Constituent Assembly, in which he said :

> "The President of the Indian Union will be generally bound by the advice of his Ministers. He can do nothing contrary to their advice nor can he do anything without their advice."

Ramsay Muir says that the Cabinet is the steering wheel of the ship of state and the Prime Minister is the steersman. This description holds good of the Indian Prime Minister also.

———:O:———

LONDON LETTER

By Major D. GRAHAM POLE

"The world is so full of a number of things, I am sure we should all be as happy as kings." It is the centenary year of Robert Louis Stevenson, who wrote this children's rhyme, and I was wondering, were he still alive, what he would find to be happy about. Reflection soon brought two men to mind, Sir Benegal Rao and General Eisenhower. Then in the realm of abstract things, we can rejoice that Free Speech still prevails in the greater part of the world. Last but not least a religious revival is well under way—and this time it has the powerful aid of science which seems all the time to be uncovering the underlying one-ness of the universe. (As indeed Charles Kingsley always felt that it would—and that at the height of the hulabaloo which followed on Darwin's assertion of the theory of Evolution, also nearly a hundred years ago).

At first we thought of Sir Benegal Rao principally as a peace-maker and go-between the United Nations and the Chinese Government. We watched eagerly for any news of the response which he was receiving from the Chinese. Now it becomes clear that the position in the East is most dreadfully entangled and that the United Nations is in very great need of someone who can explain the East and the West to one another. Sir Benegal Rao has put his hand to the plough. He can have had no idea how far his task would lead him. But it would be a wonderful thing for the world if India could assume this role of Mediator and Interpreter. The world is so weary of war but disarmament will never come until we disarm our minds. Russia, straddling Asia as she does, might have been the bridge between East and West. But for too long Russia thought her Revolution was menaced by the outside world and it has led her to make her neighbours into satellites and herself into an imperialism, that hopes to rule the world—and to fight through other people's armies. It may seem an endless and often disheartening journey, but can India begin on a great detente in the Asiatic world ?

Not much to the purpose can be said at the

moment about the situation in Korea. General MacArthur seems to be a Nelson as regards being a law unto himself and a very Montgomery as regards making speeches. The point about being a Nelson is that one must succeed. If General MacArthur had made good his boast and ended the fighting in Korea by Christmas, no one would have questioned the wisdom of his plan of campaign. In any event, since he did decide to cross the 38th Parallel, it is no use being wise after the event and crying over spilt milk. It proved to be a disastrous step but, since war was the method, there was nothing inherently "wrong" in his action. As more than one critic has observed, it was no more unreasonable of him to pursue the aggressors into their own territory than it was, in the last war, for us to pursue the Germans across *their* borders. Still the tragedy of Chinese intervention remains. (And how great a tragedy that is for China anyone can see who reads the reports of recent fighting and of the way in which the Chinese hurled away their lives on American guns). History will criticise the policy-makers. Why did they not heed China's warning that she would not stand aside if the United Nations advanced to the Manchurian frontier? We shall not know the answer until the war is over.

But one thing we do see now. Matters might not have fallen out in such a way had China been an undisputed member of the United Nations with a seat on the Security Council. Here it is worth while being wise after the event. To come by way of war to partnership in the United Nations seems a travesty and to some plainly unthinkable. But does it ever work out to put a quarrel into cold storage? Surely the history of our experiences with Germany, and above all with Russia, teach us quite otherwise. We must stop thinking of German militarism and Russian Communism and Chinese Communism and try instead to reach them as individuals. If we never despair of them, they may some day throw up a different kind of leadership who want to try a different kind of approach to us. Thinking along these lines, I would like a copy of the speech made the other day by Lord Samuel—our one philosopher-statesman—to be printed and put in the hands of every member of the United Nations. He believes that the United Nations should include in its membership every nation on the earth.

> "I do not believe at all," he said, "in this principle of screened admission to the United Nations, as though we were choosing members for a select club. . . . That is the principle of the one-party legislature. It is a totalitarian principle. It is not democratic . . . All should have equal rights, whether they agree with one another or not."

Lord Samuel takes a realistic view of Chinese Communism. He does not believe that it is allied to the Russian product. The Chinese, he thinks, are Communists because they are engaged in an agrarian revolution. And he thinks too that they have probably got a better administration now than they have had for many years. It would indeed be an overwhelming and intolerable disaster if short-term policies on our part were to drive China into an alliance with Russia. As Jugo-Slavia is demonstrating, there is a kind of Communism that can make peace with its neighbours. Might it not be the case that China is going to exhibit yet a third variety? All other considerations apart, it is very hard to believe that China with her long tradition of culture—and her chronic addiction to philosophy—could for long make common cause with the Russian totalitarianism which closes not only its land frontiers but the frontiers of the mind.

War strategy in Korea has gone awry. May defence strategy fare better in Europe this week when the meeting of the North Atlantic Council takes place in Brussels. It is a comfort that it now seems certain that General Eisenhower will be appointed as Supreme Commander of the Atlantic Forces in Europe. General Eisenhower has proved his worth as an outstanding and capable soldier. And to see him on a news reel—or to hear him over the radio—one feels that he would have made an equally successful General of the Salvation Army! He has no wish—or need—to try for effect or cut a figure. He gives the impression of a man who has learned an immense amount from life and whose whole energies are dedicated to the service of mankind. He will have a tremendous task in Europe including that of reconciling France and Germany. France would like a European Army under a European Defence Minister —and Germany would like to stay out altogether if she is only to be allowed to provide troops and not have her own General Staff. As *Time and Tide* remarks of General Eisenhower :

> "All his renowned capacity for tactful realism must be concentrated on assisting the French and German Governments in the extremely delicate experiment of co-operative rearmament."

May he succeed. He has a German name and it will be a wonderful feat if he is able to awaken the European conscience of Germany—three times the aggressor in a space of less than eighty years—to the realisation that now she has a chance to redeem the past by taking a part in the preservation of Europe. Anyway, thank God, Eisenhower is coming. There are many in America who think that most of our defence preparations so far are still on paper. But now, to quote *Time and Tide* again, "the task of turning a multi-national conglomeration of soldiers into an effective army" is about to begin.

At any other time than this our heads and the newspapers would have been full of the big item of home news last week, the suspension of Marshall Aid to this country. But the news has fallen very flat. For one thing, if the strange workings of economics have been read aright, we owe this suspension in part

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the tremendous rise in prices which is getting us all down! So though we can never forget our tremendous debt to the United States for Marshall Aid—aid which got us on our feet and saved thousands and thousands of our people from unemployment—we can hardly stop to rejoice at the special circumstances attendant on our improved dollar position. We are everlastingly grateful to America for her unexampled generosity. But very feelingly do we echo Shakespeare: "Evermore thanks, *the exchequer of the poor!*"

The cost of living is becoming the King Charles's head in every conversation. Everything that's made of anything is going up in price—sometimes, if it happens to be made of wool, by as much as two-thirds. But cotton is bounding up too. The only prices that vary hardly at all are the prices of one's food rations. And the only reason they don't go up is that they are subsidised out of our own pockets in the form of taxation. An article appeared in the London *Evening Standard* the other day entitled "The High Price of Going to Sleep." Item by item the writer went through the cost of equipping a single bed. She demonstrated that whereas in 1939 a single bed could be bought and fitted up with bed-clothes for the sum of £11-2-2, today such a bed would work out at no less than £53-0-4. Laundry charges, amongst other things, are up by 77 per cent. So that keeping the bed up to standard is another problem.

We are in fact, all of us, in a very tight spot and the worst of it is that it is bound to become tighter. Some time before the last War, when rearmament was beginning, we all noticed how prices began to rise. What advance in prices can we expect now? We can only bring down the cost of living by making more and selling more. But how can we do this when we must employ men and materials on the unsaleable goods of rearmament? And how are we to meet the competition that is reviving from abroad, from countries where wages are low compared with ours and whose industry is not taxed to pay the expenses of a free medical service, free teeth and free eye-glasses, subsidised houses and subsidised food, and all the other expenses of the Welfare State? The Japanese, for instance, are flooding the American market with beautiful china dinner services. To pass them off as English goods they have given these products such names as "Wentworth,' 'King's Court' and 'Citadel.' Lady Violet Bonham-Carter said in Rome recently that all parties in England were committed to the policy of the Welfare State. And indeed no one who remembers the appalling suffering during the years of the great Depression can feel otherwise than that the Welfare State is a good thing. But we are in a dilemma. We cannot give up our Welfare State but as things are this State is yoked to the galloping horse of inflation. Unless we can contrive some means of stopping the horse, it is going to run us right over the edge of disaster!

However one thing that really is 'free' in this country is free speech and it continues to brighten our darkness. A most amusing article appeared this week entitled 'Crazy Coal' and analysing the situation of our nationalised coal industry. Coal, of course, is no laughing matter. There is an enormous unsatisfied demand for our coal abroad and prices are higher than they have ever been. But we cannot take advantage of this demand—instead we ourselves have to import coal! For the first time in our history the proverb 'carrying coals to Newcastle' has lost its meaning. Various reasons are put forward for the present shortage. In particular it is ascribed to full employment and the fact that industry has been going at full steam. But this explanation does not account for the main, incredible, underlying fact. That fact is that under nationalisation—when 'the miner has become one of the best paid workers in industry, with a priority claim for housing and an assured job'—the output of coal does not reach the figures of the years of unemployment. Production for 1950, it is stated, is likely to amount to about 217¼ million tons as against 227 million in 1938. In a nationalised industry we are all shareholders and the writer asks: Has our money been wasted? He says he cannot give the answer because 'the only way to approach such a judgment is to compare the working of alternative possibilities in active competition.' But a nationalised industry has no competitors. In fact, he concludes, 'by eliminating competition the Coal Board has not only locked the door to efficiency but *has swallowed the key as well*'! (Italics mine).

And now for a brief inadequate word about the religious revival. Church-goers have for many years been irritated by the parrot cries —from those who would never bother to go there anyhow—that 'the churches could not be emptier.' That the churches *were* emptier was due to changes in our social habits. In the first place, like so much also that has changed in England, church-going was affected by the servant problem. In former times, when the upper and middle classes could all get house-maids, families would troop off to church in the morning and come home to find the Sunday dinner ready cooked for them. Now most of them are maidless and too there is always or almost always a very good service, with excellent sermon, broadcast over the radio. These factors have operated to keep people away from church. But, in spite of this, the churches are filling up again! The Roman Catholic Church, of course, has never suffered in this way. Its members are well schooled from their childhood to make a point of going to church (and never to be so late as to miss the reading of the Gospel). Now other churches are reporting growing congregations. Recently a friend of mine tried to get into a Christian Science

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

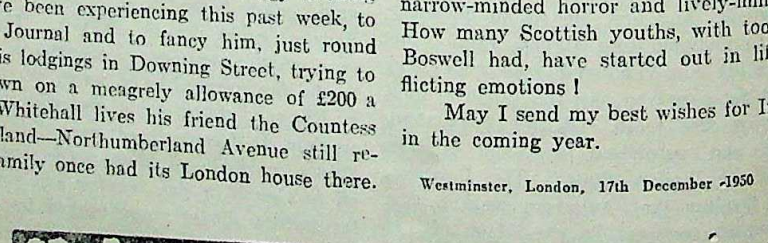
Digitized by Arya Samaj Foundation Chennai and eGangotri

meeting that was being held in Westminster. As it was a pouring wet night she thought she would be certain of a place. But there was a long queue stretching right down the street and she only just succeeded in getting into an overflow meeting which was packed out too. A Lay Reader, arguing from his own experience, in a letter to the press this week has no doubt that the decline in church-going is much more than arrested. He writes :

> "May I cite one figure which I know is accurate and may be taken at its face value ? The Church of England Men's Society, without spectacular effort, has added branches at the rate of a hundred a year in each year since the war ended, and is rather more than maintaining that rate in 1950."

It is part of his work to attend a good many different churches and he gives the names of six churches within a few miles of his home that have crowded congregations each Sunday. (Four of these are Anglican, one is Baptist and one Methodist). Surely these are enough swallows to herald the summer—and silence the parrots !

Some people affect to believe that church-going is escapism. My favoured form of escapism is reading about the past. "The use of history," says Thucydides, "is to light the present hour to its duty." That is true of history but one of its junior branches—biography—has a gentler use. It makes a man feel at home in his environment. At the present time many of us are reading Boswell's recently discovered *London Journal*. He doesn't give us a torch to light us to our duty—far from it !—but it is a torch that lights up the London of his day, a London of dirty streets and jostling chairmen and of poets so thick upon the ground that, as Boswell says, finding poems for the *St. James's Magazine* "is as if one were making a collection of whinstones in Scotland, where you may get them on every field." It is a delight, on a cold foggy evening such as we have been experiencing this past week, to open Boswell's Journal and to fancy him, just round the corner in his lodgings in Downing Street, trying to conquer the town on a meagrely allowance of £200 a year. Just up Whitehall lives his friend the Countess of Northumberland—Northumberland Avenue still recalls that the family once had its London house there. This Countess, like so many of the people who [illegible] in these pages, is vividly etched in. As so often [illegible] the artistocracy, she has a very peculiar streak [illegible] thrift.



> "Why don't you go to Court, Mr. Boswell," says she, "I'm sure that's a cheap diversion. It costs you nothing, and you see all the best company and chat away. It is the best coffee-house in town !"

One could rattle on indefinitely—to use a favourite word in the eighteenth century—picking out glimpses of London at that time. None of them very important—except for the meeting with Dr. Johnson—but one encounters little unforgettable scenes or a record of conversation so real that one fancy the different tones of the speakers. One favourite memory is of Boswell, in very bad humour, keeping places in the pit at Drury Lane for two friends who can't be bothered to turn up until the last moment. However, he adds balefully, 'I had the satisfaction to see them well-punished, for by staying so late they could scarcely squeeze through the crowd. Haven't we all been served like that by our friends ? But we would not have the same mitigation as Boswell. At least Oliver Goldsmith came into the box behind him . . .).

May I be forgiven for a last word about Boswell and that is that he and I appear on the roll of members and Masters of the same Masonic Lodge, Canongate Kilwinning, in my native town Edinburgh. Boswell was Master of the Lodge in the year 1773 and a hundred and thirty-eight years later, in 1911. Boswell loved the Canongate and in his day the Edinburgh Theatre was there. So I will close with a glimpse of Boswell, as a boy, walking down Canongate. "In boyish days," he writes, "I used to walk down the Canongate and think of players with a mixture of narrow-minded horror and lively-minded pleasure." How many Scottish youths, with too strict a father as Boswell had, have started out in life with these conflicting emotions !

May I send my best wishes for India's good fortune in the coming year.

PRESIDENT'S RESIGNATION IN THE NEW CONSTITUTION

By Prof. K. V. RAO, M.A., M.Litt., O.E.S.

Article 56(1) limits the tenure of office of the President to five years, but the President is eligible for re-election any number of times. Originally the Draft Constitution wanted to restrict re-election only for one more term but it was deleted without comment by the Constituent Assembly. It was a good thing that it was deleted for it was meaningless to restrict his term and re-election when he is to be only a mere 'constitutional head.' A President elected a number of times again and again would accumulate experience and wisdom so that he could be a real friend, guide and philosopher to the ministry. On the other hand, thus restricted, a President running a second term may become a bit indifferent as he has nothing to lose. Elective principle acts as a great restraining force as it makes the incumbent seeking re-election to account for his acts of omission and commission before the electorate periodically.

A vacancy in office occurs in four ways: (*i*) by the natural expiration of the five-year term; (*ii*) by death or by permanent disability such as total paralysis; (*iii*) resignation; and (*iv*) by removal by impeachement. This is covered in the Constitution by Articles 56, 62, 65 and 70. The Constitution provided for an election to take place before the expiration of the normal term of office [Article 62(1)]; and in the case of other vacancies by death, resignation, removal or otherwise, elections will have to take place within six months after the occurrence of the vacancy [Article 62(2)].

The word 'otherwise' in this Article 62 is difficult to understand as causing a permanent vacancy. The Drafting Committee have not explained it. Is it merely a legal safeguard inserted by the lawyer-members of the Committee to cover any unforeseen contingency or were they contemplating anything more mysterious, something like a man becoming invisible, as in H. G. Wells' novel? Another such safety provision is found in Article 70; but we are not discussing a casual or temporary vacancy here.[1]

A President whose period normally expires need not automatically vacate his office; but only a vacancy occurs. He continues in office under Article 56(1)c, "until his successor enters upon his office." Here 'successor' probably does not mean the Vice-President; for ordinarily the successor is already elected, according to the Draft, under Article 62(1). This is probably intended to cover a contingency of India going without a President in two possible ways. One is temporary inability of the President-elect due to absence from the country at that time or illness, etc., which prevents him from taking the oath and assuming office on the appointed day; the second is an unforeseen permanent vacancy occurring by the death of the President-elect before he assumes the office. In both these cases, the old President continues. A better provision would have been for the Vice-President to step in, for there is another contingency which the fathers of the Constitution have not foreseen, as otherwise they would not have made it so. Suppose the out-going President is very unscrupulous and knows fully well that he has no chance for re-election. He can manipulate remaining in office by dissolving the House of People or some other House of Legislature in the States.[2] It is highly desirable that the Constitution is amended to make the Vice-President, who is only a temporary lease-holder, to step in all contingencies when a vacancy occurs in the office of the President.

One important way in which a permanent vacancy occurs in the office is by the voluntary quitting of office by the President by resigning. This is provided by Article 56(1)(a). This is not an ordinary contingency whereby a President, whether a constitutional head or not, resigns his office for nothing. There must be some contributary causes that leads to that step. Now what are they? There may be four grounds leading to resignation. One is a normal contingency of illness, etc. The second is that it might be something like an 'abdication' which is voluntary, like that of Edward VIII, where the President does not look eye to eye with his ministers and would like to quit instead of creating a constitutional crisis; or, under similar circumstances or otherwise, a President could be asked to resign by the High Command, and he might oblige. The third reason might be an impending impeachment; a President might prefer resignation to

1. One such contingency not covered by Clauses 1 and 2 of Article 65 is probably 'unwillingness of the President' to act. Suppose a President is 'unwilling' to act with a view to paralyse the government. (This is not the same thing as madness though it may be one such kind). Impeachment is both long and difficult and meanwhile administration may suffer. Parliament could provide for such a contingency under Article 70 and Article 71(3). But in such a case another question crops up,—to what extent Parliament will be going against the provisions of the Constitution by such legislation?

2. The question I pose here is this: What is the meaning of 'Electoral College' in Article 54. Does it mean that all the Houses mentioned therein should be there before an election takes place? Say, can an election take place when the House of the People or the Assembly of Orissa stand dissolved? The final answer can be given only by the Supreme Court under Article 71(1). In any case an unscrupulous President can take advantage either by dissolving the House before an election or dissolving some hostile legislatures.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

removal by impeachment. The last is, it might be the President might use it as a threat against the Ministry and the majority party on some vital point which might reveal something bad against the Ministers and so might make them reconsider their own stand or voluntarily themselves resign.

Before going into the details of these grounds and the probable circumstances under which each cause occurs, let us have an idea of the procedure contemplated by the Constitution and the issues it raises. The Constitution has laid down a very simple procedure, obviously because the fathers of the Constitution have taken it as a casual, normal, thing requiring no explanation and elaborate examination. On any one of the grounds as stated above, suppose the President has decided to resign. He has simply to write a letter of resignation to the Vice-President, which "shall forthwith be communicated by him to the Speaker of the House of the People." [Article 56(2)]. The Draft Constitution in Article 45(a), following the procedure given in the Report on the Union Constitution [Clause 2(1a)] which was approved by the Constituent Assembly on 24th July 1947, lays down the procedure that the President under his hand address the Chairman of the Council of States and the Speaker. Later on, it has been amended to make the address to the Vice-President and him compulsorily to the Speaker. The following questions of procedure arise out of this procedure and either conventions should be established or the Constitution has to be amended to solve the difficulty, unless meanwhile the Supreme Court decides it finally:

a. When does the resignation come into effect? Is it as soon as the letter is written down; or as soon as the President's letter is received by the Vice-President? Is it necessary that a Gazette Extraordinary should announce it, and who will announce it in the Gazette, the President or the Vice-President?

a. Is the resignation final and irrevocable? Can the President reconsider his decision? And, if so:

b. When does the resignation come into effect? Is it as soon as the President writes his letter, or is it after the Vice-President receives it? Or a Gazette Extraordinary should first announce it, and in this case, who will send it for publication?—the President or the Vice-President? It cannot obviously come into immediate effect in any of the cases cited above, as there is some time-lag between one President resigns and another (the Vice-President) assumes charge after taking the oath under Article 69: and who will be President in the interval? The out-going President, obviously, must remain in office till the Vice-President assumes office by taking the oath. Incidentally it must be deemed to be the meaning of Article 56(1c) that it covers all contingencies mentioned above and that 'successor' there means both the Vice-President, and the President-elect. Now the question is: can the President reconsider his decision and withdraw his resignation meanwhile?

c. The answer to the above questions depends upon the answer to another question that arises. Is there any question of accepting the resignation and, if so, by whom? We may understand, by the absence of any provision for acceptance, that the same will be accepted by the Vice-President. But in this case, the incidental question comes whether the Vice-President has got the option of requesting the President to reconsider. To the last question we may emphatically say 'no'; the Vice-President is not so dignified an officer to exercise such discretion. From the context, after reading the Debates of the Constituent Assembly on the Article, the President is asked to address the letter of resignation to the Vice-President because he is the person to step into the shoes of the President and who could also write to the Election Commission to get ready for the election of a new President. We could have easily accepted this view but for another question that is raised below.

d. What is the purpose of communicating the news of resignation to the Speaker of the House of the People? There was no valid and convincing reason given for this particular provision in the Article. It might be just an accident that this provision remains from the original which suggested that the President should address letters to the Chairman of the Council and the Speaker of the House, as the Presiding officers of the two Houses of Union Legislature. It was then amended that it should be addressed to the Vice-President as the successor Officer and then the latter should inform the Speaker because it is simply desirable and for no other reason.[4] But there must be some sub-consciously reason why the Speaker alone should be singled out but we are not able to find it out. What is the Speaker supposed to do them? Is he, or even it that the Vice-President, supposed to place it before the respective Houses? and, if so, what are they to do if the Houses are not in session? And lastly, if the Houses of Legislature have the power (right) the duty to consider the letter and discuss it even come to a decision, *i.e.*, can they refuse to accept the resignation? This question becomes especially relevant when proceedings for impeachment are going on in the Legislature. Can the House, for instance, refuse to accept the resignation and proceed with impeachment?

The Constitution should have clarified these points. And if the intention is that the resignation should take immediate effect as soon as the letter is received by the Vice-President, then it should have been stated to do so and then the Vice-President should have been asked to communicate the same once to the Election Commission. Thus the election machinery for the next election should have been set in motion.

3. In actual fact the matter was treated rather lightly by the House. One Member suggested by an amendment that the letter should be addressed to the Indian National Congress. *Debates*, Vol. VII, p. 1021.

4. The mover of this amendment said: "It is better, therefore, that provision should be made that one person should receive the resignation and be responsible to set the machinery in motion to fill the vacancy. And that person is most properly the Vice-President. I have therefore provided that the Vice-President should receive the resignation. But at the same time it is desirable that the Speaker also should know it." *Debates*, Vol. VII, p. 1020.

Now let us examine in some greater detail the plausible grounds on which a President would be tempted to resign such a high post. Illness could be dismissed as most improbable. To start with, no weak man on death-bed would have stood for election, and not much energy is required to carry on the duties of a 'constitutional head.' If the illness is serious enough, then he can temporarily go on leave, as our constitution, unlike the American one, creates also a temporary vacancy and thus enables the President to go on leave. Human nature being optimistic, no President would resign his post on grounds of illness; he would at the most go on leave, thus creating a temporary vacancy. If the reasons are strong differences with the Ministry or the majority party and the President wants to quit quietly, then it is all right and no difficulty arises. (This the President would do only if his own party is in power and it is strong enough to make him resign). So also when the President resigns rather than faces an impeachment.

But suppose some high principles are involved and the majority party is not his, then resignation would come in handy when the President wants to bring a constitutional issue to a head and wants the dispute settled by the Legislature. Sometimes on particular occasions, the President might feel that he is in the right and ministry is in the wrong. It may not be serious enough to dissolve the House. Again it might be the Ministry is not treating him well; an autocratic Prime Minister might not be carrying his duties under Article 78. He cannot dismiss the Ministry as he (the Prime Minister) has a strong majority in the House. Moreover, such a dismissal would turn out to be a challenge to the sovereignty of the House, as the House would be completely ignorant of the issues. As it is, the President has no constitutional way to bring his grievances to the notice of the Legislature, the immediate masters; the Courts are forbidden to enquire into the matter under Article 74(2). We do not know how the Constitution expects the President to enforce Article 78. One way is for the President to disregard the advice of the Ministry (having a majority in the House, otherwise it could be dismissed) but then he would be impeached and he has to stand as an accused. The other way is resignation; the Ministry would then be the accused. Resignation might be used as a mere threat, or the President might resign, explain his stand and again stand for election. Let us examine them both.

The threat of resignation is a great weapon, if properly used. A President with a commanding personality could use it with great advantage. It may amount to a threat of abdication found in England and once or twice Queen Victoria used it to carry out her will.[5] The threat of resignation on particular issues might wring out some important concessions from an otherwise recalcitrant ministry, and in case of serious differences the President should be given a chance of bringing these differences to the House of the People which could decide who was in the right —the President or the Ministers—either by accepting the resignation or refusing it by simple majority. In the latter case, he might dismiss the Ministers and choose another.[6] From this point of view, Article 56(2) could have made it obligatory for the letter to be placed before the House of the People which should then decide whether to accept or reject it or request the President to reconsider the decision. (Rejection is to be used in case of impeachment proceedings before the House). In case his point of view is not accepted by the House, he can still appeal to a bigger electorate—after all the House of People is not the final authority on constitutional delicacies—by standing again for election; the letter of resignation and the subsequent discussion in the House would place the issues clearly before the country for the electors to judge. In case he is elected again, he might then justifiably dissolve the House and ask for another election. A threat of resignation would be a great weapon against a corrupt and unconstitutional ministry backed by a strong but blind, or as Jinnah used to call, brute majority. The President also requires a weapon in case his ministers violate the constitution and the House backs the ministry which the country would not. Resignation along with the suggested procedure would serve the purpose. Therefore, I suggest that Article 56(2) should be amended thus: "Any resignation addressed to the Vice-President under Clause (a) of the proviso to Clause (1) shall forthwith be communicated by him to the Speaker of the House and the Speaker shall forthwith place it before the House of People for its acceptance."*

5. See A. B. Keith: *England from Victoria to George VI*, Vol. I, page 141. But Keith thinks that such royal threats were "unconstitutional except as a mode of emphasising the strength of the feeling in the matter."

6. It is not the same thing as his dismissing the ministry before resigning and forming another. In this case, the issues would not be before the House. If he is definitely in the right, then the President might be requested to reconsider his decision, which amounts to a vote of no-confidence in the Ministry.

* The reader will not be able to appreciate the true spirit of this article unless he understands the truth of the following: *i.* That no constitution is capable of laying down every detail of its working; it will leave some leeways; *ii.* That no conventions can be binding on the people unless forced by strong circumstances and organised public opinion; *iii.* that our constitution does not necessarily bind our President to be 'nominal,' but it leaves it to circumstances; *iv.* that in politics there is a regular struggle for power between parties, between groups within the parties, and between individuals within parties and groups; that is the only realistic approach to politics; and *v.* that there will be a period of such struggle between the President and the Prime Minister before the issue is finally settled whether the President is *bound* by the advice of the Council of Ministers or not. This article of mine envisages the use of resignation by the President during such periods of struggle, especially when the President and the Prime Minister belong to two different parties.

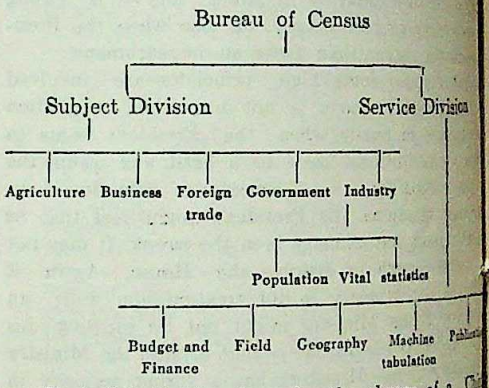
CENSUS OPERATION

By Dr. PURNENDU KUMAR BOSE,
Calcutta University

In India, Census may be well compared with the appearance of a comet on the horizon. Just as a comet appears on the horizon after long intervals, stays for a few days attracting attention of the general public and then disappears, leaving almost no impression so also does the Indian Census which is taken at an interval of ten years. During the Census year people become interested for the time being, show an extra amount of enthusiasm but the whole thing is temporary, the exuberance dies out only after a few days. Most of the people in India fail to realise the real significance of Census. They only think that Census means the counting of people, they are not in a position to connect census with the developmental projects of the Government. Two things are essential for making the census a success. They are: (*i*) Enumerator, (*ii*) Citizen. Unless the two co-operate whole-heartedly the census cannot be perfect. I believe, in India, the second one *i.e.*, the citizen is more important than the first. People ought to understand clearly why the census is taken? Unless this is clear people's co-operation can not be expected. In the United States of America, which is one of most advanced countries of the world, this difficulty is also similarly felt though in a lesser degree. This is evident from the following statement by H. L. Dunn, Chief Statistician for Vital Statistics, United States Bureau of Census:

> "The problem involved with making Census data available to the public are primarily psychological ones . . . . True there are plenty of headaches in terms of budget, publication, analysis and presentation of statistical material. But these things can be solved by buying trained brains and skilled hands, by turning them loose to do a job the best they can. But to understand the audience for this material is a more difficult matter. One which is hemmed in by barriers of ignorance, indifference, distance and prejudice. If the Bureau is to reach its audience and make its data truly available its primary task is to understand the people whom it would serve and whose needs it desires to satisfy. It must interpret its data in the light of what they are. Of how they live and feel and dream. In other way can the gap be bridged between supply and demand."



In America, the census operations are now considered as a continuous process. By continuous process I mean that throughout the year they are collecting information, not as in India at intervals of ten years.

This year in the Independent Sovereign Republic of India we shall have the first Census. In order that this census may be a success all citizens should co-operate earnestly so that Government can collect correct figures which they can unhesitatingly utilise for their future planning.

I shall try to give you in brief: (*i*) An account of the census operations in the United States of America because here it is done most methodically using modern statistical methods, (*ii*) A Summary of the Indian Censuses in previous years and (*iii*) Future Recommendation. The subject under discussion is very wide so it is not possible to give an exhaustive study of the different aspects at such a short space.

An Account of the Census Operations in U.S.A.

In the United States of America, there is a permanent department under the name Bureau of Census. In the Bureau of Census there are broadly two divisions: (*i*) Subject Division and (*ii*) Service Division. Under subject division there are seven items and under service division there are six items. This can be diagramatically shown as:

Each Sub-division is under the charge of a Chief (scientific man), besides these officers there are two more Senior Officers (all technicians) and a Director. This is in short the administrative set-up of the Bureau of Census. From the list of items given above it will be clear that the Bureau of Census in the United States covers a very wide field. Let us now turn to the activities of the Bureau. As in India, in the United States also there is decennial census. At intervals of ten years there is a complete census and in the intercensal period the Bureau collects information under the above heads. In our country we understand the need of a department of the above type in the census year but we fail to understand the necessity of the department in other years. The collection of information should be up-to-date so that we can use this in war-time as also in peace-time with complete reliance. The following quotation may be of interest:

> "The principal changes in the work of the Bureau of the Census during the past year were brought about by the termination of hostilities and of wartime controls, the need for statistics to aid planning for reconversion, the development of a comprehensive, balanced, permanent Census program geared to peace-time needs . . . . needed to furnish new statistical bench marks for Government, business and private research".

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Firstly, we shall consider the normal activities of the Bureau and then we shall discuss in brief how the decennial census is arranged in U.S.A.

NORMAL FUNCTIONS OF VARIOUS SUB-DIVISIONS

(i) Agriculture includes for the year under review the total number of farms and lands in farms. It also includes detailed information on acreage and production of specific crops and live stock in each county. Additional information such as land use, value of land and buildings, farm dwellings, farm population, farm labour, farm equipment, farm fecilities, value of farm products sold, etc., are included.

(ii) *Business* : It includes the series of monthly, quarterly and annual reports relating to retail and wholesale business and to the flow of certain commodities through the distribution system.

(iii) *Foreign trade* : It includes matter like adjusting foreign trade reports, statistical classification of domestic and foreign commodities, etc.

(iv) *Government* : It includes analytical reports on State expenditure, State surpluses, State debt, City capital outlay, City debt, etc.

(v) *Industry* : It includes surveys in the manufacturing fields. In a particular year, work under this head is clear from the following sentence :

"The principal efforts in this subject during the past year involved taking over certain war agency surveys which were being discontinued by them and initiating new surveys of commodities for which production had been virtually suspended during the war."

(vi) *Population* : It includes preparation of inter-censal and post-censal estimates of population. During the decennial census, complete count of the population of the United States is done but from year to year the net increase or decrease in the number is furnished by the department.

(vii) *Vital Statistics* : It includes "processing, analyzing and publishing the essential national statistics of births, deaths and still births. In addition, special statistics of motor vehicle accidental deaths, the 10 per cent mortality analysis and various current reports are compiled and published."

In the above paragraphs I have tried to explain in brief the various activities of the different branches under subject division. I believe now it is clear that a permanent Bureau of Census is essential for the country. About the second main division, namely, Service Division, I will not try to explain as it is mainly administrative.

Now I shall try to place before you something about the decennial census in the United States of America. United States of America is a country with a population of 13,16,69,275 and an area of 30,22,387 square miles. The last census was taken in 1940 and this year they will take a fresh census.

"In the United States, the Census of population has been taken every tenth year since 1790. This is a function of the Bureau of the Census, where statistical and administrative activities are carried on by a staff of about 3,000 employees. A large number of this permanent or quasi-permanent staff engaged in different tasks throughout the various stages of preparation, tabulation and other censal and post-censal operations, aside from the special census force engaged periodically for actual work in the field.

"In the 1940 Census, more than 1,20,000 enumerators were employed. Written examinations to test the ability of enumerators in the use of Schedules and instructions and moving pictures to show practical angles of the work and determine an efficient selection were important features of the organisation of this census. The country was divided into enumeration districts, each of which contained, on the average about 1,000 persons. Maps of these districts were prepared and furnished to enumerators who visited each place of residence and entered in the schedules the householder's answers to queries. On a small number of topics the questions were asked of only a 5 per cent randon sample of the population, a procedure which permitted the broadening of the scope of the census to obtain additional information at a minimum cost. The enumeration was completed in about two weeks in urban areas and in one month in rural areas. The general results were published in several regular volumes, within about three years of the enumeration period."

The above extract is taken from *Census Costs in the Ten American Nations.*

The total amount which was spent in 1940 for decennial census is $3,66,08,496. This comes to nearly .278 dollars per capita. In the preceding paragraphs census operations in the United States have been explained. The need for a permanent Census Bureau is now felt by all advanced countries of the world. The whole idea of explaining the activities of the Bureau of Census is to illustrate how the collection of information is actually done and how they are useful for the administration of the country and also for proper planning.

A SUMMARY OF THE INDIAN CENSUS IN PREVIOUS YEARS

The first census in India was taken in 1881 and the last census was in 1941. That is, up to now we have seven censuses. This year we shall have the eighth census or in other words the first census in Independent India.

Census in India was started by the British Government, so naturally it followed the British model. In England, Census is taken at an interval of ten years. The whole country is divided into districts and sub-districts and each division is in charge of an official. About 40 thousand enumerators are employed in each census, they distribute the schedules and collect an exhaustive information in every building. Almost the same procedure is followed in India.

Indian Census : Administrative Arrangement

(*a*) *Census Act* : Before census is taken in India, Census Act is passed by the Government. By this Act :

> "Every military officer, every person in charge of lunatic asylum, hospital, workhouse, prison, reformatory, a lock-up. or any public charitable, religious or educational institution, every keeper, secretary of a boarding house, lodging house, emigration depot or club, every manager or officer of a railway or any commercial or industrial establishment and every occupant of immovable property where at the time of census persons were living, was, if required by district magistrate or Provincial Government, under legal obligation to perform the duties of a census officer in relation to the persons who at the time of the census were under his command or charge or inmates of his house or were employed under him."

(*b*) *Staff* : Central Government appoints a Census Commissioner to conduct the census. Under him the administrative arrangement is as follows :

Census Commissioner
|
Provincial Superintendent
|
District Census Officer—Collector
|
Charge Superintendent—Kanungo
|
Circle Supervisors
|
Block enumerators

Block enumerators are mainly village headmen, village school masters and also patwaris. They all perform their duties as part of their ordinary day's work. Thus census is conducted mainly by honorary workers. Before these enumerators start their work, they are properly trained. They are asked to fill up some schedules to see whether their training is satisfactory or not.

Census up to 1931

The work is divided into two parts, preliminary and final. Each house in a particular block is marked. A separate house is decided on the basis of "chullah." Usually the preliminary census is taken a few weeks before the actual census. The enumerator goes to a particular house and fills the form. This is carefully checked by supervisors and other officers.

> "The actual census usually relates to a particular night. On the night of the census the preliminary record is made up-to-date. Names of persons who have left their houses or died are struck off from the list and those who have come from outside or are born are entered in the list."

The enumerator prepares a statement showing the population of the block. Each enumerator submits his records to the Circle Officer, following the hierarchical process shown above. Provincial totals are calculated and are published in the form of separate volumes.

1941 Census (*Census Report*)

"The 1941 Census operations differed wide in their circumstances, methods and outcome from those of the previous decades and taken all must represent the most difficult operation of the long and honourable series.

"The first point of comment is that this census saw more changes in methods than had previously taken place in the whole 70 years since the census began. The chief was the abolition of the old six night theory of enumeration and the next was the abolition of old Schedule and the conducting of enumeration straight on to the slip which was later sorted to produce the various tables. Connected with the list was the complete centralisation of printing, the removal of any written language from the enumeration slip and a variety of other connected and consequent changes which produced not only efficiency but substantial economies amounting to over a lakh of rupees. The first major change enabled us to relate the enumeration more closely to the existing systems and agencies in the country and brought down the number of enumerators from two millions to one and for British India from 1½ million to 2|3".

Under this system the census was extended over a period and it was taken on ordinary residence basis. Suppose a man whose residence was in Calcutta, he would be counted always in Calcutta, no matter whether on the census day he remained in Bombay or in Madras. Another innovation in 1941 census was that every 1/50th slip was marked. The idea was to estimate the population on the sample basis and to see whether the sampling method would be suitable for this purpose.

The different tables which were included in 1941 Census were as follows :

(1) Area, Houses and Population.
(2) Variation of population during fifty years.
(3) Towns and villages classified by population.
(4) Cities classified by population with variation since 1891.
(5) Towns arranged territorially with population by communities.
(6) Community.
(7) Variation in population of selected tribes.
(8) Summary figures for provinces and States by district.

Future Recommendations

(*a*) Census operations in India should not be a temporary one. Realising the importance of census a permanent department should be established immediately. If future planning in India is to be done on a sound basis then a Bureau of Census on the lines indicated above should be set up.

(*b*) In England and in America trained enumerators are appointed on a paid basis but the enumerators here have to do the work in addition to their normal work. Thus the enumerators are careless and often commit blunders. The following sentence is interesting :

> "In India which is, no less than a Continent, the vast army of enumerators appointed, gets only paper certificates in lieu of the service rendered."

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Indian census is unpaid. The census reports may continue to pay glowing tributes for the efficient work done by the enumerators but the fact remains that the majority of enumerators take census as a burden forced upon them against their wishes.

This mental outlook should be changed for efficient work. This can only be achieved if proper remuneration is given to all workers concerned. This will further offer an incentive to the educated public of this country and they will render their services. In former times Census used to be taken more as a "show" than for any real purpose. In Free India we hope this will be changed, and trained and efficient enumerators and supervisors with proper remuneration will be employed. Unless this is done we cannot expect good census.

Now we shall turn to some of the operational aspects of the Census.

(c) Sampling methods applied to Census work. Suitable sampling techniques should be evolved for Census work. This is intended for two purposes: (*i*) to estimate the population in the intercensal and post censal period. (*ii*) Many items can be estimated with lesser cost.

In 1940, in the United States, Sampling in conjunction with the census was tried. Following are very valuable observations by M. H. Hansen, Statistical Assistant to the Director :

"In planning the 1940 census of population it was clear, because of the limits placed upon the census by available time and money, that it was impossible to include for complete Census enumeration a number of inquiries urgently needed by both Government and private sources. It was also clear, however, that many of the desired statistics could be collected if sampling techniques were employed."

It was possible to design a highly efficient sampling technique for use in conjunction with the 1940 Census of population because the complete census itself provided a prelisting of the poulation of the United States. A 5 per cent sample was pre-designated by requiring supplemental inquiries to be asked of all persons whose names fell on specified lines of the Census Schedule. The sample so drawn provided a representative cross-section of both persons and families in the United States.

The introduction of sampling techniques into the 1940 Census of population made it possible to increase the number of inquiries by approximately 50 per cent and thus, tremendously to increase the amount of information collected with no appreciable loss in the accuracy of the data and at considerable savings in the cost of the enterprise to tax-payers.

Moreover, the use of sampling in the census made possible the preparation of preliminary returns on the basis of a specially prepared set of sample punch-cards for the persons enumerated on the sample lines of the schedule fully eight months in advance of complete tabulation. Thus it was possible to serve quickly the vital public need for accurate statistics on employment, unemployment and the age, sex and colour composition of the population. Finally, the use of sampling in the census made possible a considerable increase in the scope of cross tabulations of basic social and economic characteristics of the population.

In 1950, the Bureau of Census in America is using the sampling techniques in greater details. From the preceding paragraph it is clear that sampling methods provide the following advantages :

(*i*) To increase the number of inquiries, *i.e.,* to increase the information collected with no appreciable loss in the accuracy of data and at considerable savings in the cost.

(*ii*) Reports can be published within a short time.

As regards the accuracy of sample census estimates the following illustration may be interesting. In 1944, in some congested areas in the United States sampling technique was used to estimate the population. The following table gives the estimates with error:

Areas	*Estimated 1944 civilian population*	*Average relative sampling error in per cent*
Charleston S. L. Area	167,195	.8
Detroit-Willow	2,658,700	.8
Hampton-Road Area	496,790	.6
Los Angles Area	3,356,969	.7
Mobile Area	233,891	.8
Portland-Vancouver Area	660,583	.7

In the table it has been shown that error has not exceeded in any case 1 per cent.

In India in 1941-Census, every 1/50th card was marked and was kept separately. With these slips, Government of India with the help of the Indian Statistical Institute is now trying to estimate the different characteristics of the population. I suggest that in this year's census, sampling techniques should be employed in conjunction with the complete population census. In analytical statistics, theory of sampling is highly developed and with the statistical experts in the country I believe we can collect very useful information with considerable lesser expense.

(*d*) United Nations set up a Population Commission to select subjects on which internationally comparable information in the population census is to be taken in or about 1950. The object and the number of subjects may be quoted from the proceedings of the report of the Sub-committee, dated 19th May, 1948 :

"The object of the Commission in preparing this list of subjects and the accompanying explanatory notes are to provide a frame-work for the development of comparable data on the more important matters of demographic interest and thus to lay a sound factual ground-work for the work of the Commission. The Commission feels that the development of comparable data on these topics is essential for the consideration and solution of world population problems. The recommended list of subjects is presented below, without regard to relative

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

importance : 1. Total population, 2. Sex, 3. Age, 4. Marital status, 5. Place of birth, 6. Citizenship, 7. Mother tongue, 8. Educational characteristics, 9. Fertility, 10. Economic characteristics—(*a*) total economically active and inactive population, (*b*) occupation, industry and industrial status, (*c*) population dependent on various types of economic activities, (*d*) agricultural population, 11. Urban and rural population, 12. Households (including relationship to household head).

"It is understood that it will not be practicable in some censuses to obtain data on all these topics and that in many censuses it will be undesirable to include subjects not mentioned in the list. The Population Commission agrees with the opinion expressed in the report of the third session of the statistical commission, that statistics on total population, sex, age, marital status and economic characteristics are specially important."

The important items which the Population Sub-Commission has recommended for inclusion in the census operations should be clearly explained so that there may not be ambiguity.

(*i*) Total population means population living in the country as a whole at the time of census. Foreign military and diplomatic personnel located in the country should be excluded whereas military and diplomatic personnel of the given country located abroad at the time of the census should be included.

(*ii*) Sex.

(*iii*) Age: The population should be classified by age in terms of completed years at the last birthday. In our census-table this is omitted. This is very important because if we want to construct life-tables we cannot do it if the population is not classified according to age. To calculate the expectation of life which is so vital for Insurance Companies this is indispensable.

(*iv*) Marital status: Data should be provided for these four marital status—(*a*) Married, (*b*) Widowed, (*c*) Divorced, (*d*) Single.

(*v*) Economic characteristics: (*a*) Economically active population, (*b*) Inactive population.

It includes : (1) persons engaged only in household work at home, (2) students, (3) inmates of penal, mental, and charitable institutions, (4) all other persons not engaged in economic activities such as retired and disabled persons and those who derive their income from rents, royalties, dividends, pensions etc.

(*c*) Occupation, Industry and Industrial status.

(*d*) Population dependent on various types of economic activity.

(*e*) Agricultural population.

The detailed explanatory notes on different items have been given by the Population Sub-commission but here I have mentioned only a few.

Considering the importance of Census, Government both at the Centre and in the provinces should carefully plan the method of procedure. The points which I have raised as a form of recommendation should be carefully considered. The different items can be summarised as :

1. There should be a permanent Bureau of Census.
2. It should be a paid Census. No honorary workers will be allowed.
3. Proper sampling techniques should be employed.
4. Different items on which information will be collected should be chosen from the list recommended by Population Sub-commission accepted by U.N.O.

We the citizens of free India hope that this year's Census will be a real Census in the true sense of the term where both the Government and the people will co-operate with sincere interest.*

* Subject-matter of a talk given in Indian Association on 8th May 1950.

—:O:—

INDIAN ECONOMY UNDER INDEPENDENCE

By MRITYUNJOY BANERJEE, M.A. LL.B.

It was our poet Rabindranath Tagore who predicted on the 1st of Baisakh, 1348 B.S. that

"The wheels of Fate will some day compel the English to give up their Indian Empire but what sort of India will they leave behind, what stark misery ? When the stream of their centuries' administration runs dry at last, what a waste of mud and filth they will leave behind them !"

It is about three years and a half since the British left India. The question is, have we been able to recover from the rot, are we on the road to our long-dreamt-of Ram Rajya ? For an answer to this question it is necessary to analyse the progress we have achieved or deterioration we have suffered so far in some of the major sectors of our national economy.

National Income

The national income of British India was estimated by Dr. V. K. R. V. Rao at Rs. 62 per head in 1931-32. On the basis of Dr. Rao's estimates an economist arrived at the figure of Rs. 213 per head for the Indian Union in 1947-48 (*Commerce*, Annual Number, 1949). According to the *Eastern Economist*, Annual Number, 1948, it was Rs. 160 per head in 1947-48. Three different official estimates of national income have come out recently. The per capita income for provinces in the Indian Union was estimated by the Economic Adviser to the Government of Madras at Rs. 232-0-0 for 1949-50; that for Bombay, by the Provincial Bureau of Economics and Statistics at Rs. 249-2-0

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

1948-49; while according to the Ministry of Commerce, Government of India, the national income of the Indian provinces stood at Rs. 204 in 1945-46, Rs. 228 in 1946-47 and Rs. 272 in 1948-49. In other words, averaging these different estimates, the current national income of India comes to about Rs. 220 per head per year. But this refers to nominal national income, that is, to national income in terms of money. Money itself has fallen in value. Prices have risen more than four times from what they were in 1931-32. Therefore, there has not been any appreciable increase in India's real income so far.

The per capita incomes of other principal countries at present stand thus :

	Rs.
United States	4,643
Canada	2,826
Denmark	2,647
United Kingdom	2,356
Australia	2 160
Ceylon	300
Philippines	228
Pakistan	225

Agriculture

The agricultural situation may be judged from the following estimates of area and yield of principal crops for the Indian Union :

(Area—in 1,000 acres)

	1947-48	1948-49	1949-50	Percentage increase or decrease in 1949-50 over 1947-48
Rice—				
Area	60,818	70 275	71,660	+ 18
Yield (in 000 tons)	19,534	21,725	21,913	+ 12
Wheat—				
Area	20,353	21,875	23,627	+ 15
Yield (in 000 tons)	5 389	5,472	6,110	+ 13
Sugarcane—				
Area	4,047	3,791	3,641	— 10
Yield (in 000 tons)	5,803	4,993	4,904	— 16
Groundnut—				
Area	10,079	9,145	9,672	— 4
Yield (in 000 tons)	3 411	2,896	3,399	— .4
Tea—				
Yield (in million lbs.)	568	595	580	+ 2
Raw Cotton—				
Area	10,932	11,293	11,793	+ 8
Yield (in 000 bales)	2,116	1,767	2,165	+ 2
Raw Jute—				
Area	652	834	1,158	+ 78
Yield (in 000 bales)	1,696	2 055	3,117	+ 84

(Source : Ministry of Agriculture, Government of India)

Thus it appears that there has been a considerable improvement in production in respect of raw jute and an appreciable one for rice and wheat. The production of raw cotton and groundnut fell in 1948-49 but has improved again in 1949-50. In the case of raw cotton it is higher than in 1947-48 but of groundnut, it is lower. The production of sugarcane has been falling year by year. Another noticeable feature is that in the case of rice the increase in yield has been made possible by a larger increase in area, while the decrease in yield of sugarcane has been larger than its decrease in area. This shows that there has been a fall in the average yield per acre of these two crops.

Industry

Industrial production stood as follows in recent years :

	1947	1948	1949	First nine months of 1950	Percentage increase or decrease in 1949 over 1947
Coal (in 000 tons)	30,073	29,822	31,457	23,994	+ 4.6
Steel ingots and castings (in 000 tons)	1,256	1 252	1,353	1,054	+ 7.7
Cloth (in million yards)	3,816	4,338	3,904	2,762	+ 2.3
Jute (in 000 tons)	1,051	1,048	946	622	— 10
Sugar (in 000 tons)	925	1,075	1 045	780	+ 13
Caustic Soda (in 000 tons)	3,314	4,383	6,303	8,094	+ 90.2
Paper and paper-boards (in 000 tons)	93	98	103	81	+ 10.8
Cement (in 000 tons)	1,441	1,553	2 102	1,911	+ 45.9

(Source : Ministry of Industry and Supply)

Thus compared to 1947, the production of cement and caustic soda has increased substantially ; of sugar, paper and steel appreciably ; coal and cotton textiles, slightly; while production of jute manufactures has actually fallen much. There has been a fall in production of cotton textiles and sugar in 1949 compared to 1948. On the basis of available records for the first nine months of 1950 it may be estimated that the production of coal, steel and paper will be slightly higher in 1950 than 1949, caustic soda and cement much higher and cloth, jute and sugar lower.

Industrial Profits

The position of industrial profits has been as follows :

(Base 1928=100)

	1939	1946	1947	1948	Maximum reached and year
Iron and Steel	289.3	293.7	249.6	278.0	402.2 (1942)
Jute	13.6	56.4	42.5	49.0	56.4 (1946)
Tea	96.2	191.5	208.4	123.3	219.5 (1942)
Cotton	154.5	631.9	490.9	846.9	988.9 (1943)
Sugar	179.4	219.2	308.1	685.1	685.1 (1946)
Coal	139.1	276.5	239.4	280.1	359.7 (1945)
All Industries	72.4	160.2	134.0	181.7	181.7 (1948)

(Source : Ministry of Labour)

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Thus the profits of all the industries have been higher during the period of Independence than on the eve of World War II, except in the case of iron and steel where they are lower by a few points only. Profits have been higher in 1948 than 1947 for all industries except tea. The cotton industry has earned in 1948 nearly double its profits in 1947 and more than five times the pre-war profits, while sugar industry more than double the profits of 1947 and about four times the pre-war profits.

Industrial Disputes

The average number of stoppages per month due to strikes has stood as follows:

1939	34	1947	151
1943	60	1948	105
1945	68	1949	77
1946	136	1950 (First 9 months)	82

The average number of man-days lost per month has stood as follows:

1939	416	1947	1,380
1943	195	1948	653
1945	338	1949	550
1946	1,060	1950 (First 9 months)	1 028

This shows that both the number of disputes and the number of man-days lost reached their maximum in 1947, they have been steadily declining since then but they suddenly jumped up in 1950. During the first nine months of 1950 as many as 9.886 man-days were lost, raising the month's average 1.098. The long strike in Bombay during August and September was principally responsible for this situation. Except for this extraordinary development, it may be said that the labour situation, though on the whole worse than during or before the last war, has still been improving slowly.

Prices

The index-number of wholesale prices, as compiled by the Economic Adviser to the Government of India, has moved as follows:

(Base August 1939=100)

Annual Average

	November 1947	1948-49	1949-50	23rd Dec. 1950
Food articles	294.8	382.9	391.3	419.7
Industrial raw materials	377.9	444.8	471.7	536.4
Semi-manufactured articles	252.5	327.3	331.6	350.9
Manufactured articles	283.2	346.1	347.2	350.3
General index	302.2	376.2	385.4	411.5

The prices in India are the highest among principal countries of the world and price variations are also the highest. They remained fairly stable in the first eleven months of 1947, rose sharply after decontrol in November, 1947 and have been rising slowly and almost steadily since then. The present price-level is more than four times the level in August, 1939; two times that in December, 1942; and about one-third more than what it was on the eve of Independence. Stabilisation of the price-level, not to speak of lowering it, has been the main cause of headache to the Government whose measures like price control, ration, concessions to industry and relaxation of import restrictions have alike failed to check the price spiral.

Foreign Trade

The over-all position of India's foreign trade stood as follows:

(Valued in lakhs of Rupees)

	1947-48	1948-49	1949-50
Total Imports	4,86,43	6,65,59	5,87,[illegible]
Total Exports	4,03,19	4,50,61	4,[illegible]
Balance of trade	—83,24	—2,14,98	—1,[illegible]

Her sea-borne trade in merchandise, both private and Government, has been as follows:

(In lakhs of Rupees)

	1938-39	1947-48	1948-49	1949-50
Imports	155,55	398,62	518,32	500,[illegible]
Exports	169,83	403,41	423 32	425,[illegible]
Balance of trade	+ 14 28	+4,79	—95,00	—75,[illegible]

India's trade with Pakistan has stood thus:

(Valued in lakhs of Rupees)

	1948-49	1949-50
Imports	105,17	43,55
Exports	74,01	41,40
Balance of trade	—31,16	—2,15

Thus her balance of foreign trade, including trade by land, has been negative during the three years of her Independence, but the deficit which increased enormously in 1948-49 has been lowered substantially in 1949-50. This is the direct result of devaluation of the Rupee which was adopted on September 19, 1949 and which has, on the whole, proved beneficial to India's foreign trade. The balance of trade on current account in the 12 months almost preceding devaluation, *viz.*, October 1948 to September, 1949, was negative or adverse to the extent of Rs. 248.8 crores while in the corresponding period following it, *viz.*, October, 1949 to September 1950, it has been positive or favourable to the extent of Rs. 65.9 crores. Similarly, in the capital account there has been a favourable balance of Rs. 34.7 crores in place of an adverse balance of Rs. 245 crores.

Conclusion

Considering the multitude of accumulated deficiences that have been inherited and new handicaps that have cropped up since Independence, the trend of Indian economy during the past three years has not been on the whole unsatisfactory nor altogether discouraging either. As our new Finance Minister has said the economic situation is difficult but not desperate. In some of the items of agriculture and industry particularly, tea, raw jute, cement, caustic soda and coal the production figures are highly encouraging. In respect of agriculture it has to be remembered that

partition India retained 77 per cent of the population which has been augmented further by mass migration of refugees, but she got only 73 per cent of the total area, 72 per cent of the rice area, 70 per cent of the wheat acreage and 70 per cent of the irrigated land. In these circumstances the achievements in the agricultural sector generally are not too little. In industry the recent production trends are quite promising and the tempo has only to be pushed up further by a return of confidence in the investment market and a peaceful labour situation. Our foreign trade position has improved tremendously and the latest figures are record ones in India's history. One disconcerting element, however, in the economic situation is the demon of high prices which appears to be the villain of the piece. It is the most important factor which is damaging the entire economy. It is because of high prices that the increase in our national income is rendered meaningless in terms of reality and the standard of living is so low. If prices rose to that extent only which was necessitated by shortage in supply or increase in demand or both, prevalent in the post-war era and no more, the situation would have been a tolerable one. A considerable portion of the price-rise is speculative and has been caused by non-economic factors. The responsibility for these is not merely Governmental. It has to be shared by the people, too. High prices above the controlled level are charged and paid also by our countrymen, exclusive of the Government. There is dishonesty to the right, corruption to the left; profiteering here, and blackmarketing there. This makes clear the truth that national economy is inextricably mixed up with national character. National character is again the sum-total of individual character. Ultimately the task of lifting the country out of its economic difficulties devolves on every man and woman of the country. Independence has brought on new responsibility. If each one is true to this new sense of duty, economic recovery will not be difficult in any way.

BRITISH PRESS : IS IT REALLY FREE ?

By NIKHIL RANJAN RAY, M.A.,

Department of Political Science, Dacca University

I

While flinging the common gibe at the Russian Press that it is a propaganda arm of the Communist regime and serves only State-manufactured opinions, British newspapermen and politicians insist that the British Press is absolutely free. This claim for the British Press, however, is much too extravagant. If the Russian Press is designed primarily to serve "the interests of the toilers" and "strengthen the socialist social order",[1] its counterpart in Britain is mainly an instrument of the financial interests for the propagation of their views and the upholding of the capitalist social order. In fact, free Press in a class-ridden society is a chimera. In every country, whether it is a Fascist dictatorship, a "proletarian dictatorship," or a "liberal democracy" the Press is principally a means in the hands of the dominant class for the dissemination of news and views accordant with that pattern of culture and society which guarantees its dominance.

A free Press serves no particular class; its allegiance is to the whole society. It presents news accurately and serves as a national pulpit from which all shades of opinions can be voiced without let or hindrance. It does not black out news or suppress opinions because they are subversive of the interests of any particular class. A free Press is the mirror and pulse of the national life; it is the warden of public conscience and exponent of public opinion. It is the one means through which the freedom of the people to know, speak and criticise can seek realisation. Judged by this standard the British Press falls far short of the requirements of a free Press. Those who assert that the Press in Britain is absolutely free really refer only to its comparative freedom in relation to the State and overlook its servility in relation to the financial interests. A free Press not only enjoys immunity from undue governmental interference, it also functions as an impartial agency for the dissenmination of news and opinions without being subjected to any pressure from the financial interests. It is no exaggeration to say that the British Press is a virtual prisoner in the hands of the financial interests. It is an outstanding fact of the modern newspaper industry of Britain that the ownership and control of newspapers and periodicals, with a very few exceptions, are concentrated in the hands of a few big combines in which half a dozen Press Lords, such as Lord Rothermere, Lord Kemsley, Lord Camrose, Lord Beaverbrook, Lord Illiffe, etc., are the central figures. A brief account of the ownership and control of the Press in Britain may be attempted here.

1. Andrei Vyshinsky, Soviet Foreign Minister, in his *Law of the Soviet State*, writes: "Freedom of speech, of the press, . . . are the property of all the citizens in the U.S.S.R., fully guaranteed by the State upon the single condition that they be utilised in accord with the interests of the toilers and to the end of strengthening the socialist social order."

II

The main groups that monopolise the ownership of the "big" Press differ considerably in their structure. While there are some which are very ramified and control every process from the manufacture of newsprint to the publication of every variety of newspapers and periodicals, there are others which have no ramifications and whose interests do not extend beyond the publication of a few dailies.

CONSERVATIVE PRESS

Harmsworth Group : The oldest of these groups is what is conveniently described as the Harmsworth group, to which the main inheritance of the two Harmsworth brothers, Viscount Northcliffe and the first Viscount Rothermere, had descended. This group comprises mainly four companies, namely, Associated Newspapers Limited, Daily Mail and General Trust Limited, Daily Mirror Newspapers Limited and Sunday Pictorial Newspapers Limited.[2] In addition to the publication of such national papers as *Daily Mail, Overseas Daily Mail, Sunday Dispatch* and the London *Evening News,* this group owns or controls a host of Provincial newspapers and periodicals. Besides, it has large interests in a number of paper mills.

It is difficult to trace where the real financial control of the group lies. Lord Rothermere has substantial direct holdings in both Associated Newspapers Limited and Daily Mail and General Trust Limited but they are comparatively small. The directoral connections of the companies of the group however are a fair indication of where the financial control can possibly lie. Lord Rothermere is chairman of both Associated Newspapers and Daily Mail and General Trust Limited. In addition, he is chairman of British Movietone News and a director of Gaumont Picture Corporation Limited. Besides, he is on the boards of Anglo-Canadian Pulp and Paper Mills Limited and Anglo-Newfoundland Development Company. The Vice-chairman of Associated Newpapers, Esmond Layton-Bennet, holds eighteen other directorships, including several investment trusts, and insurance, hotel, publishing and other companies. On the board of Daily Mail and General Trust the smell of rubber is strong. Its Vice-chairman, Sir Samuel Hardman Lever, is a director of three companies of the Dunlop group. With him on the board is F. A. Szarvasy, who is also connected with the Dunlop group, investment trusts and banking. In addition, Szarvasy is deeply involved in South Wales, being chairman of the vast Amalgamated Anthracite company. Directoral connections with *Daily Mirror* and Sunday *Pictorial* are maintained by F. A. McWhirter, managing director of Associated Newspapers, who sits on both boards, which in turn are strongly interlocked under the same chairman, H. G. Bartholomew. The circle is completed by A. S. Fuller who is a director both of the Daily Mirror and the Daily Mail and General Trust.

Kemsley and Camrose Groups : The second great Press trust and the greatest rival of the Harmsworth group is what was formerly known as the Berry group which split into three separate groups under the two Berry brothers, Lord Camrose and Lord Kemsley, and Lord Illiffe in 1937.

The key company in the group is Kemsley Newspapers Limited. It owns *Daily Dispatch, Empire News, Evening Chronicle, Sunday Chronicle* and *Sunday Times* and has a direct controlling interest in a large number of papers.[3]

The second main group is that of Lord Camrose whose daily newspaper interests are confined to the *Daily Telegraph* of which he is proprietor and editor-in-chief. Lord Camrose is also chairman of the vast Amalgamated Press which publishes over a hundred and fifty weeklies, monthlies and annuals. The company, among other things, diaries, has a direct controlling interest in Imperial Paper Mills Limited (Gravesend) and owns about three quarters of the ordinary shares of Kelly's Directories Limited which publishes over one hundred Directories and has a direct controlling interest in Fixol Stickphast Limited and two subsidiary printing companies and owns all shares of Associated Illiffe Press Limited.

The newspaper interests of the group which centres round Lord Illiffe has shrunk considerably since his temporary 'retirement' in 1939. In 1937 when the original

2. Associated Newspapers Ltd. owns the *Daily Mail, Overseas Daily Mail, Sunday Dispatch* and the *London Evening News.* Through subsidiary companies it also owns or controls a host of provincial newspapers and periodicals. It owns *Gloucestershire Echo, Cheltenham Chronicle, Citizen, Gloucester Journal,* Stoke-on-Trent *Evening Sentinel* and *Staffs Weekly Sentinel.* It has a direct controlling interest in *Hull Daily Mail, Grimsby Daily Telegraph, Sports Mail, Hull and Lincoln Times, Saturday Telegraph, South Wales Daily Post, Herald of Wales, Derby Evening Telegraph and Express.* It has also an interest in the *Leicester Evening Mail* and the *Bristol Evening World* and *Evening Post.* In addition it controls Empire Paper Mills Ltd., and has a substantial holding in Anglo-Newfoundland Development Co., with which it has an agreement to purchase all its requirements of newsprint until 1958.

Daily Mail and General Trust Ltd. is primarily a shareholding concern, and holds more than a third of the deferred shares of Associated Newspapers. It has also a large interest in Bristol United Press Ltd. which runs *Bristol Evening Post* and has a direct controlling interest in *Bristol Evening World.*

Daily Mirror Newspapers Ltd. owns *Daily Mirror* and has a direct controlling interest in *Lincolnshire Echo;* it has large holdings in Albert E. Reed & Co., Ltd., (Paper Mills), Anglo-Canadian Pulp and Paper Mills Ltd., Daily Mail and General Trust Ltd., Associated Newspapers Ltd., and Sunday Pictorial Newspapers Ltd. which publishes *Sunday Pictorial.*

Sunday Pictorial Newspapers Ltd. publishes *Sunday Pictorial,* and has large shares in Anglo Canadian Pulp and Paper Ltd., in Associated Newspapers Ltd., and Daily Mail and General Trust.

The Western Morning News (published by the Western Morning News Ltd. in Plymouth) with its associated papers, such as the *Cornish Evening News, Cornish Guardian, Western Times, Tiverton Gazette, Wellington Weekly News,* etc., is under the control of another branch of the Harmsworth family.

3. Namely, *Daily Graphic* and *Sunday Graphic; Newcastle Journal and North Mail, Evening Chronicle, Sunday Sun; Glasgow Daily Record, Evening News* and *Sunday Mail; Sheffield Telegraph and Independent Star; Yorkshire Herald, Yorkshire Evening Post; Aberdeen Evening Gazette; Northern Daily Telegraph* (Blackburn); *Newcastle Press and Journal, Evening Press; Middlesbrough Evening Gazette; Stockport Express.*

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Berry group split up Kelly's Directories passed under the control of Lord Illiffe but control reverted to Amalgamated Press in 1939. Publications of the group now includes *Coventry Evening Telegraph, Birmingham Post, Birmingham Mail, Burmingham Weekly Post*, etc.

The holdings of the Berry family in its companies are enough to give it an effective control over the publications of the group.

The Financial News Limited forms the core of another small group. This company publishes the *Financial Times*, owns a fifty per cent interest in the *Emonomist*, all shares of the Investors Chronicle Limited, all shares of the *Practitioner*, and a substantial interest in Moody's Economic Services. The chairman of the group is Major General G. P. Dawnay Day and Company, the City financial house.

Express Group: The Express group organised under Lord Beaverbrook almost qualifies as a trust since it owns *Daily Express, Sunday Express, Evening Standard* and has a controlling interest in the *Glasgow Evening Citizen*. Of the 408,000 ordinary shares of London Express Newspapers Limited in which the voting rights are concentrated 136,507 were held by Lord Beaverbrook in 1941 and 154,200 by Control Nominees Limited.

Liberal Press

Provincial Newspapers Limited is what remains of the great group which was formed by the Inveresk paper interests in the twenties under William Harrison. Today Inveresk group controls four evening papers (Provincial), their local sporting papers and a number of weeklies. It also holds some shares in Hull and Grimsby Newspapers Limited.

Chairman of the board is Sir Herbert Grotrian. He also holds the chairmanships of United Newspapers Limited, Argus Press Limited and Argus Press Holdings Limited in which he has a large interest. On the board are also B. H. Binder, who is connected with a number of South American railways and British Breweries, rubber, insurance, property and investment trusts, and Sir Harry Britain, Tory M.P. for Acton, 1918-29, one of the founders of the Anti-Socialist Union.

Westminster Press Provincial Newspapers Limited is the last survivor of another group of Liberal tendencies, originally known as the Starmer group, which owned the *Westminster Gazette* and had an interest in the *News Chronicle*. This company owns eleven morning papers, seven evening papers and one Sunday paper. The group has always been closely identified with the Rowntree (cocoa) and Pearson (contracting and electrical) interests.

Two important London Dailies, *News Chronicle* (morning) and *Star* (evening), are controlled by the Daily News Limited which has no further newspaper interests. Control of this group is clearly in the hands of the Cadbury family.

In the periodical field the Odhams Press occupies a position next to the Amalgamated Press of the Camrose group. Its newspaper interests consist in the publication of the *Daily Herald* and *The People*.

Today the only national papers independent of the above combines are two dailies—*The Times* and the *Daily Worker*—and three Sundays—*The Observer, Reynolds News* and the *News of the World*. Both *The Times* and *The Observer* are closely associated with the Astor family.[4]

There is also a large number of independent Provincial papers some of which are of national reputation, *e.g.*, the *Manchester Guardian*, the *Yorkshire Post*, the *Scotsman*, the *Glasgow Herald*, the *Liverpool Post* and the *Birmingham Post*.

The word "independent" has little meaning as applied to many of these papers. *The News of the World* has an authorised capital (£2,500,000) larger than that of some of the groups. Besides, a Tory newspaper representing big industrial interests remains Tory in inclination and affiliation whether it stands on its own or whether it is part of one of the big chains.

Labour Press

Labour is represented nationally by the *Daily Herald, Daily Worker* and *Reynolds News*. Control of these papers is vested in their readers, in part directly in the case of the *Daily Worker*, through the Co-operative movement in the case of *Reynolds News*, and through the T. U. C. in the case of the *Daily Herald*. The position of the *Daily Herald* is peculiar. Its body is owned by a capitalist combine, and its soul by the T. U. C. The Odhams Press holds 51 per cent of its shares but policy control lies with the General Council of the Trade Union Congress who hold the remaining 49 per cent of the shares. There are also Labour weeklies and monthly periodicals which flourish in a large number of localities.

Monopolistic tendencies are also evident in the Indian Press. At present there are five groups of papers owned or controlled by five families. (a) Birla family owns *The Hindusthan Times* of Delhi, daily and weekly; the *Leader* of Allahabad; the *Searchlight* and *Rashtrabani* of Patna; *Jagriti* (Bengali monthly) of Calcutta. It is reported that this family has also a controlling interest in Bombay's Bharat group of papers, started by Mr. Dayabhai Patel, son of Sardar Patel. (b) Dalmia family owns the *Bennet Coleman* publications of Bombay which include *The Times of India*, (and will include the *Times of India*, Delhi, to be started soon) and *Satyajug* (Bengali) of

4. In the field of finance and British public life the Astor family is well-known. On the death of the first Viscount in 1919, his American fortune alone was estimated at £22,000,000. By the middle thirties, besides Lord Astor in the House of Lords, the family held three seats in the Commons (Lady Astor, the Hon. J. J. Astor and the Hon. W. W. Astor) and a daughter of Lord Astor's was married to another M.P. (Lord Willoughby de Eresby). Throughout the late thirties, the influence of the family and the "Cliveden" set, named after Lord Astor's country house, on the Chamberlain Government became well known.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Calcutta. The *Indian News Chronicle* of Delhi till recently belonged to this family. (c) Goenka family owns the *Indian Express* and *Andhraprava* of Madras; *The National Standard of Bombay;* and the *Eastern Express* of Calcutta. (d) The Amrita Bazar group belonging to Sri Tushar Kanti Ghosh of Calcutta includes *Amrita Bazar Patrika* and *Jugantar* (Bengali) of Calcutta; *Amrita Bazar Patrika* and *Amrit Patrika* (Hindi) of Allahabad. (e) The Ananda Bazar group belonging to Sri Suresh Majumder includes *Ananda Bazar Partika* (Bengali), *Hindusthan Standard* and *Desh* (Bengali weekly) of Calcutta. Starting of an English daily in Delhi by the group is reported to be in preparation.[5]

The growth of powerful chains of newspapers creating a monopoly of ownership has certain far-reaching consequences involving considerable loss of freedom on the part of the British Press. First, there has been a gradual reduction in the number of papers consequent upon amalgamation, absorption and extinction. In 1921 there were 12 morning papers and 6 evening papers in London; now there are 9 morning and 3 evening papers. In 1921 there were 45 morning papers and 88 evening papers in the Provinces (English); now there are 18 morning and 65 evening papers. In this process of absorption and extinction many papers of real worth have gone to the wall. Disappearance of such papers as *Westminster Gazette, Pall Mall Gazette* and *Daily Graphic* (old) is a real loss to the reading public of Britain. In the United States also the same tendencies are in evidence. In 25 years since 1921 the total number of newspapers there had been halved, and the situation is such that today there are 10 whole States in which there are no cities with competing newspapers.[6]

Second, there is a marked decline in the editorial standard. Nowadays editors of assertive personality and independent mind are at a discount. Newspaper proprietors rather prefer "scribling lackeys" who would toe the marked line without demur. As Wickham Steed, former editor of the London *Times,* said :

> "Newspaper proprietors today dislike editors and editorial writers of strong personality. They prefer that their own personalities should be served by expert scribes who can be trusted to advocate whatever the view the proprietors may wish to proclaim."[7]

Referring to the cause of the serious decline in the quality of British journalism in the past thirty years Michael Foot, the noted editor of the *Evening Standard,* said :

> "It is due to the decline in the power of the editor, and the encroachment of the authority of the newspaper proprietors. Thirty years ago, many of the great editors of the great dailies were well-known people throughout the country. Today, very few of their names are known; in fact, many of them are little more than stooges, cyphers and sychophants."[8]

Third, the sum of money that has to be risked in starting a new daily with any hope of making it stand on its own feet is so enormous that the door of the industry is virtually closed against a new-comer. The result is that the competition is limited to the existing papers. Since the first World War only one full-scale national paper, the *Daily Herald,* has been established. Though this paper derived substantial goodwill from its official connection with the Labour Party yet the Odhams Press had to spend £2,000,000 to make it self-supporting. As truly the London *Economist* said, "There are very few industries which impose an entrance fee as high as this."[9] It may be noted that most of the sum has to be spent not on capital goods (plant, etc.) but in building up goodwill. In getting a foothold a new paper has to fight fierce 'circulation war' against powerful well-entrenched enemies. In order to beat their rival papers they often resort to such journalistically unworthy devices as offer of various inducements in the form of "insurance benefits," "free gifts," "competition coupons," etc., to "registered readers." According to the *Economist,* in pre-war days, of the total production cost of £3,000,000 of a paper with a circulation of 2,000,000 "Readers' Insurance" normally absorbed £100,000 and canvassing and publicity £300,000.[10] In the beginning of this century the proprietors of the *Daily Tribune,* a London morning journal of a serious type, had given up the unequal struggle after they had poured £600,000 into it.[11]

Fourth, in news, leaders and features variety has yielded place to dull uniformity. Today the different links of a chain are little more than the same edition under different titles. In most cases the functions of the editors of chain newspapers are mechanical and consist in carrying out instructions and policies dictated from a central source. An ex-editor wrote :

> "With some years of experience as editor of a daily newspaper in a large provincial city, I am well aware of certain undesirable aspects of the group or 'chain' system of ownership, such as the subordination of editorial to the managerial (*i.e.*, commercial) status, the standardised service of leading articles and political commentaries to all the group newspapers from a central source, the directoral instructions as to the news 'slants', the lack of genuine local news involved in multiple proprietorship and the interplay of group finance with its tendency towards amalgamation."[12]

III

Ownership and control seldom part company. He who pays the piper calls the tune. In the case of the British

Press also it is the proprietor who sets the tone of the paper and controls its editorial policy. And since all the important papers, with a very few exceptions, are owned by big trusts or by wealthy persons (as in the case of *The Times* and *The Observer*) the views and opinions that find expression through their columns are those of the financial interests. As Francis Williams, editor of the *Daily Herald*, said :

> "The modern editor has become primarily an executive carrying out policies laid down for him by his proprietors and voicing, in so far as the newspaper he edits attempts to form public opinion, their judgments. It is the voice of Lord Beverbrook that is heard in the *Daily Express*—which indeed is stamped throughout with his brilliant, dangerous and irresponsible personality—the voice of Lord Rothermere and his friends that comes to us through the *Daily Mail*, the voice of Lord Camrose that is heard, tuned to a slightly dignified note, in the columns of the *Daily Telegraph*, and the lighter tenor of his brother, Lord Kemsley, that inspires each morning the readers of the *Daily Sketch* and of the other Kemsley newspapers."[13]

Lord Kemsley admitted that he had instructions to his editors that the editorial policy of his papers should have a "wide general regard for Conservative interests" which he conceived "to be the best for the country."[14] He assured the recent Royal Commission that it was quite unnecessary for him to tell his editors his views on any subject since they were all "men with similar ideas to my own".[15] Lord Beaverbrook is said to be in the habit of "talking his editors out of it" if their views on Empire Free Trade do not coincide with his.[16] He has also declared that the main purpose which he seeks to fulfil through his papers is 'propaganda'.[17]

The newspapers and periodicals representing the capitalist interests are not only the vehicles of the ideas and opinions of those interests but also a means of propaganda against their political opponents. Since Labour assumed control of the destinies of the nation the capitalist Press has been bitterly hostile to the Government always endeavouring to discredit it in the eyes of the public. In a booklet published by the Labour Research Department it has been remarked that the "Labour Government, elected with a clear mandate, stands confronted with, in the main, a bitterly hostile Press tightly organised both nationally and locally, which reflects not the interest and the aspirations of the British people or of any considerable section of it, but purely those of large-scale capitalism."[18] The capitalist Press does not see eye to eye with the Labour Government, for the conception of socialist Britain which is alleged to be the creed of the Labour Party is completely excluded from the philosophy of the capitalists. Having lost control of Parliament capitalists are striving to divert public attention from Parliament to the Press which they are seeking to develop into a rival forum. Now they fight national issues not so much on the floor of Parliament as on the columns of their papers. In debating national questions they do not adequately represent the views to which they are opposed; they misrepresent their opponents in order to show that the latter are wrong and make themselves appear infallibly right. They show scant regard for truth. If truths do not serve their purpose they invent falsehoods. If facts do not agree with their policy, they suppress them and invent new ones as it suits their policy. In 1946 the Attorney-General of England remarked : "They distort the facts; they suppress the news upon which free opinions can be freely formed. They refrain from publishing information which might conflict with their particular opinions."[19] In 1946 the *Daily Graphic*, in an attempt to discredit the Labour Government, published a circumstantial and wholly apocryphal report of a cocktail party to be given by Mr. Shinwell (the then Minister of Fuel) for "1000 guests" to celebrate the transfer of the coal industry to State ownership. On the eve of the October election of 1924 Conservative Press published a forged letter known as "Zinovieff letter" which raised in the minds of the electorate a suspicion of Russian influence in Labour's counsels. The publication of the "Red Letter" had the desired result: it destroyed all chances of Labour victory. In condemning a section of Conservative Press for its vile and vitriolic attack against that group of Conservatives which was led by Mr. Baldwin (later Lord) when in early 'twenties the lute of the Party exhibited a rift, he said: "The papers conducted by Lord Rothermere and Lord Beaverbrook are not newspapers in the ordinary acceptance of the term. They are engines of propaganda for the constantly changing policies, desires, personal wishes, personal likes and dislikes of two men. What are their methods? Their methods are direct falsehood, misrepresentation, half-truths, the alteration of speaker's meaning by putting sentences apart from their context, suppression and editorial criticism of speeches which are not reported in the paper. What the proprietorship of these papers is aiming at is power, but power without responsibility, the prerogative of the harlot throughout the ages."[20] Indeed, "processing" of facts of which Wickham Steed so pompously accused the Russian Press and Government recently is a common practice with the partisan Press and Government in every country, not excepting Britain.[21]

Next to proprietors it is the advertisers who exert potent influence on the newspaper Press of Britain. Revenue from advertisements has long been the mainstay of newspaper enterprise in Great Britain. Popular papers draw about half their income from advertisements, and class newspapers three-quarters or more. Without advertisement revenue it is wellnigh impossible for a paper to become self-supporting. Dr. Max Grunbeck in his *Die Presse Grossbritanniens* observed :

"The economic success of an English newspaper is so overwhelmingly dependent upon its advertisement columns that the advertiser has been able to develop into a Press dictator who, as such, plays a part far more dangerous than that of the State since in the majority of cases his influence is secret, entirely selfish and not susceptible of control. Besides, the whole make-up of the English popular papers is to-day the clearest example of their economic dependence upon advertisements. So advertisers exert influences which, in effect, are scarcely less efficacious than restrictions of newspaper freedom by the State itself."

In 1938 after Munich the British Government had to prevent three prominent British public men from returning to office under German pressure. When this news was broadcast the whole nation became greatly incensed. But hardly a hint of the enraged public feelings did appear in the Press. For certain advertising agents warned papers that advertisements would be withheld from them should they "play up" the international crisis and cause an alarm which was "bad for trade."[22]

While pointing out that the indirect influence of advertising was more subtle and extensive, Mr. Ivor Thomas, who is rather an apologist for the capitalist Press, said:

> "A newspaper that receives a large revenue from company prospectuses may have an unconscious bias in favour of our present financial system; and the paper carrying frequent advertisements of patent medicines may, without any conscious deviation from rectitude, give too little weight to the medical professions views on such goods."[23]

In stressing the subservience of the British Press to financial interests Bernard Shaw observed :

> "As people get their opinions so largely from the newspapers they read, the corruption of the schools would not matter so much if the Press were free. But the Press is not free. As it costs at least quarter of a million money to establish a daily newspaper in London, the newspapers are owned by rich men. And they depend on the advertisements of other rich men. Editors and journalists who express opinions in print that are opposed to the interests of the rich are dismissed and replaced by subservient ones. The newspapers therefore must continue the work begun by the schools and colleges; so that only the strongest and most independent and original minds can escape from the mass of false doctrine that is impressed on them by the combined and incessant suggestion and persuasion of Parliament, the law-courts, the church, schools, and the Press."[24]

With the increasing dependence on the advertisers' revenue for finance the Indian Press is also showing signs of its subservience to the advertisers. In November, the Calcutta editors at a meeting agreed upon a 'code of behaviour' for the Press to 'combat Provincialism.' On the face of it the attempt was a laudable one. But subsequently it transpired that behind this move there was the threat of the Calcctta Marwari business firms to withdraw their advertisements from papers which would publish news, and make comments, tending to accentuate provincialism.

IV

In April, 1947, following a vote in the House of Commons the Labour Government appointed a Royal Commission to inquire into the ownership, finance and control of the British Press in order to devise means for maintaining freedom of discussion in the Press by freeing it from capitalist control. The Commission which submitted its report in June, 1949, however 'vindicated' the Press and cleared it of all charges of dishonesty, misrepresentation of facts and doctoring of news in the interest, and at the dictation, of proprietors and advertisers. They held that "free enterprise in the production of newspapers" was "a pre-requisite of a free Press, and free enterprise" would "generally mean commercially profitable enterprise in the case of newspapers of any considrable size and circulation." They added that the Press gave "good value for money" and that soaring circulations were proof that the public was being given "what it wanted." "Indeed," as the *New Statesman and Nation* remarked, "no more respectful whitewashing of large-scale capitalist enterprise in the production of newspapers could have been expected, had the Commission been appointed not by the sixth George Rex but by the first Baron Kemsley."[25]

It needs no emphasis—since the bubble of the nineteenth century individualism was long pricked by new and inevitable developments in the industrial sphere—that while free enterprise in the publication of newspapers is an essential condition of a free Press, freedom of enterprise can be maintained only by delivering the Press from the shackles of Capitalist domination, by creating conditions which will rule out the development of trusts. As P.E.P.[26] observed, "The economic accident which

links the function of reporting, interpreting and commenting on news with the running of a large-scale, highly capitalised industry, is having some unfortunate results, and we doubt whether a Press subject to these conditions can fully satisfy democratic needs." The same view found expression on an international plane in a resolution of the International Congress of Journalists at Copenhagen in 1946. The resolution was as follows :

"This Congress recognises that Press freedom can never be fully assured while newspapers, news-agencies and broadcasting system are solely in the hands of individuals or private monopolies with no responsibility to the people, and it recalls that freedom of the printed word has been used in the past not for the benefit of humanity but against it, and therefore recommends the appropriate departments of the United Nations and of the W.F.T.U. to consider an international investigation on this question....."

The contention of the Commission that the increasing circulations reflect the fact that the public gets what it wants hardly needs rebuttal. When it has no alternative choice the public has to swallow whatever rubbish is served to it.

———:O:———

BERTRAND RUSSELL

By Prof. P. P. MEHTA, M.A.

Among thinkers and writers who tolled the death-knell of Victorianism, its prudery and its snobbishness, Bertrand Russell, along with Dean Inge, H. G. Wells and Bernard Shaw, stands pre-eminent.

It must have caused many a literary critic a pleasant surprise to learn that the 1950 Nobel Literary Prize was awarded to Bertrand Russell, whose thought-provoking writings have greatly influenced the world in the spheres of mathematics, logic, sex, marriage, society, education and philosophy. His writings show a clear, nay crystal-clear, intellect probing into a subject and whatever theme he handles, we find that this 78-year-old philosopher goes straight to the heart of the subject and puts forward his own conclusions, and completely independent ideas, even if they shock the entire world.

Lord Russell whose grandfather was Lord John Russell, who successfully piloted the Reform Bill of 1832 comes of noble family with liberal political traditions. His father had destined young Bertrand to have free education; but the trustees waived aside this provision and Bertrand Russell got the usual religious education, which did not have much influence on him.

His first wife was Alys Whitall Persall Smith, sister of L. P. Smith. It was during the time of his first marriage that Russell's most important work in mathematics, logic and philosophy was finished. *Philosophy and Mathematics, Principles of Mathematics, Introduction to Mathematical Philosophy* are works of sterling merit and scholarship. When the World War I broke out, Russell opposed conscription as a conscientious objector and courted jail and fine, over and above losing his job. But his independent ardour kept him undaunted. In 1921, his first marriage, which was childless, was dissolved. The period of his first marriage coincides with the period of his most important work.

His second wife was Dora W. Black and the education of his children focussed Russell's ideas on the problem of education. He tried his hand at schooling on his own lines—an experiment which was as novel as it was strikingly original. His books *On Education, Education and Social Order* and others enunciate his theory of education in which, entire emphasis is laid on development of instincts of children. At the same time, his *Marriage and Morals* created a sensation of the first order in the thinking world. His ideas on sex, trial marriages, etc., are not only in advance of the society today, but are equally bold and original. To an Indian mind, which believes in the sanctity of married life, this Bohemian attitude of this strange philosopher, who believes in free love and ultra-marital sex-relations, would seem shockingly vulgar. So it did to the whole world at that time. During this period his bold ideas touched many subjects and the result was *Sceptical Essays* and *Conquest of Happiness*. This marriage, too, was dissolved in 1932.

In 1936, he married Helen Patricia Spence and a period of quiet and deep thinking followed. He was appointed Professor at New York City College in 1940, but the court revoked his professorship on the ground that he advocated trial marriages for students. When recently asked about the incident in America where he is now on a lecture tour, he replied, "I am not mad at anybody—except the Catholic Church." In 1940, when German bombers were showering death on London every night, he renounced his pacifism and was a staunch advocate of war and patriotism. His other works comprise *An Inquiry into Meaning and*

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Truth, Human Knowledge, History of Western Philosophy, etc. On the radio, he made a deep and lasting impression with the Reith lectures by delivering six broadcasts on "Authority and the Individual," which came as "a revelation to a great many of those who listened to them of the sheer power of mind to marshal highlights of history and contemporary facts into a coherent pattern of thought which could be understood and grasped by any reasonably intelligent human being."

He is, as his writings show, a champion of humanity and freedom of thought. There was a time when he had praised Russia sky-high; but one visit to Russia and he did not flinch from renouncing his views and two years ago lecturing to a London audience he had declared :

> "Either we must have a war against Russia before she has the atom bomb, or we will have to lie down and let them govern us."

His views on individual liberty are radical and wherever he finds that individual liberty is curtailed, he is out to battle it with his keen intellect.

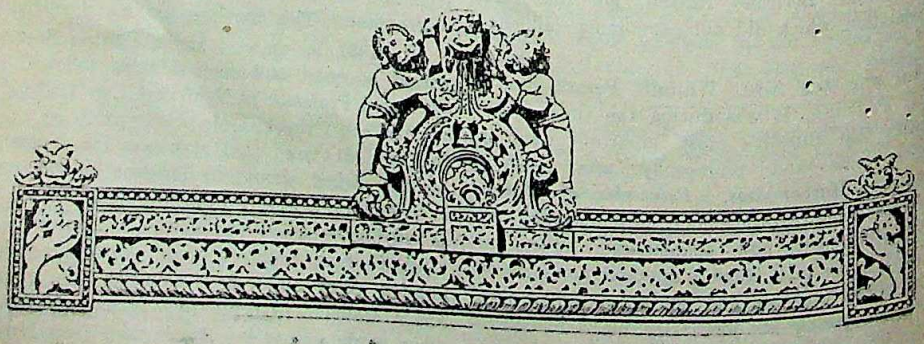
So vast is the bulk and so keen is the insight that half a century of writing has made Earl Russell one of the greatest thinkers of England. His keen intellect has evolved a system of education in which all-sided development resulting in good citizenship is the aim for a child's progress. He believed that healthy minds went with healthy bodies. He did not conceive an entirely uncontrolled child. According to him, a child should be trained up to be a good citizen, knowing full well its civic responsibilities. Along with freedom, Russell emphasizes some observances like personal cleanliness, regular bedtime, etc. Ideal character depends upon vitality, courage, sensitiveness and intelligence.

> "What I suggest is that no one should learn how to obey and no one should attempt to command."

He also believed that Arithmetic was no test of a student's intelligence.

> "Arithmetic did nothing to cultivate it. . . . Universities should not only carry on pure learning and research, but also train people certain professions."

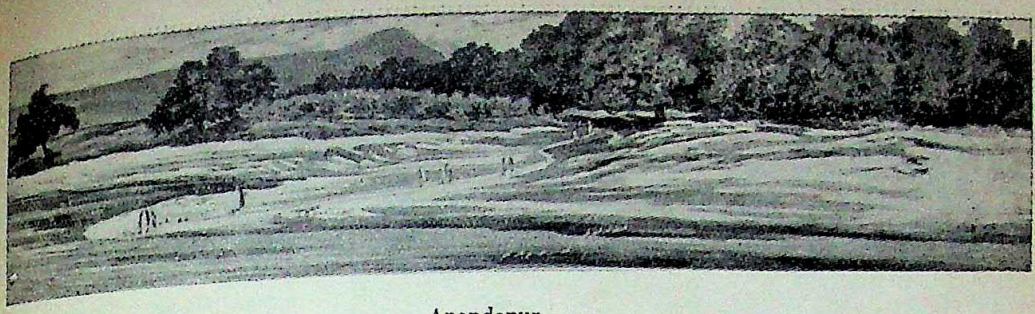
Thus admitting the need of vocational training he points out the advantages of liberal education against utilitarian education.



He had shocked the world by his views on marriage, sex and morals. Four fundamental trends can be found in his thinking on sex: better sex education, pre-marital sex-relations; freedom to have outside sexual relations for married couples and better facilities for divorce. Thus he strikes at the very root of the Christian idea of morality by advocating intercourse outside marriage.

His stupendous work in the field of philosophy proves beyond doubt the creed he professes—the creed of modern anaytical empiricism. His work "has given the whole philosophical enquiry a grand tidying up in the course of which, he has made some original discoveries of permanent importance.

His views have been attacked by staunch supporters of religion and morality. "I hope that every kind of religious belief will die out." says Russell. His *Western Philosophy* is a stupendous work full of originality, learning and clear-sightedness.



The fine and graceful style in which his ideas and his concrete examples are clothed, lends a literary charm to his otherwise philosophic stuff. His has extraordinary prose, like the prose of Dr. Radhakrishnan, carries wit and irony, fine images and deep thought. The classical economy of words and logical marshalling of thoughts are simply wonderful.

Suffice it to say that Bertrand Russell represents an attitude of scientific scepticism, which leads to objectivity, understanding and balanced judgment. His views on sex, society, mathematics, politics, etc., may not all have been accepted on all hands today, but English society, English customs and English outlook have undergone a subtle change which can be easily traced to the influence of Bertrand Russell, the white-thatched English aristocrat, who has been acclaimed as one of the greatest thinkers England has ever produced.

FIFTEENTH ANNUAL EXHIBITION OF THE ALL-INDIA ACADEMY OF FINE ARTS, CALCUTTA

By RAMENDRA NATH CHAKRAVORTY

This year the Annual Exhibition of the Academy was opened by the renowned artist Sri Jamini Roy on December 16, 1950 amidst a huge gathering. Due to the sad demise of our beloved Deputy Prime Minister Sardar Vallabhbhai Patel it could not be opened formally in accordance with the programme pre-conceived by the Academy.

The chief characteristics of this year's exhibition are its all-India character and a judicious selection of exhibits from artists and sculptors of talent from all provinces and groups in Bombay, Madras, Delhi, Lucknow, Indore, Hyderabad, Bihar, Amritsar and from many other places including our local exhibits and exhibits from Santiniketan. Dr. Nandalal Bose,

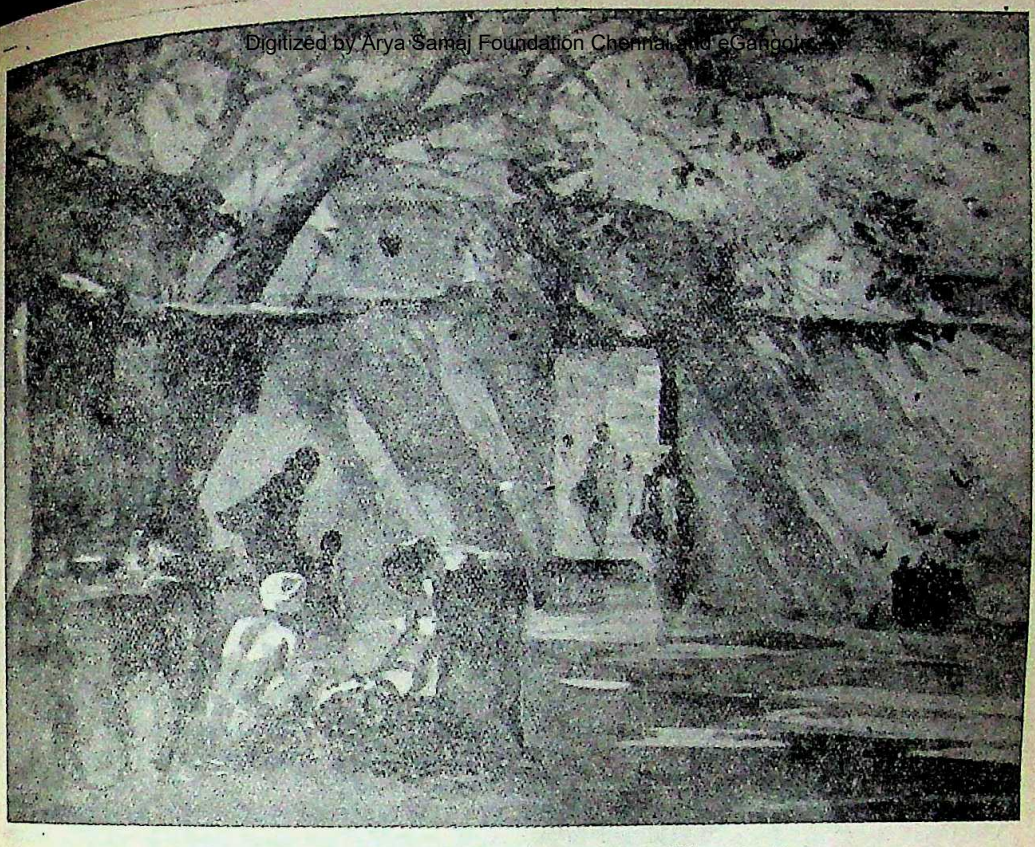
after many years of absence , has appeared again and enriched the exhibition by sending four of his recent exhibits. From the exhibits selected and displayed it leaves not a shadow of doubt that the Academy has no 'ism' and stands for all groups—everybody may take it as his own organisation catering for the aesthetic requirements of the country.

Massaging the horse
By Dhanraj Bhagat

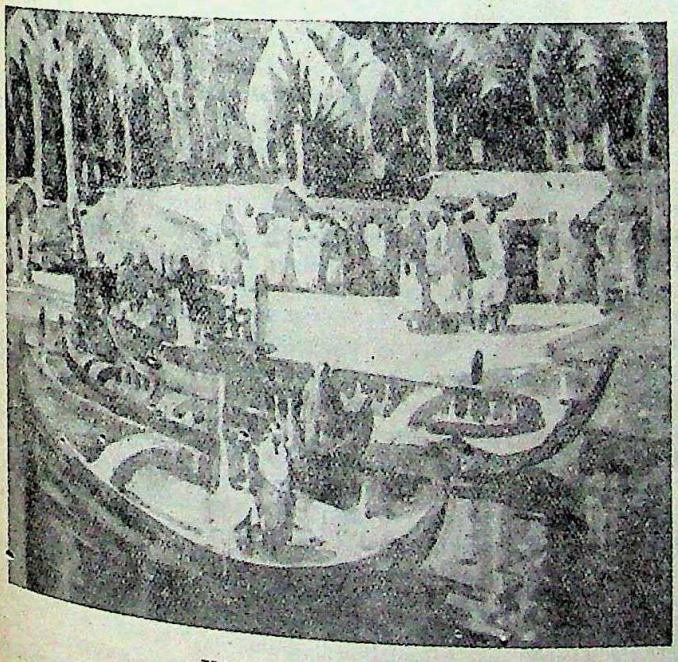
The mode of hanging and arrangements of exhibits is an art to be learnt and plays not an insignificant part in the success of an exhibition. The Academy authorities in their zeal of having an exhibition of an all-India character have not lost sight of this most important item—every exhibit has been hung in its proper place and surroundings under sufficient light and against white background without jeopardising the effects of its neighbour. This harmony in the arrangements of exhibits and their quality have attracted numerous visitors to the exhibition every day and elicited appreciation from all

All branches of art have been allotted a place in the Exhibition Hall with a representative selection from each group giving the general public an idea of the artistic development of this country, nay, of the different provinces as represented in the exhibition and the different artistic currents prevalent all over India. We had in the exhibition over 600 exhibits executed in various media on a variety of themes to suit the requirements of all. The number of visitors attracted to the exhibition every day has fully justified the aims and objects of the Academy.

Generally, in small exhibitions it pains one to ... a fashion prevalent among young artists of present ... 'groups' to start on an experimentation before ... have acquired any knowledge of the craft through ... disciplined training and it has almost been a fashion ... for those who have just been able to learn something ... to unlearn it quickly for the simple reason of finding ... out new expressions in art for ... quick publicity in the Press by ... means. This undesirable ambition ... for name and fame at this stage ... their career through such ... propaganda takes away the ... patience, and thus they lose ... interest for hard work which is ... essential for a strong foundation ... during their training period. Art ... cannot develop overnight and to be ... an artist one has to be a craftsman ... and a draftsman first. This truth ... should never be overlooked by any ... one who takes up this subject ... seriously. Another thing to be ... remembered is that our artists ... today are very much active in absorbing foreign influences in their ...



Hemanta
By Ramkinkar



work and feel proud if they are able to do it, while on the other hand it seems they lack understanding of our own traditions and seldom like to study the superb specimens of art and sculpture scattered all over our country. We should not be misunderstood as ones against any progressive move. We fully realise what modern art movement has contributed to the world and it is also an established fact that the famous

Vegetable market
By G. D. Paulraj

Village on the canal
By K. C. S. Paniker

modernists of today have found out their new expressions by constant practice and also by taking inspirations from the examples of the past. Dr. K. N. Katju, Governor of West Bengal, expressed the same opinion while awarding medals and prizes to the successful candidates at the Academy Banquet held on Friday, the 12th January, 1951. In course of his speech His Excellency said :

> "Young painters should try to draw for inspiration India's heritage and traditions, probably the richest that any nation possessed. It would almost be a tragedy if the young painters were to look to the West for inspiration. In fact, in every branch of national progress the people of India must not look too much to the West."

In this connection one sad thing must not escape our notice. Our artists who are toiling day and night towards the fulfilment of their their cherished object have

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

not yet been granted the status due to them. Appreciation is the life-breath of art and when it is lacking, art is sure to suffer. It is, however, a discouraging fact that most of our artists for want of encouragement and support are compelled to take recourse to some sort of profession for meeting their daily necessities of life and this sort of diversion is not at all conducive to artistic development. It should be honestly felt that works of art should have a place at home. There should be schemes to beautify our public institutions and there should be a public demand for the spread of the objects of art at every walk of our life. These enterprises will not only make our homes and ... beautiful but will encourage development of ... merits of our country to a standard which was ... achieved by us in the past. From our heritage ... artistic tradition we should create the present to ... worthy of our National Government. True culture ... a nation can be judged by its art and literature ... regeneration of a nation can be effected through ... regeneration of its art.

The photographs of exhibits published in ... connection will give an idea of the standard of ... displayed in the Academy Exhibition.

———:O:———

THE SUPREME COURT OF THE UNITED STATES

By MAX LERNER

As the inscription over the entrance proclaims, the Nation's highest tribunal assures to the American people "Equal Justice Under the Law."

I

"The life of the law," wrote young Oliver Wendell Holmes, long before he became a famous justice on the United States Supreme Court, "has not been logic: it has been experience." Anyone familiar with the Supreme Court's history knows how truly Holmes was right. The Court is not a temple to cold and formal logical principles revealed from on high to a cult of prophets and priests. Its history is replete with quarrels and conflict, with trial-and-error fumbling by very human men. But in this history is distilled the social experience of a great democratic people.

The idea that the gleaming marble Supreme Court Building houses is more enduring than the building itself. The idea is simple—respect for a man's rights and freedoms under the law. It is also fragile, as every social heritage is fragile; for it can be undermined by an accumulating contempt either for freedom or for man's dignity, or it can be blown sky-high by the explosive power of human hatred. But in America so far it has lasted.

One day in the spring of 1949, the Supreme Court marshal had a visitor, an earnest little man with frayed trousers and cuffs. He had a well-worn folder full of papers, and was pulling them out eagerly. The little man had a grievance about some building lots, and there were men he wanted to bring to justice. How should he go about getting his case directly to the Court? The marshal explained there was no way of starting it in the Supreme Court. He had to start in a lower court, and then if it involved a Federal question, or a Constitutional problem of interpreting State or Federal powers, it might finally reach the Court. The man left, murmuring his intent to get the case there somehow.

Perhaps he was eccentric. But he was not ... and however unimportant he might be, the knowledge that the Supreme Court was there to protect his rights made him in one sense the equal of any man in the nation.

The knowledge that there is a highest tribunal to which even the lowliest and most abused can appeal makes every American feel more secure. The Supreme Court is not a tribunal for social uplift, and often the consequences of its decisions are tragic. But while it is concerned with establishing general rules that will apply to all cases, clearly and with justice, it is not blind to the social experience of the ordinary American people. Nor is it afraid to protect the lowly against the strong—even against the Government itself.

The quarter million people who visit the Supreme Court every year come for some visible sign that will confirm this sense of security they get from the Court. Probably few of these visitors realize how much of the power of the present Court is the result of a historical accident. The U.S. Constitution provided for three branches of the Government, but it did not specify explicitly that the Court's interpretation of the powers of the other two should be final and prevailing. But the Court was lucky in having a man of immense strength of mind, Chief Justice John Marshall, who almost 150 years ago asserted the doctrine of judicial supremacy, making the Court the final arbiter of the constitutionality of acts of the U.S. Congress, and made it enduring.

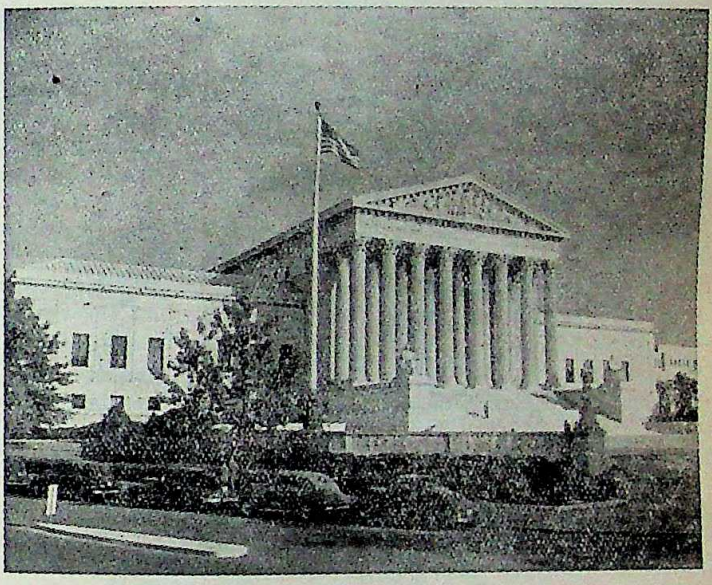
Visitors to the U.S. Supreme Court find a ... courtroom with heavy red velours draperies which ... like a backdrop in a stage setting against which a ... dramatic performance is enacted. Exactly on the hour at noon, the curtains part in the center and the Chief

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Justice and two others appear; at almost the same moment, on the left and right, the other justices enter in groups of three.

Everyone stands, the marshal intones "oyez oyez," the justices apply themselves to the briefs and papers before them while page boys scurry about bringing them lawbooks or carrying notes from one to another; the new members of the bar are presented for practice before the Court, the appellant's attorney begins his argument and has not gone very far in it before the members of the world's most powerful tribunal are tearing away at him and each other with questions, objections, and gibes.



The ardent followers of the Court are there in the reserved pews—the lawyers and law students, the law secretaries and law clerks of the justices, the visiting dignitaries from business or law firms or trade unions and a sprinkling of Government officials. Their number swells when a big case is to be argued, involving much money or power, or a "hard case" involving hair-trigger questions of Constitutional meaning.

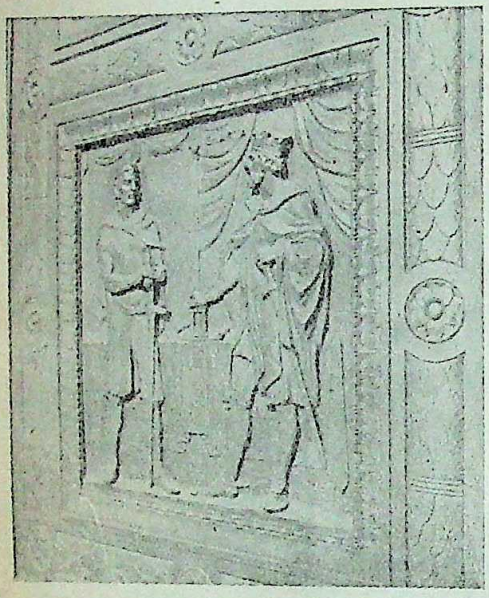
The rest of the audience is less knowing, but it forms a cross section of America. Here is a couple from the midwestern section of the United States, probably on their first Washington visit. Here is a gentle-faced Jewish mother with her son of college age. Here are a Negro, his young wife, and two small daughters. Here are two nuns in black robes, taking notes in little black books. Here is a row of girls on a holiday visit from a boarding school. Near them are the knotted hands and alert faces of two workmen, probably minor officials of a trade union. The audience strains to follow the technical language of the discussion, but most end by giving up the sense and remaining content with the magnificent outward show.

The Supreme Court has developed its fixed conventions. It receives no cases except after passing on petitions for review. The judges work on them during summer vacations, or whenever they can through the year, for the task of passing on them is ever present and exhausting. If three judges agree, the case is put on the calendar to be argued. The judges hear arguments for two weeks a month during the Court term (which begins the first Monday in October of each year and continues as long as the business before the Court requires, usually until about the first of June), then study the cases and write their opinions the other two weeks. They have a chance to study the lawyers' briefs before the arguments are heard. They come to court with questions in their minds, and some ply the lawyers with questions.

The Court gathers each Saturday for private conference on the cases before it. Saturdays are the days that test the strength and mettle of a Chief Justice, for he must hold down the dissents if possible and keep cases moving so that the schedule is not clogged.

In the voting the judge most recently appointed to the Court votes first—so as not to be overawed by his seniors—and the Chief Justice votes last.

The Supreme Court of the United States in Washington where decisions vital to the individual and the nation are made



Actually, however, after the discussion by the others, the newest appointee knows pretty well what each vote will be, and, if he has kept score in his mind, he knows whether his vote will break a tie and make a majority. After the voting the Chief Justice assigns the drafting of the Court decision to a member of the majority whom he chooses. If he is not himself in the majority, it is assigned by the senior justice who is.

The last stage is complex and often prolonged. The judge reviews the opinion which has been assigned to him to work on, chooses the arguments he wants from the briefs or the discussions, reads the chief precedents that come closest to the case, and has his assistants digest others. Once the opinion is drafted, it goes to the Court printer, is set up in large type, with wide margins, and is circulated to the whole court. Each judge sends the draft back

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

with brief or long marginal comment. The author of the draft then may decide to rewrite it and circulate it again. Sometimes the draft will win over a marginal voter, or lose one, shifting the majority and minority. Sometimes the drafting judge will himself change his mind in the process, and someone else is assigned.

This plaque in the door of the Supreme Court of the United States in Washington depicts the signing of the Magna Carta

At some point the other judges decide whether they will concur, or write separate concurring opinions, or write dissents. There may be more than one dissent written. The opinions are handed down on three Mondays a month. Each judge may choose to read his, or (what is more frequent) summarize it orally, sometimes putting in verbal asides not in the printed version. Once the opinion is released, the comments of editorials, columns, and law journals begin, and may continue for years, decades, or even centuries. The bound volumes of decisions are constantly thumbed, constantly argued over.

There is probably no comparable situation in the history of government where a body of men is subject to so close and exacting a scrutiny of their work over the generations—a scrutiny for logic, for consistency, for break or continuity with tradition, for personal creativeness, for social utility. This is what gives the Court its strength and prestige. More important than an army or a police is the knowledge that the U. S. Supreme Court has the hearts and minds of the people with it.

II

Every strong institution has its personal legend to back it up. In the case of the U. S. Supreme Court the legendary figure has become Oliver Wendell Holmes. A play has been done about him (*The Magnificent Yankee*), and a popular biography by Catherine Drinker Bowen (*Yankee from Olympus*). A vast novel by Carl Sandburg (*Remembrance Rock*) includes him as a main figure, and there are numerous less anecdotes. He had the advantage of dying very old, at 93, and he never lost either his sense of humor or his perspective. He went to Harvard University, at Cambridge in the northeastern State of Massachusetts, knew Ralph Waldo Emerson, the American essayist, poet and philosopher, at his father's table, fought in the American Civil War, and three times wounded.

Handsome, literary, and brilliant, Holmes' career from a law-school post to the Supreme Court seems inevitable. What made him great was that for all his background, and his basic economic conservatism he he'd the Court's function in a free society higher than his own preferences. He wanted the Court to leave a large margin of tolerance for the errors of social experiment, and for "free trade in ideas . . . in the competition of the market."

But the chief elements in the Holmes' popular legend center around his human qualities. He avoided reading heavy economic tomes in favor of French novels, or philosophy. He had a way with the ladies and an eye for pretty ones. Holmes stayed on the Court until almost the end, but even at the age of 90 he was alert, although feeble.

The average age of the members of Supreme Court now is just less than 60. Age is a factor in social views, but far from a decisive one. What is really decisive is the experience and training and background of each judge, and the intellectual temper of the period.

In the deepest sense, however, the life of a Supreme Court Justice is always a lonely one. It includes political chastity, and obedience to the tradition of isolation from controversy. This is especially hard for a Court made up like the present one, and accustomed to an active life in the midst of great affairs.

It is always hard to predict what will be either the direction or the destiny of this institution, which has outlived its detractors, disillusioned its enthusiasts, disappointed the cynics, and outwitted the self-assured predicters. Yet as we try to pierce the future, we can be certain of one thing about the U. S. Supreme Court. Nowhere in the world can one find a high judicial body which so truly represents the democratic principle in the sense that it comes from the ranks of the common people, yet so heroically makes the effort

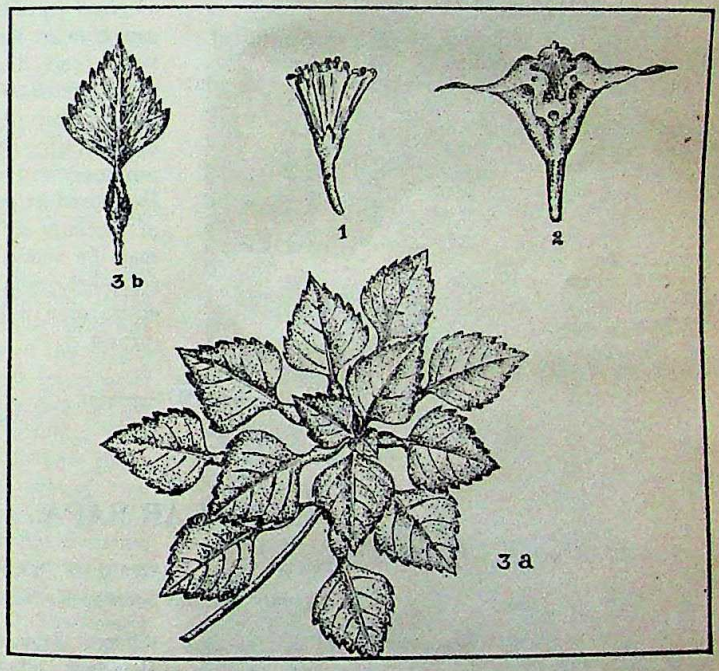
CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

detachment from ordinary passions. Nowhere can one find a group so deeply committed to the proposition that the law must protect even the poorest and humblest with the same armor with which it invests the rich and the proud. Out of the struggles of our century the Court has emerged with an idea about modern America to which it clings tenaciously: that only a secure people can be free, and only a people which passionately cherishes its freedom can be great.—From *Holiday*.

———:O:———

SINGARA—THE FRUIT



By MURARI PROSAD GUHA, M.A.

In early winter the fruit stalls begin to be filled up again, though mostly with fruits of foreign origin, but our *Singara* or *paniphal* though appears in the market during this time (November-December) is a fruit of our country and the other tropics.

This fruit derived its name *paniphal* or water-chestnut from its development in water and the angular horned shape of the fruit gives it the name *Singara*. Probably the hot *singaras* prepared from wheat floor and fried in ghee for our breakfast or evening tea which we relish throughout India, derived this name for its similarity in shape with this fruit, which in ancient India had a special place of its own. Our Anglicized countrymen started to despise everything Indian even the Indian fruits. But the shortages are reminding us of those true friends who never can forsake us.

Singara, botanically known as *Trapa bispinosa* Roxb., belongs to the family Onagraceae and is a floating herb found in *jheels*, ponds, tanks and lakes throughout India and Ceylon and also in tropical Africa and South-East Asia including Malaya. It is very often met with in the wayside ditches of the railway tracks in our country. There and in similar other water areas they are cultivated for the delicious fruit. And the cultivation of this plant in India is known from very ancient times; even *Ain-i-Akbari* (1590) mentioned levy of revenue on this crop and it clearly reveals the flourishing condition of it at that time.

The fruit is a bony four-angled indehiscent nut with a thick coat (pericarp) containing only one seed. On removing the coat the white fleshy kernel becomes visible and this is usually eaten raw. The kernel is hard, fleshy with high percentage of water and has a cooling effect on the stomach. Sometimes, after soaking overnight they are boiled in water and then made into a curry. Where this is grown, abundantly, the high starch content of the fruit is also utilized for the preparation of flour which is used in making *chapattis*. Uttar Pradesh, Madhya Pradesh and Bihar have got large areas under this crop, also Kashmir is famous

The Singara plant

(1) The white-petalled flower with four sepals is shown. (2) The fertilized mature fruit with two of the persistent sepals turned into spinescent horns. Through the beak at the top the radicle comes out during germination. (3a) A partial view of the arrangement of the leaves on the surface of water as seen from above is shown. (3b) The leaves are villous beneath which has been shown in a solitary leaf reversed. The petiole of the leaf has a spongy swelling near its apex

Digitized by Arya Samaj Foundation Chennai and eGangotri

from old times for the cultivation of *Singara*, and the best variety there is the *basmati* (after the rice of that name). In West Bengal there are small patches of cultivation and the supply to Calcutta is supplemented from Bihar and U.P. and the variety common in Calcutta is the deep-green two-horned *Patnai*. The total supply of *Singara* in Calcutta market from the different sources in Bengal (*viz.*, Das Nagar, Dum Dum, Rajarhat-Vishnupur, etc.) is approximately 2,500 mds. annually. The yield per acre water area being 12-15 maunds of raw fruit usually.

Cultivation of *Singara* has been neglected like other crops in our country. Planned cultivation and supply of planting material may pave a long way for the easing of the tension in the food front, as this fruit not only yields a large quantity of flour or fruit, when taken raw, but the food value is also very high contained in the fresh fruit or the flour as will be revealed from the following comparative table taken from the Health Bulletin No. 23:

	Singara (dry)	Wheat flour (atta) (whole)
Moisture	13.8 per cent	12.2 per cent
Protein	13.4 „ „	12.1 „ „
Fat (ether extracted)	0.8 „ „	1.7 „ „
Mineral matter	3.1 „ „	1.8 „ „
Carbohydrate	68.9 „ „	72.2 „ „
Calcium (Ca)	0.07 „ „	0.04 „ „
Phosphorus (P)	0.44 „ „	0.32 „ „
Iron (Fe) gms.	2.4 „ „	7.3 „ „
Calorific value per 100 gms.	336	353
Carotene (International Vitamin A units) per 100 gms.	Trace	
Calories per ounce	95	100

Usually at the end of January the fruits are scattered over the water of the *jheels*, etc., where they are to be planted and then pressed in the mud, where it germinates, the radicle (primary root) coming out through the short cylindric beak at the top of the fruit. The water should generally be shallow and about breast-high. Within a month after planting they start growing and soon cover the water surface. At the beginning of the monsoon they are transplanted, after thinning out the overcrowded areas. After the end of the monsoon the 4-merous flowers comes to age and their white petals can be seen from a distance floating on the surface of the water among the green leaves and in October the fruits set in. And the fruits are available in the market during November and December.

Singara can be grown with ease and without any special care and needs no manuring. These points are of great consideration to our poor cultivators and they can grow at least a small quantity of this fruit in their ponds and ditches and tanks. In West Bengal with some districts having more ditches and tanks than the number of homesteads, it is a matter of great consideration, specially because, it is also a problem province not only politically but from the points of food production as well. Nursery units may be started in specially suitable areas and supply from these areas may be made throughout the country in small but scattered units which in no time will cover up the entire area if conditions are favourable and if we are earnest.

———:O:———

THAKKAR BAPA

By S. R. VENKATARAMAN, B.A.B.L.,
Servants of India Society, Madras

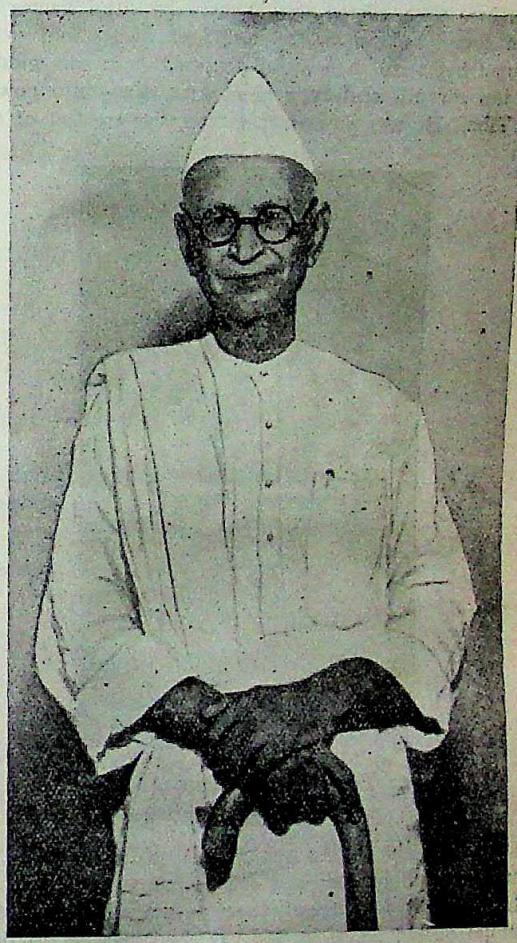
Thakkar Bapa was a prominent member of the Servants of India Society for about thirty-seven years and its Vice-President during the last eleven years. His broad human sympathies led him into beneficent activities and his life was one of ceaseless and tireless striving to serve the under-privileged in society. Early in life, he engaged himself in promoting elementary education and forming co-operative societies among the working classes. Later, the promotion of the well-being of the Harijans, the Adibasis and women became a passion with him. He organised relief measures also to help the poor and the suffering and the victims of disasters caused by fire, flood, famine and earthquakes. In his last days, the cause of the displaced persons equally claimed his attention. Though the Servants of India Society since its inception was engaged in social ameliorative work in different fields, under the guidance of the late Mr. C. [illegible] Devadhar, whom Thakkar Bapa claimed as one of his Gurus, it was Thakkar Bapa who gave a new impetus and momentum to these activities, more by his own personal example than by his speeches, writings or exhortations. In connection with his work he travelled all over the sub-continent of India several times, most of it in third class crowded compartments, buses and bullock-carts, pack ponies, camels, boats and dandies, at an age when lesser spirits than his would have shuddered to travel under such conditions. His love for the backward and the under-privileged was so overpowering that he had no time to think of the hardships and privations involved in such journeys.

Thakkar Bapa is one of the three leaders of Sourashtra who [illegible] been the architects of modern India

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Mahatmaji fought and secured freedom for the country; Sardar succeeded in welding together the scattered units of India of different ideologies and varying levels of administration into one compact and integrated whole. Thakkar Bapa, the true social engineer, canalised the forces of patriotism generated by Pujya Gokhale and Gandhiji into channels calculated to promote the social, educational and economic progress of the backward section of the population.



For, he was convinced that unless the backward sections of the population were also brought up to the level of the average citizen, the freedom we have won would not be safe for us.

Thakkar Bapa was eminently fitted in many ways for the work he had set before himself. Having become a widower early in life he had no encumbrances and no worldly ambitions. He was endowed with a good physique and robust health. Referring to his secret of his health in one of his letters written to me from Chorvad in Sourashtra where he was convalescing, Thakkar Bapa wrote as follows :

> "In my school up to the age of 16, I was not specially fond of any games, except those which were enforced in the school, that is only cricket. After the age of 20, when I was in service, and up to 43, I was constantly on outdoor service, and as such had to ride, walk long distances or do rough hard work. Moreover, my first wife was sickly and so Brahmacharya was compulsory. During my second married life which was short it was no married life. This is the only secret I can think of."

He combined with his good constitution a soft and tender heart which would not see the sufferings of people till something was done, and an indomitable will and determination not to rest till the sufferings of the people are alleviated. His transparent sincerity and integrity of character, his simple living and high thinking, his infinite capacity for taking pains and genius for planning and executing schemes of uplift work on an All-India basis, his scorn of a life of ease and comfort and love of hard work, all these had earned for him a unique place in the heart of a grateful people as the foremost humanitarian and social engineer of the age. In truth he ranks among the world's greatest humanitarians and social workers. What Wilberforce, Dr. Barnardo and Earl of Shaftesbury are to England, what Dr. Kagawa is to Japan, what Booker Washington is to the Negroes and Albert Schweitzer is to the Africans, that Thakkar Bapa is to India.

This is not a vain-glorious claim that we make for Thakkar Bapa. The fact that during the latter part of his life when most people would have gone into retirement, Thakkar Bapa took with enthusiasm the work of organising the Harijan Sevak Sangh in 1932 when he was 62 and the Kasturba Gandhi National Memorial Fund in 1943 when he was 74, especially when his hands were full with the work of the Bhil Seva Mandal and organising relief works in other parts of India, is a tribute to his passionate desire to spend himself in the service of the poor. Later, he was responsible for starting the Adim Jati Seva Sangh of which he himself became the Vice-President. Unlike many office-bearers whose connections with organisations were only nominal Thakkar Bapa's with everyone of the organisations with which he was connected were very intimate and vital. He knew all the details about the working of the organisations and directed their activities with zeal and firmness and expedition. Lesser men than Thakkar Bapa would have quailed under the burden of administering these associations with far-flung branches all over India needing his personal attention and touch in the execution of the programmes and feeding them with funds. In fact, Thakkar Bapa thrived on work and flourished on more work.

Thakkar Bapa
(Seventy-five years young)

Thakkar Bapa is no more. To mourn his death is not the way to pay our tribute to him. The best tribute to Thakkar Bapa's memory is that every admirer of Thakkar Bapa must become in his own life a miniature Thakkar Bapa in his chosen field of public work. May the tribe of Thakkar Bapa increase and thus may his work and memory be ever kept green.

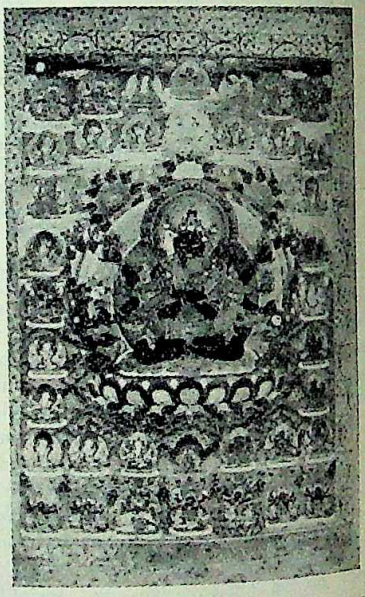
INFLUENCE OF INDIAN ART IN TIBET

By DASARATHI ROY

Before the introduction of Buddhism into Tibet, Bon was the religion of its people. It was a ritualistic religion. The followers of this religion worshipped spirits and devils. Rites were performed in gloomy caverns. The dark chambers and the altars on which sacrifices were offered were lighted by fitful flames of dim fire. The worshippers sacrificed beasts and even human beings to their awful deities. But in the middle of the seventh century a great king came into power in Tibet. He was Srong-tsan-gampo, the greatest of all



Saint Pimasambhaba or Guru Rimpoche, founder of Mahayana Buddhism, went from India to Tibet in the eighth century A.D. (A Tibetan Thanka)

the Tibetan kings. He was a great soldier as well as an able administrator, and the Tibetans regard him as the political founder of their country. Srong-tsan-gampo visited Nepal in 639 A.D., and his visit to that country was destined to influence the future development of Tibet. It was through the efforts of a daughter of Nepal that the transformation was brought about.

Amshuvarma, the then king of Nepal, had a very beautiful daughter, Princess Tri-tsun. The Tibetan king was fascinated by the beauty of this Nepali princess and he took her off as his bride to his capital at Lhasa. But the Tibetan king brought away from Nepal more than he knew, for it is said, Tri-tsun with the aid of a wonder-working begging bowl that once belonged

to Lord Buddha and helped by several images, introduced Buddhism into her husband's country. Soon after, Tri-tsun got the assistance, in this great task, of Wen-Cheng, the Chinese wife of Srong-tsan-gampo whom he had married in 641. But it was not Buddhism only that was introduced into Tibet. Nepal, then a dependent State and a part of the Tibetan empire of Srong-tsan-gampo, greatly influenced the life of the new Tibetan capital at Lhasa. Nepalese arts, which were essentially Indian in character, were eagerly

One of the ten forms of Goddess Kali (A Tibetan Thanka)

assimilated, and it was due to Queen Tri-tsun that the art of India has remained dominant in Tibetan craftsmanship.

The spread of Buddhism, which had its beginning in the time of King Srong-tsan-gampo, continued up to the twelfth century. During the course of these five hundred years many Indian Buddhist scholars came at the invitation of different Tibetan kings to Tibet and influenced that country with Indian religion and literature.

The introduction of Buddhism in Tibet coincided with the foundation of the Pala empire in Bengal. During the reign of the Pala kings from the eighth

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

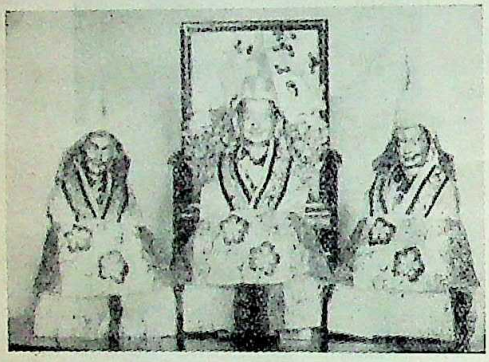
the twelfth century, we find the renaissance of Buddhism for the last time in India. Some of the Buddhist monasteries that were founded by the great kings of the Pala dynasty were the greatest centres of learning in India. The Buddhist monastery of Atantipur, founded by the first Pala king Gopala, and the universities of Bikramsila and Paharpur together with the already existing university of Nalanda, became the chief seats of Tantryana or Tantric Buddhism. Under the Pala kings, the Buddhist pantheon was enriched by various icons, and *asanas* and *mudras* made the figures beautiful. In the monastic establishments of the Pala period was created a religious art, rich and varied, and it was strongly influenced by Tantric inspiration. This art, comprising stone

"Galden Lhajyama" or the saint Sonkapa, founder of the Gelupka sect in Tibet (A Tibetan religious banner)

sculptures, moulded images and religious paintings, was distinguished by its perfect execution, and it was this art of India that entered Tibet. Some forms of art reached directly through Indian Buddhist monks who visited Tibet and some reached through Nepalese artists. The main themes of the Pala Art were the principal events of Lord Buddha's life; a host of Ishta-Devatas (tutelary deities) of Tantric Buddhism were also its subject. The statues and stone figures, cast images and painted religious banners of Tibet distinctly show this form of Indian art. The Tibetan metal images known as *Shar-ri* and the painted religious banners of Tibet known as *Thankas* have been deeply influenced by the Indian style of the Pala period. When the great Indian Tantric Buddhist monk Padmasambhaba went to Tibet at the invitation of Thri-eron-de-tsan, a worthy successor of Srong-tsan-gampo, he established there many monasteries which became famous seats of Tantric Buddhism. The most famous of the monasteries that were founded by Padmasambhaba is the Samye monastery. It was esta-

Prince Gautama Buddha. This statue in the Jokhang Monastery, the chief temple of Lhasa, is a specimen of Indian sculpture in Tibet

blished in 870 A.D. and is still the chief centre of Tantric Buddhism in Tibet. It is stated that the Saint



A Tibetan painted religious banner showing Lord Buddha with a thousand hands and a thousand eyes

Padmasambhaba having subdued the devils and evil spirits of Tibet compelled them to erect the Samye monastery. After the completion of the monastery Padmasambhaba found his wealth exhausted and

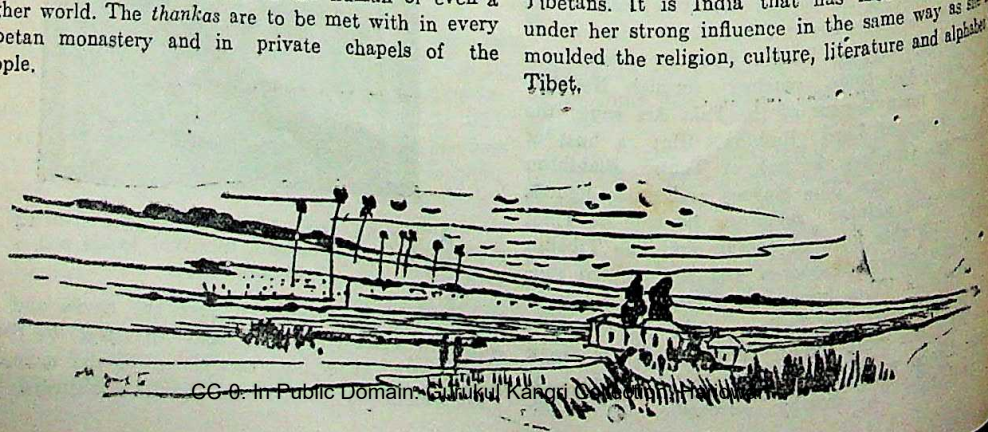
CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the spirits and devils brought the Saint huge quantities of gold from the Malgro Lake and thus enabled him to present many Indian statues made of solid gold which are still to be found there. Atisha Shri Gnan Dipankara, the great Bengali Buddhist monk, went to Tibet in 1042 A.D. and he brought with him many cast images of the Pala period. The carved figures and cast images brought by Padmasambhaba and Atisha Sri Gnan Dipankara were the source of inspiration to the Tibetans who imitated the style in this sphere of art.

Tsongkapa with his two disciples. A fine specimen of Tibetan metal cast image after the Indian style

The *thankas* or the painted religious banners of Tibet are importation from India *via* Nepal. These *thankas* show the gods and the saints in conventional attitudes; episodes from their lives are also represented. Many of the *thankas* depict Tantric tutelary deities and Indian saints who had spread Buddhism in Tibet. These *thankas* are regarded so sacred by the Tibetans that when a Tibetan dies a *thanka* has to be painted for the occasion, depicting a saint on it and the saint so depicted is believed to intercede for the deceased when the departed soul stands before the judgement seat and to assure its rebirth in the human or even a higher world. The *thankas* are to be met with in every Tibetan monastery and in private chapels of the people.



The art of miniature painting which was popular in India in the 11th and 12th centuries was imitated by the Tibetans. Illuminated manuscripts of Tibet are directly descended from this Indian art.

In the field of Tibetan architecture, Indian influence is quite evident. In building temples and monasteries the Tibetans followed the tradition of the Indian guild work. It is interesting to note that Drepung, the biggest monastery of Tibet, nay, of the whole world, was built after the fashion of the now-defunct famous Buddhist monastery Sridanga Kataka of Orissa.

A tutelary god of a Tantric order
(A Tibetan Thanka)

Tibet is the Land of Religion and her art is religious art which is a tributary of Indian art. Modern Tibetans are not aware of the Indian influence in their art and hence all metal images and paintings are called *Bal-Bris* or Nepalese art by the Tibetans. It is India that has moulded Tibetan art under her strong influence in the same way as she has moulded the religion, culture, literature and alphabet of Tibet.

IN PRAISE OF ARTISTS

By Prof. O. C. GANGOLY

Having lived the greater part of my seventy summers in company with pictures and in intimate contact and communion with them, I have developed a mighty horror of talking in the presence of pictures. To do so, I verily believe, is an insult to artists and a blasphemy to Art.

To do little and to talk about it in amiable exaggeration is the business of politicians and statesmen.

To talk nothing and to do marvellous things and to set them down in the silent but eloquent language of form and colour is the business of the artists.

If there are exaggerations in these canvases they are exaggerations with a spiritual intention—to glorify and sublimate Truth in artistic emphasis. Except when *impatiently* listening to deputationists and agitators, our ministers and administrators incessantly indulge in the one-way traffic of words, words, and words, drowning their victims and burying the slender voice of Truth under the volley of their atom bombs.

But our poor but honest artists after recording and presenting the most valuable Truth of this life and of the other life in the heavens, in the speechless voice of their brushes, shut their mouths in life-long silence, listening with the patience of Job to the most harsh and unkind criticisms of their judges, their critics, their newspaper-men, their would-be buyers and, sometimes, their jealous brethren.

Rabindranath Tagore has recorded a happy homily on hard-hearted judges and harsher critics :

> "They know not how hard it is to master
> The brush and the colours,
> They condemn as jokes and funs
> Our tearful labours!"[1]

But the greatest artists never seek an immediate word of praise or appreciation, or a ready-made reward, prize, or gain, but are prepared to wait in pious resignation in the infinity of space and of time, for the advent of his *Samana-dharma*[2]—his spiritual twin, who may turn up from a far corner of the earth after the lapse of many centuries, for,

> "Time, indeed, is limitless and verily expansive
> is the lap of Mother Earth !"[3]

And, I verily believe that to many artists who have missed any of the rich prizes provided by our president, the lady bountiful or even a smiling glance of the judges or the critics *today*, richer prizes may be in store *tomorrow*, for, time is the best judge, as we know time has upset the wrong judgments of the best judges of Art, armed by the steel armour of their own prejudices, and, unable to see new ways of putting them into practice.

To the lucky exhibitors who have secured today shining medals and brilliant awards, I may perhaps offer a word of warning that these prizes may not be a ready passport to popular or universal recognition of their merits *tomorrow*. For, I have known many winners of prizes and certificates of merit who have pined away all their lives failing to secure purchasers for their pictures or popular appreciations of their works.

Yet these tentative, perhaps erroneous judgments and erratic awards of prizes have their values, for, they help to attract the attention of the general public, the potential patrons to real works of Art, and make many haters of pictures to become lovers of beautiful forms and colours. For, to the average man with no passion for beauty, and indifferent to the higher needs of life, this magnificent feast of form and colour provided by the president and the distinguished members of her committee offers a happy haven of refuge—a temporary paradise, where we forget the many miseries of our life, the irrationalities of the ration-shops and the soaring prices of our winter-cloths.

I am told that a very large number of our citizens have thronged into this corridor of convincing canvases to *learn by seeing*, to acquire knowledge without tears, for, many of these pictures can teach us things and offer lessons, which none of our teachers in schools and colleges can do, namely, to know and love all our brothers and sisters, to obliterate racial differences, to banish colour-bars, to chide away religious rancours, to tolerate music before mosques, and animal slaughters before temples, in short, to bring harmony and concord among the distracting discords of life and the many warring dogmas and doctrines, and, above all, to learn to worship the beauties of this earth, in the expansive canvases of God's landscapes, "for, what God paints in one day, humanity cannot paint throughout eternity."

And the role and career of all artists through the ages have been to catch and record a fraction of the fleeting beauty which eludes them in the creations of God.

For, as St. Thomas Acquinas has said, "Art imitates Nature in her manner of operation," that is to say, God in His manner of creation, in which He does not repeat Himself or exhibit deceptive illusions, in which the species of things are confused.

I hope, we have succeeded in persuading to come to this show a fraction of the large body of our half-educated and misguided youths, who

throng into the cinema-halls in vain search for beauty in spurious pictures and who injure their eyes and powers of vision, and, sometimes, damage their morals in incessantly looking at machine-made pictures and camera-made abominations. For, our scriptures enjoin:

> "Oh ye gods! give us the power to listen only to noble and auspicious words, to look with our eyes *only* on things of beauty and of sublimity."[4]

Photographers have all along attempted in vain to imitate Rembrandt effects and Holbeinesque lines and forms. With all the latest claims of colour-photographs and the perfection of the photographic lenses, the makers of cinema-pictures have failed and will continue to fail to catch a fraction of the qualities which our great artists, here, provide in their intriguing colour-schemes and in their mystic compositions of the harmony and melody of lines, mocking the efforts of the camera and the machine.

May the eyes of our artists ever continue to see visions and render the eternal and the invisible in terms of the visible.

And may our critics and *rupa-rasikas*, the sympathetic connoisseurs of Art, for ever continue to bow their heads before the masterpieces of our artists in worship and in adoration![*]

AMERICAN FOOD FOR INDIA

By J. J. SINGH

I am glad that the Government of India has asked the United States Government to help India in purchasing two million tons of food-grains on a long-term credit basis, besides what the Indian Government will be buying itself.

I say I am glad because my colleagues and I have felt for some time that the continued shortage of food, and such low rationing as ten to twelve ounces a day, for hundreds of millions of people, was bad for the health and morale of the people, as well as for the stability of the Government. We have all along felt that empty stomachs make easy victims to vicious propaganda, either of the extreme right or of the extreme left. And that, if help were needed to better the lot of millions of men, women and children, there was no reason why such help should not be asked for—at least as a lesser evil.

It will be recalled that at the time of Prime Minister Nehru's visit to the United States, in the months of October and November, 1949, talks were started that, perhaps, a barter arrangement could be made whereby India would get one million tons of food-grains and the United States would get mica, manganese, and some other raw materials from India. We all had hopes that this so-called barter deal would go through.

Months went by and reports started appearing in the Press that, because of various limitations and difficulties in increasing the production of mica, manganese, etc., and because of the danger to the general economy of India in pledging shipments of these vital materials for years in advance, the deal was off.

I went to Washington in January, 1950, to check up if a way could be found to get out of these difficulties and secure the very much needed food-grains for India. I found that there was enough favorable sentiment amongst some Senators and members of the House, that if a Bill had then been introduced in the Congress, to sell India a million tons of food-grains at half the market price and for a ten to fifteen years' credit, the Bill had a fair chance of passage. But inasmuch as this arrangement had to be contracted between two governments, non-governmental people like myself, or non-governmental organizations like the India League of America could come into the picture only if the Indian Government were agreeable to the proposition. So, I passed this information to the Indian Embassy officials in Washington and I believe, after consultations with the Government of India, they decided not to seek such aid through any congressional act. Naturally, I dropped everything.

After the Assam earthquakes, and reports of floods in Eastern Punjab and severe drought conditions in some parts of Bihar and Southern India, we were convinced that the food situation in India would worsen. In view of that, the India League of America called a special meeting with the object of activizing all avenues for getting assistance from this country.

We invited Mme. Vijayalakshmi Pandit, the Ambassador of India in Washington, to come to our meeting and give us authentic and the latest detailed information about the impending food crisis in India. Mme. Pandit accepted our invitation but, unfortunately, had to cancel it later on. However, I was requested to go to Washington to secure the necessary information.

I had long talks with a high Government of India official who was then visiting Washington, and an Indian Embassy official. Once again, I was discouraged from getting [illegible] moved in the United States

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Congress whereby India could buy food-grains here on a long-term credit basis and at very much reduced prices. As I recall it, their argument was that food shortages in India will continue to exist and that it was a "recurrent" problem. I was told that what India needed was tractors, fertilizers, tube-wells and other agricultural machinery with which arid land could be brought under cultivation and India could become self-sufficient in food. Once again, my colleagues and I had to drop this matter because, as I have stated above, without the assent of the Government of India, we, the non-governmental people, could not move in the matter.

So, now that the Government of India has made a definite request, we are at last at liberty to work on this question.

However, this time it is not going to be easy.

The sole object of writing this piece is to warn my countrymen not to be over-optimistic about getting these two million tons of food-grains. The reasons for my words of caution are as follows:

I understand that President Truman is in favor of making an outright grant of two million tons of food-grains instead of selling it to India on a long-term credit basis. That is most excellent. It is also excellent that Secretary of State, Dean Acheson, is in complete agreement with the President of the United States, and he and his colleagues of the State Department are fully aware of the food crisis in India and are most anxious to help India in averting serious famine conditions.

As a result of my recent talks in Washington, I have gathered that they all feel that, taking everything into consideration, a straight grant would be much better than any kind of loan or deal. In other words, the United States will have to spend approximately two hundred million dollars (almost 96 crores of rupees) for these two million tons of food-grains and make a present of it to India.

But there is something that our people in India have to understand. The fact that the Government of India has made the request, the fact that the "Administration," as represented in this case by the President, the Secretary of State, and the Secretary of Agriculture, are all in favor of giving this grant does not mean that it will be done.

We in India were for so long under a virtual dictatorship and got used to the *Hukam* of the British Viceroys that it is hard for us to realize that the President of the United States cannot issue any *Hukams*, in such cases.

Our people have to know a little more about the Constitution of the United States of America.

And, according to the Constitution, legislation will have to be moved in the Congress of the United States for this grant. The grant could come from already appropriated funds, such as that of the Economic Co-operation Administration (ECA), or a bill for a new appropriation will have to be moved. If the United States Congress, which means the Senate and the House of Representatives, does not pass this legislation, then there is nothing that the President of the United States or the Secretary of State or anyone else can do. This is something that our people must understand.

The chances of "India Aid" legislation passing in the present Congress are, at present, 50-50. It is possible that they may become better, but it is also possible that they may become worse. And, I am afraid, a lot will depend upon the foreign policy of India, especially with regard to Korea, aggression of Communist China, and India's role in the United Nations.

In the last Congress, passage of such a Bill would, in my opinion, have been a little easier. I think in the last Congress, especially if the Bill had been introduced in the early part of 1950, the consideration of the Bill would have been on a more humanitarian basis than on a political basis. But with the Korean war, where thousands of American boys have died and are dying, there would be very few Senators and Representatives who would think in terms of humanitarianism only.

Last week, when I was in Washington, I checked around and found that if an India Aid Bill is brought before the Congress, there will be an unprecedented debate on all issues relating to India. It will give chance to friends of India to say friendly things and to those who are inimical to India to attack India. There is no doubt in my mind that the question of Kashmir will be brought up. One of my Senator friends told me that we should be prepared for a washing of dirty linen on the floors of the Senate and the House. I told my friend that we were not afraid because India has nothing to hide.

In view of this, it has been considered advisable by the friends of India to do a little more "polling" of the Senate and the House before the Bill is even introduced. Because we are all agreed upon one thing—the Bill should not be introduced if it has little chance of passage.

As your readers are well aware, there is a great deal of criticism and disappointment at India's attitude towards Communist China. Some of the criticism is ill-tempered and not at all justifiable. But one has to understand and take into account the emotional state of mind that prevails in the United States today. One may say that this extreme emotionalism, bordering on to hysteria, is not warranted. But then again, we must face the fact that it is there. And it will be under these conditions that the members of Congress will act upon the Bill.

No one wishes to suggest that India should change its basic foreign policy or its belief in certain principles

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

or act against its own national interests for the sake of two million tons of food-grains.

But we must remember that the United States, too, has similar rights. And it is natural to assume that if the majority of the members of the Congress would deem India's foreign policy as injurious to United States interests, then they will not be inclined to sell out two hundred million dollars.

I will give you an illustration: Last week in Washington, everywhere I went, Mme. Vijayalakshmi Pandit's interview over the television program called "Meet the Press" on December 31, was thrown at me. It is a very popular program and many Senators and Congressmen and State Department people and others had seen it. On this program, Mme. Pandit said that, in her opinion, "War was a greater threat to India than Communist domination in Asia." The inference drawn was that India would much rather be under Communist domination than be a party to a war. Then again, when asked whether crossing of the 38th Parallel by the Communist Chinese troops constituted an aggression, Mme. Pandit answered that the United Nations forces went beyond the 38th Parallel, too, and so the Chinese Communists have a "come-back," and they can say that it was no more an aggression for them to cross the 38th Parallel than when the United Nations forces went beyond it. The inference drawn in this case was that Mme. Pandit was equating the crossing of the United Nations forces and the crossing of the Communist Chinese forces. Now this may be the Government of India's policy—I would assume that Mme. Pandit, as Ambassador of India, would not make such a public declaration unless she were to say that it was in conformity with the Indian Government's point of view.

But then the question is: Is it reasonable to expect Americans, who do totally disagree with [illegible] attitude as expressed by Mme. Pandit, to give [illegible] large-scale aid to India?

I am told that a very high United States Government official, commenting on Mme. Pandit's television talk, said:

> "We cannot ask the Ambassador of India to say this or not to say that. She is perfectly at liberty to express any opinion she so wishes. But statements like this are making the job of the United States Government to get a Bill through very difficult, to say the least."

Another official is reported to have said:

> "Another statement like that from Mme. Pandit or some such policy statement from India, and the United States Government will have to reconsider whether the Bill should be introduced or not."

He added:

> "Not that we in the Government are disturbed about India's attitude because we know that, in the final analysis, India will be on the side of the democracies. But the question is, will the Senators and the Representatives feel that way? And it is they who will have to decide on the fate of the Bill."

Well, this is the story. And I have considered it my duty to bring it to the notice of the Indian public. Needless to add that the India League of America will strive hard and do all it can so that this very much needed aid is obtained from the United States.

New York, January 12, 1951.

WHAT RANSOM FOR MANCHURIA?

By NORMAN CLEAVELAND

Member of U.S. Reparations Mission in Korea and Manchuria during 1946

THE fate of Manchuria is a warning to all the world, but particularly to Asia and Malaya, for in Manchuria the true nature of communism was exposed, both by the Soviets and their stooges, the Chinese Communists. Judging from the comments made in Singapore about Manchuria the Chinese Communists in Pekin are now dancing to the Kremlin tune just as were Chinese Communists in Manchuria during my visit in 1946.

Having travelled extensively in Manchuria and Korea during 1946 as a member of the United States Reparations Mission under the leadership of Ambassador Edwin W. Pauley who was President Truman's personal representative on reparations, I have irrefutable evidence that Soviet activities in Manchuria were the most destructive ever taken on Chinese territory by any European power. Not only were these Soviet activities the most destructive, but they were imperialistic in its most aggressive and sinister form.

I personally had several extended interviews with Communist leaders in Manchuria, including General Lin Piao and Li Li San. Li Li San was the predecessor of Mao Tse Tung as Communist leader of all China. I was particularly interested in talking to these men and other Communist leaders to determine whether their fundamental loyalties were to the Chinese people or whether they too were fanatic Communists of the type familiar in Europe and America, Communists who would betray their own country or even their own families to further the interests of the Kremlin. There were many in America during 1946 who pictured the Chinese Communists as merely agrarian reformers and not subject to control from Moscow.

After numerous prolonged discussions with Chinese Communists I was fully convinced that as far as the controlling leadership of the Communists was concerned the interests of the Kremlin were paramount; that deceit, treachery, and the ruthless use of violence were normal methods to serve their lust for personal power by advancing the interests of Moscow.

The Soviets entered Manchuria three days after the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

first atomic attack on Hiroshima and the day before the Japanese agreed to the Potsdam ultimatum. Five days later the Japanese formally surrendered. During these five days of technical hostilities the Soviets occupied the northern portion of Manchuria and met resistance at only a few points. When even the technical hostilities ceased the Soviets quickly occupied all of Manchuria with ample forces to deal with any emergency. For all practical purposes the Soviets did not control Manchuria until after the war was over.

They promptly undertook to dismantle and destroy the industrial capacity of the country. The Japanese had highly developed a well-rounded industrial economy in Manchuria based largely on the coal, iron, and other abundant natural resources. Manchurian industry played a major part in the Japanese war effort. The industrial capacity of Manchuria would have been invaluable in the rehabilitation of China after eight years of devastating war waged by the Japanese on Chinese territory. The Soviet destruction of Manchurian mines and industries has set back the industrial development of China at least a full generation and possibly a great deal more, for the Soviets now hold Manchuria for ransom from China with the eager connivance of the present rulers of China.

I received the first of many shocks in Manchuria upon my arrival at the Mukden airfield in early June of 1946, about two months after the major military forces of the U.S.S.R. had been withdrawn. Close by the airfield were the ruins of the Northeastern University. It was obvious that these ruins had once been handsome brick and reinforced concrete buildings and that the buildings and grounds generally would have been a credit to any community in the world. The full impact of what I saw did not strike me, however, until I became familiar with the terms of the Sino-Soviet Treaty of Friendship and Alliance, and associated agreements, which had been signed on August 14, 1945, the day before the Japanese formally surrendered and four days after they had accepted the Potsdam ultimatum to surrender. This treaty was announced to the world over the Moscow radio on August 23, 1945, by which time the destruction of Manchurian industry was under way. The preamble states that this treaty was being entered into in accordance with the spirit and principles of the Charter of the United Nations to establish "good neighbourly postwar collaboration" between the two countries.

I observed sessions of the United Nations from the public gallery during its organization in San Francisco in April 1945 and am familiar with the lofty idealism proclaimed during its organization. Even before the first atom bomb explosion the main hope for the future of mankind appeared to depend upon the wholehearted acceptance by the nations of the world of the ideals proclaimed in the Charter of the United Nations. The signatures on the organizational documents of this noble institution were hardly dry when the Sino-Soviet Treaty of Friendship and Alliance was signed in Moscow upon the conclusion of negotiations in which Marshal Stalin, Foreign Minister Molotov, Dr. T. V. Soong, and Wang Shih-Chieh had participated. The Treaty was signed by Molotov on behalf of the U.S.S.R. and Wang Shih-Chieh on behalf of China.

According to the terms of this treaty and associated agreements, the U.S.S.R. obtained a naval base at Port Arthur, 50 percent of the port facilities at Dairen, and joint control for 30 years of principal Manchurian railways. These and other concessions obtained by the U.S.S.R. would certainly be considered imperialism in a less enlightened age and when expressed in less idealistic terms, for these very agreements reaffirm the historic fact that Manchuria is an integral part of China.

In return for these very substantial concessions on Chinese territory, the Soviets had promised "good neighborly postwar collaboration." Article VI of this treaty stated :

> "The high contracting parties agree to render to each other *every possible economic assistance in the post-war period, with a view to facilitating and accelerating reconstruction* in both countries, and to contribute to the cause of world prosperity."
>
> A supplement to this treaty stated :
>
> 1. "In accordance with the spirit of the aforementioned treaties, and in order to put into effect its aim and purposes, the government of the U.S.S.R. agrees to render to China, moral support and aid in military supplies and other material resources; *such support and aid to be entirely given to the National Government of the Central Government of China.*"

The National Government of the Central Government of China was, of course, the government of Chiang Kai-shek.

As I was primarily concerned with making appraisals of mining machinery and installations I visited many remote districts. I remember distinctly the Fouhsin Coal Mines in the Province of Jehol. (These mines should not be confused with the Fusun Mines in the Province of Liaoning). The Fouhsin Mines are in an isolated area which had been intensely developed by the Japanese, until during the war it had grown into a community of about 200,000 persons, over 90 per cent of whom were Chinese. About 38,000 persons had been employed in the mines and the Japanese had built up a modern community. The fact that the total employment for all mines in Malaya at present is slightly over 50,000 persons gives an idea of the size of the Fouhsin Mines which during the war produced about 12,000 tons of coal daily.

Records disclose that the Soviet troops occupied Fouhsin about two weeks after the Japanese had surrendered and remained for about six months. Anyone with an appreciation for fine machinery would be appalled by the remains of the Fouhsin power plant, where four turbo-generators with a rated total capacity of 160,000 K.V.A. had been removed together with major portions of the steam boilers. The size of this plant, which supplied power for much of the industry in Southern Manchuria, can be appreciated when it is realized that it had a rated

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

capacity of about twice the combined output of all power plants in Malaya at the present time.

The general chaos and evidence of crude and undisciplined handling of heavy equipment at the Fouhsin power plant clearly indicated that the machinery would have little more than scrap value upon arrival at its destination. Yet the replacement value of such equipment in the rehabilitation of China and the entire Orient would be many times its original cost.

Of course, without power, the underground mines at Fouhsin were flooded and fires, started by spontaneous combustion in coal above water level, raged out of control in a manner to make a mining man shudder. The destruction of productive capacity of coal and electricity were not the only revolting spectacles at Fouhsin. All the normal facilities of civilization had been devastated. I visited the ruins of a hospital and received reports by eyewitnesses as to its destruction. China is desperately short of medical facilities. Schools, libraries, religious and recreational facilities all shared a similar fate. At Fouhsin, as in most of Manchuria, the Soviets had taken over an orderly community with ample forces to have maintained law and order had they so desired. It was, however, evident that their purpose was to sow the seeds of violent social unrest and the general breakdown of law and order. When the Soviet forces retired from Fouhsin they took with them all available stores of foodstuffs.

The net effect of the Soviet post-war occupation of Fouhsin was to deprive an orderly, isolated community of its means of livelihood, its food supplies, its medical facilities and means of transport, and in addition, law and order were broken down and violent and destructive social unrest encouraged. All this after the Japanese surrender and not on the territory of an enemy, but on the territory of an ally with whom a Treaty of Friendship and Alliance had just been signed, a treaty promising good neighbourly collaboration for the rehabilitation and reconstruction of both countries.

The Soviets reported that the value of the machinery they removed from Manchuria amounted to only U.S. $80,000,000. This might be a fair appraisal based on scrap metal prices at Vladivostok where scrap metal has very little value. Our appraisal which was conservatively based on prewar costs placed the value of equipment removed and destroyed at U.S. $2,000,000,000. And of course the replacement value in the post-war period, and particularly its value in the rehabilitation of China, would be many times its cost.

Not all communities in Manchuria suffered as severely as Fouhsin. In some communities the Soviets removed only choice electrical equipment and machine tools. In such places it also was noted that looting by the local populace was on a much reduced scale. Nor was all the destruction we noticed caused by the Soviets and by looting mobs. There was some battle damage from fighting between the Chinese Nationalists and Chinese Communist forces.

Chinese Communist forces attacked the Peipiao Coal Mine a few days before I arrived and seriously damaged the mine power plant and hoisting machinery.

At Anshan the Japanese had built a major steel producing plant, which included seven blast furnaces. Five of these furnaces had been removed by the Soviet forces and shortly before our visit to Anshan, Chinese Communist forces in the area attacked and blew up the remaining blast furnaces, thus removing any possibility of rehabilitating the productive capacity of the plant. Besides removing the blast furnaces the Soviets had completely dismantled rolling mills, tube mills, and other steel producing equipment.

While in Harbin, the Communist headquarters of Manchuria at the time, I asked several Chinese Communist leaders why their troops were destroying basic industries which were so desperately needed by the Chinese people, regardless of whether the Nationalists or the Communists ruled China. The replies invariably were that the damage was being done by irresponsible local Communist leaders acting on their own initiative. The Communist troops I saw in Manchuria gave the impression of being particularly well trained, equipped, disciplined and not inclined to act without proper orders.

I arrived in Harbin with a party of six engineers to carry on our work of appraising Japanese assets. We had full information as to major Japanese assets and industrial plants in Harbin, obtained from Japanese sources. Our request to Communist officials to visit these Japanese plants were countered in all cases by the statement that they were now in the hands of private owners and that the civil authorities did not have the right to grant us permission to visit private property. However, they finally directed us to a Russian general who permitted us to visit one of the minor railway repair shops in Harbin and then provided most lavish entertainment. However, on the following morning we were able again to press the Communist authorities to be put in direct contact with the "owners" of the Japanese plants we wished to see. Finally, we learned that all plants which had not been dismantled were owned by a single company called. I. I. Tschurin and Company. It was not until after we left Communist territory that we were able to obtain the background and history of this organization and to learn how it came to control nearly all the industry in Harbin which had not been removed or destroyed. The Chinese Communists were very evasive as to details and were anxious only to assure us that everything was in order and, above all, that the Soviets were entirely blameless in the matter.

I. I. Tschurin and Company was originally organized to do business in Manchuria by Russian subjects at about the turn of the century. This firm was highly successful and by the time of the Japanese invasion in 1931 was the largest general agency concern in Manchuria, with branches in all the leading communities. Under the Japanese regime, however, they experienced difficulty and finally, the Hongkong and Shanghai Bank took over complete control of the company. Before leaving Harbin

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the outbreak of World War II, the manager closed the Hongkong and Shanghai Bank at Harbin and appointed a White Russian, named Ostrenko, to act as caretaker of the bank's premises and gave him a power-of-attorney to act in such matters.

Upon the arrival of Soviet forces in Harbin they concluded a deal with Ostrenko, taking over the Hongkong and Shanghai Bank's interest in I. I. Tschurin and Company by the payment of occupational currency which was printed in the U.S.S.R. for use in Manchuria. This currency, according to agreement, was redeemable by the Chinese Nationalist Government. I. I. Tschurin and Company and all its branches in Manchuria were thereafter placed under the management of a Soviet trading organization which was thoroughly financed with occupational currency, there being no shortage of paper in Russia at that time. The new management of I. I. Tschurin and Company, with the support of the Soviet forces, had little difficulty in persuading all concerned with the desirability of co-operating fully in the "sale" of factories and properties which had not been stripped or destroyed. In making these deals I. I. Tschurin and Company went through all the legal motions of making a *bona fide* transfer of title in accordance with good capitalistic procedure. Of course, the amount of occupational currency issued by the Soviets was vastly in excess of the amount agreed to by the Chinese Government; however, for purposes of negotiations in which I. I. Tschurin and Company were concerned the occupational money had full face value.

When the Chinese Nationalists occupied portions of Manchuria they promptly passed a law which invalidated deals made by I. I. Tschurin and Company. This law stated that no foreigner or foreign company could own property in China unless Chinese enjoyed reciprocal rights in the foreigner's own country. Thus, since Chinese could not own land in Russia, the Russians could not own property in China. However, in Communist-held areas of Manchuria, I found the Chinese Communist authorities actively condoning the actions of I. I. Tschurin and Company and doing their best to rationalize and justify them.

The Soviets having occupied Manchuria with large military forces for a period of nine months during 1945 and 1946, I made a particular effort to locate any constructive works they had left behind. Certainly any civilized people would have done so, particularly a people who proclaim themselves the inventors of nearly all modern conveniences as well as being champions of the under-privileged. However, the only constructive efforts I was able to find to mark the nine months of occupation of Manchuria by the Soviets were massive stone monuments. I saw them in Mukden, in Changchun, and in Harbin. These massive stone columns supported in Mukden a nearly full-scale replica of a Soviet tank, in Changchun a Soviet fighter plane, and in Harbin two heroic soldiers holding a Soviet star above their heads. These monuments bore massive inscriptions on bronze plates stating that they had been erected by the local people in gratitude for their liberation. Arising against a background of chaos and misery resulting from the destruction of the economic life of the land, these monuments were, in effect, tombstones of good faith and the legitimate hopes of the Chinese people after fighting a victorious war against Japan. The deception and terror these monuments reflect have blighted the lives of hundreds of millions of people in Asia. These monuments were not the works of war criminals but rather of peace criminals and the crimes were condoned and abetted by Chinese Communists who still seek to shield the criminals and make way for further crimes against China.

Early in 1950 it was reported that the Chinese Communists and the U.S.S.R. had signed a "Treaty of Friendship, Alliance and Mutual Assistance" dated February 14, 1950. In this treaty the Soviets promise to return "not later than the end of 1952" some of the concessions they have obtained in Manchuria under the Treaty of Friendship and Alliance of August 14, 1945. However, the Soviet Naval Base at Port Arthur still dominates the North China coast, the Soviets still control Dairen, Manchuria's main seaport, and Soviet control of Manchurian railways and I. I. Tschurin and Company apparently is still intact. They hold the whip hand in Chinese industrial and political development and China has been alienated from her normal commercial and cultural contacts with the West. It is obvious that China must pay a fearful ransom to redeem Manchuria "not later than the end of 1952."

The horrible price China may be forced to pay is evidenced by the grim fate of Northern Korea, another hostage of the Soviets. Like Manchuria, Korea—particularly North Korea—was highly developed industrially by the Japanese. Like Manchuria, Korean industry did not suffer war damage. In the post-war period Korea could have been one of the most fortunate countries in the Far East. But that was not to be. Violating all agreements concerning Korea, just as in Manchuria, the Soviets took action resulting in a division at the 38th parallel. The Soviets then proceeded to develop the war potential of North Korea and in due time turned it loose in savage aggression. The Soviets certainly knew what the results would be. The Soviets knew that half of Korea could not defeat the United States with the backing of the 53 other nations who endorsed the United Nations resolution to support South Korea. The Soviets certainly knew of the destructive capacity of the Super Forts (airplanes). They knew that the Korean war could have no other outcome except complete destruction of Korea's economy and terrific misery, suffering and loss of life to the Korean people. Certainly the Soviets have no greater regard for the welfare of the Chinese than they have for the Koreans. China too may be forced to pay the fearful ransom, for the Soviet stooges in Pekin are now behaving just as Soviet stooges behaved in North Korea.

CENTRALIZATION—THE NEGATION OF DEMOCRACY

By MANKUMAR SEN

In theory Democracy has come to mean "government of the people, by the people and for the people." In other words it is the people with whom should lie the reins of adminsitration and it is the people's well-being —their physical, moral and intellectual development that should constitute the fundamental objective of such administration. Again, this Democratic Government should mean not only the governance of political affairs but the State's economic affairs too should, for all intents and purposes, vest in it. Rather it is in the latter sphere of economy that the people's choice should be more vocal, assertive and pronounced so that democracy in economy automatically leads the country to a full-fledged cultural democracy—to a state based on the fundamentals of social justice.

While almost everyone of us seems to comprehend the meaning and implications of political democracy our indifference to or ignorance of democracy's economic pre-requisites and consequences is rather sweeping. As a result modern democracies have become mere patchworks—attempting at a preposterous compromise between democracy in politics and dictatorship in economics. The sum and substance of such a mixture has been that what the masses of the people have earned in their right to cast votes and elect representatives is comparatively less than microscopic in relation to what they are made to lose every day and at every step in the sphere of the country's economy. This strange and unnatural 'adjustment' between two sharply contradictory forces—one recognizing the people's right to vote and the other denying their right to live in economic justice and equity—is inevitably leading the so-called democracies of today to rapid recession and class cleavage, and ultimately to bloody strifes and war. Truly speaking, there is yet to evolve a real democracy—politico-economic and cultural. As we have outlined above, nothing short of economic democracy—equilibrium of production and distribution can ensure cultural pursuits for the people. And without cultural pursuits human beings differ from beasts only in form.

The fact that even after the growth and development of democracies the world today has not been freed from the ravages of war, from the clutches of exploiters, from untold misery and seething discontent among the multi-millioned masses all over the world, should serve as a pointer and an eye-opener to the guardians of modern era who are rushing with break-neck speed to a machine-based and centralized civilization. But alas! they are either blind or helpless victims to an illusory propaganda!

Now, how is it that while there was powerful advocacy for democracy, the people were deprived of their economic and cultural rights? The evil is too deep and vast and baffling: we cannot unearth 'romantic' development, short of a calm, probing unprejudiced analysis. The process of this deprivation and disgraceful regression has been very scientific (or should we call unscientific?) so that the ignorant masses were hoodwinked and bluffed easily.

Those Happy Days

Until about two hundred years ago up to the advent of what has come to be known as the 'Industrial Revolution' the economic systems of the different countries of the world were considerably broad-based and decentralized. Particularly in the Orient it was all throughout a decentralized economy, pure and simple. The production was primarily by simple tools and implements which the ordinary people could afford to possess by their modest means. The production being centred round the private entrepreneur, it afforded ample scope for the culture and development of his artistic acumen, imagination and intellect. There being no magic of large-scale machinery as we see today the success of the trade and industry was mostly dependent on human energy and skill. As the satisfaction of the local demands was the objective of economic planning there was nothing like mass-production or over-production for profiteering which is the worst malady of the modern world. The economy was guided by a spirit of mutual co-operation—as for instance, the agriculturist used to offer his surplus produce to the artisans and in return he could get the necessary implements of production, viz., the plough, the spade, etc., from the artisan. Thus it was production by the masses and for the masses—and not mass production. This superstructure of a decentralized economy drew its inspiration and sustenance from the people. Conflicting forces and forces of exploitation and vested interests found very little scope to play their game and this rendered class struggle, class hatred and violent outbursts almost impossible. Maybe according to its modern definition we had less of civilization those days—but we had peace. There was peace in individual in the society and in the country and that again assured international peace or peace among nations of the world. And today?

The more broad-based the production, the more evenly and equitably distributed is the wealth of the country. The scope of unequal competition being almost zero, exploitation of one by the other, of the mute millions by a millionaire was absent. And who can deny that inequality breeds hatred, hatred begets violence and violence in its virulent form lands the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

nations in war? We have enough of progress today—yes—but that progress has denied us peace, has denied us the fundamental rights of man, has permanently sowed the seeds of war. If progress cannot bring about peace what it is worth for? Has it really any meaning?

Unlike modern economic systems in which units of production are centralized in a place known as the cities, the economy of those days centred round villages where lived and developed the predominantly larger part of the population. A different story we have today and hence also the difference in conclusion! This they say, is an age of science and machinery. The dual might of science and its achievements in machinery has brought about spectacular progress in the different sectors of our life but all this progress is more than nullified by the disgrace it has showered on humanity, the crushing blow it has administered to a balanced economy, the reign of desert and disease it has let loose in the peaceful and lively villages. Modern progress means poverty for the millions and unlimited plenty for the millionaires. This is a progress where man has gone mad after machine—has become a slave rather than a master of machine. So the rapid development of machine-progress is strangling all human elements, all moral and spiritual aids still more rapidly. This is why man has the least sympathy for man and the human world is being visited and revisited by devastating wars at the bid of a designing few. The aim and end of progress is peace. We say we have progress—also we mourn there is no peace anywhere. Is it not a strange phenomenon judging by the only criterion of progress, we have not marched a step forward from pre-historic barbarism!

Science and Inventions

The Industrial Revolution was preceded by various monumental inventions of science. These inventions largely stepped up production and strengthened organization on a wider scale. The invented large machineries in a great measure replaced small tools and implements now the production being on a mass-scale and not by the masses as before. Application of large machineries was no doubt costly, so it needed much outlay of capital. Formerly it was the satisfaction of local demands that determined the policy of production, now the huge capital investment necessitated production being carried to capacity with a view to minimising the average cost and maximising profit by export to still-unexplored countries. Not all the required raw materials being available within their own boundaries the owners and organisers of this revolutionary system of large-scale production were in frantic search for raw materials outside. Thus Great Britain landed in India; Japan and America in China, so on and so forth. The Jute Mill Industry of Great Britain was concentrated at Dundee for which raw jute was bought from the poor Indian peasants at the most uneconomic prices through an unholy alliance between the British traders in India—who had by now become masters of the land—and the jute factory owners in Dundee. It is to be noted that until before this necessity arising from Industrial Revolution, Britain had no occasion to infiltrate in Indian market and ultimately to secure reins of India's administration primarily for easy economic exploitation as in the above instance. Each and every country which became a victim to such centralized production intruded on the rights of other countries which were primarily the producers of raw materials so that its factory did not suffer from shortage of raw materials. And as an inevitable consequence of such intrusion, the intruding traders invariably became mighty rulers too. We need not treat in detail the stained history of how East India Company came to trade in India and ultimately became its ruler. Thus we see two distinct classes of countries today—one class being the producers of raw materials mainly, and the other class being the producers of industrial goods, the raw materials for which are in no small measure drawn from the former class. Again, the owners of these industries form a separate class—the class of exploiters—in their own countries. In this way class-conflict and country-conflict comes to pass frequently with bitter results. So we see what a vicious circle the centralized economy has created today. This is the basic disease of modern world. No superficial treatment either through full-throated slogans of world governments and world federation or through political adjustments and re-adjustments can cure this basic disease.

What is Our Position?

Over and above the profit-motive or the motive of a powerful few to exploit the millions the large-scale machineries have been adopted also as labour-saving devices. To a certain extent Britain, America and some other countries had the problem of labour shortage no doubt,—but what about India?

In a country where the unemployment of crores of people has become a tremendous and baffling problem, the application of labour-saving machines is murderous in so far as this will aggravate the problem of unemployment, far less lessen it. The factory-owners will tend to, as they are tending now, 'efficient' machines more and more and thereby drive the human labour out. Also the ordinary people of India have neither the power nor the desire to go Western-way. Ours is a land predominantly agricultural. The life-blood of this land is vested in its seven hundred thousand villages. From any reason and any conceivable approach, India's decision cannot but be decentralization. Let us pause and ponder.

THE HEAVY CHEMICAL INDUSTRIES

By J. V. RAMANA, B.A., B.SC.,
Lecturer in Chemistry, Government College, Cuddapah

The Heavy Chemical Industries occupy a key position in a country's industrial economy and the economic regeneration of our country in particular depends to a large extent on our ability to turn the potentialities at our disposal to proper account. Industrialization is naturally followed by a rapid growth of the chemical industries which form the very basis of national defence. The two world wars have proved beyond doubt the importance of the chemical industries in the scheme of national defence and our country obviously cannot afford to neglect their development and jeopardise her newly won freedom. These heavy chemical industries are important not only for general economic development but for the development of other small-scale industries as well. The products of the heavy chemicals industry form the basic raw materials used in almost all other industries.

The Indian chemical industry has only been of recent growth. Chemical industries were unknown in the pre-war days in India, our requirements being met mostly by imports from abroad. Acute shortage of chemicals was felt for the first time during the early years of World War I as a result of the stoppage of imports. The demand of chemicals for defence purposes was also keenly felt and this led to the starting of a few chemical works mostly in the cities of Bombay and Calcutta. A few plants were set up for the manufacture of sulphuric acid and its allied products. The production of chemicals like Nitric Acid, Toluene, etc., used in the manufacture of explosives, also received immediate encouragement. The heavy chemicals industry however had a great impetus during the recent World War which led to the stabilization and rapid growth of the industry in our country.

The various chemical industries that need immediate development in India are the manufacture, for example, of mineral acids, paints and varnishes, drugs and medicines, dyestuffs, fine chemicals, photographic chemicals, fertilizers, plastics, glass, pharmaceuticals, rubber, enamels, and ceramics. As the industries happen to be too many, classification of the most important heavy chemicals may be made for the sake of convenience under three heads as (*a*) sulphuric acid and the products derived from it, (*b*) the caustic alkalis and soda ash and lastly (*c*) miscellaneous heavy chemicals like ammonia, bichromates, bleaching powder, etc.

(a) *Sulphuric acid* : Sulphuric acid is a vital basic chemical and its importance and utility in other industries has been universally recognized. The total consumption of this important acid in industry is supposed to denote in general the industrial prosperity of a country.

Sulphuric acid as such finds use in leather tanning, in textiles, in the production of explosives, in nonferrous metallurgy, and in filling the accumulators. The acid plays an equally important role in the manufacture of certain auxiliary chemicals such as:

(*i*) Ammonium sulphate and superphosphate used as fertilizers;
(*ii*) Hydrochloric and nitric acids used in the production of explosives;
(*iii*) Ferrous sulphate, magnesium sulphate and the bichromates used in textiles;
(*iv*) And aluminium sulphate and alums used in purification of water and in leather-tanning.

Sulphuric acid is manufactured from either sulphur or from iron pyrites (FeS_2) though the former is mainly used in our country for the manufacture of the acid. Sicily and Japan were mostly supplying our requirements of sulphur in the pre-war days but with the outbreak of World War II, the supplies had to be cut off and imports made from the U.S.A. The non-availability of our requirements of sulphur led to the exploitation of the deposits in Baluchistan by the then Government of India. But the ore was not only found to be of inferior quality but its actual working and transportation proved to be nearly four times as costly as imported sulphur. With the partition of the country after independence even this source of supply has been lost and India has now to depend entirely on imported sulphur for her industrial requirements. Deposits of iron pyrites are however found in Singhbhum district in Bihar and in Simla. No attempts have so far been made in India to utilize these sources of combined sulphur not only because of certain technical difficulties and for reasons of economy, but because a purer acid can be more readily obtained from good sulphur.

In India before the recent war, there were about 23 factories manufacturing the acid, but with the outbreak of World War II, owing to the extensive demand of the acid for munitions production six new plants were set up with an annual production of about 8,000 tons.

Only a few plants in our country are worked on the contact process, the rest operating on the less economical lead chamber process which gives only a weak acid requiring further concentration. The high cost of the lead chamber process is due to the fuel consumption for concentrating the acid to the required specific gravity of about 1.84, whereas in the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

contact process the maximum concentration is directly obtained after the oxidation of sulphur dioxide into the trioxide and its dissolution in water.

The annual production of the acid in our country is roughly estimated to be about 80,000 tons. The imports of the acid from abroad are very low owing to the difficulties in transportation, the high freight charges and also because of the hazardous nature of the acid. As a result of this the sulphuric acid industry enjoys a natural protection. Bengal stands first in the production of the acid and the production at other centres like the Punjab and Madras needs development at a later date when there is an improvement in the position of the raw materials.

The acid is used in other countries principally for the manufacture of fertilisers like ammonium sulphate and the superphosphates but unfortunately our total production of the acid is so low that it does not warrant its profitable use in the manufacture of fertilizers. In Soviet Russia, about three-fourths of the total quantity of the acid produced is directly made use of in the manufacture of fertilizers. In spite of our country being predominantly agricultural, only a small quantity of the acid produced is employed in its manufacture, obviously for reasons of economy and the acid thus conserved is utilized in the development of other auxiliary industries.

Hydrochloric acid, another important mineral acid like the sulphuric, finds a variety of uses in industry. It is employed in the manufacture of chlorides, such as the zinc chloride and ferric chloride and also in the textile industry.

The method of production of the acid in our country is by the decomposition of common salt with sulphuric acid. The sodium sulphate obtained as an important by-product is used in the preparation of glauber's salt and in the paper industry. The synthetic acid is also now-a-days produced by the direct combination of hydrogen and chlorine in the gaseous form, which are obtained as by-products in the electrolytic manufacture of caustic soda. This method is certain to have a bright future in our country because of the cheapness in the cost of production compared to the chemical process.

Nitric acid ranks in importance on a par with the sulphuric acid because of its extensive use in the manufacture of explosives and in fertilizers. The acid quite apart from its utility in the production of munitions is of considerable importance in the manufacture of diazodyes and aromatic nitro compounds.

The method of production of the acid as is adopted in India at present is by the decomposition of the sodium or potassium nitrate with sulphuric acid. The production of the acid is carried out by most of the sulphuric acid manufacturers. The catalytic method of production of the acid by the oxidation of ammonia has not been attempted yet on an industrial scale in our country and the method is bound to have a bright future if the fertilizer industry is developed on a large scale. This method has another distinct advantage of being quite independent of sulphuric acid of which we are in short supply. The production of the acid increased enormously during the war period because of its immediate need in the manufacture of munitions for defence purposes. The annual production is likely to increase to a considerable extent if the dyestuffs industry is established in our country, the possibilities of which are being explored by the Government of India.

(b) *The Caustic alkalies* : The manufacture of caustic alkalies and their allied products undoubtedly forms another important unit in the field of heavy chemical industries.

Sodium hydroxide or caustic soda as it is called is a chemical of very great importance and is an essential requisite for many other industries like textiles, paper, dyestuffs, soap manufacture, etc Caustic soda can be produced by two different processes, the electrolytic and the chemical methods, the raw material in the electrolytic method being pure common salt. The prominent manufacturers of this product in our country are the Mettur Chemicals, Mettur Dam, and the Tata Chemicals at Mithapur.

The electrolytic plant at Mettur Dam which started production of the alkali in 1941 has a production capacity of about five tons per day. The Tata Chemicals plant at Mithapur has an annual capacity of about 2000 tons, the process adopted being electrolytic. Bleaching powder is manufactured from the chlorine obtained as a by-product in the manufacture of caustic soda.

The indigenous manufacture of caustic soda was almost negligible before the World War II, in spite of the indispensable nature of the chemical in running other consumer industries. Most of our requirements of the alkali are met from foreign imports which are found to be quite cheap. As the packing and transportation of caustic soda do not present any difficulties as in the case of sulphuric acid, the imports are made cheap and as a result of this, indigenous production has been seriously handicapped. The Indian Tariff Board which examined the prospects of this industry in 1946 recommended protection to the local producers of caustic soda.

The imports of the alkali before the war were quite satisfactory, but the situation considerably deteriorated with the outbreak of hostilities and owing to the scarcity of supplies, some sort of control had to be enforced by the government, in order to conserve the stocks for defence purposes. The shortage of supplies during the war period pointed out the immediate need to make ourselves self-sufficient in our requirements of the alkali. The imports of the product are to be regulated by governmental control till we reach a position of self-sufficiency in the matter of production. The problem has to be tackled

THE HEAVY CHEMICAL INDUSTRIES

By J. V. RAMANA, B.A., B.SC.,
Lecturer in Chemistry, Government College, Cuddapah

The Heavy Chemical Industries occupy a key position in a country's industrial economy and the economic regeneration of our country in particular depends to a large extent on our ability to turn the potentialities at our disposal to proper account. Industrialization is naturally followed by a rapid growth of the chemical industries which form the very basis of national defence. The two world wars have proved beyond doubt the importance of the chemical industries in the scheme of national defence and our country obviously cannot afford to neglect their development and jeopardise her newly won freedom. These heavy chemical industries are important not only for general economic development but for the development of other small-scale industries as well. The products of the heavy chemicals industry form the basic raw materials used in almost all other industries.

The Indian chemical industry has only been of recent growth. Chemical industries were unknown in the pre-war days in India, our requirements being met mostly by imports from abroad. Acute shortage of chemicals was felt for the first time during the early years of World War I as a result of the stoppage of imports. The demand of chemicals for defence purposes was also keenly felt and this led to the starting of a few chemical works mostly in the cities of Bombay and Calcutta. A few plants were set up for the manufacture of sulphuric acid and its allied products. The production of chemicals like Nitric Acid, Toluene, etc., used in the manufacture of explosives, also received immediate encouragement. The heavy chemicals industry however had a great impetus during the recent World War which led to the stabilization and rapid growth of the industry in our country.

The various chemical industries that need immediate development in India are the manufacture, for example, of mineral acids, paints and varnishes, drugs and medicines, dyestuffs, fine chemicals, photographic chemicals, fertilizers, plastics, glass, pharmaceuticals, rubber, enamels, and ceramics. As the industries happen to be too many, classification of the most important heavy chemicals may be made for the sake of convenience under three heads as (*a*) sulphuric acid and the products derived from it, (*b*) the caustic alkalis and soda ash and lastly (*c*) miscellaneous heavy chemicals like ammonia, bichromates, bleaching powder, etc.

(a) *Sulphuric acid* : Sulphuric acid is a vital basic chemical and its importance and utility in other industries has been universally recognized. The total consumption of this important acid in industry is supposed to denote in general the industrial prosperity of a country.

Sulphuric acid as such finds use in leather tanning, in textiles, in the production of explosives, in nonferrous metallurgy, and in filling the accumulators. The acid plays an equally important role in the manufacture of certain auxiliary chemicals such as :

(*i*) Ammonium sulphate and superphosphate used as fertilizers;
(*ii*) Hydrochloric and nitric acids used in the production of explosives;
(*iii*) Ferrous sulphate, magnesium sulphate and the bichromates used in textiles;
(*iv*) And aluminium sulphate and alums used in purification of water and in leather-tanning.

Sulphuric acid is manufactured from either sulphur or from iron pyrites (FeS_2) though the former is mainly used in our country for the manufacture of the acid. Sicily and Japan were mostly supplying our requirements of sulphur in the pre-war days but with the outbreak of World War II, these supplies had to be cut off and imports made from the U.S.A. The non-availability of our requirements of sulphur led to the exploitation of the deposits in Baluchistan by the then Government of India. But the ore was not only found to be of inferior quality but its actual working and transportation proved to be nearly four times as costly as imported sulphur. With the partition of the country after independence even this source of supply has been lost and India has now to depend entirely on imported sulphur for her industrial requirements. Deposits of iron pyrites are however found in Singhbhum district in Bihar and in Simla. No attempts have so far been made in India to utilize these sources of combined sulphur not only because of certain technical difficulties and for reasons of economy, but because a purer acid can be more readily obtained from good sulphur.

In India before the recent war, there were about 23 factories manufacturing the acid, but with the outbreak of World War II, owing to the extensive demand of the acid for munitions production six new plants were set up with an annual production of about 8,000 tons.

Only a few plants in our country are worked on the contact process, the rest operating on the less economical lead chamber process which gives only a weak acid requiring further concentration. The high cost of the lead chamber process is due to the fuel consumption for concentrating the acid to the required specific gravity of about 1.84, whereas in the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

contact process the maximum concentration is directly obtained after the oxidation of sulphur dioxide into the trioxide and its dissolution in water.

The annual production of the acid in our country is roughly estimated to be about 80,000 tons. The imports of the acid from abroad are very low owing to the difficulties in transportation, the high freight charges and also because of the hazardous nature of the acid. As a result of this the sulphuric acid industry enjoys a natural protection. Bengal stands first in the production of the acid and the production at other centres like the Punjab and Madras needs development at a later date when there is an improvement in the position of the raw materials.

The acid is used in other countries principally for the manufacture of fertilisers like ammonium sulphate and the superphosphates but unfortunately our total production of the acid is so low that it does not warrant its profitable use in the manufacture of fertilizers. In Soviet Russia, about three-fourths of the total quantity of the acid produced is directly made use of in the manufacture of fertilizers. In spite of our country being predominantly agricultural, only a small quantity of the acid produced is employed in its manufacture, obviously for reasons of economy and the acid thus conserved is utilized in the development of other auxiliary industries.

Hydrochloric acid, another important mineral acid like the sulphuric, finds a variety of uses in industry. It is employed in the manufacture of chlorides, such as the zinc chloride and ferric chloride and also in the textile industry.

The method of production of the acid in our country is by the decomposition of common salt with sulphuric acid. The sodium sulphate obtained as an important by-product is used in the preparation of glauber's salt and in the paper industry. The synthetic acid is also now-a-days produced by the direct combination of hydrogen and chlorine in the gaseous form, which are obtained as by-products in the electrolytic manufacture of caustic soda. This method is certain to have a bright future in our country because of the cheapness in the cost of production compared to the chemical process.

Nitric acid ranks in importance on a par with the sulphuric acid because of its extensive use in the manufacture of explosives and in fertilizers. The acid quite apart from its utility in the production of munitions is of considerable importance in the manufacture of diazodyes and aromatic nitro compounds.

The method of production of the acid as is adopted in India at present is by the decomposition of the sodium or potassium nitrate with sulphuric acid. The production of the acid is carried out by most of the sulphuric acid manufacturers. The catalytic method of production of the acid by the oxidation of ammonia has not been attempted yet on an industrial scale in our country and the method is bound to have a bright future if the fertilizer-industry is developed on a large scale. This method has another distinct advantage of being quite independent of sulphuric acid of which we are in short supply. The production of the acid increased enormously during the war period because of its immediate need in the manufacture of munitions for defence purposes. The annual production is likely to increase to a considerable extent if the dyestuffs industry is established in our country, the possibilities of which are being explored by the Government of India.

(b) *The Caustic alkalies* : The manufacture of caustic alkalies and their allied products undoubtedly forms another important unit in the field of heavy chemical industries.

Sodium hydroxide or caustic soda as it is called is a chemical of very great importance and is an essential requisite for many other industries like textiles, paper, dyestuffs, soap manufacture, etc Caustic soda can be produced by two different processes, the electrolytic and the chemical methods, the raw material in the electrolytic method being pure common salt. The prominent manufacturers of this product in our country are the Mettur Chemicals, Mettur Dam, and the Tata Chemicals at Mithapur.

The electrolytic plant at Mettur Dam which started production of the alkali in 1941 has a production capacity of about five tons per day. The Tata Chemicals plant at Mithapur has an annual capacity of about 2000 tons, the process adopted being electrolytic. Bleaching powder is manufactured from the chlorine obtained as a by-product in the manufacture of caustic soda.

The indigenous manufacture of caustic soda was almost negligible before the World War II, in spite of the indispensable nature of the chemical in running other consumer industries. Most of our requirements of the alkali are met from foreign imports which are found to be quite cheap. As the packing and transportation of caustic soda do not present any difficulties as in the case of sulphuric acid, the imports are made cheap and as a result of this, indigenous production has been seriously handicapped. The Indian Tariff Board which examined the prospects of this industry in 1946 recommended protection to the local producers of caustic soda.

The imports of the alkali before the war were quite satisfactory, but the situation considerably deteriorated with the outbreak of hostilities and owing to the scarcity of supplies, some sort of control had to be enforced by the government, in order to conserve the stocks for defence purposes. The shortage of supplies during the war period pointed out the immediate need to make ourselves self-sufficient in our requirements of the alkali. The imports of the product are to be regulated by governmental control till we reach a position of self-sufficiency in the matter of production. The problem has to be tackled

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

by setting up more plants for the manufacture of the alkali, and if necessary, adequate steps should be taken by the government itself in installing a few plants for its manufacture.

Sodium carbonate commercially known as soda ash, is another indispensable raw material required in the development of a large number of other industries. Soda ash is consumed in large quantities in the textile industry where owing to the mild alkaline nature of the substance it is made use of for cleaning the fabrics and yarn. The glass and ceramics industry also consumes the substance to a large extent.

The Ammonia soda process or the Solvay's process is followed for the manufacture of soda ash and two plants are operating on this process in our country. As the cost of production of indigenous soda ash does not permit an economic working, imports are being made on a large scale to meet our demands, and the prospects of the industry appear to be rather gloomy.

(c) *Miscellaneous Heavy Chemicals*: A large number of chemicals like the bichromates of sodium and potassium, bleaching powder, glycerine, sodium thiosulphate, potassium chlorate, potassium permanganate, litharge, white lead, ammonia, etc., can be classified under this head but only a few will be dealt with in detail below.

The chromates of sodium and potassium are chemicals of outstanding importance and find a variety of uses in many industries. They are largely used in the leather industry for the chrome tanning of leather and in the manufacture of chrome colours or chrome pigments which find considerable use in the paint industry. Chromic acid is employed in the electroplating industry.

The chief raw material, the chrome iron ore of fairly good quality is available in Mysore and in Bihar. The other raw materials like lime and sulphuric acid are available in sufficient quantities to meet the requirements of this industry, soda ash alone being imported from abroad in view of the local production of it being negligible.

At present in our country there are about a dozen plants engaged in the manufacture of bichromates, the largest among them being the Cawnpore chemical works, Cawnpore, and the Buckingham and Carnatic Mills, Madras. As Madras and Kanpur happen to be centres of leather-tanning, location of more plants in these areas promises a bright future for the bichromate industry. The machinery required for the production of the bichromates can be easily manufactured in our own country and we can anticipate with some optimism that she would be quite independent of foreign supplies within a short time.

Another chemical of importance is ammonia, which finds considerable use in the refrigeration industry. It is used in the rubber industry for vulcanizing and in the manufacture of ammonium sulphate which finds extensive use as an artificial manure. It is also employed as a condensing agent in the plastic industry, which is still in an infant stage in our country and in the production of cuprammonium silk.

Anhydrous ammonia is produced on a very meagre scale, the local production being very small compared to our actual demands. Ammonia can be produced by several methods, the synthetic method of manufacture being the best and the most popular. It is high time that efforts were made for the installation of at least a few plants in some important industrial centres for the manufacture of synthetic ammonia. The recovery of ammonia from the coal-tar distillates undoubtedly is a very cheap process and can be successfully undertaken on a large scale to meet at least a part of our demands.

Bleaching powder and chlorine are chemicals of equal importance—the former being manufactured from the chlorine obtained as a by-product in the electrolytic manufacture of caustic soda. The chief Indian producers of bleaching powder are the Travancore Chemicals and the Mettur Chemicals. In our country bleaching powder is consumed to the extent of about 12,000 tons per annum, more than 50 per cent being used up by the paper mills and the rest being utilised in the textile industry and in the manufacture of other essential chemicals.

The Indian production of bleaching powder and chlorine is steadily going up and within a short time it would be quite sufficient to meet our entire requirements. If a few additional plants are installed for the production of caustic alkali, our country would definitely be in a sound position to meet all her requirements of chlorine for the pharmaceutical and other industries as well.

Our Indian chemical industry, as has been pointed out, is in a backward state, compared to the scientifically and industrially advanced nations of the West and is in need of urgent and immediate development. The two grave handicaps which seem to threaten the development of this industry in our country are the absence of technical manpower and the necessary industrial equipment. It would be only suicidal to depend for ever on technical assistance from outside for our industrial development and efforts should be made for the training of skilled personnel in our own country. All this requires a close co-operation between the men of science of the universities and the big industrialists in addition to government help. It is the paramount duty of industrialists and business magnates to extend their sympathy and co-operation to the national government in advancing the country's industrial progress. The government are doing their best in this direction in spite of the anaemic state of our finances and we can hope with some measure of confidence that the heavy chemical industries will have a bright future in our country.

Book Reviews

Books in the principal European and Indian languages are reviewed in *The Modern Review*. But reviews of all books sent cannot be guaranteed. Newspapers, periodicals, school and college text-books, pamphlets, reprints of magazine articles, addresses, etc., are not noticed. The receipt of books received for review cannot be acknowledged, nor can any enquiries relating thereto answered. No criticism of book-reviews and notices is published.

EDITOR, *The Modern Review*.

ENGLISH

BRITISH MALAYA: *An account of the origin and progress of British influence in Malaya. By Sir Frank Swettenham. Published by George Allen and Unwin, Ltd., London. Forty-nine illustrations and a map. Pp. 330. Price 21 shillings.*

Ever since the date of its first publication in 1906, *British Malaya* by Sir Frank Swettenham has been recognised as the standard work on the subject. This is due not only to the weight of the author's official experience extending over all the active years of his life-time, but also to his intrinsic qualities of clearness, honesty and sound judgment. In this revised edition of the work which has replaced the revised edition of 1929, the author tells once more the story of "how the first British Residents (in Malaya) performed their difficult task" and "how they evolved a scheme of administration never before tried with a people of different colour, language and religion inhabiting a tropical country" and of the progress secured for the Malay states by "the efforts of their British advisers working hand in hand with the Malay Rulers, their chiefs and their people" (Introduction, p. vii). It is only fair to state that the narrative has been told not only with full documentary evidence, but what is more, with remarkable independence and freedom from racial bias. To take a few examples, referring to John Crawfurd's vaunt of Albuquerque and his seven hundred Europeans storming "the walls and entrenchments" of Malacca "that were guarded by 30,000 barbarians" (p. 15), he says with withering sarcasm, "Unfortunately, it is more than probable that the 700 Europeans, the 30,000 barbarians and the walls and entrenchments were equally imaginary." On p. 37*f* he shows cunningly how the circumstances of the British acquisition of Penang in 1786 exhibited "the cowardice of the East India Company, ending in a breach of faith which sullied the British name" and paved the way for the horrors of the Siamese invasion of Kedah in 1821. Coming to recent times he rightly finds fault with the financial policy of the Federated Malay States which had led them "to create a very large establishment with the houses, passages, leave-pay and especially the pensions for a great number of highly paid Government officials" (p. 352) and that of Johore where, in spite of the abundant resources of the State, a great deal is lacking in the way of road construction, water-supply and sanitation" (p. 354). His criticism of the constitutions of 1909 and 1927 (pp. 358-9), so far as they go, are just and proper, *e.g.*, when he condemns the combination of the offices of Governor of a Crown Colony and President of a Federal Council of Protected States and the wholesale nomination of non-official members of the Council. The author's discerning and very full review (Ch. VII) of the character of the Malayas, their customs, arts, language and literature is derived, as he rightfully claims, from "close intimacy with every class of Malay society" extending over many years. One of the attractions of this book is the justice which it renders to the memory of one of Britain's greatest empire-builders in the East, Sir Stamford Raffles. Describing in full the history of the foundation of Singapore, the author justly says (p. 73), "In all this no British party and no British Government can claim to have taken any part except by grudgingly assenting to what had been done, almost without their knowledge, entirely against their wishes. The man to whom the credit belongs gave his talents and his life to achieve an end which he believed to be necessary to the prestige, the power and the trade of England in the Far East." To the Government of British India he pays a generous tribute for its ungrudging help to the Malay States throughout their later history (p. 287). Of great interest to Indian historical scholars is the author's statement (p. 13) about the Indian origin of the names Singapore and Tamasak as well as his less convincing derivation of the Malayas from a cross between South Indian immigrants to Sumatra and the local people, who "gradually worked their way to Java, Singapore and the Malaya Peninsula, to Borneo, Celebes and the other islands of the Archipelago and even to the Philippines, Sulu, the Caroline Islands and perhaps to Formosa" (p. 144).

On the whole, the book, while throwing a flood of light on the past history of Malay under British rule or influence, offers little help for shaping its future. The author is full of admiration for the administration which accounted for "the phenomenal progress and development of Malay from the year 1874 to the year 1941," and he is completely out of sympathy with the recent constitutional changes tending to whittle down the rulers' powers and to advance democratic self-government (Introduction, pp. x-xiii). He forgets that the administrative frame-work of the past which he justly admires, must give way to the changing world-forces of the present. To quote the poet's words: "The old order changeth, yielding place to new." The paper, print, get-up and illustrations are excellent.

U. N. GHOSHAL

SOCIALISM AND THE NATIONAL REVOLUTION: *By Acharya Narendra Deva, edited by Yusuf Meherally. Published by the Padma Publications Ltd., Bombay. 1946. Pp. 208+xvi. Price Rs. 5-8.*

The book under review is a representative collection from the speeches and writings in the years 1934 to 1946, of Acharya Narendra Deva, one of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the leading figures of the erstwhile Congress Socialist Party, now the Socialist Party, of India. Here we find an explanation and justification of the emergence of a new political party within the Congress from the pen of one who took a leading part in its formation. We find here also his observations on the dynamic role of the Indian peasant in recent times in the Indian Revolution and a number of other burning questions, such as the Constituent Assembly, the States' people, the communal problem in India, India in the post-war world, the Cabinet Mission, etc. He finds the justification for the rise of the Congress Socialist Party within the Congress instead of as an independent party, because even then the main problem was the attainment of national independence and the Congress was the rallying point of all the revolutionary forces in the country. At the same time in the context of the new world situation with the deepening crisis of the capitalistic order of society he along with his comrades found an urgent need for a reorientation in the policy and aims of the Congress, for broadbasing it on the support of the Indian masses which could be won only by adopting an economic programme based on the socialisation of the means of production and elimination of exploitation. If the formation of the party was justified then, in the context of attainment of independence its continuance is still more justified if for no other reason at least for organising an effective opposition to the party in power. In view of the changed correlation of forces brought about by the quittance of the British, the old role of the Congress as the only fighting organisation has disappeared and a new alignment of political forces has become urgent if democracy is to function at all. The Socialist Party has since severed its connection with the Congress and is functioning as an independent party pledged to fight the first general election in a free India on its own independent programme. The strength and appeal of the party in the country will soon be tested by the verdict of the electorate at the next elections. In any event the views and observations of one of the doyens of a very significant movement, a lifelong and valiant fighter in the freedom struggle and one of the leaders of thought of modern India are worth careful study and sympathetic understanding. The publishers are, therefore, to be congratulated on presenting to the public this useful collection of speeches and writings which has been very timely indeed.

AKSHOY KUMAR GHOSAL

SAVARKAR AND HIS TIMES : *By Dhananjay Keer. Published by A. V. Keer, 77 Bhageshwar Bhuvan, Lady Hardinge Road, Bombay, 26. Pp. 421 with Index. Price Rs. 10.*

The biographies of Vinayak Damodar Savarkar have been many; this is the latest for English-language readers. To us in Bengal, this flaming sword of Maharashtra Nationalism has been as inspiration since 1910 when he burst over the world's attention as the author of the *First War of Indian Independence of 1857* as the "Sepoy Mutiny" has been revalued in the light of history brought to a focus by this young scholar and revolutionary leader. But his long imprisonment in the Andamans has made him a distant figure, and we are thankful to Sree Dhananjay Keer for his full length life-sketch of Vinayakrao.

We have to confess, however, that this writer suffers from the defects inseparable from the spirit of hero-worship that fails to pay proper regard to the historic setting of his hero. The superlatives that he has spread over the book are uncalled for; for, Vinayak Damodar Savarkar will shine all the brighter if the background of his times is adequately drawn. This Dhananjay Keer has failed to do. Not to speak of all-India perspectives, the new awakening in Maharashtra, a part and symbol of the Indian Renaissance with its light and shade, is very disappointingly dealt with. Vinayak Damodar Savarkar is no freak; he is heir to the makers of Maharashtra, of Ramdas Swami Shivaji's *guru*; of Ranade, of Chiplunkar, of Tilak, of Agarkar, of Gokhale during the British period. The struggles of these men to rouse their people to a sense of shame and ignominy of their dependent existence as a subject people explain much of what Vinayakrao has been and has done. Narasimha Chintamon Kelkar's biography of Balwant Gangadhar Tilak should have been an exemplar to Savarkar's latest biographer.

We can understand the causes of this inadequacy. The Indian Press in general have misrepresented Vinayak Damodar Savarkar as a communalist reactionary, vowed to the cause of Hindu orthodoxy. The Indian public has been studiously kept in the dark with regard to his activities as a reformer of social conduct. Chapter IX of this book (pp. 153-), entitled "Social Revolution" tells us the story of Vinayakrao worked mightily for the removal of touchability, for temple-entry for the *achhyuts* from 1924 to 1937, the years which saw him interned in Ratnagiri district, his political activities banned and his other activities restricted by the British bureaucracy. It shows Vinayakrao as a social revolutionary in line with the makers of modern India from Raja Mohun Roy downwards.

If the present volume helps to penetrate the veil of organized silence put up by political prejudice and narrowness, it will have served its purpose. To restore Vinayakrao to his legitimate place as a leader of thought and action in India during the last days of British rule is not an easy task. Many more biographies, more balanced, will be required for the necessary task.

S. C. D.

MY LIFE'S PARTNER : *A translation of Motilal Roy's Bengali book "Jivana-Sangini" by P. Mahalanobis. Prabartak Publishers, Calcutta. Pp. + iv. Price Rs. 5.*

The book depicts the heroic struggle of Chandernagar nationalist leader Motilal *Sangini* and the inspiration he derived from his life's partner who helped him to become what he is now. The story is interesting, as, beyond the personal life of the couple we are told something of the history of our national awakening and the Swadeshi Movement and the part played by Sri Aurobindo and others in it. The translation is good but it cannot satisfy us who can read the book in the original, where there is poetry mingled with history ; but in the English version we have only the history.

GURU GOVIND SINGH : *By Devendra Chatterjee. Published by the author from Chinsurah nagore. Illustrated. Price Re. 1-8*

The monograph is the English translation of Govind Singh (in Bengali) by Basanta Kumar Roy. Guru Govind is rightly regarded as one of the immortals of Indian history. He appeared on the scene at a very critical time in the history of the Sikhs and by lofty patriotism, martial ardour and religious zeal of the Guru breathed a new life into the Sikh community, transformed it into a martial nation and by doing laid the foundation of its future greatness. The monograph under review gives an account of the life and doings of the great Guru who is acknowledged

the second founder of Sikhism. It is much to be regretted that the life and achievements of so grand a personality as Guru Govind should be treated in the manner in which it has been done in the present monograph. The style and the manner of presentation are equally unsatisfactory. The fault perhaps is not so much the translator's as the original author's. The monograph, however, gives an authentic account of the life and achievements of the last of the Sikh Gurus.

SUDHANSU BIMAL MOOKHERJI

SUN-BLOSSOMS : *By Nirodbaran. Published by Sri Aurobindo Circle, Bombay, Nair Hospital Compound, Bombay Central Station. Pp. i—iii+112. Price Rs. 4-8.*

Poetry is something akin to religion. Both poetry and religion draw their strength from and have their sustenance in emotional fervour. Nirodbaran's poetry cannot certainly be classified as religious: it is rather spiritual. But in the field of poetry what is spiritual and mystic is cognate to religion. The *Sun-blossoms* is a collection of about a century of poems essentially lyrical in tone. Intensity of passion which is a characteristic of lyric poetry is present there, but it is a very different kind of passion. Some of the poems are marked with tranquillity, some with a yearning for the beauty of the Infinite and some are a-glow with imagination, and though they bear a close resemblance to poems of love and nature they are really the expression of the poet's spiritual emotion.

Heart alone is not the seat of poetry. Poetry is not simply an expression of our feelings. A school of poetry has recently arisen which is concerned more with the Spirit than with external life. Sri Aurobindo is the source of inspiration of this Pondicherry school of poetry. A poet, philosopher and spiritual leader of a very high order, Sri Aurobindo's influence has created an atmosphere congenial for the art of poetry to thrive. But it is the personality and *sadhana* of the expounder of Divine Life rather than his poetry that have influenced this school of poets. And Nirodbaran's place is high among them. The underlying philosophy of devotion and self-surrender is a characteristic of this school. The quest after the remote begins after he hears the call of light :

O purple glory of Light, thy mystic call
Echoes in my heart as in a hollow cave.

He feels that He will reveal the secret Truth :

And life with golden wings of vision sail
Across the spirit's unnavigated seas.

And in "Moon-Flood" he prays :

Let thy silver silence pour
Wonder-rays of the moon
On my lonely sand-grey shore,
Suddenly jewel-strewn.

His imagination soars high and in "Haloed Face" he says :

Poised in an eagle-calm my thoughts flow
Over dark ranges of night
Burdened with the hues of some invisible glow
Of a sun-dripping light.

And he sings :

My burdened heart becomes a song
Drunk with the wine of sleep
Poured from the bodiless fire-throng
In caves of a luminous deep.

In "Silver Wonder" he observes :

A divine beauty wakes now everywhere;
Nature becomes a white
Altar of Grace, an everlasting prayer
Towards the Infinite.

With rapture Nirodbaran describes the awakening of the soul :

Till from fathomless depth awakes the soul
Into a rhythmic universe of Light,
And the two extremities of heaven and soul
Merge in the timeless heart of the Infinite.

In the Foreword to this volume Kishor H. [illegible] says : "The height and intensity of the poet's inspiration no doubt varies, but even at his lowest, he never forsakes the intuitive felicity of the [illegible] inspired word and vision." Though sometimes [illegible] the way, Nirodbaran's poetry is rich in imagery. It seldom slipshod, and the quality of his [illegible] sometimes exquisite. Above all, there is the true of poetry in the poems presented in this volume.

SAILENDRAKRISHNA [illegible]

KALI THE MOTHER : *By Sister Nivedita. Advaita Ashrama, Mayawati, Almora, Himalayas.*

Sister Nivedita delivered her famous lecture "Kali the Mother" on February 13, 1899 in Cal[illegible] There was much misconception about the goddess at that time in the mind of the educated Be[illegible] so much so that no one could be had to preside the meeting at which she made the speech. Ac[illegible] to Sir Jadunath Sarkar, "Nothing daunted, Ni[illegible] delivered her lecture in the meeting with[illegible] president. Kali, the Mother, she said, is the k[illegible] darkness, the punisher of evildoers. She represents necessary moral vigour and courage. *Nayam balhinena lavya*—the Supreme Soul cannot be [illegible] by the weak,—thus she showed a great lesson followed by future India, in the Kali worship."

From the caption of this small book one [illegible] led to believe that it is a reprint of the above le[illegible] But it is not so. In the publisher's Preface we come know that the book was printed in 1897 in En[illegible] for the enlightenment of the Westerners regarding Kali cult and Kali worship. But the fundamental regarding our "Kali the Mother" was the s[illegible] both. This is the first Indian reprint and contains following chapters: Concerning Symbols; The V[illegible] Siva; Two Saints of Kali; The Voice of the M[illegible] A Visit to Dukhineshwar; An Intercession; The [illegible] of Kali for a Western Baby. The poem on "Ka[illegible] Mother" by Swami Vivekananda is appropriately in the end. Though our idea about Kali has gone a tremendous change by now, yet the book be highly cherished by the modern Indian re[illegible] Advaita Ashrama has done a real service by pu[illegible] this book and making it easily available for the

Digitized by Arya Samaj Foundation Chennai and eGangotri

The Ramakrishna Math of Mylapore is doing valuable work in disseminating Indian culture among people who have scanty knowledge of Sanskrit by publishing handsome editions of well-known Sanskrit texts on Hindu religion and philosophy accompanied by translations and annotations in English. The volumes under review which show how the work is being carried on fully justifies the object of the institution. The first volume is the Indian edition of its American proto-type with the addition of Sanskrit texts not given in the latter. It contains besides the text and annotated translation of the metrical Vedantic treatise *Atmabodha* of Sankaracharya, texts and metrical translations of some of the beautiful hymns addressed to different deities and attributed to the great philosopher. The *Anandalahari*, one of the sublimest hymns in Sanskrit, has not been included presumably on account of its length but we miss it very much. The introduction gives a short popular account of the main principles of Vedanta. The Preface in seeking to refute misconceptions regarding Sankara's philosophy asserts that 'the liberated man engages in service to humanity (p. xiii).' A similar hint is given in the attractive description of the liberated man in the Introduction (p. 148). We do not know how far the suggestion is borne out by authoritative texts or orthodox interpretation thereof.

The second volume gives the text and translation of the *Srimadbhagavadgita* and the translation of the well-known commentary of the same by Sridhara Swami which was not so long available to the English reader. Literal translation of a Sanskrit commentary which occasionally incorporates or simply analyses the words of the text it interprets is a very difficult job. To distinguish the words of the text from those of the commentary the words of the translation of the text have been put in italics in the present volume. A more helpful and better course, it seems, would have been to use the original words of the text to be followed by the translation of the statements of the commentary.

CHINTAHARAN CHAKRAVARTI

BENGALI

YOGABALE ROGA-AROGYA : *By Swami Shivananda Saraswati. Published by Umachal Prakasani, 68/1/2K Raja Dinendra Street, Calcutta 6. Pp. 317. Price Rs. 5.*

The author of the book under review is already known to the Bengali readers by his two previous publications on yogic exercises. This book, as the title signifies, deals with the cure of various acute and chronic diseases by the practice of yogic poses and breathing exercises. It is divided into five chapters of which the first contains a short account of physiology and pathology according to yogic science and Ayurveda. The second chapter gives descriptions, causes, symptoms and dietetics of as many as 62 serious diseases, such as dyspepsia, acidity, dysentery, jaundice, constipation, leprosy, goitre, spermatorrhoea, pleurisy and others. About two-thirds of the whole book is occupied by this chapter. the description of diseases given in this book is so elaborate that it should more rightly be called a medical book than a yogic manual. In the third chapter yogic asanas, mudras and pranayamas are briefly stated just as in his previous two books on yogic exercises. This repetition, being redundant, reduces the importance of the present book. The fourth chapter discusses the good and evil effects of medicine and the last deals with unhealthy sexual life as well as ideal conjugal life. Sexual matters have been often indulgently treated as attractiveness and appeal to a vulgarity. But vulgarity should be avoided as far as practicable in a book of yogic therapy.

Swami Kuvalayananda of Bombay, who is the chief disciple of the famous Bengali Yogi Madhavdas of Malsar, is the modern pioneer of yogic science. His scientific investigations in yogic asanas and pranayama published in his quarterly *Yoga Mimamsa* and his two books *Asanas* and *Pranayama*, have attracted the attention of the modern world. On the basis of his unprecedented researches *yogic asanas* are now practised as physical and curative exercises in several provinces of India and even in the far distant Yale University of U.S.A. It is a thousand pities that Swami Shivananda does not acknowledge his indebtedness or even makes a passing mention of Swami Kuvalayanada, in this or other two books. My Bengali manual of yogic exercises in two parts contains a portrait and a life-sketch of the great yogi Madhavdas. The illustrations of the yogic poses given in this book are printed on ordinary paper, and not on art paper. Thus they are very indistinct and consequently useless to the readers. In order to be attractive to the modern mind a book on yoga should be both scriptural and scientific. But the present book has hardly come up to that standard. Without the help of an expert this book will not be useful to the readers in the application of yogic therapy. At the end of the book the author strongly accuses of plagiarism Sri Buddhadev Bose, the well-known Bengali athlete.

SWAMI JAGADISWARANANDA

HINDI

SANYUKTA PRANTA KI APRADHI JATIYAN: *By Prakash Narayan Saksena. Published by U. P. Discharged Prisoners Aid Society, Old Post Office, Lucknow. Pp. 235. Price Rs. 3-8.*

A historical and sociological account of the criminal tribes in U. P., written with exceptional sympathy and sufficiency of information. It is a pioneer work, well worth emulating by probationary officers in the other provinces. G. M.

GUJARATI

DHARMATMA GOKHLE : *By Gandhiji. Navajivan Prakasan Mandir, Ahmedabad. February, 1950. Price nine annas.*

A collection of nine articles written by Gandhiji from 1912 to 1928, on Gokhale whom Gandhiji had proclaimed from many a platform as his political *guru*. The simple and sincere tribute paid by Gandhiji is touching indeed, and many a trait can be found common to both. Shri Kishorilal Mashruwala fittingly prefaces the selection with an anecdote about Gokhale, which shows the man and his technique, and he quotes verses from the Upanishads to point out how in Gokhale and Gandhi, *guru* and *chela* (master and disciple), had been evenly matched, and to exclaim how blessed was Gokhale to find disciples like "Gandhi, Shastri and Thakkar"! The publication is opportune and it may pave the way for planning the centenary of Gokhale's birth in a suitable manner.

P. R. SEN

ITA KAVYO ((and all others excepting Ratan) : *By Chandravadan C. Mehta, B.A. Published by the Bharati Sahitya Sangha, Ltd., Ahmedabad. 1948. Illustrated jacket. Thick card-board. Pp. 175. Price Rs. 2-8.*

So far as *Ita Kavyo* are concerned the first edition that came out in 1933 is exhaustive and this is the second edition. The other poems are selections from the production of Mr. Mehta's everflowing pen and keep up the name he has made of writing feeling and impressive verses. Each poem has its own charm,

Need of Revolution in the System of Education

The nation cannot get rid of mental slavery without the push of a revolutionary change in the Indian educational system. Prof. Indra Vidyavachaspati writes in *The Hindustan Review* :

The chief objects of the educational system started in India by the English Government in the beginning of the 19th century can be clearly seen in the words of Lord Macaulay, the chief protagonist of English Education, and other English writers and rulers. Those objects were as follows :

(a) To create in India a class of educated Indians who could be Indians only in appearance but in thought and way of living, English.

(b) To prepare such men who may be appointed to subordinate Government posts.

(c) To spread the precious literature of the West in place of what the English considered to be worthless and trivial literature of India.

(d) To carry out these objects, the educational system started in India had five special features:

(i) Hindi and Sanskrit were boycotted and English was given the first place in education.

(ii) English was made the medium of instruction.

(iii) While preparing text books on subjects such as History, it was kept in view that in them the ancient Indians be maligned, and modern Europe be praised in every way.

(iv) Thus while Western education was imparted to the prosperous and higher classes of society, the 99 percent people of the country were left in utter ignorance, and if any thing was done for them at all, it was next to nothing.

(v) The Pathshalas meant to spread knowledge among the common people stopped functioning either because they were ignored or because they were deliberately closed.

The consequence of this scheme and other such schemes was that in a few years while the majority of Indians were left illiterate, a handful of Indians having got English education and adopted English ways and mentality, ceased to be Indians except by birth and became the chief props of the British rule.

For several years this process of denationalisation of Indians by the British Government went on uninterruptedly.

Gradually, thanks to internal reforms and international situation, the sentiment of nationalisation began to rise in the country and along with it, the attention of a few educated Indians began to be drawn to the pitiable plight of Indian education. In course of time, several reformers inspired by the national sentiments began to start such institutions in which arrangement was made to teach Western knowledge along with Indian language, Indian culture and Indian science. Moreover, thoughtful patriots like Gopal Krishna Gokhale drew the attention of the Government and of the people towards the education of the masses.

The national agitation continuously went on gaining strength, and consequently the desire for national education became more and more acute throughout the land.

Eventually all these factors began to affect the steel frame bureaucracy, and after setting up several committees and commissions, a few modifications here and there were made in the system of education started in the time of Lord Macaulay. But one thing can be said with certainty and established by statistics, that in spite of all the aforesaid opposition, the British Government continued till 15th August 1947 fundamentally the same system of education in India which they had initiated a 100 years back. We have to admit with regret that, though the English have gone, yet the stamp of mental slavery to which we were ceaselessly subjected for a hundred years, still exists. The speeches, writings and the example of Mahatma Gandhi have inculcated the lesson of nationalism and due to its influence some change is visible on the surface, but if we look beneath, we discover love of English ways in the educated Indian. He believes that our own language lacks the power to express the sentiments of the heart which the English language possesses. He is persuaded that dhoti and shirt may be suitable for social functions, yet for efficient work what is needed is either bush-shirt or achkan. He believes that by discussing ancient India or Indian culture our country will fall in the estimation of the foreigners and if that happened, we shall be nowhere. Our body is clad in khaddar, no doubt, but Western sentiment and English language dominate our minds powerfully as before.

The People in the Workshop

Writing from first-hand experience of factory, R. M. Fox observes in an article in *The Aryan Path* that democratic principles should be applied to industry, in the interest of democracy itself no less than in the workers' interest :

The factory is the forcing ground for a view of life that excludes beauty, freedom and compassion. In my pre-war study of industrialism I wrote :

"The factory standard, if it is not corrected, may, succeed in spreading a horrible blight over life as it has already done over the industrial towns. If the advance of a rigid, unlovely utilitarianism goes on it may be that stern justice will be meted out to those lovers of beauty who failed to protest when degrading conditions were meted out to others. Just as people become reconciled to living and working in squalor—of body and spirit—so they come to accept this as the normal and proper condition and, as unconscious victims, become the apostles of ugliness, imposing it by sheer mass weight upon their fellows."

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The history of the war and post-war years has underlined the truth of these words. The world is still facing the threat of totalitarian standards. When the mass of industrial workers are geared to the factory plant they are no longer considered as individuals. They figure as part of the industrial unit, an item of labour cost. In such a setting, human dignity ceases to have meaning.

One great weakness of liberal thought is that it has dodged the application of democratic principles to industry and has taken refuge in political abstractions. Democratic practice must apply to the everyday lives of the people in the workshop if it is to mean anything to them.

How can this be done? One way to start is to insist on a greater variety of occupation in the workshop and a greater degree of responsibility for every worker in the conduct of industry. It is a relatively simple matter to train workers to do different kinds of work. The farm labourer, without the aid of wonderful machines, is able to manage a whole range of jobs. It is, of course, much easier to chain each worker down to some simple repetitive process. In general the factory worker is sacrificed to office systems.

Besides variety of work, more responsibility and a share in workshop control—through works-councils—is another antidote to totalitarianism. To imagine that men can be subservient tools in the workshop and independent, alert, responsible citizens in the world outside is to imagine a vain thing.

Is the evil inherent in the very nature of industrialism? The medieval guildists who have urged going back to handicrafts have argued that this is so. But they are mistaken. Modern industry is the means of increasing mastery over the forces of nature in the service of man. But man must be the central consideration. Industrialists have declared proudly that modern industry is based on power. It is also based on men and it is not wisdom to ignore this. The core of the problem is to give to the industrial workers that scope which their intelligence, their aptitudes and their needs demand. Until this is done there will be social explosions.

Some years ago I listened to the Indian poet, Rabindranath Tagore, speaking in Oxford on "The Message of the Forest." In beautiful words which he knew so well how to command, he contrasted the emphasis on spiritual resources in Eastern philosophy with the slick, enamelled, superficial outlook of Western civilization. He urged that to balance humanity we must not only have the technical knowledge and mechanical skill of the West but also the *feeling for life* shared by the simple and the learned in those places where industrial civilization had not stamped the spirit of man into the mud.

Writers must always stand for the free human spirit. This is a stand which should be taken in the East and in the West. They must insist that, in industrialized countries, the workshop should serve as a working model of democracy. Those writers and thinkers who ignore the workshop and its problems, while pleading for a freer world, should realize that they are leaving out of account large areas of modern life which can exert the greatest amount of mass pressure for good or for ill. The workshop is the kernel of all our social problems. Once the relation of the individual to his means of livelihood is put on a proper foundation, we should be within reach of solving those social questions which throw up, like distorting mirrors, images of the mal-adjustments existing in modern industry today.

Saptagram

A Forgotten City of Bengal

Natabar Datta, writes in *The Calcutta Municipal Gazette* :

Saptagram was the capital of Bengal in the Hindu and Muhammadan periods and was the residence of the Kings of the country. The city was 16 miles in area and consisted of seven Wards (villages) *viz.*, Triveni, Debanandapur, Shibpur, Shankhapur, Bansabati (Bansberia), Vashudebpur, and Krishnapur. It has a unique place in the history of Bengal and it had once the same position as Calcutta occupies in the present era. It was the principal port and chief commercial centre of Bengal of the Hindu and Muhammadan periods. Its name and fame has been elaborately mentioned in the ancient literatures of Bengal as well as that of India, *viz.*, the Mahabharata, Ramayana, Shrimad-Bhagabatam, Skanda-Puranam, Manasha-Mangal, Kavikankan-Chandi, Chaitanya-Bhagabata, Chaitanya-Charitamrita, Bhakti-Ratnakar, Tabaqati-i-Nasiri by Minhaj, etc., etc.

The City in History

The name and fame of Saptagram has been mentioned by many eminent historians of this country and abroad and by the authors of the old days.

The Roman historian Pliny, in the middle of the 1st Century A.D., in his book *Historia Naturalis* (translated by Philemon) mentioned Triveni which was a Ward of Saptagram.

Riazu-S-Salatin, by Ghulam Hossain Salim, translated from the original Persian by Maulavi Abdus Salam (1902) page 48, states :

"Sarkar Satgaon comprised a small portion to the west of Hughly, whilst a large portion comprised the modern districts of the 24-Parganas to Kapadak river (Kapotaksha), western Nadia, south-western Murshidabad and extending to Hatiabagh (Hatiagarh) below Diamond Harbour." To this Sarkar Province belonged the Mohal Kalkata (Calcutta) which together with two other Mahals (sub-divisions) paid in 1582 A.D., a land revenue of Rs. 23,405.

In *Lekh Mallika*, an old Bengali manuscript, it has been stated that "There was a Samaj (Association) of Benias at Mahasthan. In the town of Sakarma, Gour, Garveswar Datta was the merchant in chief. Those Benias used to go for trade, by voyage in big vessels filled with merchandise, to Lanka (Ceylon), etc., through Gour and Saptagram."

Other References

The celebrated Chinese traveller Hiuan Tsang, who visited India in the seventh century A.D., wrote in his diary : "After performing the *Navaratri* festival (Sharadiya Durga Puja), on the Bijoya-Dasami day (the tenth day of full moon) the Hindu traders used to set out for trade with merchandise, by land and voyage. These Indian traders used to carry their merchandise to Greece, Somaliland, Kushadwipa, Shankhadwipa, Java, etc., for trade. They also used to carry muslin, pearl, sugar, etc., for sale and brought ivory, crystal, gold, black-wood wares, etc., to India."

In the Ramayana, by Krittibasa Ojha (1385 A.D.), it has been stated that Saptagram was a famous and peerless city and a place of great sanctity and pilgrimage of the Hindus, as sacred as Prayaga (Allahabad).

Raghunandan Bhattachariee (fifteenth century A.D.), the Hindu law-maker, in his famous book *Prayaschitta-Tattwa* quoted a *sloka* from the Maha-Bharata : "On the south of Pradumnyanagar (present Pandua) and on the north of the river Saraswati the village Triveni was a Ward of Saptagram. The junction of the three rivers, the Ganges, Jamuna and Saraswati, is called Dakshin-Prayaga and is as sacred as Uttar-Prayaga (present Allahabad). The three rivers, Ganga, Jamuna and Saraswati, joined at Uttar-Prayaga (Allahabad) and separated themselves at Triveni (District Hughly, Bengal)."

Saptagram is mentioned in the old Vaishnava work *Chaitanya-Bhagabat* written by Brindabandas Thakur (sixteenth century A.D.), a contemporary of Shri Chaitanya Mahaprabhu. Kavikankan Mukundaram Chakravarti, in his notable book *Chandi* (16th century A.D.), describing the voyage of Dhanapati Sadagar, states that Saptagram was a great centre of trade and commerce. The merchants from Kalinga, Trailanga, Karnat, Guzarat, Malaya, Lanka (Ceylon), etc., used to bring their merchandise for sale in the mart of Saptagram, it was also a place of great sanctity and pilgrimage for the Hindus.

Portuguese in Satgaon..

J. De Barros, a Portuguese traveller visited Saptagram in 1516 A.D. and mentioned the place in his book *Da Asia* and put the name of Saptagram as "Satiga" in his map as published in 1517 A.D. (Vide *Asiatic Society Journal*, Vol. LXI, Part I, page 298).

The renowned traveller Caesar de Frederic, in 1565 A.D., mentioned Saptagram as "Satagaon" in his diary and described it as a large city.

In 1530 A.D., the Portuguese anchored their first merchant vessels at Saptagram and were amazed to find the splendour of commerce at Saptagram and named Saptagram as "Porto Piqueno."

During the Pathan period (fifteenth century A.D.) Saptagram was called Hossainabad after the name of Allauddin Hossain Shah, the Nawab of Bengal. (Vide *Catalogue of Coins* in the Indian Museum, Calcutta, Vol. II, Part II, page 172).

Encyclopædia Britannica, 9th Edition, Vol. XIII, page 148, states: "In the early period of the Mahammadan rule, Saptagram was the seat of the Governors of lower Bengal and a mint town. It was also a place of great commercial importance."

In 1526 A.D. a mosque was established by Seikh Jamaluddin Amuli, at Saptagram, during the reign of Naseruddin Nasratshah, Nawab of Bengal (1497 A.D.).

The first Church established in Bengal, by the Portuguese, was at Hughly, in the 4th quarter of the sixteenth century A.D. (1580), with the permission of Akbar Badshah. In Akbar's time Satgaon (Saptagram) was known as Balghak Kahana, the "house of revolt."

The first Englishman who visited Saptagram, was Ralph Fitch, in 1586 A.D. He was astonished on seeing the riches of Saptagram. He wrote in his diary : "When I reached Saptagram. I saw hundreds of vessels full of merchandise, of which one hundred and eighty vessels came from Agra alone and most of them were with 24 and 26 oars."

A Flourishing Port

Saptagram was a flourishing port on the river Saraswati, where ships from China, Malaya, Java, Siam, Ceylon, Persia, Egypt, Italy, etc., brought their merchandise for sale in the mart of Saptagram. In the first Century A.D. the Hindus exported perals, fine muslin, silk, betel, lac, rice, sugar, etc., for sale in European countries (*Vide* McCrindle's *Ancient India*) as described by Ptolemy. Once (about 40 years ago) I saw myself a big iron anchor tied with iron chain, half buried in the bed of the river Saraswati. The river Saraswati is at present a narrow stream (8 feet wide).

Formerly, it flowed to the west of Saptagram, meeting the river Bhagirathi on the north at Triveni, District Hughly, and on the south at Sankrail (near Botanical Gardens), District Howrah, through Battor, Andul, etc.

The place of the Vaishya King Singhabahu, a contemporary of the Lord Buddha, was on the bank of the river Saraswati at Singhagarh (at present Singur, District Hughly). His son Bijoy Singha invaded and conquered Lanka in 500 B.C., and named it after his name as Singhal (Ceylon).

It is also understood that two Hindu Kings ruled over Saptagram in the old days, *viz.*, the Vaishya King Rajya Bardhan and Raja Satrujit. The place of the Hindu King Pundrabardhan, was at Pandua, a few miles to the north of Saptagram.

Its Industries

Saptagram was famous for (hand-made) [illegible] industry in the old days up to the 1st quarter of the seventeenth century A.D., which was exported to places far and near, and also famous for yellow silk and 'Balapose'—(warm wrapper).

Ramusio states that though the Port was reduced (to Hughly), about ten thousand houses still existed in Saptagram even in the 4th quarter of the seventeenth century and there were seven hundred betel shops.

A market price-list of the capital Saptagram in 1350 A.D., as mentioned by Ibn Batuta ran as follows :

25 ratal rice or 80 ratal paddy—1 Dirhm (silver mohar); 1 ratal sesame oil—2 Dirhm (½ Dinar); 1 ratal cow-ghee—4 Dirhm (¼ dinar); one milch cow 3 Dinar; 8 fowl or 15 pigeons—1 Dirhm; 1 full grown sheep—2 Dirhm; 1 ratal sugar—4 Dirhm; 30 yds fine muslin cloth—2 Dinar; one beautiful and young female slave—1 gold mohar. [1 Ratal—1¾ seers, 1 Dirhm—2as. 6p. (ten pice), 1 Dinar (silver mohar)—Re. 1, 1 Gold mohar—Rs. 20].

Ijuddin Mahaia Azmul Mulk, Governor of Saptagram, established a mint at Saptagram in 1328 A.D. (Vide *List of Coins*, Vol. II, page 69, by Nelson Wright). Saptagram was a big Pargana extending from Nadia (included) to Bay of Bengal.

Relics of an Old Capital

Saptagram was the Royal Port of Bengal and famous for the splendour of its commerce. Traders from all parts of India and foreign countries used to visit Saptagram. Its wealth and commercial importance date as far back as the time of the Hindu and Mohammadan periods. It was so even at the beginning of the English period and was recognised by the different ruling chiefs of the day. The silting of the river Saraswati brought about its ruin, but the time-honoured name and fame are there coming down from generation to generation and held in great respect both by the Hindus and the Muhammadans alike, as examplified by the temple of Shri Shri Uddharan Datta Thakur (a great saint and companion of the great Lord Shri Gouranga and Nityananda Prabhu) who flourished in the [illegible] century A.D., and another at Krishnapur, the birth-place of the great devotee Srila Ragu Nath Das Goswami, one of the six Goswamis, the chosen disciples of the great Lord Shri Chaitanya Mahaprabhu. There are also ancient Muhammadan relics, and the relics of the old capital, fort and port demarcated with [illegible]

tablets by Lord Curzon, Viceroy and Governor-General of India. It was undoubtedly one of the seats of culture and learning also. Uddharan Datta was a big trader, merchant, Court-Banker and a person of enormous wealth. He had several mercantile vessels. He opened *langarkhana* for the famine-stricken people, on the bank of the river Saraswati, where 10 to 12 thousand persons were fed daily for a considerable period.

CENTRE OF VAISHNAVA CULTURE

The name of Saptagram is a household word to people in many districts of Bengal. Unfortunately much of its history is lost owing to the disappearance of the city on account of silting of the river Saraswati. The towns of Hughly, Chinsurah, Chandernagore, Srirampur, etc., practically rose out of the ashes of Saptagram, which though destroyed physically is yet one of the spiritual centres of the great Vaishnava culture and religion of Bengal. Thousands of pilgrims visit their respective shrines every year.

There are still two mounds of ruins at Saptagram, one is the ruin of a fort and the other the ruin of a temple of Kali. They are situated side by side on the eastern bank of the river Saraswati.

The length of the mound of the Fort is about 400 yds. and the height is about 25 feet, the top of the mound being now used for cultivation. Local people told me (about thirty years ago) that an iron cannon was found, some time previously, when p'oughing the land (at the top of the mound of the fort).

On the mound of the ruins of the temple there is an old banian tree at its top. Local tradition has it that sailors and crewmen used to tie iron chains, ropes of ships and vessels, round the trunk of the tree. A local old man of 80 told me that he heard from his grandfather the same tale. This quarter, where the mound stands, is called *Dingir Ghat, i.e.*, the mooring place for anchoring vessels, boats, ships. The height of this mound is about 25 feet and the top is about 20 sq. feet. The above two mounds were discovered by me about twenty years ago. It was also brought to the notice of the Archæological Department and those mounds were inspected by the Archæological Survey Department in 1939.

Foreign travellers, who learn about the glory of the ancient Saptagram from history, do not know where the place is now situated, as at present the time-honoured, glorious and famous Saptagram is entirely engulfed in jungle, situated on the side of the Grand Trunk Road, District Hughly. Saptagram is only 27 miles from the Howrah railway station and 2 and 3 miles from the Bandel and Hughly railway stations. The nearest railway station of Saptagram is Adi-Saptagram.

An Indian Examines Nehru

By Dr. Taraknath Das

No one who has followed the conduct of India in the Korean crisis, and in relation to Communist China generally, can doubt that the personality and political nature of Pandit Jawaharlal Nehru, its Prime Minister, are of direct significance for America. Aside from India's specific weight in the Asian equation, there is the fact that so many influential American liberals have adopted Nehru as their own, and endowed him with the colors of their own ardent and extravagant hopes.

Perhaps it was to be expected that certain liberals, yearning for a messiah to redeem a brutally illiberal world—preferably a messiah in some distant land, removed from too much probing—should have picked on the Indian leader. Like Nehru himself, they crave to escape unpleasant realities. They have need for an idyllic middle ground between the capitalist democracy they have rejected and the Communist monstrosity that has, in effect, rejected them. The Pandit Nehru, wearing Gandhi's mantle of spirituality, seems to fill the bill. Here, they proclaim eagerly, as an Eastern prophet with a Western mind, non-Communist without being anti-Communist; in short, a leader to mediate between the contending worlds.

It is well that Americans should examine the Prime Minister, not in sentimental ecstasy but quite calmly. No less than Nehru's countrymen, they must try to ascertain whether the man, for all his humanism and mental attainments, is really the chosen of destiny to lead Asia and through Asia the world; whether an Indian government in his image can serve as stabilizer and conciliator in this period of grim totalitarian threats.

Clearly, Pandit Nehru is a man of exceptional intellect and literary gifts, a cultured gentleman with a winning personality. He has assimilated the best in both India's culture and that of the West. He is a cosmopolitan idealist, often dreaming of beauty in nature and sublimity in man. He has made sacrifices for human freedom, suffering long confinements in Indian prisons. He is a staunch supporter of human rights, the principles of which are elaborately set forth in the Constitution of the Indian Republic. There is greatness in the man that has brought him the adoration of the Indian masses and respect in the outside world.

In sum, it is impossible to question Nehru's idealism and sincerity. What can and should be questioned, precisely because his views and behaviour are so critical in the scales of events, is the effectiveness of Nehru's actions. In appraising him as a statesman, one is reminded of the celebrated dictum of Hegel: "To be good is not enough; one must be effectively good." Has Nehru's goodness been effective? Before attempting an answer, let us look at his background.

The original home of his ancestors was in beautiful Kashmir, and they were Brahmins. About 1716, one of Nehru's forebears moved to Delhi, and after the Sepoy Mutiny of 1857, the family moved to Allahabad, where it was there that Jawaharlal Nehru was born on November 11, 1889, in a rich, Westernized lawyer's home.

His father, the late Pandit Motilal Nehru, was in the early twenties of this century, according to his own admired the English and their ways" and in politics was a "moderate nationalist." Jawaharlal, raised and tutored in an anglicized home, did not attend Indian schools and had a "lonely childhood." At sixteen, he was sent to Harrow in England. Two years later he entered Cambridge and specialized in science; later he became a barrister. On returning home in 1912 he followed his father's profession at Allahabad for a time.

British persecution of Indian nationalists and their sympathizers during the First World War brought about a change in the elder Nehru, "who was drifting away from the orthodox moderate position in politics." It pushed the son even further in the direction of passionate nationalism. At one time Nehru was inclined to join the extreme left-wing of the movement—the underground revolutionists—but instead he came under the influence of Mahatma Gandhi, who was then preaching non-violent non-co-operation as the means for Indian freedom. In 1916, Nehru was married and spent some months in Kashmir, his ancestral home for which he has a great and romantic attachment. From then until Gandhi's assassination in 1948, Nehru's political life was deeply affected by his master and guide. The rest is current history.

Speaking before the Congress of the United States on October 13, 1949, Nehru defined the goal of his country's foreign policy: "Where freedom is menaced or justice threatened, or where aggression takes place we cannot and we shall not be neutral . . ."

Without for a moment doubting that he means this, one can doubt that his guidance of Indian policy in the Korean crisis has been consistent with this principle. Freedom and justice were not merely threatened but cynically violated; aggression has been

open and massive. But India, in substance if not in form, has been neutral. She joined the majority in the first United Nations denunciation of the North Korean assault. But almost immediately Nehru struck out on a policy of his own, seeking to act as mediator. In effect he pleaded that the Kremlin be paid off with a security council seat for Soviet China for calling off its military banditry in Korea.

Naturally, he was applauded by Stalin and the Communist world. As always in these years, the illusion of a mediating force operated to the advantage of the men without illusions in Moscow. But the United States firmly rejected the plan, and Nehru's hope of acting as a "third force" failed. His subsequent conduct was marked by similar inconsistency.

To understand Nehru's strange role in the Korean affair, one must know the strength of his conviction that India is destined to serve as a balance-wheel in world politics. One must realize also his profound belief that co-operation between India and China—even a puppet China manipulated for larger Communist purposes—is essential to the future of his continent. Nehru visualizes India as the leader of an Asiatic bloc aligned with neither the pro- nor anti-Soviet forces.

That vision rests on the same kind of refusal to acknowledge the true character of imperialist Communism that is endemic in "liberal" circles the world over, and is at bottom a species of wishful thinking. The core of the fallacy, of course, is in its assumption that the choice is between two blocs with equal moral claims on the allegiance of mankind. Despite verbal finessing, it takes a stance of substantial impartiality as between freedom and slavery, between democracy and its opposite. The very premise of a third force is that the other two are equally "right," or perhaps equally wrong, and that the desirable condition is somewhere midway between them. No matter how it may be rationalized, it is a position that accepts totalitarian horror as valid and aims to give it permanence.

Nehru and those for whom he speaks in all countries, the United States included, fail to recognize that while the Soviet bloc is under iron discipline, the so-called American bloc is a voluntary alliance of the loosest sort. With respect to China, they are obliged to convince themselves, in defiance of the evidence and common sense, that Mao Tse-tung's regime is a free agent rather than an extension of Stalinist power. To maintain their equivocal position they must close their ears and minds to explicit statements on the issue by leaders of the Soviet bloc. Said Mao Tse-tung on July 1, 1949 :

"To sit on the fence is impossible; a third road does not exist . . . Not only in China, but also in the world, without exception, one either leans to the side of imperialism"—Communist slang for democracy —"or to the side of socialism. Neutrality is a mere camouflage and a third road does not exist."

But the self-hypnosis of a Nehru would seem to be proof against such candor. Even while he was toiling to obtain world-wide recognition for Mao's regime, the *New China News Agency,* speaking for Communist China, rewarded him with juicy insults : "British and American imperialism and their running dog, Pandit Nehru. . . ."

A certain measure of sympathy for Soviet Russia will be found among the leaders of nearly all Asiatic movements to end colonialism. During the first decade of its power, Soviet Russia energetically fomented revolutions in Asia, to enhance its own influence on that continent and to harass the great colonial nations which opposed the Bolshevik regime. To the young Nehru, Moscow's propaganda of freedom for "oppressed colonial peoples" spelled hope; Moscow seemed to him a genuine friend. Thirty years later, and in stubborn disregard of Soviet conduct in both Europe and Asia, he has not wholly freed himself of these youthful impressions.

Going abroad for the first time after the completion of his British education, Nehru came to Geneva in 1926. He observed the forces in and outside the League of Nations which might help the cause of Indian independence. Soviet Russia seemed the chief of these, closely seconded by Germany. The two countries were collaborating against the Allied Powers

A True Pathetic Story

Dear Brother, I am neither a Doctor nor a Vaid, but I am the son of a respectable millionaire I fell a prey to various diseases in my prime of youth. I secretly tried so many medicines of well-known venereal disease expert doctors but of no use. On the other hand, my parents were bent upon to get me married when I was not fit for it. I therefore ran away from home to Kashmir and decided to end my life. One day by the grace of Almighty God, I met an old Mahatma who gave me some medicine for internal use and oil for massage, the use of which gave me new life and made me Heman within seven days. But according to the directions of the Mahatma I had to complete full course of fifteen days. At the time of departing the Mahatma gave me a prescription, taking an oath from me that I will place my services for the welfare of mankind. I therefore, according to my promise offer the medicine and oil to the persons suffering from loss of Debility, general weekness, nervous breakdown and private diseases, so that they may rejuvenate themselves and enjoy prime of youth even in old age. The medicine can be taken in any season. Price 7 days course :— Kashmiri Pills Rs 2-12. Kashmiri Massage Oil Rs. 2-8. The readers are requested to help me in making it known to all their friends by showing this paper and serve the mankind. Correspondence in English only.

at this time; support of revolutionary trends in India and other Asiatic colonies fitted well into their self-interests.

It was in Berlin, with the support of Moscow, that the idea of a Congress of Oppressed Nationalities originated. It took place in Brussels early in February, 1927. Nehru played a prominent part in it, and it was to play a prominent part in his life. For it molded his future views and political relationships, some of which hardened to the point of dogma and obsession. It is not too much to say that India's ambivalent attitudes in the U. N. in 1950-51 stemmed directly from Jawaharlal Nehru's first experience in international politics in Belgium a quarter of a century earlier.

The Soviets pulled the leading strings in that Brussels congress. That Nehru was aware of this, and complacent about it, is explicit in his writings. That he did not fully grasp or rightly appraise the significance of the Soviet role is all too clear. In his *Autobiography*, in 1936, he wrote :

"There were many labour organizations represented and several well-known men who had played a leading part in European labour struggles for a generation, and they took an important part in the proceedings."

Then Nehru added : "They came not as Communists but as representatives of trade union or similar organizations." Communists, in other words, in trade union and other non-Communist disguises.

The techniques of Communist infiltration had been perfected by 1926. The League Against Imperialism that grew out of the Brussels gathering was one of the earliest "front" organizations devised by the Communist International to befuddle world opinion and exploit decent liberal instincts. It was the lineal forerunner of the whole array of camouflaged Muscovite organizations which have promoted the Kremlin's program.

Nehru himself notes how important a part in organizing the Congress was taken by "the Chinese belonging to the left wing of the Kuomintang, co-operating with Communists and near-Communists." With the frankness of a clean conscience he tells how the Brussels meeting and subsequent committee meetings of the League helped him understand the inner conflicts of labor in the West : a circumlocution for the Moscow drive to capture organized labor. And his allegiance was substantially on Moscow's side : "As between the labor worlds of the Second International and the Third International, my sympathies were for the latter. . . . *I turned inevitably with good will towards Communism, for, whatever its faults, it was at least not imperialistic.*"

Three decades ago many people, the writer included, honestly hoped that the collapse of Tsardom was a great step towards a more democratic era. But how, in the light of the history of the last five years, can anyone continue to be blind to the brashly imperialist character of Soviet Russia ? Yet Nehru, to judge by his actions—like so many American liberals—still clings to the early illusions.

As a natural sequel to his involvement in the "front" League, and possibly to bring revolutionary India and the Soviets closer together, Nehru, his father and sister visited Moscow in November, 1927, during the celebration of the tenth anniversary of the Soviet regime. In summing up his impressions, he admitted his dislike of Soviet violence, regimentation and suppression of freedom of thought. But in the classic style of the confused fellow-traveler he explained that, after all, the violence was in the interests of a new and better future : "In the balance, therefore, I was all in favor of Russia and the prescnce and example of the Soviets was a bright and heartening phenomenon in a dark and dismal world."

The anti-American bias that so often obtrudes in Nehru's thinking is, in a sense, the obverse of his pro-Soviet fixations. The picture of America that emerges from his associations with Kremlin propagandists was naturally distorted. To this day he seems far more fearful of American capitalism than he is of the rampant Red imperialism right on his frontiers.

Oddly enough, Nehru's distrust of the United States has a dual origin. It derives in part also from the early British influence. During the seven formative years of his sojourn at Harrow and Cambridge he came into close contact with the then fashionable derogation of America. That youthful prejudice might have been dissipated, but the Soviet influence came along to fix it in his psychology.

The fact remains that Nehru and other Asian leaders never seemed to suspect that the primary objective of Soviet policy was to create a Communist force to be used in spreading Soviet imperialism at any cost. This tendency to evade the harsh facts of *real-politik* is at the root, too, of Nehru's concept of India as a third force. He does not distinguish sharply enough between the inherent differences, in moral terms and in terms of political freedom, between the other two forces. Nor does he seem to realize that a hungry India, an India which produces less than two million tons of steel annually, an India which has many and vast internal problems to solve, cannot become the mediating force in a world where political influence is measured by physical power.

In line with his ideal of Asian solidarity, the government preceded even Britain in recognizing Communist China. He was eager to demonstrate that, despite India's opposition to Communism at home, it could maintain friendly relations with its abroad. He must naturally have expected, by way of a *quid pro quo*, that Red China and Soviet Russia would cease to aid and encourage Indian Communists in their subversive activities; that Tibet would not be molested; that outstanding Chinese-Tibetan questions would be answered by peaceful negotiation.

The disillusionment he has been forced to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

is a prime example of historic irony. Comrade Mao's invasion of Tibet came to Nehru as a violent shock. Soviet China made a mockery of its solemn promises on this score. When Nehru's ambassador in Peiping protested, he was advised, in effect, to mind his own business and not interfere with what Communist China regards as its private sphere. The comforting idea, based on wishful thinking, that Mao was independent of Stalin and that Chinese purposes took precedence over Communist world strategy was exploded.

Pandit Nehru, it should be understood in America, had fallen into the tragic error so industriously promoted here by Owen Lattimore, Edgar Snow, Frederick Vanderbilt Field and their confreres. He considered Mao basically a Chinese nationalist pursuing agrarian reforms in China, who had come to power through popular consent. This attractive picture, though it survived the Korean episode, was wrecked by the Tibetan aggression. As M. R. Masani, a member of the Indian Parliament from Nehru's own Congress party, has just written :

"By its one stroke in Tibet, the Chinese Communists have cut Asia in two, and have awakened us from that illusory dream of an Asian third force which some of us have held. There is now a free Asia and a *slave Asia*."—*The New Leader*, Dec. 11, 1950.

Whether Mr. Masani's political chief has been thoroughly awakened, to the point of renouncing his third-force dreams, remains to be seen.

The threat to India in Mao's march into Tibet is clear. External encouragement of the subversive activities of Indian Communists in Assam, West Bengal, United Province, Hyderabad and South India may be expected to force the Government of India to adopt more vigorous repressive measures against Indian Communists. These, in their turn, will expose India to the danger of civil wars in various parts of the country, as was the case in China during the early days of the Communists' effort to organize their own army and state.

Nehru will have to make one of two choices, each of which would force him to follow a more rigid and consistent line than he has hitherto adopted. Under attack from the left, he would either have to seek the support of the right wing of his Congress Party and other rightist groups and close collaboration with the United States, or he would have to woo the Soviets and the Chinese Communists. In the latter case, Nehru might find himself leading India towards partnership in a Soviet Russian-Chinese-Indian combination in world politics which would facilitate the Communization of all Asia.

If Nehru tries to adopt any such policy, he will meet with opposition from the right wing of his own party—opposition so vigorous that it may topple him from his position as Prime Minister and Foreign Minister. Recent events have proved that Nehru is no longer the undisputed ruler of the Congress Party, Although Mr. Tandon, the present president of the Congress Party, is opposed to Nehru's foreign and domestic policies, he was elected by an overwhelming majority this September. Even leading members of the Congress Party in Nehru's cabinet will be likely to oppose him if he seeks closer collaboration with Soviet Russia and Communist China.

He is also threatened by defections if he fails to solve India's difficulties with Pakistan over the Hindu refugees and over the future of Kashmir. While such domestic Indian questions may seem remote to an American reader, they are of importance at least to the extent that they throw light on Nehru's essential character.

It is not too well known in this country how many millions of persons—at least ten million Hindus and five or six million Moslems—have been tragically affected by the partition of India. Nor is there any understanding here of the fact that more thoughtful Indians have begun to believe that the partition was neither necessary nor basically beneficial. In destroying the economic unity of the subcontinent, it has left India with a shortage of food and raw materials, and imposed on both India and Pakistan the burden of large standing armies.

On all these issues, which are at the heart of India's internal difficulties, Nehru has played the same vacillating, unrealistic, sentimental role as in his conduct of foreign affairs. Here, too, he has been incapable of taking decisive action and has sought always to avoid conflicts at any cost. He has made compromise after compromise with principles he advocates in theory and, despite his high ideals, can be—and is—rightly accused of being an inveterate appeaser.

Nehru had originally been opposed to partition but when the Moslem League threatened "rivers of blood" and the British Government added the weight of its support, Nehru became one of the chief architects of the division. He rationalized his reversal by asserting that partition alone could save India from internal strife. A clearer-eyed prophet—one who is effective as well as good—might well have foreseen the vast

refugee problem and the communal massacres that followed directly upon partition.

Nehru is known to be particularly eager to have Kashmir remain an integral part of India, and indeed the government of Kashmir had legally and officially joined the Indian union. Yet when the Pakistan army invaded Kashmir in 1947 and the Indian army was ready and clearly able to drive out the invading forces, it was Nehru who insisted on a cease-fire. It was one more expression of his apparent deficiency on realism.

In the economic area he has been no less inconsistent—one is tempted to say confused. Committing himself on vague socialist grounds to nationalization of India's heavy industry, Nehru succeeded in discouraging much-needed investment of foreign capital. At the same time, ironically, his government has failed to control the enormous profits made by rapacious Indian industrialists, many of whom engage in black marketing.

Americans who have watched Nehru's admixture of idealism and poor judgment without benefit of romantic glasses are sometimes reminded, not unnaturally, of Henry A. Wallace. It is said, in fact, that Nehru is a great admirer of the former Vice-President, and of the pro-Soviet policy Wallace so vigorously espoused. During his American visit, Nehru went out of his way to confer at length with Wallace, apparently to obtain his views on world affairs.

Wallace has now altered his stand on Soviet imperialism and Red China. Will Nehru, too, see the light? Can he summon up a new clarity, a new realism, to replace his vague good intentions? Can he stop India from drifting towards internal chaos and from external combination with the very forces cated to its destruction as a truly independent Can he yet make India—geopolitically so signific Asia and the globe—a true bulwark of world and Asian independence?

If the answers for which mankind, and especially, are waiting should be in the negat Nehru may ultimately join the company of Masaryk and others who toyed with the delusion third-force appeasements of the unappeasable Po Without denying him any portion of the admir to which he is entitled for his goodness, Am would be well advised never to lose sight of chronic lack of effectiveness.

The sad truth is that Nehru's foreign policies so far been liabilities to the cause of freedom world peace. With India's borders menaced by Communist invasion of Tibet, with Peiping follow Moscow orders in refusing to accept the "cease-fire Korea" resolution advanced by India and other nations, it is tempting to credit strong rumors Nehru is revising his policies and moving towards operation with the United States. Let us hope that rumors are true, and not a mirage of wishful thinking on our part.—*The New American Mercury*, Februar 1951.

Note : Dr. Taraknath Das has been an exile fr India for about thirty years. In this article, Dr. D has made assumptions which differ in many respe from the views of people who are in close touch w India.—Ed., *M. R.*

A unique Collection

of

India's Choicest Landscapes & Architectural Wonde

by

S. G. THAKUR SINGH

(*Introduction by* DR. JAMES H. COUSINS, D.Litt.)

GURUDEV SAYS :—"The representations of the landscape, temple scenes & striking aspects of Indian Art done by Mr. S. G. Thakur Singh have gi me pleasure and I recommend them to all lovers of Beauty and Nature human works of Art."

These paintings are, in fact, poems in colour. They open before you all wonderful wealth of India's artistic heritage in its eternal freshness.

The book contains *25 colour plates* mounted on cover paper, interleaved high class antique paper, containing critical analysis and appreciation of the art and genius and short descriptions with historical or religious context of pictures depicted therein.

In fact, this art album, with its excellent get-up and its extremely m price of Rs. 20/-, makes it look like a free, though invaluable gift.

"I Can Make You a Master Writer and a Convincing Speaker!"

—GRENVILLE KLEISER, Famous Speech Specialist

Whatever your business or occupation you need a command of the English language to be successful. It will lead you to the forefront and will help you, as no other single thing can, to reach the goal of your desires and achieve success.

Years of study and experience have enabled Mr. Grenville Kleiser to formulate a course of lessons in Practical English which has been universally admitted to be superior to any instruction hitherto offered on this subject. It enables you by post, in your spare moments at home, to—

Enlarge Your Vocabulary by Thousands of Words;
Use the Right Word in the Right Place;
Correct all Errors of Grammar, Idiom and Diction;
Develop Originality of Style and Expression;
Write Tactful and Forceful Letters, Essays, Advertisements, Articles, Stories, Reports and other Compositions;
Become an Engaging Conversationist and Be Popular in Good Society;
Be a Person of Culture, Power, and Influence;
Earn More Money and Get Better Position.

If it is your ambition to become a forceful effective speaker, enrol yourself for Grenville Kleiser's Mail Course in **Public Speaking & Development of Personal Power.** It will enable you to—

Conquer Timidity and Fear;
Banish "Stage Fright" & Nervousness;
Acquire Poise and Self-Confidence;
Develop Charm and Personality;
Grip and Hold Attention;
Argue Effectively and Winningly;
Talk Convincingly & Be Successful;
Be a Centre of Attraction in Social Gatherings;
Address Meetings and Sway All by Forceful Speech;
Become a Living Force and Win Admiration.

This Course will bring out the best that is in you, by making you a positive, clear-cut, convincing thinker and speaker. Nothing like it is available anywhere in India or abroad.

WRITE TODAY FOR FULL FREE PARTICULARS

There is absolutely no uncertainty—no guesswork—about Mr. Kleiser's methods. He has had years of experience in leading educational institutions and is generally recognised as the foremost teacher of speech culture and English by post. He has had under his tutelage many of the best known men in the public eye. His Mail Courses are his life work. They are for every ambitious man and woman who would use the English language for all one is worth in business and social life. We shall be glad to explain any of these two Courses to you. Send us the coupon above or write for full particulars, enclosing two annas in stamps. Will you do it TO-DAY?

MIRACLES OF MESMERISM

—This introductory book now sent free!

It explains the secrets of Mesmerism, Hypnotism, Will-power, Thought-force, etc., and reveals many interesting and amazing facts about these mental sciences, and describes in detail with photographic illustrations how wonderful things can be done with these powers. It also tells you how you can learn these things practically from us by post at very low charges. This book will prove a revelation to you. It will show you what wonderful powers are lying sleeping within you and how these secret powers of human mind can be awakened and utilised to get all-round success and happiness in life. If you wish to develop your inner powers and influence and control others so as to follow your wishes, or to cure your own diseases, or of others and to gain health and happiness, write to-day for this marvellous book now sent FREE.

Thousands have already been benefited by the secret teaching described in this book. **We are receiving hundreds of letters from the grateful people like the following:—**

"I gained very much in my health. I am feeling a new energy in me. I can hypnotise people and can remove all sorts of pains and fever, etc., by my power"—Shamsher Singh Raikwar, Bindal Bridge, Dehra Dun.

"I am glad to inform you that I have had wonderful results."—T. S. M. Faleel, Wattala, Ceylon.

"I have cured 400 people of different diseases. I have given some public demonstrations also."
—A. C. Chakravarti, Nirshachatti, Manbhum Dist.

"I inform you with thanks that I have been successful in hypnotising various persons. I have treated a few persons and got wonderful results."
—Miss S. Khanna, Rly. Rd., Kasur, Punjab.

"I have improved my mental faculties. My physical defects have vanished and I am enjoying my life in the true sense of the word."
—D. Hardas, Juna Basti, Bilaspur.

"I have developed powers that are surprising to me, and everyday my personal influence is getting stronger. Every one should have this course."—Exane Edmond Jiyana, 57, Meyer Street, Sophia Town, S. Africa.

"May God bless you and shower His choicest blessings on you for your Good work of unreserved teaching of the occult sciences in such a manner that one has no difficulty to understand and practise."
—Yad Ali, Dargah Bazar, Ajmer.

"To my astonishment I tried my first experiment on my niece, a girl of 14. I came to success to put the girl in complete trance.—A, B. Nandi, Bank of Tripura, Golaghat."

"I have cured myself from the disease and now my health is improving marvellously."—I. C. Rath, Janjgir, Bilaspur.

"Most gladly I am writing that I tested my powers on my boy-servant and maid-servant. I was successful everytime."—A. M. Khan, Jamalpur, Mymensingh.

"On the third day I took to hypnotise my wife and sisters and was fully successful. My sister came under my control fully on the first attempt. Members of my household were very much surprised and glad to see my powers."—B. G. Kshirsagar, Brahmaghat, Banaras.

"I am overjoyed to inform you that I have succeeded in Mesmerism beyond my wildest dreams... I have mesmerised both my sisters and 4 other boys."
—Titus Gomes, 109, Church Road, Colombo, Ceylon.

"I have hypnotised a lot of persons young and old. My own diseases have vanished away and I have cured a lot of patients."—Pershad Gajadhur, Sebastopol, Mauritius.

"I have mesmerised numerous friends and relatives... I thank you ever so much for my success."—Gennes Moodley, the Magician, Scottsburgh, Natal, Africa.

We are receiving hundreds of such letters from all parts of the Eastern World.

Write to-day for this introductory book, now sent free, and soon you would also speak like them. Write your address very clearly.

INDIAN ECONOMIC INSURANCE CO., LTD.

Head Office :— MISSION ROW, CALCUTTA.

"Indian Economic" is one of those very few Life Insurance Companies of India which are regularly paying bonus to the policy-holders and dividend to the shareholders.

Board of Directors

S. M. BHATTACHARJEE, Esq., Chairman.
RAJENDRA SINGH SINGHEE, Esq.
T. C. CHATTERJEE, Esq.
I. N. ROY, Esq.
M. M. BHATTACHARJEE, Esq., Manager.

As it is always profitable to take a policy from the INDIAN ECONOMIC, so also it is always profitable to take an agency from the INDIAN ECONOMIC. Well-informed people take Insurance Policies from "INDIAN ECONOMIC" with pleasure. It is the support of the intelligent public that has made the position of the "INDIAN ECONOMIC" so strong to-day.

ROUND THE WORLD

By Mr. J. N. SINHA

(Assistant Conservator of Forests, Bihar)

A most interesting travel book that reads like a novel—valuable and instructive information of the world in the language of story book. The different customs of foreign people, their manners and outlook, are delicately mingled with humorous and entertaining anecdotes.

"There is a certain distinctiveness about the book which sharply marks it off from the ordinary travel tales of this kind." —*Hindusthan Standard*

"The volume is a record of first-hand experiences in various countries of the world, and is full of information which a large public ought to know." —*Amrita Bazar Patrika*

34 Photographs & 3 Maps :: 2nd Edition—Price Rs. 7-8

The Truth in Your Horoscope

YOUR REAL LIFE TOLD FREE

Would you like to know without any cost what the Stars indicate for you, some of your past experiences, your strong and weak points, etc? Here is your chance to test FREE the skill of Pundit Tabore India's most famous Astrologer, who by applying the ancient science to useful purposes has built up an enviable reputation? The accuracy of his predictions and the sound practical advice contained in his Horoscopes on Business, Speculations, Finance, Love-affairs, Friends, Enemies, Lotteries, Travels, Changes, Litigation, Lucky Times, Sickness, etc., have astounded educated people the world over. GEORGE MACKEY of New York believes that Tabore must possess some sort of second-sight.

To popularise his system Tabore will send you FREE your Astral-Interpretation if you forward him your full name (Mr. Mrs. or Miss), address and date of birth (English Calendar) all clearly written by yourself. No money wanted for Astrological Work, postage, etc., but send 6 annas (Stamps) for Stationery, Testimonials and other interesting literature. Tabore believes in fair dealings and all work for which he receives any payment is on the basis of satisfaction guaranteed or full money refunded. You will be amazed at the remarkable accuracy of his statement about you and your affairs. Write now as this offer may not be made again. No personal interviews, all consultations by mail only. Address: Pundit Tabore (Dept. 341), Upper Forjett Street, Bombay 26.

AVAIL YOURSELF OF GOLDEN OPPORTUNITY.

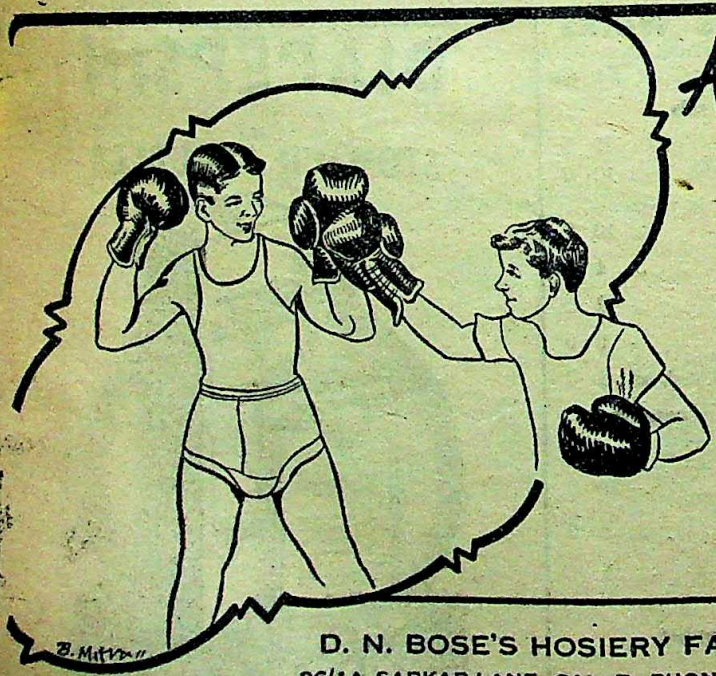
SAVINGS BANK ACCOUNT



To have a Savings Bank Account with the CALCUTTA NATIONAL BANK is very convenient and profitable. A Savings Bank Account with the Calcutta National can be opened with the sum of Rs. 25/- only.

If a minimum balance of Rs. 100/- is maintained with the Bank in the Savings Bank Account, the Bank will, on request, supply a cheque book, free of cost. Money from the account, to the extent of Rs. 1000/-, can be withdrawn from the Bank by a single cheque, once a week. So, four cheques can be drawn in the four weeks of the month. But you can deposit cash and cheques in your account every day.

The maximum amount that you can keep deposited in your Savings Bank Account is Rs. 15,000/-. Interest at the rate of 1½% per annum is paid by the Bank and interest is credited to the account every half-year, provided the interest accrued is at least Re. 1/- for the half-year. The Bank supplies a Pass Book, free of cost, and entries into that Pass Book of all your transactions are also made by the Bank, free of cost. Thus a lot of facilities which are usually enjoyed by the holder of a current Account, have also been made available by the CALCUTTA NATIONAL BANK to its Savings Bank account depositors. You can open your Savings Bank Account in any one of the thirty offices of the Bank, spread over the whole of India.

—AN UNUSUAL WAR BOOK—

THIS EUROPE

By GIRIJA MOOKERJEE Rs. 7

"The rumblings of a Third World War are being heard all over the world. At such crucial times as now, books of the nature that Girija Mookerjee has written as a faithful account of his harrowing experiences of the Second World War in France, Germany and in neutral Switzerland (!) should serve as a very effective reminder of the evil and catastrophe that war spells in modern times. He is perhaps the first Indian to have written a book of this type."

—FORUM, 11-2-51.

"Like a modern thriller the reader's curiosity is tickled from the beginning and keeps keyed upto the very end of the book."

—NAGPUR TIMES, 28-1-51.

"He writes with the verve of a seasoned reporter who has warmed up to his subject. His glimpses of Paris after the occupation is realistic and so is the picture of the end of the Third Reich…"

—HINDUSTHAN TIMES, 3-12-50.

—A FEW OTHER SARASWATY PUBLICATIONS —

CALCUTTA.

"Among the makers of modern Bengal Ramananda Babu will always occupy an honoured place. × × × Like Tagore's the late Mr. Chatterjee's genius was essentially constructive. × × By publishing this engrossing biography of her father, Srijukta Santa Devi has done a great service to Bengal and derivatively to the whole country. × × No one could have written a biography of Ramananda Babu as she has done. It will certainly remain a source book for future writers and students."

—*Hindusthan Standard.*

"An authentic and highly interesting biography in Bengali of the late Ramananda Chattopadhyaya. × × The life story of such a man is naturally linked up with the main currents of contemporary national history and we are glad to note that the author has adequately covered this wider background in delineating the individual's life. The style is restrained and has a homely grace, and a number of fine photographs have greatly enhanced the value of the volume. We are sure the book will be read with profit by those who wish to study he currents and cross-currents of Bengal's history tor the last half a century with which Ramananda wasfintimately associated."

PRABUDDHA BHARATA
or AWAKENED INDIA

(Started by SWAMI VIVEKANANDA in 1896)

The Premier English monthly conducted by the Monks of the Ramakrishna Order, devoted to universal religion and comparative philosophy; keeps its reader in touch with the cultural side of Indian national life, both ancient and modern.

56th year begins from January, 1951

RABINDRANATH TAGORE: "Admire its writings as contributions to pure Indian culture."

Dr. S. RADHAKRISHNAN: "I have been a regular reader of *Prabuddha Bharata* and can say that its sanity in dealing with religious doctrine and discipline has been its most impressive characteristics."

COUNT HERMANN KEYSERLING: "I think *Prabuddha Bharata* is one of the most interesting and important magazines that one can find today in any country."

Annual subscription: Inland Rs. 5, Burma Rs. 6, Foreign 14 sh., U. S. $ 4.

A WONDERFUL SCIENTIFIC INVENTION

"PILEGORIN" (Regd.)

Long-felt demand for an effective remedy for piles is now fulfilled. Piles are no longer incurable. There is no need of operation or external application of ointments and pastes of any kind on piles. Piles of any type can be cured completely within six days by taking 'Pilegorin' orally. It acts on the circulatory system of the parts affected as well as on the liver and thus produces tonic effect.

Price Rs. 3-12-0 *Postage and Packing extra.*

FAMINES IN BENGAL

(1770-1943)

By KALI CHARAN GHOSH

The best documented history of Bengal Famines since 1770. Materials collected from the official Despatches and contemporary literature. Causes of famines and their remedies have been fully discussed.

Writes *Commerce*: "By pointing out the Government's mistake of ignoring the experience of previous famine enquiries, Mr. Ghosh seems to want his book to serve as a warning to them for the future."

Guardian remarks: "……If any safeguard against any future lies…Mr. Ghosh's record will be ready at hand then to lash into shame any possible indifference."

Forum says: "These pages contain one of the best accounts of the Bengal famine."

THE MODERN REVIEW

MAY 1951

VOL. LXXXIX. No. 5 WHOLE NO. 533

NOTES

Visva-Bharati University

The "Parishat" (General Assembly) of Visva-Bharati has after due consideration authorized its "Karmi Samiti" to take all necessary steps to effect the changes necessary to raise the Visva-Bharati to a Central University. There have been apprehensions that under the temptation of State patronage, the Visva-Bharati may lose the distinctive features imparted to it by its founder, the Poet. The Prime Minister of India who also happens to be the Acharya (Chancellor) of Visva-Bharati has, however, tried to remove these apprehensions, by a message to the "Parishat" assembled in session on April 22 last, by saying that

"I have to inform you that the Government have introduced a Bill in Parliament with the object of endowing the status of a Central University to the Visva-Bharati. It is our special wish that Santiniketan will not be a mere replica of other Universities, but will carry on its work on the lines laid down by Gurudeva.

"I am happy at this new development in the life of Santiniketan, and in trust that this will give it more opportunities of service, I send all my good wishes on this occasion."

This tardy and somewhat meagre recognition by the Centre of what Rabindranath's vision of the Visva-Bharati meant, is a happy augury. It means that we have not as yet totally forgotten our ideals and our ethical background. But all the same, this Bill, even if it be passed soon and implemented to the fullest extent, will not fulfil all that for which Gurudeva gave his uttermost, in endeavour and in worldly treasure.

In a few days' time we shall be celebrating his ninety-first birthday. But do we as yet realize what we had gained by him and what we have lost in his passing? The nation was fortunate in that it had at its forefront one of the greatest of thinkers of all time. during its most crucial days of trial while in bondage. And to-day at the darkest hour of our destiny, when from all sides we are beset with grave perils, we sadly feel the absence of that superman with his clarity of judgment.

The curse of mediocrity is on us. And nowhere is that so manifest as in the field of education. This Visva-Bharati Bill as it is sponsored seems to us to be the attempt of pygmies to build a memorial to a Titan whose stature they were unable to measure. Where are the provisions to see that proper men and fit measures be arranged so as to stop the drift into oblivion with which the Visva-Bharati is threatened? For this Bill might stave off economic bankruptcy for the time being but who is there and what machinery has he got to clear the channels that are clogged and restore the flow of the fountain of inspiration? As the Bill stands it looks to us as if it were an attempt to restore an edifice of archaeological importance.

For an University to function to the utmost of its scope, the most essential factor is inspiration, and not merely cold cash. And for that inspiration the Teacher, *the Acharya*, must be there, with full powers to choose his associates for the administration of the institution and the instruction of its alumni. Pandit Nehru, if he really desires that the most cherished dreams of Gurudeva come to flower, must find the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

proper men to be put in charge and having done so must assure them that he and his colleagues are there, all the time, to help and advise.

Rabindranath's dream of the Visva-Bharati was that of a fountain-head of Inspiration, where all that were thirsty might drink and be refreshed, regardless of colour, creed or nationality. The dream was that of a Valley of Peace where laughing and dancing children may attain the vigour of youth, with fertile brains, noble ideas and tireless energy, so that when they leave they might face all trials, tranquil in mind, stout and assured of heart, and with an intellect polished and sharpened like a shining weapon at the cultural armoury of the Visva-Bharati. Untold wealth alone would not transform this vision into reality unless the men are there who have not only the appreciation but also the capacity to give it shape.

Lady Abala Bose

In her 87th year the wife of Acharya Jagadis Chandra Bose has departed from this world. She had been waiting for this release for more than thirteen years since November 23, 1937, the day on which her Acharya, in more senses than one, had preceded her to the realm of the spirit.

The country will mourn her loss. For, it snaps asunder the links that bound in natural piety more than three generations of men and women. Her father was Durga Mohan Das, one of the founders of the Sadharan Brahmo Samaj, and a stalwart supporter of female emancipation. Durga Mohan and his generations represented the constructive phase of India's Renaissance that was the product of the impact of the West on the East. Abala Das and her generation were thrown into the full tide of this emancipation, and she was initiated into the national service under the spacious eyes of men like Shibnath Shastri, Ananda Mohan Bose.

The imprint of that time had persisted in her life for well over seventy years. She went to Madras for medical education. Her happy marriage to a dreamer and a scientist introduced her into life's many-sided activities of which she chose education of women as her special field. And the history of this education is coincident with her growing life, ever gathering new experiences and new skills as she travelled for decades all over the world in the company of her husband.

She was keenly sensitive to the influences of the times, and represented the dynamic phase of India's womanhood which recalled to many the times of the Upanishadic seekers of Truth—men and women. We had it from her own lips how she came to know Margaret Noble, better known as Sister Nivedita of Ramakrishna-Vivekananda. This Irish woman re-educated herself into a leader of Indian womanhood, holding fast to the ancient moorings and stretching forth their hands to hold in their grasp and utilize for life's enrichment all that the modern age with sciences and arts could give.

Her first work in the uplift of women was Brahmo Girls' School, of which her father was of the founders. During her regime as Secretary forged ahead, and its present high status is mostly to her guidance and drive. The success of this institution has been an inspiration to the present leaders the women's movement in Bengal. Today we witness women boldly coming forward to take up burden and responsibility of their own education.

Abala Bose lived to see the fulfilment of the factory steps that from her youth upwards she had initiated and herself initiated through the various institutions that she had helped to found. The last these was the Nari Siksha Samiti founded in Under its parental care has grown up the Vidyasa Bani Bhawan, a widows' home, where board lodging is rendered free to the inmates. Then the Mahila Shilpa Bhawan, an industrial sch founded in 1926 to impart education in the crafts arts which women could carry on during the interv of their domestic life. Education of village girls has been a special pre-occupation with the Samiti sin 1924. The Nari Siksha Samiti diverted her energy to rural education which in 1937 gained an extend purpose—the education of rural women in mother-cra and home industries. This scheme is being financ by the interest of a Fund left by Acharya Jagad Chandra, worth one lakh of rupees. It bears the nam of Sister Nivedita. The Bani Bhawan Training Sch rounds off the activities of the Samiti which h pioneered in Bengal many an activity intended make women's life richer and more purposeful.

This record would be an inadequate representation of a historic life if an attempt be not made to indica the individual instincts and accomplishments whi Abala Bose developed to re-mould herself as a Hin wife. And herein was shaped her life's fulfilment in th it got fused in the dreams and aspirations of her scient and seer husband. But for her constant ministrati Acharya Jagadis could not have reached the summ that he did. It was inspiring to watch the mutu action and reaction of two natures almost making single personality—one in thought, one in aspiratio one in activity, one in counsel, one in hopes fulfil and one in disappointments shared, in common. became difficult to separate these two. After husband's death, life lost all meaning for her, except for the fulfilment of her mission for the betterme of the status of the helpless amongst her own sex, also for watching with a loving care over the resear institute founded by Acharya Jagadish Bose. With t she passed her long wait. On 24th April, 1951, th waiting ended. May her soul attain peace in the co pany of her dear and near ones who had crossed barrier of the apparent and taken to the realm of t reality. *Shantih Shantih Shantih!*

Food from U.S.A.

It is sickening to have to watch the spirit in which the whole business of food supply to India is being discussed in the U. S. A. Congress. The Nehru Government must share a part of this charge. India's Prime Minister knows his America or ought to. His proposal made during his 1949 September-October tour through the States was a frank "barter" offer to exchange U.S.A. foodgrains for certain essential raw materials for her industries which India can supply—manganese, mica, jute and tea, for instance. Instead of frankly accepting or rejecting it, the U.S.A. Administration sat over it.

Then certain good people in the States, moved by reports of food scarcity in India, took the initiative in influencing their President to move the Congress for making available to India two million tons of food-grains for immediate despatch in order to halt famine in our country. It started a tragi-comedy for the edification of the world. The following news cabled by *Press Trust of India* and *Reuter News Agency* reveals a part of it:

"Washington, March 20.—The Bill to make India a gift of 2,000,000 tons of food-grains is meeting increased opposition in the U. S. Legislature.

"Congressmen favouring the 'gift' said today the Opposition had stiffened to the extent that there was now only an 'even' chance of legislation being approved.

"Sponsors of the Bill met in conference this afternoon. It was reported that

1. An attempt would be made to bring the Bill, at present held up by the House Rules Committee, to the House floor immediately after the Easter holidays. The Rules Committee has not formally voted, but sentiment is against making a gift.

2. The sponsors would make no compromise but would retain the 'gift' provision of the bill.

3. The Democratic leadership would attempt to overcome the inaction of the Rules Committee, although there was no indication how they would do it.

4. It could be expected that the House might not approve the Bill, and that, at best, it would offer to 'loan' to India the food-grains.

Representative Thomas Morgan (Democrat-Pennsylvania), a sponsor of the Bill, said: 'The opinion is that the Bill has only a fifty-fifty chance at best'."

But this impasse had been preceded by a propaganda against India, an idea about which can be had from the following, widely circulated through the American continent:

"The Nehru Government intensified India's food shortage by its isolationist efforts to become independent of Pakistan (or anywhere else) for cotton and jute," says Mr. Henry Hazlitt in an article under the caption, "How to Cause A Famine," published in the *Newsweek* of March 5, 1951.

"This programme,' said President Truman, in asking Congress to give the Indian Government 75,000,000 bushels of grain, 'does not constitute a precedent for continuing to provide food to India on a grant basis or for providing similar aid for other countries.' But it does, of course, constitute precisely such a precedent. We cannot do less in future for India or any other country without being accused of less generosity or plain discrimination.

"Famine and starvation should, of course, always be prevented or relieved when humanly possible. But we must also ask, what caused it, whose duty it is to relieve it, and what steps are essential to prevent its recurrence.

"It has gradually, precedent by precedent, become the assumption of most foreigners and most American Fair Dealers that when any real or imagined deficiency of anything whatever exists anywhere on earth, it must be made good primarily, if not solely, at the expense of the American taxpayer. Yet even the Indian Government did not ask us for more than a long-term loan to enable it to buy this grain. Given reasonable prudence, it could easily have repaid such a loan. Why did Mr. Truman recommend a gift?

"The process will be this. America will give the grain. But the average Indian (nearly 85 per cent of the Indian people are illiterate) will probably never know this. For, the gift will be to the Nehru Government, and the Nehru Government will sell the grain to India's hungry. Moreover, the Nehru Government will be allowed to keep for statist schemes even the 'counterpart funds' it gets for selling what we give.

"Just as Mr. Truman ascribed the Yugoslavian food shortage solely to 'the drought,' so he now ascribes the Indian famine solely to 'natural disasters —earthquakes, floods, droughts and plagues of locusts.' Yet the famine has at least been intensified, if not principally caused, by the economic policies of the Nehru Government:

1. "The Nehru Government is a 'planning' government, a Socialist government. Like all such governments it has embarked on a grandiose 'industrialisation' programme. This means that it has diverted land, labour, and capital from agricultural to industrial production. This has directly reduced India's production of food. Mr. Truman apparently approves of this compulsory diversion. For he wants to compel American tax-payers to subsidize it. It is explicitly because he wishes the Nehru Government to have the funds to continue this long-range economic development programme, that he thinks American and not Indian tax-payers should be asked to pay for the present Indian food deficiency.

2. "Specially, the Nehru Government intensified India's food shortage by its isolationist efforts to become independent of Pakistan (or anywhere else) for cotton and jute. It ordered a reduction in grain-growing acreage to increase cotton and jute acreage.

3. "The Nehru Government has not permitted free markets in agriculture. It has put price ceilings on grain. These have, as always, discouraged and reduced the production and sale of grain. The Government has restored to force Government procurement of grain from peasant growers. Our Government is asking American taxpayers to suffer from these policies and is not suggesting any change in them. Therefore the food shortage is likely to recur.

4. "The argument that India can not pay [illegible] for grain because it has only

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

'limited foreign exchange reserves' and an 'unfavourable balance of payments' is economic nonsense. These conditions are the result of the Nehru Government's own exchange control measures. It has made dollars scarce in the same way as it has made foodstuffs scarce—by putting artificial price ceilings on them.

"In this grain discussion the whole emphasis has been on distribution. But in the long run nothing can save India or the world from poverty and famine but greater production. And there is wilful blindness to the fact that government 'planning' price-fixing and Socialism inevitably discourage, reduce and disrupt production."

Our readers will understand the full import of such lying and malicious propaganda against a friendly country. A detailed reply should be given by our Government in a dignified manner and we on our side should learn to recognize the American with his mask off. It is a sorry business.

China's Rice Offer to India

The *Observer* discusses what it calls "Peking's bid for popularity with the people of India." This—although it ignores the Indian Government's pleas for peace in Korea—cannot be overlooked as a new and disturbing factor in Asian politics. Of the 1,000,000 tons of rice offered by China to relieve famine in Bihar, Peking Radio announces that 22,300 tons have already reached Calcutta and a further 11,500 should be there in a few days.

The same agency gave prominence yesterday to the formation in Calcutta of an India-China Friendship Association said to be enthusiastically supported by 'prominent scientists, writers, artists, professors and important political leaders from different parties.'

"This familiar move," says the *Observer*, "is presumably intended to strengthen the Communists in the coming Indian elections."

India is now in desperate need for foreign food and she has expressed her willingness to accept food from any source if no political strings were attached to it. Nobody prevented the U.S.A. to act quickly and firmly to despatch food to India. If China seized the opportunity, certainly she cannot be blamed.

Food Supply to Bihar

Almost all the States of the Indian Union have been crying themselves hoarse over their food deficits, Bihar not the least. Allegations have been made by Bihar ministers and the Press that their people are being discriminated against by the Centre, that death due to starvation has been active to which the Centre has been indifferent. The Centre's Food Minister and his chief advisers have denied these charges, after touring the affected areas. They have been forced to issue a Press statement in course of which they say:

"According to the figures available in the Union Food Ministry, following the failure of rains in Bihar last September, the State's quota of foodgrains for 1950 was progressively raised from 40,000 tons to 1,40,000 tons. For the current year, Bihar's quota has been fixed at six lakh tons, highest for any State except Bombay. The allocation for January 1951 is 36,000 tons of foodgrains, and it is likely that an equal quantity will be allotted for February as well.

Official sources here, however, recognise that allotments of foodgrains are not sufficient unless there is a prompt movement of the quantity allotted. Special steps have, therefore, been taken to ensure the quick movement of foodgrains.

In view of the necessity for transhipment from broad-gauge to meter-gauge, movements to North Bihar are usually subject to quotas.

It is, however, stated that by curtailing non-essential traffic food movements into North Bihar from the Punjab *via*., certain routes have been made free both on trade as well as Government account. Traffic from Calcutta is being moved at the rate of 900 tons a day."

We hope that this assurance will satisfy the Rashtrapati's own State. A lakh tons of food-grains 3000 tons from Calcutta alone, are being moved into Bihar to meet the emergency which threatens Bihar.

Cooch Behar

Police firing on hunger-marchers in Cooch Behar resulting in six deaths, including a boy of seven and two girls of 16 and 18, and serious injury to many is another sad instance of how the food position is being bungled.

The following press note was issued by the West Bengal Government after the incident of April 20:

"For some time past, there has been a steep rise in the prices of rice and paddy in Cooch Behar. Steps had been taken by the local authorities to introduce modified rationing and arrange market operations to keep down the prices and rush supplies from outside to relieve the situation.

"On April 19, however, hunger-marches were organised in Cooch Behar town by members of the Hindu Mahasabha, Forward Bloc, R.S.P.I. and others. One such procession demanding the introduction of full-scale rationing went to the Deputy Commissioner's office. The Deputy Commissioner met the representatives of the processionists and explained to them the measures taken by him to bring down the price of rice and meet the general food situation obtaining in Cooch Behar. Five of the processionists, however, declared their intention to resort to hunger-strike and squatted in front of the Deputy Commissioner's office. The organisers of the procession at the same time declared their intention to observe a *hartal* and organised further hunger-marches on April 20 in sympathy with the hunger-strikers.

"On April 20, a procession of about 1,500 persons including some women and children was again taken out to the Deputy Commissioner's office during office hours. The processionists surrounded the Deputy Commissioner, who tried to explain to them the steps taken by Government to meet the food situation, and remonstrated with the Deputy Commissioner for a long time. The hunger-strikers continued their fast in front of the Deputy Commissioner's office and were joined by two others on April 20.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"To prevent breaches of the peace, the Deputy Commissioner issued orders under Sec. 144 Cr.P.C. in the office area to be in force for a fortnight and banned the use of loudspeakers in the municipal area. On April 21 in the morning another hunger-march was organised and after passing through different areas this procession broke into the prohibited area in defiance of the order under Sec. 144. The assembly was declared unlawful and warned to disperse. But the processionists started severely brickbatting the police. Some acid bulbs were also thrown at them. This resulted in injury to four police officers and twenty men, some seriously. Two police constables were overpowered by the mob, severely injured and thrown into nearby tank.

"The Deputy Commissioner, the Additional Deputy Commissioner and the Sub-Divisional Officer were also manhandled by the riotous crowd. The car of the Deputy Commissioner was set on fire and another police vehicle badly damaged. As the mob which had been reinforced in the meanwhile and was quite over two thousand further pushed in and the situation became out of control, the police after due and repeated warnings had to open fire to disperse the mob.

"Government regret to announce that as a result of firing five persons are reported to have died. Thirty-three persons are also reported to have been injured in the incident. The situation is being closely watched and further reports are awaited. The Divisional Commissioner is proceeding to Cooch Behar."

On April 23, the Central Food Ministry are understood to have expressed their surprise at the abnormal rise in the price of rice in Cooch Behar in view of the present stock position in West Bengal. The stock position is stated to be not too unsatisfactory. On the same day, West Bengal Food Minister told pressmen that "considering the population of Cooch Behar and the production of rice he found no reasons for the abnormal rise in price of rice, the district being almost a self-sufficient one. He felt that Cooch Behar being a district predominantly of large producers there had been hoarding leading to the present abnormal rise in prices there." From the account of rise in prices given by the Food Minister, it appears that cause or no cause prices continued to move steadily up while the food department stood by as silent and disinterested spectators. The Food Minister continued:

"The present population of Cooch Behar is 6,60,000 out of which 99,000 are refugees. The production of rice last year was 1,33,000 tons and this year 1,28,000 tons. The requirement of the people at the rate of 4 maunds and 26 seers per capita per annum comes to 1,16,000 tons. The net quantity available this year for consumption after deduction allowed for seeds and wastage comes to 1,15,000 tons. The net deficit is thus only one thousand tons.

"The district of Cooch Behar is almost self-sufficient. But owing to the fact that it is a district predominantly of large producers there has been hoarding in consequence of which supply in the market has been meagre. Government have lifted 48,000 maunds of rice out of 1,50,000 maunds of rice by issue of directives. Rice was given under modified rationing to about 20,000 people of Cooch Behar and Dinhata at 1 seer 8 chattaks per adult head per week at Rs. 16-14 per maund.

"Besides these, marketing operations were resorted to some markets where rice was sold at Rs. 16-14 to keep down the soaring prices of rice. Instructions have now been issued to bring a larger number of people under modified rationing. Government have ordered the release of 41,000 maunds of rice, now in Government stock in Cooch Behar, for release through modified rationing and for open sale in some of the markets. In addition, fresh stocks of rice amounting to 2,000 maunds and in another lot 5,000 maunds have been sent to Cooch Behar in March and in the middle of the current month respectively. The rise in prices showed an upward tendency by the end of February.

"The following are the prices of rice, according to Government reports, now ruling in different Sub-Divisions of Cooch Behar:

Place	*Date*	*Price*
Cooch Behar	April 11	Rs. 37 0 0
,,	,, 18	,, 47 8 0
Dinhata	,, 11	,, 50 0 0
,,	,, 18	,, 55 0 0
Mathabhanga	,, 11	,, 35 0 0
,,	,, 18	,, 65 0 0
Tufangunge	,, 11	,, 40 0 0
,,	,, 18	,, 50 0 0
Meckligunge	,, 11	,, 40 0 0
,,	,, 18	,, 45 0 0

In his next press statement on April 27, the Food Minister gave the number of people brought under modified rationing as follows: Cooch Behar Sadar 36,332, Dinhata 13,333, Mathabhanga 2,441, Tufangunge 796 and Meckligunge 437. He informed that stock in hand in Cooch Behar was 45,000 maunds of paddy and 12,000 maunds of rice. The weekly offtake from the stock was 2,000 maunds, *i.e.*, they had 28 weeks' food in hand to start modified rationing as soon as signs of unrest began to be seen. From the Food Minister's statement it appears how small the problem was which could have been solved with a little bit of tact, courage and foresight without resulting in a loss of six costly lives.

But the whole matter has been reported differently by Sri Surendra Nath Lahiri, Secretary of the Cooch Behar District Congress Committee. He is a Congressman and his statement published by the *Ananda Bazar Patrika*, on April 28, deserves close and very serious attention by the Government. Mr. Lahiri states:

"In view of the very bad food situation in the district of Cooch Behar, I went to Calcutta on March 31. There the member to the West Bengal Legislature from Cooch Behar, the President of our District Congress Committee and myself met the Ministers and arranged to bring the Parliamentary Secretary of the Food Department here. On April 10, the Parliamentary Secretary promised to an all-party gathering that modified rationing would be introduced in Sadar, Tufangunge and Dinhata Sub-divisions from April 16. He also assured of outside supply of rice. On April 17, we sent a telegram to the Chief Minister with copy to the Food Minister stating in it that rice was selling at Rs. 70 at Sitai-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

in Dinhata and Rs. 55 at Cooch Behar town; people were getting furious, hunger march might begin, introduction of modified rationing requested.

"On April 19, five young men started hunger-strike on the verandah of the Deputy Commissioner's bungalow. On April 20 two more youths joined the hunger-strike and there was complete *hartal* in the town. Hunger-marchers again came out. Finding the situation serious, the President of the Sadar Subdivision Congress Committee requested the Deputy Commissioner to convene an all-party conference. Accordingly, the conference was held on that day at 3 p.m. in the D.C.'s office. Rationing was demanded but with no effect.

"In the morning of April 21, telegrams were again sent to the Chief Minister, Food Minister and the President of the Provincial Congress Committee. In it we stated, 'Food situation extremely serious. The promise of the Parliamentary Secretary for the introduction of rationing has not been fulfilled. As a result, hunger strike has begun. Hunger-marching continues. Yesterday there has been complete *hartal*, which may continue further. Position of Congress precarious. Outside food needed. Rationing must be introduced immediately. Wire decision.' On the same morning at 9 o'clock, the President of the Sadar Subdivision Congress Committee and myself went to the D.C. and requested him to realise the gravity of the situation and not to do anything which might infuriate the people. We also requested him to declare that rationing had been introduced from that day. We assured him to go to Calcutta on April 23 and we wanted 15 days' time for solving the food problem. We also told him that till we met him in the evening nothing should be done from the Government side which might be felt by the people to be undesirable or provocative. If that were done, the situation would go out of control. I wanted temporary rationing for pacifying the people and ascertaining their views. Local authorities turned a deaf ear to my proposals. The result was the sad incident. I shall explain them in detail at the time of enquiry.

"Immediately after the incident, telegrams were sent to the Prime Minister of India, Chief Minister of West Bengal and President of the West Bengal Congress Committee. After the firing I followed the dead and the injured to the hospital and stayed there till 2-45 p.m. At 3 p.m. I convened an emergency meeting of the District Congress Committee. A resolution was adopted condemning unwarranted firing on peaceful hunger-marchers and the unreasonable and inhuman steps the local authorities had taken. In the resolution, their act was described as barbarous. It also demanded the presence of the Chief Minister on the spot. Copies of the resolution were sent to Prime Minister of India, Chief Minister of West Bengal, Police Minister, West Bengal Congress President, Chief Whip of the Congress Party, General Secretary of the A.-I.C.C., Food Minister, etc.

"In the afternoon I joined the public meeting but I with my workers was not allowed to speak. When we were there, the D.C. sent an urgent message to the President of the Subdivisional Congress to meet him at his office. In reply it was stated that as he had, in spite of serious and earnest requests, taken no steps to stop this dastardly firing it was not possible to meet him without consulting the members of the Committee. On April 22 the D.C.'s permission was sought so that two non-official doctors might be present at the post-mortem examinations of the victims of firing. In another letter, it was brought to his notice that the A.-I.R. had broadcast a news that 24 policemen had been injured by brickbats and acid bulbs and the D.C.'s permission sought for examining these policemen by non-official doctors. Both the letters remained unreplied.

"On April 22, we met the Divisional Commissioner and asked for a non-official enquiry and requested him to place the local administration in new hands because the people did not feel safe under the present local authorities. He regretted his inability to accede to the demand for non-official enquiry and said that he would himself conduct the enquiry."

The state of administration revealed in the statement quoted above, if it be correct, has been shown to be staggeringly inefficient. The Central Home Minister has promised a statement on the Cooch Behar incident. Needless to say the matter deserves urgent and serious attention and very firm action.

Indian Communists

On the 10th of March last Indian Union's Home Minister, Shri Chakravarti Rajagopalachari, re-iterated the Government's policy with regard to the Communists of Indian parentage who have been dancing to the tune of Moscow passed through Bucharest, the capital of Rumania, the Cominform's new propaganda centre. The Home Minister is a man of peace who has passed the major portion of his life as a lawyer, and the last 30 years as a votary of non-violence. But when he has had to share the responsibility of State he has risen equal to the occasion and always dealt with anti-social elements as they deserved.

In 1947, the Communists had observed some sort of a benevolent neutrality towards the Indian Government headed by Sri Jawaharlal Nehru. But in the beginning of 1948, a change came over the spirit of their activities. At a secret meeting of their Politi Bureau they resolved to switch back to their instinctive policy of sabotage of national effort in the new set-up of a Free India as they had done during the war years since 1941 when they co-operated with Lord Linlithgow in putting down our Liberation Movement. Communists from East Asia, specially from Burma and Malaya, were said to have taken part in this Conference. The result became apparent when the Communists opened their offensive operations in Telengana, on the Indo-Hyderabad border, exploiting peasant grievances for their own purposes.

They turned their attention next to Assam where conditions of infiltration from over Burma were easier and the "tribals" are an easier group to dupe. Of both these fields of their own choice, they stand discredited today. But they have ever been on the look-out for social sores whereon they can settle and drive their poison in. From their hide-outs, their leadership has been issuing directives to their followers. Some

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of these Sri Chakravarty Rajagopalachari has summarized. We publish these below as published in the daily press:

"Three leading Indian Communists have issued to their comrades a statement on September 23, 1950, explaining the Communist Party's policy. It is categorically stated therein that the party should put the peasant movement progressively on the rails of armed struggle, and that in agrarian relations, they should, by mass mobilisation and direct action as in Telengana, create armed forces in the rural areas and strong bases for their operation. It was further categorically stated therein that there is no question of liquidating Telengana, but that on the contrary it was a question of raising the movement in the rest of the country to the level of Telengana.

"The Politburo of the Communist Party of India issued a policy statement on November 15, 1950 in the following terms:

'Finally, it is necessary to clearly grasp the truth that the armed struggle has become the principal form of struggle in the present agrarian revolutionary stage that our national liberation movement has grown to'.

"It was added that simultaneously they should adopt and co-ordinate all other conceivable forms of struggle, such as economic and political strikes, demonstrations, agricultural labour and tenant struggles, signature collections for peace-pledge, election contests and so on."

Sri Rajagopalachari then quoted a special circular issued by the Central Committee of the party in regard to Telengana. The circular read:

"The Central Committee notes that certain statements are being made demanding the withdrawal of the heroic struggle of Telengana people led by the Communist Party against their age-long oppressors, with arms in hand for land and liberty. The Central Committee wishes the party ranks to note that such statements will be disruptive of Telengana struggle, the harbinger of the people's democratic revolution in India, which the enemy is trying to drown in blood. The Central Committee stresses upon all party members and people to defend Telengana with all the means at their debated.'

Sri Rajagopalachari said:

"An important foreign Communist who was invited to advise the Indian Communist Party, gave the following opinion on December, 1950: 'It is the task of the Communist Party to skilfully utilise the stand of the Nehru Government on questions like Korea, atom bomb, etc. Regarding armed struggle, as we have stated in our letter, we do not deny that ultimately the revolution in India will and must take the form of armed struggle. It is hardly to be debated.

"It is thus clear that we cannot accept declarations and challenges but must await facts and whether crime reported from Telengana, Madras and Assam and elsewhere shows substantial decrease."

These directives prove, if any proof were necessary in view of the birth and growth of World Communism, that Indian Communists are out on an armed fight with which there can be no compromise. India's Home Minister has indicated the policy that he would be following. His words were soft but forth-right. And coming as these do from him, we feel that the Indian *intelligentsia* who have developed a sneaking fondness for this malign influence on peace and goodwill among men will revise their attitude. Secretly helping the Communists and keeping themselves studiously within the law is a thin pretence that can no longer help either themselves or their people. There come times when neutrality becomes a crime. One such has come over to us. And we must mobilize all our resources, moral and material, to fight and defeat and annihilate this evil force.

The leaders of Indian Communists, the majority of them, belonged to the class of "educated discontent." Without their help this pest could not have bred in such profusion. That help cut away, the malignant growth will be sterilized and die. Only then can conditions return which will enable our people to build up the life of their dreams and aspirations.

Students' Brutality and Indiscipline

Dr. Kanhaiya Lal Garg, Principal, Barasheni Degree College, Aligarh University, was fatally assaulted on the evening of the 6th April last while going back to his house after the examinations. He was the Superintendent of examinations of the U.P. Board and Agra University, and it is alleged that he was a victim of the students' fury because of his conscientious discharge of duties at the centre.

This tragedy should serve as an eye-opener to the Government and a pointer to the climax of indiscipline among students. This educationist died at the post of duty, and so it is the bounden duty of the Government to make ample provision for the support of his young widow and small children.

Such a promising career was cut short for he was only 35; and his abrupt end in ghastly circumstances has sent a thrill of horror and indignation among principals, teachers and educationists.

Some years ago, Narayan Chanda, an "invigilator" of examinations under the Calcutta University, was murdered at the instance of a Muslim candidate who was caught while using unfair means and asked to go out. He threatened Narayan Chanda, and helped carry out his threat by having him murdered. He escaped because there was Muslim League Mnistry then in power, the young man having influential relatives.

In the Aligarh case there appears to be no communal bias to inspire the cowardly deed. But the evil has gone beyond mere communal. During the recent Matriculation examination held at Calcutta, the Rector of the Bhowanipur Mitra Institution was threatened; and it was carried out, though fortunately not effectively as at Aligarh. The evil has become one to be tackled by the State. Only the sternest of measures can halt the downward tendency amongst our students. And the State can do its duty if Society is as stern in its determination to stamp out youthful brutality.

A Constitution for Pakistan

The proposal for a proper constitution for Pakistan has been hanging fire for about three years. True to its Objective Resolution, the rulers of Pakistan could not but give it an Islamic character. But from these opinions between the modern-educated Pakistanis and the upholders of traditional Islam have differed and differed rather violently. The late Moulana Sabbir Ahmed was the leader of the latter, and after his death his fellow-workers and followers have taken up the task.

From Karachi came the news on February 1 last that "35 prominent Ulemas of Pakistan, who gathered in Karachi recently, have formulated a draft enumerating what, according to them, should constitute the "fundamental principles of an Islamic constitution."

The draft, which has been submitted to the Constituent Assembly Secretariat, categorically states that "the recommendations made by the Basic Principles Committee and the Committee on Fundamental rights are not in accord with the principles of Islam."

The conference, originally called to outline a detailed Islamic Constitution, could not proceed further to achieve this objective because the President of the Constituent Assembly refused to hand over to them a copy of the recommendations of the Board of Talimat-e-Islamic of the Constituent Assembly.

The conference decided to invite proposals from all persons interested in Islamic thought and to meet again shortly to consider those proposals and draw up a detailed constitution. Some of the fundamental principles recommended by the conference are:

(1) The law of the land shall be based on the Quran and Sunnah.

(2) The State shall be based not on geographical, racial, linguistic or any other materialistic concepts, but on the principles and objectives of the Islamic scheme of life.

(3) It shall be incumbent upon the State to uphold the right and suppress the wrong as postulated in the Quran and Sunnah.

(4) It shall be the responsibility of Government to guarantee the provision of basic human necessities to all citizens, irrespective of religion or race, who are temporarily or permanently incapable of earning their livelihood due to un-employment, sickness or other reasons.

(5) Citizens shall be entitled to all the rights conferred on them by the Islamic law.

(6) The non-Muslim citizens of the State shall, within the limits of the law, have complete freedom of religion and worship, mode of life, culture and religious education.

(7) All obligations assumed by the State within the limits of the Shariat towards the non-Muslim citizens shall be fully honoured.

(8) No citizen shall be awarded any punishment on any charge without being given full opportunity of defence and without the decision of a court.

(9) Head of the State must be a male Muslim in whose piety, ability and soundness of judgment the people or their elected representatives have confidence.

(10) The body empowered to elect the head of the State shall also be empowered to remove him by a majority of votes.

(11) No interpretation of the Constitution, which is in conflict with the provisions of the Quran or Sunnah shall be valid."

There are enough controversial issues in this scheme to cause headache to the present rulers of our neighbouring State, specially Clauses (5), (6), (7) and (9) as these will not enable them to pose before the world as progressives. We have yet to know how the womanhood of Pakistan react to Clause (9). About non-Muslims the duties assumed are hard to fulfil in the prevailing atmosphere of Pakistan.

Indo-Pakistan Permit Regulations

A stern warning that if Pakistan persisted in continuing its stringent regulations regarding grant of permits to Indian nationals to visit Pakistan, the Government of India shall have to revise their permit system, was administered by the Minister of State for Rehabilitation in the Indian Parliament. Sri Jain stated that "international relations are based on reciprocal basis and we must do something to make Pakistan realise that they must behave in a civilised manner." Demand for reciprocal treatment with Pakistan has been long and continuously insistent, but the Government of India has so far preferred to follow a one-way traffic with them in an impossible effort to win the love of Pakistan. A realistic policy with desired firmness pursued from the beginning would have gone a great way to avoid a number of losses, complications and humiliations.

The occasion for Sri Jain administering this warning was provided by Mr. Hussain Imam, who made most astounding statements in Parliament today speaking on the Evacuee Property Bill that Pakistan treated her minorities better than the Government of India treated their minorities in regard to evacuee property law, grant of permits, etc.

The remarks of Mr. Imam drew righteous indignation from several members including Pandit Thakurdas Bhargava, Sri R. K. Sidhwa, Pandit Hridayanath Kunzru, Sardar Bhopinder Singh Mann, Sri A. C. Guha and others who emphasised how Government of India had shown greatest forbearance in the matter of evacuee property despite Pakistan Government's wanton and appropriatory actions in this regard. They pointedly referred to the Rehabilitation Bill of Pakistan corresponding to which there was no law contemplated yet in India.

Sri Jain chastised Mr. Imam for the incorrect and distorted statements made by him and quoted chapter

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and verse to show how minorities in India had been in every respect treated most fairly and generously as compared to the treatment that minorities received in Pakistan.

Referring to the issue of permits, Sri Jain stated that six weeks' notice was required for obtaining permits to visit Pakistan whereas permits for visiting India were issued within half an hour to 36 hours of application. Income-tax clearance certificates were demanded by Pakistan from temporary visitors, whereas Government of India did not require any such certificates. Medical certificates were insisted on by Pakistan from Indian nationals intending to visit ailing relations in Pakistan and there was no laxing of these provisions even on humanitarian considerations. "Could the application of the stringent permit system of Pakistan be compared by any means with the liberal permit system of India?"—he asked.

Replying to the debate, the Minister of State for Rehabilitation said that while listening to the speech of Mr. Imam he had begun to wonder whether he (Mr. Imam) was speaking as a responsible member of the Parliament and an Indian national or whether somebody had briefed him on behalf of Pakistan.

A Member: "He is himself a Pakistani."

Sri Jain said Mr. Imam had apparently attempted to advocate the cause of Indian Muslims but it would be better if Indian Muslims did not have such advocates. All the statements of Mr. Imam were incorrect and made "purposefully or based on wrong information."

The Rehabilitation Minister said that, was it Mr. Imam's contention that a company's shares were held either by Muslims or Hindus and not by both? If the latter was the case, apart from the legal interpretation, would it be the intention of the Government to declare Hindus' property as evacuee property?

Sri Jain said that Government had two courses open. By virtue of being the holders of the majority of the shares they could apply and get the articles of association amended to vest the management in their hands.

This they had attempted to do in the case of the Umbernath Mills. But the High Court had come in the way and they found the Law was defective. Therefore Government had come before the House for amending the Law. It did not mean that the rights of the minority shareholders would be affected. Government would either manage the company themselves or allot it to some refugees. In either case a profit would be obtained and the minority shareholders would get their dividend.

Pakistan had been doing this, not through Law but illegally, whereas the Government of India wanted to do it legally. Mr. Hussain Imam wanted the Government to look at the Pakistan Law and not into the practice there. That might be good logic for him and men of his thinking but the amendment brought forward by Government was a perfectly good amendment both in law and in morality.

Referring to the working of the Evacuee Property Law, Sri Ajit Prasad Jain reiterated that the Custodian had clearly laid down that where a property was owned by more than one person and where all the persons were not evacuees only the share of the evacuee should be taken over. He challenged Mr. Imam to point out a single case where the contrary happened.

Sri Jain said that Mr. Imam had mentioned the case of one person who had exchanged his property in Pakistan with that in India. The instance had taken place but the property exchanged in India was not an evacuee property. If Mr. Hussain Imam wanted to exchange his property—and he was not an evacuee—with the property left behind by someone in Pakistan and declared as evacuee property, nobody stood in the way. Did Mr. Hussain Imam want the Government of India to enact that no Muslim in India should be able to sell his property? Every Muslim in the country was free to sell or mortgage or otherwise dispose of his property and "I am not ashamed of it and I am proud of it," Sri Jain said.

Sri Jain said that he had mentioned the Umbernath Mills case only as an example. The amendment was not being brought forward only to deal with that case. The amendment had been brought forward in pursuance of the agreement with Pakistan last June. The agreement did not contemplate the present amendment but Pakistan went back on her word.

Sri Jain said: "If Pakistan is willing to declare all shares in joint stock companies as non-evacuee property, I will accept it and declare every share in India as non-evacuee shares. Let my friend Mr. Hussain Imam, who has so ably advocated the cause of Pakistan to the detriment of India, persuade his clients, and I am prepared to abide by the undertaking I have given here. Mr. Imam may have given an opportunity to the Pakistan papers to splash his speech, but he has not rendered any service to India or to the Indian nation."

Referring to Mr. Imam's contention that the Evacuee property law in Pakistan applied only to 20 per cent of the minorities, whereas in India it applied to 70 per cent, Sri Jain said the law was a territorial law. The very fact that in the areas to which the Indian law applied, a large number of Muslims lived was evidence of the fact that Muslims in India had confidence in the country and were not leaving the country. In Pakistan, the law applied only to 20 per cent of the minorities because the rest had left. If Pakistan followed its present policy, in fact, the law there would apply only to zero per cent of the minorities.

Sri Jain said as regards evacuee property in India, he was not prepared to allow any private exchanges. He had allowed it only in one case. In that case the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

actual exchanges had taken place already and possession had been obtained. Only the formalities had remained and so he had given permission.

The Rehabilitation Minister then dealt with Mr. Imam's allegations that the permit system in India was very stringent and that the permit system did not apply to 60 per cent of the population of Pakistan whereas it did in India. Sri Jain said that Mr. Imam's statement was "completely incorrect." Any Muslim in India could go to East Bengal and any Muslim living in East Bengal could come to West Bengal. A Muslim living in Pakistan could not come to India through the eastern border without a permit and the *vice versa* was true. As far as East Bengal was concerned, the permit system did not apply to 100 per cent of the population. Even Mr. Imam was at liberty to go there and come back.

In regard to the permit system for West Pakistan whereas temporary permits for visit to India could be obtained and had actually been issued in many cases at half an hour to 36 hours' notice, in the case of visits to West Pakistan, the permit would have to be applied for six weeks in advance. "Does this show there is greater harshness on our side?"—Sri Jain asked. Again, while a simple "no sanction" certificate was enough for a Muslim to go to Pakistan and return to India, in the case of Pakistan an identity certificate and a return permit was required. The Pakistan High Commissioner in India had no power even to extend a return permit.

Sri Jain said that recently a Muslim from Sitapur had come to him for help. His son had been suffering from T.B. and he had received pathetic letters to go to Pakistan. But when he applied for a permit he was told to come back after some weeks. The gentleman had come to him for help but he had been helpless. He had, however, interceded with the Pakistan High Commissioner to take pity on the man and issue a permit even if he was not authorised. The High Commissioner had done so.

Sri Jain also referred to the introduction of the system of Income Tax clearance certificate introduced by Pakistan as a result of which no Hindu or Muslim could leave Pakistan without producing that certificate, even if he had gone to Pakistan only for a day. The previous arrangement between the two Governments was that a person going there for about 20 days or two months in a year should not be asked to produce such a certificate. But Pakistan had gone back on this. This was causing harassment to everybody. Sri Jain said that the way in which the certificates could be obtained in Pakistan had "better not be said." Again, Pakistan did not permit Indian traders to go beyond Lahore.

Sri Jain said: "Let me assure the House that if Pakistan persists in its present practice, we shall have to stiffen our permit law (hear, hear). In international matter, let it be understood, things have to be done on a reciprocal basis. If Pakistan does not behave properly, we shall have to do something to make them realise and behave in a civilised fashion.

The Rehabilitation Minister said that during the debate Mr. Imam had tried to challenge the fact that a permanent permit had been issued to his wife. Sri Jain said he could produce the permit issued to Mr. Imam's wife. Mr. Imam wanted that not only should his wife be given a permanent permit to return to India, but also wanted an assurance that her property would be restored to her. "It is not for love that he wants to bring his wife but because of her property. I am not going to give any assurance and the question will be considered on merits and when his wife comes back to India."

Sign and Symbol of Frustration

Jugantar, daily of Calcutta, has featured the news that Janab Abul Hashim resigned his "special" seat in the West Bengal Assembly on the 20th April last and has decided to settle down in East Bengal where his wife and children have been in residence since February, 1950, when Muslim League policy started to make Hindu life, honour and property insecure. The Nehru-Liaquat Ali Pact threw oil over the troubled waters. But men like Janab Hashim after giving it a trial for 12 months have felt that it was not sufficient for their own "Pakistani" purposes. So as one of the League stalwarts who had been directly concerned with the "Direct Action" animalism of August 16, 1946, he has gone.

At the same time it seems strange that this should happen. Abul Hashim is the son of the late Abdul Kashim, a disciple of Surendranath Banerjea with his robust nationalism before the "two-nations" theory was raised. Burdwan Muslims specially were free from this poison. Janab Hashim somehow fell off this parental political faith, and did his worst to spread the poison that has made millions of men, women and children outcasts in their own homelands, "refugees" from and to West and East India. The staff report in the *Jugantar* carried some pathos into this scene of a politician departing from his native land for good. It reports that the Muslim League leader compared his own case with that of Sakuntala who felt a pang for every creeper that she had watered, for every tree that she had helped grow. Such is the native land's attraction.

Janab Abul Hashim was asked for a parting message. All that he could say was that the "many forces" that have hitherto enabled Bengalis to stand up amid the conflicts and competitions of modern life will stand them in good stead. He repeated a few words of Gandhiji which conveyed the idea—"The 15th of August was not the last word in India's history." He appeared to build his own future and that of his people on these words.

We devote this editorial space to Janab Abul Hashim's

CC-0. In Public Domain. Panini Kanya Maha Vidyalaya Collection. Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

experiences because he has a representative character, which he described in words of particular significance. Others, specially foreigners, have been more explicit in their views. The latest has been Mr. Norman Thomas, Socialist leader in the U.S.A. whose views will be found in the Bombay news, dated March 21 last:

"The modern tendency of attempting to solve political issues through partition was very much to be regretted," said Mr. Norman Thomas, the American Socialist leader, at a Press Conference here today.

"Maybe there is no alternative, but I find all partitions hard to take. However, I hope partition will be ended by a federalisation of India and Pakistan or by some sort of autonomous relation. This will prove to be in the interests of both the nations and all concerned. The question must be settled without war."

In reply to a direct question whether or not Pakistan has brought happiness to the people concerned, he is repeated as saying after "a little pause":

"This artificial division has not brought any Bengali nearer to peace and a brighter future; this the public of Bengal has realized at long last."

Oil Nationalisation Move in Iran

The *Economist* (April 21) discusses at length the implications of the oil "nationalisation" move in Iran and the confusion created by the disturbances in Abadan. It also analyses the sobering effect of Mr. Herbert Morrison's speech of April 13.

The *Economist* writes: "His (Mr. Morrison's) firm statement to the House on April 13, when it was clear that British lives were in grave danger and the Abadan oil refinery was slowing down to a standstill, made its mark in Teheran. The forces of order were strengthened and those who started the campaign for the nationalisation of the petroleum industry found themselves in a riotous alliance with the Communist-led Tudeh Party, associated with violence and strikes, and moving uneasily at the heart of a new centre of international tension.

"Mr. Morrison clarified the issues immediately; by his obvious determination to defend this country's most valuable asset overseas, and by his implied warning that negotiations about petroleum cannot take place under threat of mob violence, he separated the problem of maintaining order from the problem of the Anglo-Iranian Oil Company—which is to negotiate with Teheran some way of dealing with the demand for what is called 'nationalisation'."

The *Economist* points out that only a small proportion of Persians took an active part in the rioting. Mostly they were made up of the usual Communist agitators—"to whom the whole oil dispute has been a glorious opportunity." Fortunately, the Persian police and troops brought the affair under control although, it asserts, "no one can be sure that another emergency might not cause a total collapse."

Dealing specifically with the nationalisation issue, the *Economist* continues: "The fact has to be faced that 'nationalisation' means, as at present stated, nothing more or less than expropriation—that is to say, seizure of an enterprise in which over £350 million of British capital has been sunk.

"Yet it is absolutely certain that the Persian Government could not run the enterprise without extensive foreign help. If it were to persist in its aim, it would be the end not only of the oil company but of Persian economy; for it is clear that not for decades would the Persians be able to operate a concern of the magnitude and international ramifications of this gigantic oil extracting, refining and marketing organisation. And without the already great but potentially even larger revenue it draws from the Anglo-Iranian, the Persian Government would be without a regular reliable income.

"Internal collapse would be dangerous in any country; how much more far-reaching would the results be for a country which is next door neighbour to a great Power whose shortage of oil is one of its chief economic weaknesses—the Soviet Union.

"Important and obvious though these facts are—and the company has relied too much on them in the past—a new approach to the problem has to be made. A solution, practical, equitable and peaceful, must be found. Already four of the eight weeks that were asked for by the Majlis Commission which is considering ways of "nationalising' petroleum have passed. Whoever first puts up a reasonable proposal will gain the initiative in the negotiation.

"Ideas are needed; and they should be ideas that can be applied equally well to similar problems that arise wherever a great Western commercial interest has to come to terms with the growing national pride and ambition of a Government to which it owes its opportunities. Persia versus the Anglo-Iranian Oil Company is a test case which will set precedents for other great companies. And it is an opportunity for the British to show political imagination and administrative ingenuity.

"In Rumania, on the Danube, in Eastern Germany, in Manchuria, the Russians have settled the problem in their own drastic manner—the Communist imperialist solution of 'joint company.' That is not the British way with independent nations: but a British way must be found."

There are four essential facts to be considered, adds the *Economist*. "The oil belongs to Persia. Secondly, this oil has been found, extracted, refined and sold, thanks entirely to British skill, initiative, labour and money. Thirdly, the Persians could not possibly operate the company themselves," and fourthly, "for internal reasons the Persian Government must be more closely associated with the oil operations—and must obtain more money from them."

The *Economist* then suggests that "a simple and practical plan might be to form a new and purely Persian

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

company which would acquire the sole rights to oil from the Anglo-Iranian's present oilfields and would own and operate wells, pumping stations and pipelines.

"The role of the Anglo-Iranian Company will be to refine oil and market it—in fact, deal with all the essential international operations. The Persian Government would ultimately obtain its revenue not from royalties on oil extracted as at present, but by selling its own nationalised oil to A.I.O.C.

"But as neither the proposed new company nor, indeed, the Persian Government would have sufficient funds to compensate the Anglo-Iranian for the loss of its concession and at least £300 million of equipment, compensation would be paid for some years to come in oil, with an additional agreement that the highly-trained British staff should work for the new Persian company during the period that compensation is being paid. The present process of 'Persianisation' would continue and would, in fact, be speeded up as much as possible, especially by taking Persian directors on to the board of the A.I.O.C. until the entire oil business would be in Persian hands.

"An agreement on these lines should not be difficult to negotiate, given goodwill on both sides. But in view of the probability that such an agreement would become a prototype for other agreements in other parts of the world, consultation between the British and American Governments should be viewed with neither resentment nor alarm in Persia."

Concluding, the *Economist* says: "On one point there can be no doubt; straight expropriation is unacceptable and it is useless to believe that Persian national feeling could allow proper money compensation over a long period. Expropriation would make it impossible to secure capital for those further developments in the oilfields on which Persia's future prosperity and power depend. Likewise, it should be clear that it is for the Majlis Commission to say what its two Houses meant by 'nationalisation' when they voted for it five weeks ago."

On April 26, a special session of the Majlis Oil Committee unanimously passed a resolution to put the nationalisation of Persia's Oil into effect immediately. The resolution will be submitted to the Majlis on April 28 and if approved will need only the sanction of the Senate to become law.

The resolution said: "1.—For the enforcement of the law of March 15, on the nationalisation of Persian oil, a joint committee including five Senators, five Majlis Deputies, the Minister of Finance, and one more member appointed by the Government be formed.

2. The Government is bound to take over all the activities of the former Anglo-Iranian Oil Company supervised by the above Board immediately. If the Company insists on its claims against the Persian Government, the Government can meet them by setting aside 25 per cent of the net oil profits after deducting exploitation expenditure.

3. The Government is to investigate and obtain the Joint Board the judicial and financial claims of the Persian Government and the legal claims of the Anglo-Iranian Oil Company. A report will later be made to both Houses for approval and putting into force.

4. In view of the fact that oil nationalisation was approved by the Senate on March 20 all the income on oil and oil products is the right of the Persian people. The Government is bound to audit the Company's accounts with the supervision of the Joint Board. The Joint Board is also to supervise closely all matters of exploitation.

5. The Joint Board is to prepare as soon as possible a constitution for a Persian National Oil Company, including the appointment of a Board of Directors and a supervising Joint Board of Experts, and to seek the approval of both Houses.

6. The replacement of foreign experts by Persian experts is to be prepared by sending a number of students abroad every year for training in all training sciences connected with oil. Expenses are to be paid from oil income.

7. All former customers of the Anglo-Iranian Oil Company may purchase the same amount of oil that they bought from January 1948 to March 1951 at International prices and they also have priority over all other purchasers if they offer equal conditions with other customers.

8. All proposals by the Joint Board are to be submitted first to the special Majlis Oil Commission and after approval the report is to be submitted to the Majlis.

9. Within three months of the approval of this law the Joint Board is to end its activities, but may ask for extension from the Majlis."

Oil nationalisation in Iran will decide the fate of foreign companies exploiting the resources in Asia. Iran has moved forward where India faltered. It is to be seen whether the alternative arrangement suggested by the *Economist* will serve as a basis for compromise.

Iran's Difficulties

Iran's conflict with Britain over the Anglo-Persian Oil Company's profits, over the percentages of these profits, whether or not these are to be on a 50 : 50 basis, have been receiving disproportionate attention in the world. This is our general habit; we make more noise over the destructive activities than over the constructive possibilities inherent in every human situation. Iran's latest experience has been bearing out the truth of this contention. The New York *World Interpreter* of March 5 last records such an event. A Teheran news said:

"Peasants Today, Landowners Tomorrow!" The semi-official paper, *Ittelaat*, hailed a recent decision of the Shah that peasants on the Royal Estates receive full title to enough land for the support of their families. The paper points out that land alone will hardly improve the condition of the impoverished peasants; capital, implements, improved seed, modern methods, education and better health are just as necessary as land. Precisely for this reason, however, plans are being worked out

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

for a Farmer's Bank with large powers and ample capital.

"The peasants will be expected to pay for their new land, but on very favorable terms. Payments will be extended over a period of at least 15 years with exemption of payments altogether for the first few years. The land to be divided is extensive. The Director of the Royal Estates reports that in 1941 when Riza Shah was deported from Iran, he passed on to his son, the present Shah, more then 6,000 villages and tracts. Since then, much of the property has been returned to former owners or otherwise disposed of. From the remaining 2,300 villages and 2,600 forest holdings the annual income of £2,500,000 has been spent on health, education and social services.

"However, the Royal Estates are only a small part of feudal Iran, so too much can not be expected in a hurry. This experiment must succeed before it can be extended to other landlords. Peasants who have had their work planned for them for centuries, will not become independent American-type farmers living on their own land. Iran must find its own solution, and can hardly follow the American pattern. Communal interests, general irrigation systems and village life will be preserved, as the villager receives more and more fruits of his work.

"Nevertheless, the die is cast, and Iran is on the move. A Commission entrusted with the fulfilment of the great task—the turning over of the land and the building up of successful peasant farming—is already visiting villages to investigate the practical first steps."

Disposal of India's Tea

"There will be no bulk purchase of 1951 tea by the U. K. but some quantity of tea would be allowed to be consigned to the U. K. during 1951 without undergoing sale transactions in India."

This was disclosed in Parliament today (March 26th) by Shri Hare Krushna Mahtab, in reply to Shri U. P. Barman. The Minister of Commerce and Industry stated that as a result of the change of place of sale, a part of the profits attributable to the sale operations outside India would not be chargeable to Indian income-tax as income accruing or arising in India. The profits attributable to the manufacturing operations would, however, be taxable.

The consequent loss to the Indian Exchequer by allowing the tea to be shipped without sale operations would be Rs. 20 lakhs.

Other facts brought out in the reply were:

The Minister stated that the price of India tea was lower as compared with the price of tea from other countries. The Indian price would certainly be lower when it should be a competitive price. The price was not control'ed and would be regulated by the demands in the auctions. There was no intention of the Government to increase the export duty of tea.

Referring to the steps taken so far to develop Calcutta as a world tea centre, the Minister said that at the instance of the Government, construction of additional warehousing accommodation had been undertaken by the Port Commissioners of Calcutta with a view to increasing facilities of storage of additional quantity of tea that might be disposed of through the Calcutta tea auctions.

The *Ad Hoc* Commission appointed for the purpose of recommending steps to be taken for the development of Indian tea had submitted its report.

The salient points of its recommendations included *the need for assistance to the tea industry in securing supplies of essential materials, such as fertilisers and tea chests,* system of deferred payment of excise duty on tea, revision of the basis of levy of income-tax, super-tax, etc., on the tea industry so as to exem t from taxation the amount of profit utilised for benefit of labour, additional warehousing, accommodation at Calcutta, to facilitate the routeing through the Calcutta tea auctions of an additional quantity of tea.

Revision of Postal Charges

The revised postal rates which will come into effect from the 1st of May, 1951, have been announced in a Posts and Telegraphs Department notification issued on Friday. The changes notified are:

(1) Concessional rate of postage of one anna per tola for local delivery letters is abolished. All inland letters and business reply envelopes will be charged at the ordinary rate of two annas for the first tola and one anna for every additional tola or part thereof. Postage on local delivery postcards and business reply postcards will continue to remain unchanged.

(2) Registration fee on inland or foreign articles will be increased from four annas to four annas six pies.

(3) All V.P. articles containing goods of the value of over rupees twenty-five are required to be compulsorily insured for at least the actual amount to be recovered from the addressee and insurance fee collected accordingly. Further, on all V.P. articles in the inland service a posting fee of one anna will be charged from the sender when the amount, to be recovered from the addressee, does not exceed rupees twenty-five and a posting fee of two annas when the amount to be recovered from the addressee exceeds rupees twenty-five. The total charge which the sender of a V.P. article will be required to pay in postage stamps will thus be as follows:

(*a*) Value not exceeding rupees twenty-five: (i) postage at letter packet or parcel rate as the case may be, (ii) registration fee of four annas six pies, (iii) posting fee of one anna. (*b*) Value exceeding rupees twenty-five: (i) postage at letter packet or parcel rate as the case may be, (ii) registration fee of four annas six pies, (iii) posting fee of two annas and (iv) insurance fee according to the value.

(4) Scale of insurance fees for insurance of all inland postal articles will be revised as follows:

Four annas where value insured does not exceed one hundred rupees and two annas for every additional one

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

hundred rupees or part over the first one hundred rupees. The maximum value for which an article can be insured will be raised from rupees three thousand to rupees five thousand.

(5) Rate of commission on inland money orders will be revised as follows: (a) for an amount not exceeding rupees five—two annas, (b) exceeding rupees five but not exceeding rupees ten—three annas, (c) exceeding rupees ten, but not exceeding rupees fifteen—four annas, (d) exceeding rupees fifteen, but not exceeding rupees twenty-five—annas six, (e) for amount exceeding rupees twenty-five the money order commission will be six annas for each complete sum of rupees 25 and 6 annas for the remaining provided that if the remainder does not exceed rupees five the charge for it shall be only two annas, if the remainder does not exceed rupees ten the charge shall be only three annas and if the remainder does not exceed rupees fifteen the charge for it shall be only four annas.

Simultaneously the existing air mail will be abolished and on all inland money orders, surcharge of one anna per money order will be charged. These, like letters and postcards will be carried by air under the all-up scheme.

(6) Stationery charge for registration of envelopes will be revised from six pies at present to one anna and six pies. The selling price of registration envelopes with face value of six annas and six pies will therefore be eight annas from that date. Until such time as new registration envelopes bearing the emboss with six annas and six pies are made available the existing registration envelopes will be sold after affixing six pies postage stamps.

The efficiency of the postal department under Mr. Rafi Ahmed Kidwai has completely gone down. The stoppage of Sunday work has virtually dislocated the week-end postal service. It is often found that letters and packets posted on Saturday evening reach their destination on Tuesday at the earliest. A packet posted at the Calcutta G.P.O. on Monday was delivered in its own delivery area on Wednesday. Some Calcutta Post Offices are being worked up to 8 P.M. but unless Sunday deliveries and quick service are restored such facilities will be of little avail.

The latest increase in postal rates are absolutely unwarranted. The combined revenue of the Post-Telegraph-Telephone-Radio department shows an over-all surplus, we find no reason for increasing postal rates to make up for the loss of that individual section. The manner in which this increase has been effected has also been strongly criticised. The Railway Budget announced increase in railway fares. The General Budget came out with a number of tax increases, the postal rate increases were announced after the first two storms were over and on an entirely different occasion. The V.P. parcels have come in for the heaviest increase. This will further strangle muffassil trade, specially the book trade, which has already been very hard hit. Increase in money order fees is also bound to react unfavourably on the poorest sections of remitters.

And lastly we have the proposed clause which forbids the sending of V.P. packets by monthlies etc., unless a written order is obtained previously. This ridiculous clause will have a disastrous effect on all monthly magazines.

Reconstituted Railway Board

A reconstituted Railway Board with three functional members and the Financial Commissioner has started functioning from April 1, 1951. The post of Chief Commissioner of Railways has been retrenched. A railway officer of the rank of the Deputy Director in the Railway Board has been appointed Secretary of the reorganised Railway Board.

The functions of the reconstituted Railway Board are not in substance different from those of the Railway Board as it existed up to March 31, 1951. The methods of business and the procedure to be followed by the new Railway Board have, however, been radically altered, with a view to ensure both expedition and efficiency.

The Railway Board, as previously constituted, consisted of a Chief Commissioner, a Financial Commissioner and three functional members, together with the Secretary of the Transport Ministry. The Chief Commissioner was responsible for presiding at the Board meetings and for overall functional supervision and co-ordination of work.

Sri Gopalaswami Ayyangar referring to the new organisation of the Railway Board in his Budget speech stated:

"With the constitutional changes and with a Minister responsible to Parliament coming to be in charge of Railways, the functioning of the Board has altered substantially. There is now a regular weekly meeting of the Board as a whole with the Minister where several questions of policy are discussed and settled. Overall co-ordination is ensured first at the Board and then at the Minister's level. The need for an officer of the Board who is not burdened with departmental responsibilities is not now by any means compelling. The different members of the Board constitute what may be described as an 'All-India Railway Executive,' whose administrative work is suitably distributed amongst functional heads, each of whom presides over his particular department of railway activity.

On questions which require co-ordination among these different departments, the members come together and reach decisions as a collective body. The Minister controls the work of the Board and all directives given by him are carried out by it. The post of Chief Commissioner will therefore be retrenched from 1st April next, and the Board reconstituted with three functional members and the Financial Commissioner. Secretary of the Transport Ministry will, under existing conditions, continue to be, ex-officio, an additional member. One of the functional members will be appointed Chairman of the Board and, in that capacity, ex-officio function as Secretary to the Ministry.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

He will be responsible for the work of the Board as such and for the inter-Board co-ordination required for this purpose. He will also be in charge of the small Secretariat attached to the Board, in addition to being a functional member. The Financial Commissioner will retain his special position and function as Secretary to the Ministry in matters financial. The Board will function as a corporate body advising the Minister on all major questions of policy and issuing such executive orders as are necessary for the administration of the Indian Railways.

As a result of the retrenchment of the post of Chief Commissioner and certain other economies in the organisation of the Board's office, including a reduction in the status of the post of Secretary to the Board, economies to the extent of over Rs. 3½ lakhs will be realised."

Linguistic Provinces

The move for the creation of Linguistic Provinces has again been revived by leaders of certain provinces in Southern and Western India. The question may figure as one of the election issues and the Congress Working Committee meeting in the first week of May will probably have to consider it formally or informally. An influential deputation of Parliament members from Andhra, Kerala, Karnataka, Maharashtra and Tamil Nad led by Sri Nijalingappa waited on the Prime Minister and urged the creation of separate provinces in these regions on a linguistic basis. It is understood that they impressed on the Prime Minister that the people of these areas should be given an assurance in this regard before the elections are held. It is reported that the Prime Minister gave a patient hearing and invited constructive and concrete suggestions as to how this proposal would be given effect to. He is also reported to have suggested that such issues could best be resolved by agreement and understanding among the parties concerned. It is likely that the leader and protagonists of linguistic provinces will soon confer among themselves and come into consultation with the leader of public opinion of the areas and States concerned with a view to evolving definite proposals for submitting to the Prime Minister so that he may give practical consideration to the same. We are sorry to find that West Bengal is conspicuous by its absence in this new effort to alter provincial boundary on a linguistic basis. The West Bengal Government ought to take the lead in this matter for securing breathing space for this over-congested and mutilated province.

Manbhum Satyagraha

People of this country are familiar with reports of police lathi charge on opposition meetings. From Purulia however comes a report saying that the police had to make a lathi charge to disperse a meeting which was being addressed by two Ministers of the Bihar State. The meeting was convened by the Manbhum District Congress Committee. Several questions were put to ministers by members of the audience. The police tried to remove some of the questioners by force when there was uproar and the meeting ended in chaos. Some people were injured by lathi charges and the butt ends of police rifles. For weeks past, the Lok Sevak Sangh has been offering Satyagraha against iniquitous food laws in different parts of the district. The Government at first observed a detached indifference to this movement probably thinking that it would fizzle out. But when it was found that instead of collapsing, it was gaining momentum every day, the Government ordered action. Police made a lathi charge on a meeting of the Satyagrahis at Jhalda injuring several persons. Many Satyagrahis, including two M.L.A.s who had recently resigned from the Bihar Legislature to offer Satyagraha, were arrested. So long, the Ministers did not come out. The Purulia meeting referred to above had been convened the day after the arrests at Jhalda. All reports indicate that the Satyagrahis enjoy strong popular support. Unless the Government came to a quick compromise with the Satyagrahis, this struggle may lead to serious results.

Return of Peace to Telengana

The Vision, Swami Ramananda Tirtha's weekly, publishes a signed article by him. The report goes to show how the Communist menace has been brought under control. The States Ministry report of 1950-51, records the success of "Police Action" and the initiation of reconstructive activities costing more than Rs. 20 lakhs during this period. But we are tempted to accord more importance to *The Vision* report. For, it is of more permament value.

> "There is a definite psychological change in the people. The fallen hearts of thousonds have felt some relief. They are carrying on their work more freely and the fear complex is greatly minimised though not wholly removed. The panic created by the sten guns of unsocial elements, including the Communists, is fast waning and the fear of arms is growing less and less. Though it cannot be said that they have completely extricated themselves from the clutches of the arms, they have been feeling the futility of arms to build up life. All this needed a sympathetic view of their miseries. I have done nothing more than being amidst them in their woes and speaking to them heart to heart. *I am happy that the fallen hearts are once again experiencing the last breath of life though a feeble one at the present moment. The people are trying to see the way other than that shown by the Communist. An effective alternative has to be shown and reassuring feeling has to be created in them. This cannot be done by arms. Immediate ameliorative measures are necessary.* In this connection I would like to reiterate once again *the dire urgency of* solving the Agrarian problem in Telengana squarely and on a basis of justice and equity. The present hesitancy is not helpful. It will defeat the purpose of other efforts.
>
> There is one factor in the situation which should be remembered. On a critical analysis of the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

elements other than the Communists who for their own selfish interest are using the present situation in their own sinister way. These are not limited to a particular section. *These persons do not stay in their villages. They have deserted them. They stay near a Police Camp* or in Taluka headquarter. Some of them act as middlemen. They spin false stories. They try to aggravate the panic. Their interest lies in continuing the present state of affairs. They pay money to whomsoever it is necessary, at times, even to the Communist and petty elements in the administration. Some come from Zamindars, some from Patel Patwaris, some from the unsocial elements at times even under the garb of the Congress. Due to all these factors, the sufferings of the people have grown and the situation is complicated. Any truck with these sections will make matters worse."

Since this appeared in the *Vision*, we have heard that Acharya Vinoba Bhave has been conducting a "walking tour" through the same areas with the same object in view. May both these "tours" put heart in the people so that they can dare oppose anti-social element on the strength of their inner convictions.

The Problem of French India

The French "Establishments" in India cover an area of about 200 square miles with a tiny population of 362,045 only. The budgeted receipts and expenditure of these "Establishments" were in 1951 Rs. 72,00,000 and Rs. 77,95,000 respectively. Now that Chandannagore in Bengal with its 41,783 men and women have joined the Indian Union, the rest of the "Establishments," 4 in number, Pondicherry, Karikal, Mahe and Yanan, constitute the "problem" constituted by the greed for prestige of Republican France. All these and much more are given in Shri W. R. Rajkumar's book entitled above. It shows how France has been prolonging an unnatural condition of things which does not enhance her reputation or adds much to any material gains she makes out of these "Establishments." The latest statement of policy made on March 17 by M. Meynard Lands, Commissioner of French India, something like a Governor-General, does not indicate any change of spirit. In effect, it constitutes an irritation of spirit, a pinprick that cannot be maintained long.

Indians, Citizens and Residents in Ceylon

The following news was sent out by *Press Trust-Reuter's* Colombo correspondent:

"The charge that 'Government had deliberately deleted names of a large number of Indians from voters' lists to score a point in the next general elections' was made by Mr. W. Dahanayake (Lanka Samaj Party) in the House of Representatives here.

Mr. Dahanayake who was speaking during a debate raised on a supplementary demand sponsored by the Finance Minister, Mr. R. Jayawardene, to meet expenses of the Department of Parliamentary Elections added that while Indians had been given time till August 5, 1951 to register for Ceylon citizenship, it was unfair for Government to expunge in the meantime their names from electoral registers.

Mr. S. Thondaman (Ceylon Indian Congress) said that Indian estate workers were the worst affected by this deletion. Names of thousands of them had been expunged from voters' lists.

The Finance Minister replied that he was not the Minister in charge of registration of voters and, therefore, he could not answer the criticisms made. He promised to bring to notice of the appropriate Minister their criticisms. The demand was passed, 25 voting for and 13 against.

The news recalls attention to an injustice that is something of the Malan Government's discriminatory policy. Both in Ceylon and in South Africa Indian labourers in fields and factories were invited by the Governments to help develop the resources of these two countries. From being labourers, the Indians took roots and claimed their citizenship rights. This the ruling classes refuse to do; they direct their attention to up-rooting the makers of their country's economy and sending them out to start life anew. The Governments in India, both now and during the British period, could not help them much. Even the U.N.O. has been as unsuccessful. More sorrow and suffering are in store for the victims of injustice and the perpetrators thereof.

U.S.A. and Japan

A news item cabled from Tokyo on March 17 last said:

"Japan may be granted American credit totalling U. S. $2,400,000,000 to finance industrial production in close collaboration with American efforts to build an anti-Communist mechanism in Asia.

Japanese Government agencies concerned with economy and industry are currently busy compiling data on the basis of which co-ordination of American and Japanese industrial production can be effected. At the same time considerable care is being exercised in the choice of personnel for an economic mission to the United States which will remain there six months to discuss and to work out mechanisms and techniques for such co-ordination.

It is understood that Japanese industrialists are being consulted regarding a list of 61 items which the United States hopes Japan can produce in order to take pressure off American industry. The list does not include arms and munitions or foodstuff.

Most of the reported U. S. $2,400,000,000 credit will be used for the development of hydro-electric power, steel and coal industries. It is hoped that under the projected plan electric power production can be stepped up to 42,800,000,000 kilowatt hours per year. The steel industry to attain an annual output level of 6,000,000 tons of steel ingots and coal production be brought up to 45,000,000 tons. In addition, Japan will be expected to lift aluminium production to 56,000 tons and lead production to 47,000 tons yearly.

Japanese economic circles say that between 400,000,000 and 500,000,000 U. S. dollars will be earmarked for new hydro-electric power projects alone immediately after a peace treaty. In this connection it might be significant that Prime Minister Yoshida's industrialist son-in-law Tasaburo Asoyuki Jiro Shimoyama who represented Prime Minister Yoshida in the Dulles talks last month, were both

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

recently appointed heads of two out of nine regional electric power companies."

A "special" message to the Calcutta *Amrita Bazar Patrika* sent out on March 21 thus elaborated the requirements of the plan:

"The future operation of the Japanese industrial complex will be integrated with the war mobilization effort of America through the newly established Office of Foreign Supplies and Requirements in Washington, which will have full control over procurement, handling and allocation of all strategic raw materials and industrial potentials in foreign countries that are available to the United States.

"Japan will be the main cog of the new American-designed international mechanism for supplying and producing goods necessary to furnish logistical support to anti-Communist countries, especially in Asia. Details of the integration plan are awaiting a report from Japanese organizations concerned which are studying the problem from the viewpoint of plant capacities, raw material needs, technical assistance required and methods of collaboration that may be most practical and efficient. Such studies have been going on in Japan since the departure of President Truman's peace envoy John Foster Dulles from Tokyo several weeks ago.

"The American Office of Foreign Supplies and Requirements was set up little more than a month ago, shortly before Ambassador Dulles left Washington for Tokyo where he is reported to have discussed matters with the Japanese Government and industrial leaders.

"Integration of the Japanese industrial complex with American mobilization and production facilities will automatically solve the critical problems facing Japanese industries as how to obtain raw materials and shipping space to carry them. Practically all raw materials needed by Japanese industry and all shipping space needed for hauling such materials have been spoken for. Japan, who will be late in entering the fight for raw materials and shipping space, would find the greatest difficulty in obtaining either one or both to keep her industries alive after a peace treaty. However, if the Japanese industrial complex is integrated with the American industrial set-up, Japanese industries will get a share of raw materials from sources concerned from the United States for her mobilization purposes. Furthermore, Japan will be allocated shipping space controlled and reserved by the United States."

We will be glad if this U. S. A. help can set up Japan on her feet again. She has shown what she can do with modern technology—transform a few islands into one of the mightiest of modern States, a terror to Western States with a longer period of industrialisation. But the U. S. A. has other purposes in view to utilize Japan as a barrier to Communism. She had thrown bigger sums into China. The results are well-known. Before she follows the same track she should try to understand the causes of her China failure.

Germany to be Re-armed

One of the greatest headaches of the three occupying Powers of West Germany is to establish a proper balance between their needs and the chances of the revival of Nazi spirit that the re-armament of Germany will entail. It appears that German strategists are putting a premium of the way in which their victors have been going about the business. The following culled from an American paper enable us to understand the puzzle a little. "One of the basic principles of military strategy laid down by Von Clausewitz, the Prussian general who served in the Czarist army against Napoleon, was the concentration of forces in space and time. This is being gravely violated by the Western powers, says General Hans Guderian, Hitler's tank expert, in his new book, *It Can't Go On This Way*, which is a best-seller in West Germany.

Europe is the decisive battle-field in the struggle between the East and the Soviet Bloc, but the Western forces are being dispersed and dissipated in Asia, complains Guderian. Further, the psychological and political conditions are not being created for Germany's participation in Western defence. If these conditions are not fulfilled, Germany will have to look elsewhere for her salvation.

Guderian was the first German strategist who understood the role of tanks in attack. He was dismissed by Hitler in 1941 for suggesting withdrawal on the Moscow front. In 1944 he was made Chief of Staff after the failure of the attempt on the life of Hitler."

"Slave Labour"

Soviet Union's propagandists have started the campaign of charging the United States with employing and profiting from "slave labour." This we find recorded in *News and Views from the Soviet Union* dated April 17 last. The writer is M. B. Medvedeb. He flings contempt at American democracy's cant about "free labour system," "freedom of contract," and so on. He quotes Rowland Watts, Secretary of League of Defense of Workers' Rights, to uphold his charges which are various. One of these is the exploitation of Mexican labourers as "violators of the frontier."

As a foil to this, we have the charges of Dr. Margolin, who was a delegate to the Indian Congress for Cultural Freedom, from overseas. He had been "an inmate" for years of one of the "Soviet Slave Labour Camps," and is now settled in Israel. In an article he published in the *Bombay Chronicle*, dated April 13 last, the following quotations are made. It gives us an idea of the evil:

> "I regret that my visit to India was too short to permit me to go beyond the limits of my special mission, namely, to supply evidence on Concentration Camps in the Soviet Union.
>
> "The important point is this: 'The Soviet Government keeps as dead secret all data concerning 'L'Universe concentrationnaire.' Communism is *your* political and moral hope—not mine. So go ask them to answer three questions:
>
> 1. How many camps have existed and exist in the Soviet Union for the last 20 years?
> 2. How many people have been imprisoned and continue to live there?
> 3. How many have died?
>
> "On the answer to these questions or on the lack of such answer or evasion, should in the first place depend your attitude to Communism."

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"Union of All Arab States"

Dr. Nazim el Kudsi, Prime Minister of Syria, has, we are told, "caught all eyes" with the announcement of his plan for "the formation of a United States of Arabs—another U.S.A."—with possibilities of as great material power. We do not find any difference between it and Azam Pasha's Arab League, except that the latter was inspired by Clayton of the British Intelligence Service very soon after 1945. The Kudsi plan may be French inspired or by U.S.A. for all that we know to the contrary.

The Arab League has proved a failure, the different Arab States refusing to co-operate against the common enemy—Israel. The bitterness of this defeat may have taught the Arab ruling classes the much-needed lesson. And the hopes for a better mind are indicated as follows:

> "The Plan for the first time advocates in the clearest language the feelings of many who have the interests of the Middle East at heart. This unity which the author envisages is the only solution for the Middle East tangle which no one seems to have been able to solve, and none will be happier at their solution than the people of the Middle East who profess the same way of life. The present century, though it has seen the divisions of many countries into smaller units as in Europe, or the creation of new states like that of Pakistan, has also witnessed a movement for consolidation and co-operation. This movement is much stronger than many imagine or care to admit. That this has resulted in the present world situation in the form of two Blocs is our misfortune. This does not, however, mean that the reasons which impel unity and co-operation are not correct. This movement is bound to succeed and the Kudsi Plan which proposes an extension of this principle among the Middle East States is a welcome step."

The MacArthur Episode

The dismissal of the Supreme Commander of the Occupation Forces in Japan and over the areas lately re-conquered from her has been hailed by some politicians as the end of an aggressive policy. We dissent from this opinion and are sorry that Indian politicians ruling the country should be victims of such a delusion. "They have been ringing their bells today, they will be wringing their hands soon," this was the classical comment of Walpole, Prime Minister of Britain.

General MacArthur has re-emphasized his point of view before his own people. And he stands vindicated in the statement by his successor, Lieutenant-General Mathew Ridgway. A Washington news, dated April 18, blazons it forth in the following words:

> "It would be impossible to win the war if the fighting was confined to Korea and if Manchurian bases were not bombed, one of these Congressmen said today.
>
> "Representative Dod Armstrong (Republican), Missouri, who returned from Tokyo today said that he and representative W. J. Burn (Democrat), South Carolina, discussed the military situation with General Ridgway about ten days ago before President Truman dismissed General MacArthur and appointed General Ridgway to his command.
>
> "On the basis of his talks with United States military leaders in Korea and Japan and with Generalissimo Chiang Kai-shek in Formosa, representative Armstrong said he (Mr. Armstrong) was in favour of—
>
> 1. Sending a strong United States military mission to Formosa to train the Chinese Nationalist soldiers there for an attempt on the Chinese Communist-controlled mainland;
> 2. Working out with the Chinese Nationalists plans to seize Hainan island (off the South China coast) and invade the Chinese mainland from there;
> 3. The blockading of all the Chinese coastline;
> 4. The use of United States air power to destroy Chinese bases in Manchuria and to cut the railroads and highways surrounding Mukden in Manchuria;
> 5. United States assistance to the Chinese Nationalist guerillas fighting within China;
> 6. The despatch of a token force of Chinese Nationalists to Korea."

Did MacArthur suggest anything more drastic than what his successor has done? So what difference does this dismissal make?

Hindi as India's State Language

While the Constitution in India has ruled that Hindi in the Devanagri script should be increasingly used as the State language to attain this status at the completion of 15 years, the gospellers of Hindi have been dividing their own house. We cannot say that we understand the reasons for which even Tandonji appears to be taking sides. Who will conduct the examinations cannot be so very important at this stage when the whole problem is liable to re-opening if the rival protagonists persist in their controversy.

The following rather long letter published in the Allahabad *Leader* sometime in last mid-March, exposes this ugly fact. We are sorry that this should have happened so early in Hindi's new dignity. We commend this letter to our readers:

> "The hope about the emergence of unity and solidarity in the ranks of the Hindi Sahitya Sammelan has been shattered to pieces by the recent 'stormy session' of the standing committee of the Sammelan that turned down the unanimous decision of the Lucknow meeting of the Hindi Vishwavidyalaya Samiti to entrust a special committee of 14 living ex-presidents of the Sammelan with the task of guiding the activities of the Samiti. The Hindi Vishwavidyalaya Samiti, popularly known as the Examination Board, had been formed at the Hyderabad session of the Sammelan, for establishing an authoritative Hindi Vishwavidyalaya and conducting the Sammelan's examinations with suitable modifications till the sanction of the Government was received for such a Vishavidyalaya. Its sudden dissolution at the Kotah session was engineered by party intrigues inside the Sammelan. A strong resentment was voiced by important organs of public opinion in the Hindi world against this hasty decision of the Kotah session. The Lucknow meeting of the Hindi Vishwavidyalaya Samiti, which was

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

also attended by the president, the general secretary and some other office-bearers of the Sammelan, reviewed the entire situation and unanimously decided to appoint a special committee of 14 ex-presidents to guide the activities of the Samiti. According to the joint statement issued to the press by Rajarshi Purushottam Das Tandon and Shri Jaya Chandra Vidyalankar the presidents respectively of the Samiti and the Sammelan, 'the ultimate decision born out of the synthesis of all the amendments moved on the occasion was unanimous' and the general secretary of the Sammelan gave an assurance to get that decision endorsed soon by the meeting of the standing committee of the Sammelan. Other office-bearers of the Sammelan present in the meeting are also said to have concurred in the assurance.

The Lucknow meeting of the Hindi Vishwavidyalaya Samiti raised the hope that all the tension among the workers of the Sammelan was going to end, specially after the joint appeal of Rajarshi Tandon and Shri Vidyalankar. Soon however the president and the general secretary of the Sammelan objected to the wording of the report of the Lucknow decision, published in newspapers. Seth Govinda Das and Prof. Indra Vidyavachaspati contradicted their statement and testified the correctness of the report. The spirit of the Lucknow decision was, however, clearly in the nature of a happy compromise, and the manner in which it was flouted by the office-bearers of the Sammelan, before and in the recent meeting of the standing committee, expressed the determination of the majority group of the Sammelan to go their own way without caring for the ultimate good of the Hindi world. Instead of settling the minor differences in the interpretation of the Lucknow decision and honouring the assurance given earlier the leaders of the majority party put forward a resolution turning down the Lucknow decision of the Samiti and reiterating the stand for the dissolution of the Samiti, taken at the Kotah session. The resolution says that the standing committee is prepared to consider any suggestions that may be forthcoming from the committee of 14 ex-presidents in regard to any other matter but the questions relating to the formation or working of the examination board. We do not know what will be the reaction to this decision of ex-presidents like Dr. Rajendra Prasad, Dr. Bhagavan Das, Dr. Amaranath Jha, Mr. Ambika Prasad Bajpayi, Mr. Makhanlal Chaturvedi and Mr. K. M. Munshi. But there is no doubt that this decision has given a death-blow to the hope for the speedy resolution of the internal conflict of the Sammelan under the effective guidance of all living ex-presidents.

Toll of War in Korea

The News Week (New York) of April 9 last records the following facts:

"One million casualties. By last week that was the toll of the Korean war for the U.N. and Red armed forces combined. The exact total, which always lags behind the actual fact, stood at 989,361, as totted up from U.N. claims and admissions. Three-quarters of the casualties were suffered by the Communists. The breakdown:

"*North Korea*: 283,000 killed or wounded, 139,000 captured, 45,000 non-battle casualties. Total 467,000.

"*Communist China*: 260,000 killed or wounded, 2,300 captured, 31,000 non-battle casualties. Total 293,300.

"*South Korea*: 16,182 killed, 88,511 wounded, 63,959 missing. Total 168,652.

"*United States*: 8,511 killed, 37,918 wounded, 10,691 missing. Total 57,120.

Other U. N. Allies: Total casualties: Turkey 1,170, Britain 980, France 396, Australia 280, Netherlands 115, Thailand 108, Greece 97, Canada 74, Philippines 55, New Zealand 7, South Africa 6, Belgium 1, Luxembourg 0."

"Friedrich Bayer-Grant"

The following speaks for itself:

The India Institute for Cultural Relations in Munich (Germany) awards an Indian student of Chemistry a Grant of DM 600 for the academic year of 1951-52. The student should have completed his scientific studies in his own country, and intend to carry on his work in Germany. The "Friedrich Bayer-Grant" also comprises free tuition at any of the German Universities. Young Indian graduates or trainees are asked to apply for the "Friedrich Bayer-Grant" giving details of their life and academic career with duplicate copies of testimonials. The applications should reach the Institute by May first, 1951.

India Institute, Pullach bei Munchen, Johann Baderstrasse 61.

DR. FRANZ THIERFELDER, *President.*

Indian students and Indian Society will be grateful for this offer. Even now, even in her defeat and desolation, German Universities can show points to others in Indology and modern science. And facilities for education in these are ever welcome.

University for Basic Education

A news sent out on March 8 last from Sevagram (Wardha) indicates a mile-post in the progress of Basic Education.

The 7th All-India Basic Education Conference has appointed a seven-men committee to prepare a scheme for starting a university on the basis of basic education and to assess standards of attainment of different stages of basic education in relation to the traditional educational system. Acharya Kaka Kalelkar is the Chairman of the Committee and Sri E. W. Aryanayakam is the Secretary.

An interesting symposium on the idea of a rural university was the special feature of the Conference. Acharya Vinoba Bhave, Kaka Kalelkar, Prof. J. C. Kumarappa and others who participated in the discussion stressed that the Government of India and the States Governments should accept basic education as the foundation of our educational system.

Since then a Basic Education Conference has been held at Hyderabad and Wardha resolutions reaffirmed. The Governments, Central and States, appear, however, to be lukewarm explaining one of the causes of the stalemate in this program of reconstruction.

Rana Pratap Memorial

Sardar Khursand Bahadur of Rohtak (East Punjab) appeals to the people of Free India, of the Rajasthan Federation, to raise a fitting Memorial over the place where rested the last remains of Rana Pratap. At a distance of 40 miles from Udaipur, and a mile from Chaond village, on the bank of a small rainy rivulet, there stands at present a small octagonal tomb supported by eight pillars and surmounted by a black sandstone dome which rises only seven feet above the pavement.

The new Ministry in Rajasthan under Shree Jai Narain Vyas should turn its attention betimes to this task long neglected. It would be no credit to us if Rana Pratap should continue to have a Memorial as poor as at present.

Sri Aurobindo Cultural University

"The Mother" of the Ashram at Pondicherry has invited a convention to be held on April 24-25, 1951, to give shape to what is claimed to be the last wish of Sri Aurobindo with regard to the assets of the Ashram, the fruits of his disciples' offerings. Last month she had invited Shree Hemendra Prasad Ghosh, one of Sri Aurobindo's fellow-workers in the political field, for consultation in this behalf. There Shree Ghosh found ready a scheme for a Cultural University to be reared on the teachings of Sri Aurobindo in all fields of research, sacred and profane, as these are popularly differentiated.

She is said to have assured those amongst Sri Aurobindo's disciples who appeared anxious to have a Memorial to him in Bengal, that "a lock of hair" of Sri Aurobindo will be made available if a fit temple can be built to house it, and a small fund be there to maintain it.

Acharya Keshav Prasad Mishra

One of the makers of modern Hindi, Acharya Keshab Prasad Mishra, died in his 67th year. On retirement from his high position in the Hindu University as Head of its Hindi Department to which he was appointed on the death of Pandit Ram Chandra Sukla, Acharya Keshavji spent strenuous days in the pursuit of his favourite studies—Linguistics. Early in life he joined the Hindu School, Banaras, as a Sanskrit teacher. His father was practising medicine on indigenous lines but his earning was meagre and Keshavji had to stand on his own legs. As a teacher he passed his Matriculation and Intermediate examinations. When Babu Shyam Sunder Das became the Head of the Hindi Department in the Banaras Hindu University he pursuaded Malaviyaji to send Keshavji to the Hindi Department.

Babu Sahib had a unique insight for recognising merit. And in organising the Hindi Department he gathered there geniuses wherever he found them. The Hindi Department of this Banaras Hindu University has become famed for its teachers and high standard throughout the country.

The death of Acharya Keshavji is a distinct loss to Hindi scholarship. He leaves behind him his widow and a son to whom we offer our sympathy.

Ernest Bevin

At this moment of the British Labour Government's difficulties, internal and external, the death of "Ernie" Bevin is a grievous loss to the British Empire. The resignation owing to ill-health of Sir Stafford Cripps, had put a great strain on Britain's Prime Minister. Before the last shock was over, comes the resignation of Aneurin Bevin, Britain's Labour Minister, one of her "key-man" and by many hailed as her "coming man." This heightens the conditions of crisis.

"Ernie" Bevin had served his apprenticeship under poverty and squalor. It was only about 20 years ago that fortune smiled on him. But he kept his head. Slow-moving, plodding and unimaginative he represented the type of Briton that is the bed-rock of her greatness. This Labourite of Britain had a keen perception of the material aspects of her imperialism and of its strategic importance. Bevin was as conscious of these as Churchill. Therefore has the latter praised him with the words: "He takes his place among the great Foreign Secretaries of our country."

He died when his country's star has been flickering low. He recognized this fact, and strove in 1946 to keep India as the key-stone of Britain's Commonwealth Churchill's words are a fitting memorial to him.

Raja of Aundh

Hardly a month passes that does not record the death of an outstanding Indian. On the 15th April has passed away at Bombay in his 84th year, this member of the Princely Order who practised through his long life the old kingly virtues in the modern age's democratic set-up and demands.

He was a progressive administrator in every sense of the word. In days when it was rare to find any support from the Princely Order for the progressive nationalist movements of the country, the Aundh ruler was a fearless champion of the cause of Khadi—an article of faith by which Mahatma Gandhi set much store. As early as 1938, when newspapers carried stories about onslaughts launched on the States People by autocratic rulers and their Dewans, Aundh was the only State where the ruler voluntarily agreed to forego a large share of his privy purse and reduce it to ten per cent of the State's revenue. Besides conferring responsible government on his subjects, the late Raja was farsighted enough to introduce compulsory education and the Panchayat system in the State. Thanks to his zeal, the State today owns a large net-work of industries, most of which were established before the integration process was set in force. All of us, prince, or peasant, has something to learn from the brilliant career in which the late Aundh ruler practised democracy.

VIVEKANANDA LETTERS

By S. D. CHATTERJEE

During my recent stay in Ottawa, Canada, I was invited to a small, informal dinner party at the house of my esteemed friend Dr. J. R. Kohr and there I had the privilege to meet the founder of the Canadian Bureau of Statistics, Dr. Robert H. Coats, now retired. The good fortune of this meeting was twofold: for not only did Dr. Coats turn out to be a keen student of India—having had, among other fascinating experiences, many personal connections with some of our foremost scientists—but he also revealed himself as the possessor of some original and unpublished letters Swami Vivekananda had written at the turn of the century. Moreover, Dr. Coats most generously consented to part with these valuable letters. They were transmitted to me with the following note:

572 Manor Road
Rockcliffe Park
2. 1. 51

Dear Dr. Chatterjee,

I enclose the two or three letters of Swami Vivekananda I spoke to you about the other evening. They were written to my wife then a young girl in London over fifty years ago. Originally she had twenty or more such letters, but with the exception of the enclosed they were almost wholly destroyed by mice during the war-period when my house was partially closed and rented.

My wife, who was French (nee Marie Halboister) was greatly helped by the Swami during a trying period of her life and always spoke of him with great affection. She corresponded with him at intervals up to the time of his death. His disciple Abhedananda was at our wedding in New York in 1905. She died in 1938.

I spoke of these letters to Dr. Mahalanobis in Washington once and had intended to send them on to him, but was of two minds when I found later so many of them destroyed. I fear the enclosed are not of great significance.

With kindest regards

Very sincerely yours,
(*Signed*) R. H. Coats

You are of course free to make any use or disposal of them you wish.

Although Dr. Coats modestly assumes that these letters by Swami Vivekananda "are not of great significance," their publication here seems to be justified, first on historical grounds and, secondly, because they afford us a glimpse at the very fibres, as it were, from which the Swami used to weave the beautiful carpet of his great thoughts.

Spelling and punctuation have been faithfully reproduced, as these factors contribute to, rather than subtract from, the natural charm and the spontaneous freshness of the Swami's style.

Finally, it may be worth while to point out that an interesting project suggests itself here, namely, the discovery, perhaps among the Swami's papers, of the complementary correspondence to the fragments published below.

These fragments are printed without further commentary, arranged in chronological order; the position of letter No. III, which is undated, has been determined by internal evidence.

I

Almora,
the 2nd June, 1897

Dear Marie,—I begin here my promised big chattie letter with the best intention as to its growth, and if it fails it is owing to your own *karma*. I am sure you are enjoying splendid health, I have been very very bad indeed now recovering a bit—hope to recover very soon.

What about the work in London? I am afraid it is going to pieces. Do you now and then visit London? Hasn't Sturdy got a new baby?

The plains of India are blazing now I cannot bear it now—so I am here in this hill places rather a bit cooler than the plains.

I am living in a beautiful garden belonging to a merchant of Almora—a garden covering several miles of mountains and forests. Night before last a leopard came here and took away a goat from the flock kept in this garden. It was a frightful din the servants made and the barking of the big Tibet watchdogs. These dogs are kept chained at a distance all night since I am here, so that they may not disturb my sleep with their deep barks. The leopard thus found his opportunity and got a decent meal perhaps after weeks. May it do much good to him.

Do you remember Miss Muller? She has come here for a few days and was rather frightened when she heard of the leopard incident. The demand on tanned skins in London seems very great and that is playing havoc with our leopards and tigers more than anything else.

As I am writing to you before me reflecting the afternoon's glow stands long long lines of huge snow peaks. They are about twenty miles as the crow flies from here, and forty through the circuitous mountain roads.

I hope your translations have been well received in the countess' paper. I had a great mind and very good opportunity of coming over to England this Jubilee season with some of our princes but my physicians would not allow me to venture into work so soon. For going to Europe means work, is not it? No work no bread.

Here the yellow cloth is sufficient and I would have food enough. Anyhow I am taking a much desired rest, hope it will do me good.

How are you going on with your work? With joy or sorrow. Do not you like to have a good rest say for some years and no work. Sleep, eat and exercise, exercise, eat and sleep that is what I am going to do some months yet. Mr. Goodwin is with me. You ought

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

to have seen him in his Indian clothes. I am very soon going to shave his head and make a full blown monk of him.

Are you still practising some of the *yogas*? Do you find any benefit form them? I learn that Mr. Martin is dead. How is Mrs. Martin—do you see her now and then?

Do you know Miss Noble? Do you ever see her? Here my letter comes to an end as a huge dust storm is blowing over me and it is impossible to write. It is all your *karma* dear Marie for I intended to write so many wonderful things and tell you such fine stories but I will have to keep them for the future and you will have to wait.

Ever yours in the Lord
VIVEKANANDA

II

Almora,
the 25th July, 1897

My dear Marie—

I have time, will, and opportunity—now, to clear my promise. So my letter begins. I have been very weak for some times and with that and other things my visit to England this Jubilee season had to be postponed.

I was very sorry at first not to be able to meet my nice and very dear friends once more, but *karma* can not be avoided and I had to rest contented with my Himalayas.

It is a sorry exchange after all for the beauty of the living spirit shining through the human face is far more pleasurable than any amount of material beauty.

Is not the soul the Light of the world?

The work in London had to go slow—for various reasons and last though not the least was l'argent, mon amie! When I am there l'argent comes in somehow to keep the mare going—now—everybody shrugs his shoulder. I must come again and try my best to revive the work.

I am having a good deal of riding and exercise but I had to drink a lot of skimmed milk per prescription of the doctors, with the result that I am more to the front than back! I am always a forward man though—but do not want to be too prominent just now and I have given up drinking milk.

I am glad to learn that you are eating your meals with good appetite.

Do you know Miss Margaret Noble of Wimbledon. She is working hard for me. Do correspond with her if you can and you can help me a good deal there. Her address is Brantwood, Worple Road, Wimbledon.

So you saw my little friend Miss Orchard and you liked her too—good. I have great hopes for her. And how I will like to be retired from lives activities entirely when I am very old, and hear the world ringing with the names of my dear dear young friends like yourself and Miss Orchard, etc.

By the by I am glad to find that I am aging fast, my hair is turning gray. "Silver threads among the gold—I mean black" is coming in fast.

It is bad for a preacher to be young, don't you think so. I do, as I did all my life. People have more confidence in an old man and it looks more venerable. Yet the old rogues are the worst rogues in the world, isn't it? The world has its code of judgement which alas is very different from that of truth's.

So your "Universal Religion" has been rejected by the *Revue de deux Monde*. Never mind try again some other paper. Once the ice is broken you get in at a quick rate I am sure. And I am so glad that you love the work, it will make its way, I have no doubt of it. Our ideas have a future ma chere Marie—and it will be realized soon.

I think this letter will meet you in Paris—your beautiful Paris—and I hope you will write me lots about the French journalism and the coming "World Fair" there.

I am so glad that you have been helped by Vedanta and *yoga*—I am unfortunately sometimes like the circus clown, who made others laugh, himself miserable!!

You are naturally of a buoyant temperament. Nothing seems to touch you. And you are moreover a very prudent girl, inasmuch as you have scrupulously kept yourself away from "love" and all its nonsense. So you see you have made your good *karma* and planted the seed of your life-long wellbeing. One difficulty in life being we are guided by the present and not by the future. What gives us a little pleasure now, drags us on to follow it, with the result that we always buy a mass of pain in the future for a little pleasure in the present.

I wish I had nobody to love—and I was an orphan in my childhood. The greatest misery in my life, has been my own people—my brothers and sisters and mother etc. Relatives are like deadly clogs to one's progress and is it not a wonder that people will still go on to find new ones by *marriage*!!!

He who is alone is happy. Do good to all, like everyone, but *do not love* anyone. It is a bondage—and bondage brings only misery. Live alone in your mind—that is happiness. To have nobody to care for and never minding who cares for one is the way to be free.

I envy so much your frame of mind, quiet, gentle, light yet deep and *free*. You are already free, Marie, free already. You are *jivan-mukta*.

I am more of a woman than a man, you are more of a man than woman. I am always dragging others' pain into me—for nothing, without being able to do any good to anybody—just like women—if they have no children bestow all their love upon a cat!!!

Do you think this has any spirituality in it? nonsense, it is all material *nervous bondage*. That is what it is. Oh to get rid of the thraldom of the flesh!

Your friend Mrs. Martin very kindly sends me copies of her magazine every month—but Stupid

CC-0 In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

thermometer is now below zero it seems. He seems to be greatly disappointed with my non-arrival in England this summer. What could I do?

We have started two *maths* here one in Calcutta, the other in Madras. The Calcutta *math* (a wretched rented house) was awefully shaken in the late earthquake.

We have got in a number of boys and they are in training, also we have opened famine relief in several places and the work is going on apace. We will try to start similar centres in different places in India.

In a few days I am going down to the plains and from thence go to the western parts of the mountains. When it is cooler in the plains, I will make a lecture tour all over and see what work can be done.

Here I can not find any more time to write—so many people are waiting—so here I stop—dear Marie—wishing you all joy.

May you never be lured by flesh is the constant prayer of

Ever yours in the Lord,
VIVEKANANDA

Note by R. H. Coats:—My wife was the most spiritual person I ever knew, but she was also the most affectionate and domestic. She always said that she had found the greatest happiness of her life in our marriage.

III

C/o. Mrs. Noble
21A High Street, Wimbledon

My dear Marie—I am in London again, this time not busy, not hustling about but quietly settled down in a corner—waiting to start for the U. S. America on the first opportunity. My friends are nearly all out of London in the country and elsewhere and my health not sufficiently strong.

So you are happy in the midst of your lakes and gardens and seclusion in Canada. I am glad so glad to know that you are up again on top of the tide. May you remain there for ever.

You could not finish the *Rajayoga* translations yet. All right there is no hurry. Time and opportunity must come if it is to be done you know, otherwise we vainly strive.

Canada must be beautiful now, in its short but vigorous summer and very healthy.

I expect to be in New York in a few weeks, and don't know what next. I hope to come back to England next spring.

I fervently wish—no misery ever came near anyone, yet it is that alone that gives us an insight into the depths of our lives, does it not?

In our moments of anguish gates barred for ever seemed to open and let in many a flood of light.

We learn as we grow—Alas! we cannot use our knowledge here—the moment we seem to learn—we are hurried off the stage. And this is *maya*!

This toy world will not be here—this play can not go on—if we were knowing players. We must play

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

blindfolded. Some of us have taken the part of the rogue of the play, some heroic—never mind it is all play. This is the only consolation. There are demons and lions and tigers and what not on the stage but they are all muzzled. They snap but can not bite. The world can not touch our souls. If you want even if the body be torn and bleeding—you may enjoy the greatest peace in your mind.

And the way to that is to attain at hopelessness—do you know that—not the imbecile attitude of despair—but the contempt of the conqueror for the things he has attained—for things he struggled for and then throws aside as beneath his worth.

This hopelessness—desirelessness—aimlessness—is just the harmony with nature. In nature there is no harmony—no reason—no sequence—it was chaos before—it is so still.

The lowest man is in consonance with nature in his earthy-headedness—the highest the same—in the fullness of knowledge—all three aimless—drifting—hopeless—all three happy.

* * * * * *

I have hastened to give you an I know nothing of London yet. I don't know where Gertrude Orchard is.— else would have written to her. Miss Kate Steel is also away. She is coming on Thursday or Saturday.

I had an invitation to stay in Paris with a friend— a very well educated Frenchman, but I could not go this time. I hope another time, I live with him some days.

I expect to see some of our old friends and say good day to them.

I hope to see you in America sure—either I may unexpectedly turn up to Ottawa in my peregrinations or you come to N.Y.

Goodbye all luck be yours—

Ever yours in the Lord, VIVEKANANDA

"POSITION OF THE PRESIDENT OF INDIA"
A Further Rejoinder*

By D. N. BANERJEE,

University Professor and Head of the Department of Political Science, Calcutta University

I

I have noted with much interest Mr. K. K. Basu's reply[1] to my rejoinder[2] in connexion with the question of the position of the President of India. In regard to my objection[3] to his statement[4] that "both in origin and effect a *written* constitution *radically differs* from an *unwritten constitution*"†—an objection to which I strictly adhere for reasons set forth before[5]—he has quoted in support of his contention, certain extracts from the judgment[6] of the Supreme Court of the United States of America in the famous case of *Marbury* vs. *Madison*,[7] as delivered by Chief Justice Marshall in 1803. In doing this, Mr. Basu appears to have missed the real point of the judgment under which a certain provision of an Act of Congress[8] was declared by the Supreme Court to have been unconstitutional and, therefore, void. The use of the word "written" in the judgment more than once, should not mislead us. The really important point in the judgment was the emphasis repeatedly laid in it, either directly or indirectly, upon *the supremacy of the "Constitution"* of the United States—I mean the Constitution which had come into force in 1789, together with the amendments made in it since then. This point of the supremacy of the Constitution had been emphasised in one of the provisions of the Constitution itself. Thus we find in Clause 2 of Article VI of the Constitution:

"This Constitution, and the laws of the United States which shall be made in pursuance thereof[9]; and all treaties made, or which shall be made, under the authority of the United States, shall be the *supreme law of the land*‡ and the Judges in every State shall be bound thereby, anything in the Constitution or laws of any State to the contrary notwithstanding."[10]

Now the object of this clause very rightly regarded by many as the "linchpin" of the American Constitutional mechanism, was, as it still is, not merely to establish the supremacy of a Federal law, duly made, over a State law in the event of a conflict between them, but also to establish the supremacy of the Constitution itself over a Federal law in case of an inconsistency between the two. The expression "the supreme law of the land" obviously means the supreme law of the territory of the United States of America, and Congress is within this territory. This view has also been taken by Chancellor Kent.

"The people of the United States," he writes, "have declared the constitution to be the supreme law of the land, and it is entitled to universal and implicit obedience. Every act of Congress, and every act of the legislatures of the states, and every part of the constitution of any state, which are repugnant to the constitution of the United States, are necessarily void. This is a clear and settled principle of (our) constitutional jurisprudence. The judicial power of the Union is declared to extend *to all cases* in law and equity arising under the constitution; and to the judicial power it belongs, whenever a case is judicially before it, to determine what is the law of the land. The determination of the Supreme Court of the United States, in every such case, must be final and conclusive."

Dicey also expresses the same view.

Under a federal system, he[12] says, "the legal supremacy of the constitution is essential to the existence of the state; the glory of the founders of the United States is to have devised or adopted arrangements under which the Constitution became in reality as well as name the supreme law of the land. This end they attained by adherence to a very

8. *I.e.*, the Judiciary Act of 1789.

What actually happened in the case of *Marbury* Vs. *Madison* is as follows: The Supreme Court "held invalid that provision of the Judiciary Act of 1789 which purported to give original jurisdiction to the Supreme Court to issue writs of mandamus to public officers of the United States." The Court was of opinion that the Constitution did not give to Congress authority to grant this authority" to the Supreme Court. The Court spoke through Chief Justice Marshall.—See Willoughby, *The Constitutional Law of the United States*, 2nd Ed., Vol. 1, p. 3. Also see Evans, *Cases on American Constitutional Law*, 5th Ed., pp. 54-58.

9. In many books the punctuation-mark here is a comma.

‡ The italics are mine.

10. "This clause," says McLaughlin (*The Confederation and the Constitution*, 1905, p. 247), "may be called the central clause of the constitution, because without it the whole system would be unwieldy, if not impracticable. Draw out this particular bolt, and the machinery falls to pieces. In these words the Constitution is plainly made not merely a declaration, a manifesto, dependent for its life and usefulness on the passing will of statesmen or of people, but a fundamental law, enforceable like any other law in courts."—Quoted by Ogg & Ray in their *Introduction to American Government*, 9th Ed., p. 71n.

11. See his *Commentaries on American Law*, 10th Edition, Vol. 1, pp. 349-50.

We also find in Judge Cooley (*A Treatise on the Constitutional Limitations*, 7th Edition, p. 6):

"The will of the people, as declared in the Constitution (of the United States), is the final law; and the will of the legislature is law only when it is in harmony with, or at least is not opposed to, that controlling instrument which governs the legislative body equally with the private citizen."

12. See his *Law of the Constitution*, 9th Ed., pp. 158-59.

obvious principle, and by the invention of appropriate machinery for carrying this principle into effect. The principle is clearly expressed in the Constitution of the United States. 'The Constitution,' runs Article[13] 6, 'and the laws of the United States which shall be made in pursuance thereof . . . shall be the supreme law of the land, and the judges in every State shall be bound thereby, anything in the constitution or laws of any State to the contrary notwithstanding'."

"The legal duty therefore of every judge," concludes Dicey, "whether he act as a judge of the State of New York or as a judge of the Supreme Court of the United States, is clear. He is bound to treat as void every legislative act, whether proceeding from Congress or from the state legislatures, which is inconsistent with the Constitution of the United States. His duty is as clear as that of an English judge called upon to determine the validity of a by-law made by the Great Eastern or any other Railway Company. The American judge must in giving judgment obey the terms of the constitution, just as his English brother must in giving judgment obey every act of Parliament bearing on the case."

Nor should we ignore in this connexion the views of Judge Story, Daniel Webster, James Bryce and Alexander Hamilton.

"The power of interpreting the laws," observes Judge Story,* "involves necessarily the function to ascertain whether they are conformable to the Constitution or not; and if not so conformable, to declare them void and inoperative. As the Constitution is the supreme law of the land, in a conflict between that and the laws, either of Congress or of the States, it becomes the duty of the judiciary to follow that only which is of paramount obligation. This results from the very theory of a republican constitution of government; for otherwise the acts of the legislature and executive would in effect become supreme and uncontrollable, notwithstanding any prohibitions or limitations contained in the Constitution; and usurpations of the most unequivocal and dangerous character might be assumed without any remedy within the reach of the citizens. The people would thus be at the mercy of their rulers in the State and national governments; and an omnipotence would practically exist, like that claimed for the British Parliament."

Again, referring to Clause 2 of Article VI of the Constitution of the United States, he says:†

"From this supremacy of the Constitution and laws and treaties of the United States, within their constitutional scope, arises the duty of courts of justice to declare any unconstitutional law passed by Congress or by a State legislature void. So, in like manner, the same duty arises whenever any other department of the national or State governments exceeds its constitutional functions."

"The Constitution," says Webster,[14] "being the supreme law, it follows of course, that every act of the legislature contrary to the law must be void. But who shall decide this question? . . . The Courts of law, necessarily, when the case arises, must decide upon the validity of particular acts."

"The stream," writes Bryce,[15] "cannot rise above its source. . . . In the United States the position of Congress may . . . be compared to that of an English municipal corporation or railway company. . . . The people have by their supreme law, the Constitution, given to Congress a delegated and limited power of legislation. Every statute passed under that power conformably to the Constitution has all the authority of the Constitution behind it. Any statute passed which goes beyond that power is invalid, and incapable of enforcement. It is, in fact, not a statute at all, because Congress in passing it was not really a law-making body, but a mere group of private persons."[16]

A classic exposition of the whole question has been given by Alexander Hamilton.

"There is no position," says Hamilton,[17] "which depends on clearer principles than that every act of a delegated authority, contrary to the tenor of the commission under which it is exercised, is void. No legislative act, therefore, contrary to the constitution, can be valid. To deny this would be to affirm, that the deputy is greater than his principal; that the servant is above his master; that the representatives of the people are superior to the people themselves; that men, acting by virtue of powers, may do not only what their powers do not authorize, but what they forbid."

Again, referring to the position of the judiciary in the proposed American federation, he says:[18]

"The interpretation of the laws is the proper and peculiar province of the courts. A constitution is, in fact, and must be, regarded by the judges as a fundamental law. It must therefore belong to them to ascertain its meaning, as well as the meaning of any particular act proceeding from the legislative body. If there should happen to be an irreconcilable variance between the two, that which has the superior obligation and validity ought, of course, to be preferred; in other words, the constitution ought to be preferred to the statute, the intention of the people to the intention of their agents."

It is evident from the extracts given above that stress has been given in them, not to the so-called written character of the American Constitution but to its supremacy and also, impliedly, to the subordinate position of Congress and the legislatures of the constituent States, the laws of which, to quote the words of Dicey,‡ "are of the nature of by-laws, valid whilst within the authority conferred upon" them by the

13. Dicey meant here Clause 2 of Article VI of the American Constitution.

Constitution, "but invalid or unconstitutional if they go beyond the limits of such authority." This is as it should be. The supremacy of the Constitution as the fundamental law of the American Federal Union is the essential thing: its so-called written nature is only a question of form and follows as a consequence from that supremacy as a matter of political expediency. But we must not confuse between the form and the essence or substance of a thing; nor should we identify the one with the other, and far less give to the former a position of primacy over the latter. Or, I may put it in another way. The so-called written character of the American Constitution is a secondary consequence of something which is of a primary importance in it, namely, its supremacy as law, and we must not confuse between what is consequential and what is essential. Thus we find in Dicey[19] again that one of the leading characteristics of a completely developed federalism is "the supremacy of the constitution," and that "in the supremacy of the Constitution are involved three consequences." And one of these consequences is that "the constitution must *almost* necessarily be a 'written' constitution."[20] And the reason for this is as follows:

"The foundations of a federal state," he observes,[21] "are a complicated contract. This compact contains a variety of terms which have been agreed to, and generally after mature deliberation, by the States which make up the confederacy. To base an arrangement of this kind upon understandings or conventions would be certain to generate misunderstandings and disagreements. The articles of the treaty, or in other words of the constitution, must therefore be reduced to writing. The constitution must be a written document, and, if possible, a written document of which the terms are open to no misapprehension."

It is clear from this that the *raison d'etre* of a so-called written constitution in a federal union is "no deeper than a political expediency." But from this it does not follow, as stated before, that we should confuse between what is only incidental or consequential in a Constitution with what is essential or fundamental in it. And we shall have an occasion to show later on why the judgment of the Supreme Court of the United States in the case of *Marbury* vs. *Madison* has come in for a legitimate criticism by competent authorities on "American constitutional jurisprudence."

We shall now deal with the judgment of the Supreme Court in the case of *Marbury* vs. *Madison*. If in the light of what has been shown before, we consider this judgment very carefully and without any prejudice or prepossession in our mind, we shall be able to see it in its true perspective, and its really important point will then be evident to us. And this really important point is, as I have already said, the emphasis repeatedly laid in the judgment, either directly or indirectly, on the supremacy of the Constitution of the United States as its fundamental and "paramount" law. This will appear from the following extracts from the said judgment:

"The question, whether an act, repugnant to the constitution, can become the law of the land, is a question deeply interesting to the United States; but, happily, not of an intricacy proportioned to its interest. It seems only necessary to recognize certain principles, supposed to have been long and well established, to decide it. That the people have an original right to establish, for their future government, such principles as, in their opinion shall most conduce to their own happiness, is the basis on which the whole American fabric has been erected. The exercise of this original right is a very great exertion; nor can it, nor ought it, to be frequently repeated. The principles, therefore, so established, are deemed fundamental; and as the authority from which they proceed is supreme, and can seldom act, they are designed to be permanent.

"This original and supreme will organizes the government, and assigns to different departments their respective powers. It may either stop here, or establish certain limits not to be transcended by those departments. The Government of the United States is of the latter description. The powers of the legislature are defined and limited; and that those limits may not be mistaken, or forgotten, the constitution is written. To what purpose are powers limited, and to what purpose is that limitation committed to writing, if these limits may, at any time, be passed by those intended to be restrained? The distinction between a government with limited and unlimited powers is abolished, if those limits do not confine the persons on whom they are imposed, and if acts prohibited and acts allowed, are of equal obligation. It is a proposition too plain to be contested, that the constitution controls any legislative act repugnant to it; or that the legislature may alter the constitution by an ordinary act.

"Between these alternatives, there is no middle ground. The constitution is either a superior paramount law, unchangeable by ordinary means, or it is on a level with ordinary legislative acts, and, like other acts, is alterable when the legislature shall please to alter it. If the former part of the alternative be true, then a legislative act, contrary to the constitution, is not law; if the latter part be true, then written constitutions are absurd attempts, on the part of the people, to limit a power, in its own nature, illimitable.

"Certainly, all those who have framed written constitutions contemplate them as forming the fundamental and paramount law of the nation, and consequently, the theory of every such government must be, that an act of the legislature, repugnant to the constitution, is void. This theory is essentially attached to a written constitution, and is, consequently, to be considered, by this court, as one of the fundamental principles of our society. It is not, therefore, to be lost sight of, in the further consideration of this subject.

"If an act of the legislature, repugnant to the

19. See Dicey, *op. cit.*, pp. 144-46.
20. The italic is mine. Dicey has, however, stated in a footnote (*op. cit.*, p. 146n):
"No doubt it is conceivable that a federation might grow up by the force of custom, and under agreements between different States which were not reduced into writing, and it appears to be questionable how far the Achaean League was bound together by anything equivalent to a written constitution."
21. See Dicey, *op. cit.*, p. 146.

constitution, is void, does it, notwithstanding its invalidity, bind the courts, and oblige them to give it effect? Or, in other words, though it be not law, does it constitute a rule as operative as if it was a law? This would be to overthrow, in fact, what was established in theory; and would seem, at first view, an absurdity too gross to be insisted on. It shall, however, receive a more attentive consideration.

"It is, emphatically, the province and duty of the judicial department, to say what the law is. Those who apply the rule to particular cases, must of necessity expound and interpret that rule. If two laws conflict with each other, the courts must decide on the operation of each. So, if a law be in opposition to the constitution; if both the law and the constitution apply to a particular case, so that the court must either decide that case, conformably to the law, disregarding the constitution; or conformably to the constitution, disregarding the law; the court must determine which of these conflicting rules governs the case; this is of the very essence of judicial duty. If then, the courts are to regard the constitution, and the constitution is superior to any ordinary act of the legislature, the constitution, and not such ordinary act, must govern the case to which they both apply."[22]

The emphasis in the above extracts on the Constitution of the United States as "a superior paramount law" is very clear. We also notice in them why the Constitution was "written," *i.e.*, "committed to writing." Thus we find:

"The powers of the legislature are defined and limited; and that those limits may not be *mistaken* or *forgotten*, the constitution is written.[23] To what purpose are powers limited, and to what purpose is that limitation committed to writing, if these limits may, at any time, be passed by those intended to be restrained."

The *raison d'etre* of committing to writing the original Constitution of the United States—I mean the short document framed at Philadelphia in 1787—is evident from this. But from this one must not think that the Constitution of the United States today is to be found only in this brief document framed in 1787 (and its twenty-one amendments subsequently made).

"Let no one," says Professor Munro,[24] "make the error of supposing that these ten or twelve pages can be understood merely by reading them, or that they contain all the constitutional rules which govern the American people today . . .

"The architects of 1787 built only the basement. Their descendants have kept adding walls and windows, wings and gables, pillars and porches, to make a rambling structure which is not yet finished. Or, to change the metaphor, it is a fabric which, to use the words of James Russell Lowell, is still being 'woven on the roaring loom of time.' That is what the framers of the original Constitution intended it to be. Never was it in their minds to work out a final scheme for the government of the country and stereotype it for all time. They sought merely to provide a starting point."

Usages were at work in the United States even when Chief Justice Marshall delivered the opinion of the Supreme Court in 1803 in the case of *Marbury* vs. *Madison*. Take, for instance, the question of party system there. Even though, writes Munro,[25] the leading statesman of 1787 had looked upon the rivalry of political parties as a thoroughly vicious feature in a free government, yet "political parties sprang into existence almost at the outset and gradually became dominating factors in the work of the new federal government."

"Usage," he continues,[26] "has created and maintains the party system, but who will say that party organizations do not profoundly affect both constitutional practices and the political life of the American people?"

If, as Mr. Basu appears to think, Chief Justice Marshall really implied in his judgment in the case of *Marbury* vs. *Madison* that there was a *radical difference* between a so-called written and a so-called unwritten constitution, then I am constrained to say for more than one reason—and that notwithstanding the great weight of his name—that his view is open to criticism. Usages (*i.e.*, unwritten elements) have begun to develop in the American Constitution, as shown above, even in Marshall's own time, materially affecting its working.

"And some of those features of American Government," says Bryce,[27] "to which its character is chiefly due and which recur most frequently in its daily working, rest neither upon the Constitution[28] nor upon any statute, but upon usage alone."

Even in England which was, by contrast, supposed to have a so-called unwritten Constitution, there were in Marshall's time many elements in its Constitution which were written or statutory. Take, for instance, the Magna Carta (1215), the Bill of Rights,[29] the Act of Settlement,[30] the Act for the Union with Scotland (1707),* the Septennial Act,[31] the Act for the Union with Ireland,[32] etc. The distinction, therefore, between a so-called written and a so-called unwritten Constitution is as I have already† pointed out, "really of

of degree rather than of kind," and does not mark a contrast between two very widely differentiated groups. In some Constitutions written elements preponderate and in others unwritten elements preponderate. That is all that we can, speaking scientifically, say, and for that reason we cannot classify Constitutions as "written" and "unwritten."

There is another aspect of the question. Mr. Basu has stated,[33] obviously following Marshall, that "the judiciary has *necessarily the last say* in the matter of interpreting a Constitution."[34] But Marshall's contention in favour of a judicial review of legislation following as a consequence from the so-called "writtenness" of a Constitution is itself not above criticism. Marshall[35] has said that "the particular phraseology of the Constitution of the United States confirms and strengthens the principle, *supposed to be essential to all written Constitutions*, that a law repugnant to the Constitution is void; and that *courts*, as well as other departments, are bound by that instrument."[35] This statement is too sweeping and not justified by facts. As Professor Willoughby, "one of the foremost authorities on the constitutional law of the United States,"‡ has shown in his celebrated work *The Constitutional Law of the United States*," that, throughout this statement as well as some other statements in the judgment in the case of *Marbury* vs. *Madison*, there thus the premise, not warranted by facts, "that there is something in the very nature of a written constitution that necessitates the vesting of its final interpretation in the judiciary." This function of interpretation is not, as will appear from what follows, *necessarily* exercised by the courts of law. That is to say, the doctrine of judicial review of legislation which is a distinctive feature of the American system of government, does not, for one reason or another, apply to every country which may have, or may have had, a so-called written constitution.

"In most European countries," writes Professor Haines,[36] "the rule prevails that the guardianship of the Constitution belongs to the legislature, and, subject to a reversal by popular referendum or the election of a new assembly, the legislature determines the limits of its own authority and exercises control over the other departments of government. The legislature not only exercises ordinary legislative authority, but is recognized as possessing constituent powers, or powers of an ultimate sovereign. . . . A controversy regarding the meaning of a constitutional provision is simply not a *justiciable controversy*. The basic hypothesis, therefore, on which the American constitutional structure is founded, that constitutions are laws in the ordinary significance of that term, and that a case or controversy involving an alleged conflict between a constitutional provision and a statute is necessarily subject to judicial cognizance, are repudiated as legally unsound and politically impracticable."

"The claim," Professor Haines, however, adds,[39] "that a written constitution with limits on the powers of government, if not guarded and protected by the judiciary, becomes a mere 'scrap of paper' and is not seriously observed, appears to be disproved by the experience of countries with written fundamental laws and final legislative interpretation of the constitution. The constitutions of Belgium and Switzerland, though subject to final interpretation by the legislative assemblies, have seldom been changed merely by legislative interpretation or by a refusal to obey a constitutional requirement. The experience of these countries indicates that legitimate private rights and privileges are likely to receive adequate protection without a judicial guardianship of the written constitution."

We also find in Willis* that

"A majority of the nations of the earth, though adopting written constitutions, have retained the doctrine of legislative supremacy."

Let me now refer to one or two specific countries which have had a so-called written constitution, but in which the doctrine of judicial review of legislation in the American sense either does not operate at all, or does so only very partially. Let me first take the case of France under the Third Republic. Referring to the position of the judiciary in it, Professor Munro[40] writes:

"There is another feature of the French judicial system which the American student will do well to note. France has a written constitution, embodied in a series of constitutional laws, the provisions of which are in some cases very precise. And the French constitution, like the American, is ostensibly the supreme law of the land; hence any ordinary law which conflicts with its provisions is said to be unconstitutional and void. But no French court has the power to declare a statute unconstitutional and to annul it on that ground, no matter how repugnant to the constitution the statute may be. No such power is expressly given to the courts by the French constitution and it has not been acquired, as in the United States, by usage."

We also find in Ogg:[41]

"We have seen that the members of the national legislature, sitting in the guise of a National Assembly, can make any changes whatsoever in the provisions of the written fundamental

Digitized by Arya Samaj Foundation Chennai and eGangotri

law. In closing, it may be noted, further, that the legislature itself can enact a statute palpably inconsistent with that law with full assurance that it will be recognized and enforced by the courts—which is tantamount to saying that in France, as in Britain, Parliament is supreme and the American device of judicial review of statutes does not exist. . . . In neither France nor England . . . . is any act of Parliament challengeable judicially."

The position of the judiciary in France does not, in essence, appear to have changed under the Constitution of the Fourth French Republic.[42]

Let me now refer to the case of Switzerland, another country with a so-called written Constitution. Besides, it is by nature, as I have shown in another connexion,[43] really a Federation—a true Federal State—like the United States of America, although it is called a Confederation. Now what is the position of the judiciary in it in regard to legislation?

"The Swiss Federal Tribunal," says Bryce,[44] "cannot declare any Federal law or part of a law to be invalid as infringing some provision of the Federal Constitution. It may annul a Cantonal law as transgressing either the Federal or a Cantonal Constitution, but the Constitution expressly assigns to the Federal Legislature the right of interpreting both the Federal Constitution itself and all laws passed thereunder, so that it can put its own construction on every law which it has itself passed, without the intervention of any judicial authority to correct it."

We also find in William Rappard[45]:

"As for the judicial review of legislative measures, it has been *expressly denied, as far as federal laws are concerned*. It has, however, crept in by a round-about path in respect of Cantonal laws."[46]

Again, he says:

"In its function as a court of public and administrative law, the Federal Tribunal must uphold the federal Constitution and federal statutes as against cantonal Constitutions and statutes. . . . However, it has been *expressly and deliberately denied the right of deciding on the constitutionality of all federal statutes*. The authors of the Constitution of 1874 reserved to the Federal Assembly alone the right of interpreting the Federal Constitution."[47]

Considerations of space do not permit me to give further instances of the absence of the power of judicial review of legislation in countries having so-called written Constitutions. But from what has been shown immediately above, it is clear that Mr. Basu's positive and dogmatic assertion[48] that "the judiciary has necessarily the last say in the matter of interpreting the Constitution," is not applicable to all countries having, presumably, what he calls "written Constitutions." And the same criticism equally applies to Mr. Basu's relevant observation on this question, referred to before. We also find in Evans[49] in connexion with his remarks on Professor Willoughby's criticism of Marshall's reasoning in *Marbury* vs. *Madison*:

"The criticism directed against Marshall's argument based upon the nature of a written constitution is better founded. It is pointed out that in a number of other countries having written Constitutions the Courts are not permitted to pass upon the constitutionality of acts of the legislature."

One should be sure of one's facts before one makes a categorical statement in regard to a point of constitutional law. Even in the United States, Mr. Basu may be interested to know, there are, as Bryce,[50] in connexion with the question of "the authorities entitled to interpret the (American) Constitution," "points of construction which every court, following a well-established practice, will refuse to decide because they are deemed to be of a 'purely political nature'."

"These points," continues Bryce,[51] "are accordingly left to the discretion of the executive and legislative powers, each of which forms its view as to the matters falling within its sphere, and in acting in that view is entitled to the obedience of the citizens and of the States also.

"It is therefore an error to suppose that the judiciary is the only interpreter of the Constitution; for a certain field remains open to the other authorities of the government, whose views need not coincide, so that a dispute between those authorities, although turning on the meaning of the Constitution, may be incapable of being settled by any legal proceeding. This causes no great confusion, because the decision, whether of the political or the judicial authority, is conclusive so far as regards the particular controversy or matter passed upon.

"The above is the doctrine now generally accepted in America."

We find a corroboration of this view in Judge Story. Dealing with the question, "Who is final

42. See Strong, *Modern Political Constitution*, 1949, pp. 261-62; also Malezieux and Rousseau, *The Constitution of the Fourth Republic* (R. C. Ghosh), p. 16; also Ogg and Zink, *Modern Foreign Governments*, pp. 519-20.

44. See his *Modern Democracies*, Vol. 1, p. 401.

45. See his *Government of Switzerland*, p. 50.

46. The italics are mine.

47. The italics are mine.

See William Rappard, *op. cit.*, p. 90. We also find in Wheare (*Federal Government*, 1947, p. 61) that in Switzerland the last word about the meaning of its Constitution "does not appear to rest completely with the Federal Tribunal, it may declare Cantonal laws invalid, but it must accept [illegible] Federal legislature [illegible] valid."

48. See *The Modern Review* for February, 1951, p. 141.

49. See his *Cases on American Constitutional Law*, 5th Ed. (Fenwick), 1942, p. 60.

I may also invite here the reader's attention to Professor Thayer's comment on the reasoning of Marshall in *Marbury Vs. Madison*, quoted by Professor Willoughby in his *Constitutional Law of the United States*, 2nd Ed., pp. 6-7n. Among other things, Professor Thayer has said: "It (*i.e.*, Marshall's reasoning) assumes as an essential feature of a written Constitution what does not exist (obviously when Professor Thayer was writing) in any one of the written Constitutions of Europe."

50. See his *American Commonwealth*, 1928, Vol. 1, pp. [illegible]

51. See *ibid.*

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

or Interpreter in Constitutional Controversies," he has said that there are many cases in which "the decisions of the executive and legislative departments" "become final and conclusive, being from their very nature and character incapable of revision." Thus, "in measures exclusively of a political, legislative, or executive character, it is plain that as the supreme authority, as to these questions, belongs to the legislative and executive departments, they cannot be re-examined elsewhere." Where, however, "the question is of a different nature and capable of judicial inquiry and decision, there it admits of a very different consideration." In such a case, "there is a final and common arbiter provided by the Constitution itself, to whose decisions all others are subordinate; and that arbiter is the supreme judicial authority of the Courts of the (American) Union."*

Further, dealing with the question, "Who interprets the (American) Constitution?", Charles Beard† says, among other things:

"According to the formula usually found in the child's book in civics, it is the Supreme Court of the United States, or at least a majority of the judges, that 'interprets' the Constitution. But even a superficial examination of the instrument itself reveals a fatal weakness in this contention. Federal courts have no monopoly over the business of exposition. They are given a field of work, a jurisdiction, and it extends only to certain cases in law and equity.

"All problems arising under the Constitution cannot be formulated into cases, or actions between parties, and carried before the Supreme Court. Moreover the Court has repeatedly ruled that some cases are political in character and lie outside its jurisdiction."

"It is an over-simplification to say," he next observes, "that the Constitution is the document as expounded by the Supreme Court."

He then shows the part which Congress plays as an interpreter of the Constitution, and, thereafter, remarks:

"Likewise, in his sphere, the President of the United States by his decrees, orders, and actions gives meaning to the Constitution. Many of his findings are 'political' in character; and the Supreme Court will not inquire into their legitimacy—for example, a declaration on foreign policy. Others are discretionary and these too, the Court has said, must be left to his judgment."

II

In regard to the question of the interpretation of clause (1) of Article 74 of the Constitution of India, I should like to state that I adhere to my view, so far as the *purely legal*—and *not political*—aspect of the question is concerned, set forth before,[53] namely, that, constitutionally speaking,[54] the President of India is not *legally bound* to accept, in the exercise of his functions, any advice tendered to him by his Council of Ministers. That is to say, there is no *statutory obligation* requiring him to accept such advice. And I have shown before[54] that this view was taken also by the late Sir B. L. Mitter. This view appears to be the correct view, notwithstanding all quibbling otherwise. If the words of a statute, says Maxwell,[55] "are in themselves precise and unambiguous no more is necessary than to expound those words in their natural and ordinary sense, the words themselves in such case best declaring the intention of the Legislature." We also find it quoted in *Craies on Statute Law*:[56]

> "If the words of the statute are themselves precise and unambiguous, then no more can be necessary than to expound those words in their ordinary and natural sense. The words themselves alone do in such a case best declare the intention of the law-giver."

Again, we find in Judge Story:[57]

> "Where the words are plain and clear, and the sense distinct and perfect arising on them, there is generally no necessity to have recourse to other means of interpretation."

Further, Beal has quoted Lord Cranworth, L. J., (in *Gundry* vs. *Pinniger*, 1852) to say:

> "The great cardinal rule is that which is pointed out by Mr. Justice Burton, *viz.*, to adhere as closely as possible to the literal meaning of the words. When once you depart from that canon of construction, you are launched into a sea of difficulties which it is difficult to fathom."‡

And, lastly, we find in Kent:[58]

> "The words of a statute, if of common use, are to be taken in their natural, plain, obvious, and ordinary signification and import."

In view of these authoritative views on the canons of interpretation of statutes, we should expound the words used in Clause (1) of Article 74 in their natural and ordinary sense. And if we do this, then the only interpretation which can be rationally put upon the clause, so far as—and I repeat this here—the *purely legal aspect* of the question is concerned, is what I have given before[59] and has been briefly stated above. If we analyse the clause, it will really mean that "there shall be a Council of Ministers with the Prime Minister at the head"—

(*i*) to *aid* the President in the exercise of his functions, and

(*ii*) to *advise* him in the exercise of his functions.

There is nothing in this clause which imposes a

statutory obligation on the President to accept the advice of his Council of Ministers. And I think that the authors of our Constitution acted very wisely in not imposing such a statutory obligation on the President. It would, as I have previously stated,[60] be very awkward, indeed, if, for instance, any advice of an outgoing Council of Ministers as to who should form the incoming Council of Ministers were to be *legally binding* upon the President. He would in that case have no discretion left in the matter,[61] and that would be a travesty of parliamentary form of government. Nor can we reasonably treat the word "aid" as a technical term. One should think a little deeply about the implications of one's statement about a constitutional matter before one should make it. Nor does the law of our Constitution really permit such a statement. We should take the words "aid" and "advise" in the Clause under our consideration "in their natural and ordinary sense"—"in their ordinary meaning." The word "aid" does not mean, as Mr. Basu thinks, "collaboration" with all that it implies. It simply and plainly means, according to the Oxford Dictionary,[62] "help (a person to do)." If I may give a homely analogy, I may say that in the matter of the execution of the business of administration at the Centre, the President, *technically speaking*, is the Principal or the Master, as it were, and the Council of Ministers are his mere *aiders* and *advisers*. While it is their duty to aid and advise him in the exercise of his functions, he is not *legally bound* to accept their advice. And, in view of the words whether or in Clause (2) of Article 74 of our Constitution, it is doubtful whether any such advice must be sought and offered. This is my view of the whole question. And when I previously stated that "the text of the law was not explicit, I really meant that it was not explicit *in the sense* of supporting Mr. Basu's contention. And we must not forget in this connection the canon of constitutional construction that

> "Nothing is to be added to or to be taken from a statute, unless there are . . . adequate grounds to justify the inference that the Legislature intended something which it omitted to express."*

My submission is that there is no justification for any inference that the authors of our Constitution intended that there would be any *statutory obligation* on the President to accept the advice of his Council of Ministers. They never meant, nor could have ever meant, it. Nor, again, does it follow from the text of our Constitution.

I need hardly state here that I have discussed above the question of the position of the President *vis-a-vis* his Council of Ministers purely from a legal standpoint, and not from a political standpoint.†

———:O:———

A SCHEME FOR INCREASING FOOD PRODUCTION

By S. N. AGARWAL

The problem of food shortage in India is getting increasingly complicated. Instead of becoming self-sufficient in foodgrains by the end of this year, the Indian people have to put up with a reduction of rations by 25 per cent and stretch the begging bowl to foreign countries. Unfortunately, correct figures as to the actual percentage of food shortage in the country are not available, so much so that some economists are inclined to believe that there is no food shortage at all and that the present difficulties are chiefly due to artificial scarcity created by anti-social elements. Even those who do not accept this view generally concede that the real deficit is not more than about 10 per cent. This shortage is, surely, not so extraordinary and should not cause so much headache to the Government and the people. With better storage techniques, irrigation facilities, reclamation of waste lands, prevention of wastage of food, and tapping of edible but inferior and generally neglected food, it should have been possible by now to meet the annual food deficit. Failure to achieve this objective is, indeed, a sad commentary on the basic policy that is being pursued by the Government of India despite public opposition.

I earnestly feel that the existing system of procurement and levy is fundamentally erroneous. In most of the States in India, the farmer has to part with a substantial portion of his produce under the system of compulsory procurement at Government rates which are considerably lower than the 'free market' or 'black-market' rates. He, naturally, resents such procurement and does not feel enthusiastic enough to step up the production of food-grains to the maximum. He tries to divert his land from food-crops to money-crops which yield higher income because of better prices. Moreover, he begins to learn the art of dodging Government procurement and selling his foodgrains to the black-marketeers. In Madhya Pradesh, the Government procures foodgrains indirectly through merchants. But the net result is ultimately almost similar. The level of production shows the tendency to go down because the producers, both agricultural and industrial, do not feel the full of economic incentives in a system hedged

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

controls on all sides. This has happened even in an enlightened and progressive country like Britain. In a poor country like India, therefore, the uneducated agriculturist is not expected to respond only to patriotism and appeal for sacrifice. Adequate economic incentives ought to be regarded as pre-requisites for making the "Grow More Food Campaign" a practicable proposition and a success.

How could this be achieved? I have a very definite and concrete suggestion to make. The Government should abandon the existing policy of procurement and introduce a system of open market and limited sale of rations at controlled rates. The State should undertake to provide cheap rations only to those who cannot really afford to pay the 'open-market' prices. For instance, persons earning less than Rs. 200 per month might be regarded as falling within this category. This figure will, of course, vary from region to region. The Government could also publish scheduled rates of foodgrains available in the ration shops from month to month; the rates could vary with the different levels of income and the quantities purchased. Moreover, only coarse, though clean, foodgrains (*i.e.*, second or third quality, but not rotten or mixed with grit, earth, etc.) may be made available in these Government shops. In order to discharge this responsibility, the Government, instead of procuring foodgrains at lower rates, should purchase them from the free or open market and sell them at cheaper prices in the ration shops. The loss incurred by the State in the process would be in the nature of a subsidy. Even at present, such subsidies are being paid by the Government on foodgrains imported from foreign countries. The money goes out of the country and the poor Indian farmer is not able to derive any benefit out of this additional expenditure from the public exchequer. Instead, the Government ought to subsidize food-grains purchased from our own agriculturists and allow the tillers of the soil to feel that they can reap the full fruits of their hard work on the land. The State will be obliged to make suitable arrangements for cheap ration shops in the cities, specially in the deficit areas; in the rural regions only landless labour will be allowed to enjoy such facilities. The rest of the people in cities and villages will be free to make their purchases of foodgrains in the open market. Such a scheme will have several distinct advantages. First, the ignominy of the "black market" and the consequent chain of moral degradation would automatically disappear. Secondly, the State will be able to recover a substantial portion of money spent on subsidy through a workable system of sales-tax and graded income-tax realized from merchants who will be entitled to conduct their business in the open or free market. Thirdly, the poorer sections of the population will continue to receive rations at controlled rates and the well-to-do people will get the satisfaction of making their purchases in the "white" market in place of the existing "black market."

In suggesting the scheme, I do not claim any originality. During my European tour last year, I found such a scheme working successfully in Czechoslovakia. The existence of a free market side by side with some cheap and subsidized ration shops for the poor people had eliminated black-marketing from the country and the State was able to augment its public exchequer in substantial measure through sales-tax and income-tax on the business transactions in the open market. I see no reason why a similar experiment could not be tried in India as well.

The first objection that may be advanced against this scheme is that higher prices of foodgrains would again set the inflationary spiral in motion. There need be no fears on this account because the Government will be able to arrest the inflationary tendencies by selling foodgrains to the poorer sections of the community and any rise in the level of wages would be quite unnecessary. Moreover, high prices of foodgrains prevail even today. The significant difference that the new scheme would bring into effect is that in place of the black-market prices we will have open-market business transactions yielding additional taxable income. The Government can check any probable inflation by two other methods as well. First, the farmers need not be paid the whole value of their produce in cash, the State could offer an additional incentive to the villagers by giving them gold and silver also in making payments. The farmers even now convert their money into ornaments but the middlemen exact high profits by exploiting the needs of the villager. The poor tiller of the soil will, surely, be grateful to the Government if he is able to procure gold and silver at comparatively cheap rates. Secondly, the State, instead of paying the full value of foodgrains to the farmers in cash or precious metals, could divert part of the money due to them into collective welfare schemes like better housing, co-operative farming and marketing. Shares of such co-operative societies could be supplied to the agriculturists, of course, with their consent. This will also, incidentally meet the objection that the additional purchasing power placed in the hands of the villagers might be mis-spent on intoxicants and wasteful socio-religious ceremonies.

Another argument advanced against this scheme by some economists is that the uneducated farmer is not yet trained in economic incentives. If he is able to earn higher income on his agricultural produce, he may not care even to cultivate the whole of his land. The insinuation is that such a scheme of paying higher prices to the agriculturist, instead of encouraging him to produce more, may ultimately result in actuating him to produce less. To my mind, such an insinuation is fantastic and betrays gross ignorance of the present psychology of the masses.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The average villager today is an intelligent person who easily responds to the economic incentives that exist in modern society.

There is one more point. In place of procurement, the Government could also think of realising rent and land revenue in kind, *i.e.*, in the form of foodgrains at controlled rates. But the present level of storage efficiency and honesty among State officials may not be conductive to the success of such a system. This may be resorted to only in times of national emergency when stock-piling of foodgrains for ration shops may become imperative.

Lastly, I do not mean to suggest that only by changing the existing system of levy and procurement the food problem in India would be automatically solved and the deficit made good by additional productive effort on the part of the farmers. All other schemes of supplying better seeds, irrigational facilities, manure, cattle and implements will still be necessary. But I have no manner of doubt that by abolishing the present system of procurement a very great hurdle in the way of greater food production would surely be removed.

I place the scheme before the Union and State Governments and the National Planning Commission for their serious consideration. I hope they will find it well worth a fair trial.

——:O:——

LONDON LETTER

By Major D. GRAHAM POLE

The wettest Winter ever recorded continues into as wet a Spring. 'Tears have drowned the world,' Shakespeare commented in one of his plays—and the superstitious amongst us have plenty of evidence for their belief that Heaven, quite literally, is washing its hands of us. But what a pity it all is. In the countryside there is a tremendous hold-up in agriculture and in our towns—where furbishing-up is in progress in honour of the approaching Festival—new paint is spoilt before it can dry and those who lay out gardens and squares, abandonning hope for their washed-out seeds, are buying grass sods by the square foot and laying them down like carpets. In Parliament Square, it is amusing to see that the grass carpet is a mis-fit. It just fails to come up to the edge of the path. But the famous Square, none the less, now looks very handsome. For the first time, probably, people really take an interest in the statues. Along the new terraces standing about as if they had taken up their places at a Reception, these dead and gone statesmen make an impressive setting for Parliament. Indeed, whatever we may feel about the Festival Exhibition and the Festival Gardens, the new design for Parliament Square is one great improvement which has been brought about. Another permanent good will be the new Concert Hall. Some may not take to its most modern and efficient design. They sigh for the old Queen's Hall, blitzed and not yet re-built. Undoubtedly its green gloom and its fountains and its noises-off from the Bar had a never-to-be-forgotten atmosphere. How long does it take for a place to acquire an atmosphere? One has a horrible fear that modern, *perfect*, buildings, with their faultless acoustics, doors that exclude all sound and lights that cast no shadow, are more attuned to a refrigerator than to a fiddle!

The Festival Gardens are very much in the news at the present time. They are the Government's latest achievement in the art of throwing away money. First the Groundnuts, then the Gambia eggs, and now the Gardens with an excess of expenditure over estimate of a million and a half pounds sterling. It is a disturbing revelation. How is it possible, everyone is asking, to pour out so much money on the seemingly simple business of creating a fun-fair (horrible word) in a public park? And on all sides one hears the charge that it is a 'racket' and 'fiddling away the money.' The Government has appointed a firm of chartered accountants to investigate the Gardens' expenditure, the Chairman has resigned, and so has the Managing Director. And all this a month before the Gardens are due to be opened by Princess Margaret . . . It is a very odd situation and must be an embittering one to the displaced officials. To go, under a cloud, when seven-eighths of the work on the Fair is completed!

Mr. Herbert Morrison is reported to have said that he hopes, when people visit the Festival Gardens, they will exclaim: 'How lovely!' and not 'How much did it all cost.' Perhaps they will and perhaps the Gardens will remain, long after the Festival year is forgotten, and become as popular a feature of London as were the former and famous Gardens of Ranelagh and Vauxhall. Londoners certainly are much more interested in the Festival Gardens than they are in the Festival Exhibition. The list of attractions is a little over-powering. Fourteen restaurants will not be wanted in after years—nor the miniature zoo, Crystal Palace, railway and so on—but the riverside restaurant and riverside theatre should remain. The theatre is said to be much admired by visiting architects. Such things should be a great advantage, in stuffy London summers, to people who cannot go away for a holiday. It is a very good thing to bring them to a Park, for supper or entertainment. In recent years the London County Council has held open air Art Exhibitions in Battersea Park. These no doubt will continue to be held in the new fashioned Gardens. (The pavilions of with a series of drawings by that very great painter Hogarth). In fact,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

this idea of a Festival Garden is no new vulgar thing. And, above all, in years to come, may Londoners look back to the proto-type Vauxhall and consider the place first and foremost as a Garden. The historian of South London, Mr. Harry Williams, has this to say about Vauxhall:

"Pepys mentions the nightingales singing in Vauxhall Gardens in 1667, but the most memorable account of Vauxhall is given by Addison in 1712. The fragrancy of the walks and bowers, the air filled with the scent of innumerable flowers, the chorus of birdsong from the trees, the freshness, the liveliness and the vibrant happiness of the place shine from his pages. Such naive delight in simple things is one of the lost treasures of the earth, and almost any sacrifice would be justified if it could be recaptured for mankind to-day."

When I read this passage, I set out to buy a copy of Addison. But I found it meant buying Addison in four volumes and this seemed a bit extravagant and especially to do such a thing on the eve of the Budget.

In palmier days the Budget was a closely guarded secret. Some taxes always came off somewhere and any leakages beforehand might allow of profitable and unfair gambling in futures on the Stock Exchange. Now it is a different story. Taxes, real or disguised in increasing prices, get stiffer all the time. Far from hugging his secrets the Chancellor of the Exchequer issues, just before his Budget, a Financial Survey. It is a mixture of cushioning the shock and of propaganda for his Government's policies. Of late years, in fact, we have become accustomed to say, we have two Budgets.

But this year the number has gone up and we are actually being treated to *three*. The Chancellor seemingly has very bad news and he has shifted some of the burden on to the Postmaster General. The Post Office has just announced a whole series of new charges. Telephone calls from public boxes, telegrams, postage on overseas parcels, poundage on money orders, postage on printed papers and the fees for cash-on-delivery are all to go up. These last two imposts are fresh blows to private enterprise and the more serious is the one affecting printed papers. It will be an expensive business to push for trade by sending our circulars and catalogues; postage on bills and receipts too presumably will come under this head. Great resentment is felt by business men. The Post Office has always been a profitable concern—and the Government has always had its services at a reduced rate.

But to return to the Financial Survey. And first of all a *caveat*. The *Daily Mail*, in a column entitled "It's Always Wrong," seeks to console its readers by pointing out that all the major predictions made in the Surveys of 1947, 1948, 1949 and 1950 were afterwards falsified. In 1947, the Survey was wrong about the American Loan; in 1948, it predicted mass unemployment; in 1949, it opined 'there is likely to be no rapid change' when in fact, the situation changed so rapidly that devaluation ensued in six months; and in 1950, it prophesied that American aid would last another two years—and added 'a further decrease in the Armed Forces is planned'! (So much for past numbers of this Old Moore's Almanack, as this same newspaper amusingly styles it.)

But the most spectacular miscalculation on the part of the Chancellor is in the matter of the Budget surplus. To anticipate a deficit of £7 millions and then finish the year with a surplus of £247 millions must be unique in the annals of accounting. Some reparation in all honesty is due to the tax-payer. But he will not get it. For this news is set against such a background as to stifle all hope in his breast. Briefly it appears the position is this. In 1951 we will have £350 millions *more* of goods and services; but rearmament will absorb £400 millions. And even that sum is illusory since prices are rising all the time.'

How is this gap in the estimates to be closed? Up and down the country, at political meetings, there is always someone to howl that every new charge can be met out of 'dividends'. Indeed even a Minister —I think it was Mr. Webb—committed himself the other day to the partisan and unjust statement that he did not think that dividends should be allowed to rise to off-set the fall in the value of money. Suppose a Conservative Minister perpetrated such an outrage in the matter of wages. . . . .

This persecution of dividend-holders is out of date and unfair. What these blinded people will not recognize is that of the dividend-holders many older people, many who have retired, have already suffered a tremendous crash in their standard of living—and indeed are at their wits' end as to how to manage to hold on in future. An ugly aspect of this persecution is that never before were the persecutors, the workers, in such an assured and prosperous condition. I look back to the days when the miners, for instance, were next door to starving. And never shall I forget the days of the great Depression. In fact, in 1931, I lost my seat in Parliament because I would not follow the stampede into Ramsay Macdonald's National Government and agree to a cut in the dole. But the workers' battle has been won. Many miners now are earning over £20 a week and I know of miners' homes—in which there is more than one male bread-winner —where £70 a week is coming in. Even the workers on the Festival Gardens have been getting £10 a week. So the time has come for the workers to let by-gones be by-gones and not, when the 'capitalist' is all but in his coffin, look for the nails with which to fasten it down. (What are they doing with the savings they can make now? Why don't they see the advantage of acquiring some dividends themselves?)

That the capitalist is all but in his coffin is suggested by the afore-mentioned Survey. Is he to be bled even now to close the gap in the rearmament thinks not. 'There can be no question this time,' it says, 'of squeezing a bit

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

more out of profits, for profits have to all intents and purposes received their quietus in the Survey. Table 26 contains the bald information that, after provision for stock appreciation, the total amount likely to be left for undistributed profits in 1951 will be £80 millions as against £299 millions in 1950 and £470 millions in 1949. This impressive, not to say staggering, news has been marked on the Stock Exchange. . .' I wonder it did not close the Stock Exchange.

Psychologists give us a lot of information we could do without. It would be an advantage if they could throw any light in the time-lag there is between the march of events and our catching up with an interpretation of them. This thought is prompted by a comparison between the mental atmosphere in industry here and that prevailing in the United States. Here many trade unionists are living in the past. It is not only in the matter of dividends but in their general approach to their place in society. *Time and Tide* this week tells an astonishing story. The Manager of a factory ordered some paint which he wanted and had it delivered at the works intending to take it home with him. But when he went to collect his paint, his storeman refused to let him take it. It must be sent along to him. 'The theory was that as an Executive he had no Union ticket . . . and in taking it himself he was depriving another man of his job.'

This attitude has its pathos. But if it is at all general in industry, think of the waste of time and energy. Think of the men, for instance, whose time and energy could be released to get on with the job of housing. (I know of a working-class woman who has been living, with all her possessions, in the middle of her room for weeks, because the men will not come to mend the roof and stop the rain running down the walls.)

Restrictions on dividends, restrictions on labour, these are sign-posts that lead nowhere. In the United States, it seems, the mental climate is quite otherwise. There 'the sky's the limit.' In other words, the workers believe there need be no limits to what they are paid so long as there are no limits to what they *earn*. High wages need not bring inflation, so long as higher output takes care of the situation. To quote the *Spectator* again:

> "In the United States, which is facing much the same rearmament problems as this country, the director of defence mobilisation, Mr. Wilson, has forecast that two years from now not only will reasonable safety against aggression be secured but civilian shortages will be easing and the relaxation of controls will be possible. It is this confident attitude towards the problems of production which British labour needs most of all."

To digress: how fortunate are the people of the United States to anticipate that in only two years' time they will be nearing the end of civilian shortages! Here the shortages—and the prices—get worse all the time and especially in prospect. Shopping in fact has become a matter of geometrical progression. When you go to buy anything, you pay twice as much as you can afford because you are assured that when the next lot come in prices will have doubled.

Thinking of Trade Unions and their restrictions, it is worth putting on record the action of the teachers in Durham in the matter of the 'closed shop.' They have done a great public service. In the past intellectuals, in times of transition and revolution, have often juggled with ideas rather than tried to sort out and arrive at principles. But in Durham the behaviour of the teachers is a reversal of the proverbial *trahison de clercs*. They have won a victory for principle over the Durham County Council. The Council had passed a resolution 'under which each employee was to be called upon to say whether he was a member of a Union or not.' And this resolution was to apply not only to manual workers but to doctors, teachers, nurses and so on. Although many of the teachers were in fact members of a union, they decided to repudiate this condition—and so did their colleagues in the Health Service. This was the first round. Then the Council thought again, and not very judiciously. In spite of the attitude of the teachers, when it came to making an appointment for a headmaster, they asked each of the six applicants for the post whether he was a member of a union. Five of them, true to the stand that they were taking up, declined to answer. But the sixth said that he was—and was given the job. (It must be a very dreary promotion). At once the teachers set up an Action Committee and this Committee instructed a number of members of the Teachers' Union to hand in their strike notices to become operative in a month's time. This, by the way, was extremely intelligent tactics. It compelled the Minister of Education to take note of the position and gave him time in which to make up his mind what he should do. He has the power to reverse the decision of a Local Authority—and this he has now done.

The Durham teachers, by their courageous action, have brought the question of compulsory membership of a Trade Union right out into the open. It is to be hoped—can one say expected—that other Trade Unions will follow their example. For in the past men who have conscientiously objected to joining a union, Plymouth Brethren for example, have been turned out of their jobs by their fellow-workers. Most disturbing of all is the fact that the Minister of Labour has ruled that a man dismissed from his job for non-union membership is not entitled to unemployment benefit. Probably the unions would lose nothing by making their membership voluntary. The time has gone when *employers* could make non-membership of a union a condition of employment. Indeed public opinion would emphatically endorse a ruling that for the worker to decide for himself whether membership or not of a union was entirely a matter

The only other item of news on the Home Front

which is engaging our attention at the moment is the business of the Census. This week-end we have all been filling up forms. It is a most interesting form. It seeks to know one's age and state and when one ceased to be educated (!) It also enquires about the number of rooms, the plumbing and the sink and the stove, and whether one has the exclusive use thereof. But the most eloquent column is conspicuous by its absence. There is no room in it for the entry of any child born out of marriage. Is not this a good thing? It does not mean that there is no place in society for the illegitimate child. But evidently it does mean that that child can keep its secret.

And all that remains to be said of the Census is this. When the next one comes round, may we all have the exclusive use of our own plumbing and our own sink!

Westminster, London, 9th April, 1951.

———:O:———

A RARE IMAGE OF AVALOKITESWARA

By JATINDRA MOHAN DATTA, M.SC., B.L.

The late Rai Bahadur Hem Chandra Basu of Monghyr was an amateur archæologist and collecter of images and inscriptions, Monghyr and its neighbourhood being rich in historical sites and ruins and objects of interest. He collected various images, inscriptions and objects of arts, but most of them were unfortunately destroyed during the Bihar earthquake of 1934. A few escaped destruction, and this is one of them. He had compiled a local history of Monghyr and its neighbourhood, and it was going to be published as the second volume of Sri Krishna Sinha Jayanti commemoration volume when he died.

The image was found near the river Kiul at Luckesarai in the district of Monghyr. It was heavily incrusted with sandal paste and cream, showing that it was once worshipped. It is of black chlorite (?). Sj. Kalyan Ganguly of the Calcutta University has cleaned it with great care. It bears an inscription at the base, which has been partially and tentatively deciphered as bearing the name of Gopala—whether Gopala II or Gopala III of the Pala dynasty it is difficult to say. The characters are in proto-Bengali of the 10th—11th century; one scholar is inclined to think that the script may be of the 7th—8th century. From iconographic consideration it appears to be of the 11th century. The image of the donor is seen at the proper left hand at the bottom; the pose of the palm with lotus mark in relief is very rare in images of Avalokiteswara. The figure of Dhyani Buddha is at the top. The chiselling as well as modelling is very fine. It has been presented to the Asutosh Museum of the Calcutta University; those eager to study it may contact the Curator, Sj. Deva Prasad Ghosh, who will be glad to help the scholars.

Inscribed image of Avalokiteswara, Lakshmisarai, Dt. Monghyr (c. 11th century A.D.)

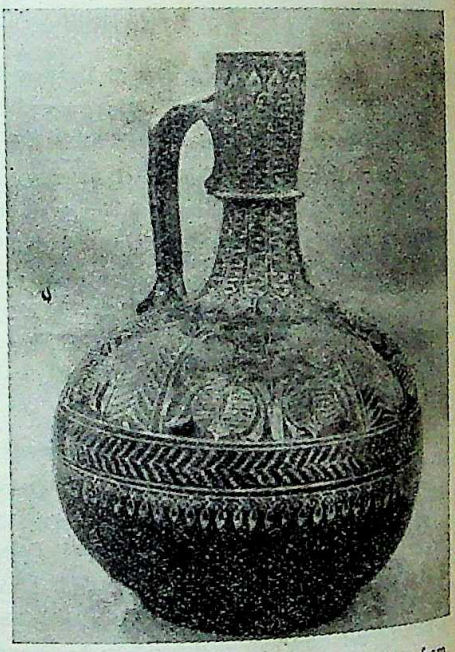
THE ART OF POTTERY IN INDIA

By TINKARI MUKERJEE,
Dy. Keeper, Government Art Gallery, Indian Museum, Calcutta

"Truest to nature, in the directness and simplicity of its forms, and then adaptation to use, and purest in art, of all its homely and sumptuary handicrafts is the pottery of India," thus describes Sir George Birdwood the art of Indian pottery. The amazing discovery at Mohenjodaro and Harappa and the variety of finds discovered consisting of pottery both decorated and plain, clay figurines and model animals and the use of glazed and vitreous pastes for the manufacture of small ornaments and animal figures testifies to the high proficiency attained in this craft even in those early days of human civilization.



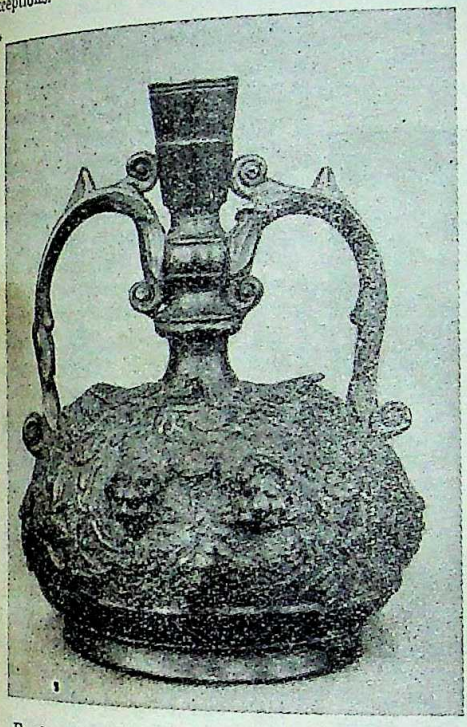
Earthen Martaban, painted and lacquered from Sasseram
Courtesy : Indian Museum

In ancient sculptures scattered all over India and in the Buddhist cave paintings we find pots of various shapes depicted which are identical with the forms of pots produced everywhere in India, even today. "*Kalasa* or water jar, *kapala* or cooking vessels, *patra* or platters, *saraka* or goglets and *patrika* or cups, were the earliest forms of earthen utensils made in the country."

The proprietorship of Indian pottery may be attributed to three sources—(*a*) Pottery produced by aboriginal tribes, (*b*) Pottery produced by Hindus, (*c*) Pottery produced by Muhammedans. The pottery being brittle and its cost being cheaper in comparison with the pots of other materials in daily usage, an impetus seems to have been given to the production of cheap potteries used by us daily. Among the Hindus however this impetus has been accelerated in view of the fact that potteries are to be thrown away on some ceremonial occasions and in view of the prevalent idea also that potteries become polluted and cannot therefore be cleaned like metal pots.

The Indian potters work on their old-fashioned wheels which have hardly undergone any change through centuries. The wheel is set in motion and the potter sitting on the ground near the wheel turns out

Earthen Surabi with nice ornamentations from Azamgarh
Courtesy : Indian Museum



pots of various sizes and shapes and of equal thickness by the dexterous manipulation of his nimble fingers. The rapidity and accuracy by which potteries are turned out have become to the potters a second nature developed through generations from father to son working on the same process and manipulation.

The potter has an assigned place in Hindu community and it has been inherited from father to son. Potters whether Hindus or Muhammedans may be divided into two classes: (1) *Kumbhakars* or the village potters confining their activities to the production of household or agricultural articles and (2) *Kuzagars* or artistic potters turning out artistic or

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

glazed wares. It often happens that the Kuzagars do not make their own pottery but purchase semi-dried vessels from the Kumbhakars on which they work. Thus the Kuzagars are in a sense dependent on the Kumbhakars who seem to be the backbone of this craft. Most of the Kuzagars are Muhammedans with exceptions.

Earthen Surabi with raised ornamentations from Aligarh

The quality of pottery mainly depends on three factors—shape, decoration and colour scheme. With the Indian potters shape is of the utmost consideration and it is never made subservient to colour or decoration. There is no perceptible effort to conceal the beauty of form, the perfect symmetry of its component parts, by decorations. This characteristic led Sir George Watt to remark:

"If any ornamentation is applied it must be skilfully subordinated to the form to which it is superadded, so as not in any way to divert attention from it. Nothing can be in worse taste, nor in an aesthetic sense more wasteful, than to hide a lovely form under an excess of foreign ornamentation. In the best Indian pottery, we always find the reverent subjugation of colour and ornamentation to form and it is in attaining this result that the Indian potter has shown the true artistic feeling and skill of all Indian workmasters in his handicraft."

The shape is different in different types of pottery and has behind it a history of development through generations after generations of potters working after

this craft and giving shapes to types of potteries both from utilitarian and artistic points of view till the present forms we find today have evolved.

It is difficult to give a clear-cut classification of the various types of potteries found all over India. In consideration of the different factors the following classifications may be made: (1) glazed, (2) unglazed

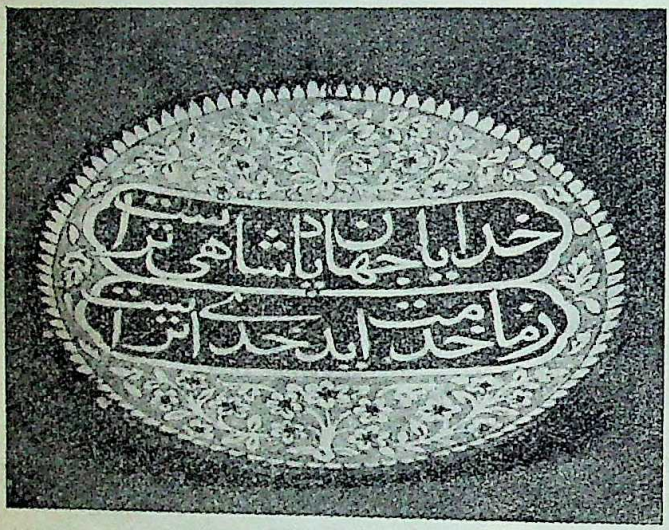
Earthen vase—Ajanta pattern, from Bombay
Courtesy : Indian Museum

or terra cotta, (3) unburnt (specially in connection with some type idols), (4) painted or stained and, (5) painted or stained but unvarnished.

The following remarks of Sir George Watt on the art of pottery seem interesting:

"Over large tracts of India the art of glazing is quite unknown, though highly ornamented pottery is nevertheless produced. Of painted pottery there may be said to be two kinds—painted or stained before firing, and painted, lacquered or stained after firing. The materials and methods employed for this purpose are extremely local and such as to remove any doubt as to their being indigenous."

The art of glazing pottery seems to have originated from the art of glazing tiles for covering walls and roofs and pavements, and the ancients were conversant with this art for a very long time. Many are of opinion that in India, specially in Sind, the art was introduced by Chenghiz Khan when he after his conquest of China in 1212 A.D. brought back with him a Chinese wife and at her instance this art was carried to India. It is held that



to Persia and Constantinople

"The old glazed tiles to be seen in India are always from Muhammedan buildings, and they vary in style with the period to which the buildings on which they are found belong; from the plain turquoise blue tiles of the earlier Pathan period, A.D. 1193-1254, to the elaborately designed and many-coloured tiles of the latter part of the Great Mughal period, A.D. 1556-1750. Whenever also the Mahommedans extended their dominion they would appear to have developed a local variety in these tiles."

By some, however, this view has been refuted on the discovery of some old Gaur tiles having a "marked Hindu character distinct from the blue and diapered tiles which are distinctive of Mahommedan manufacture elsewhere in India, before the floral designs of the Mughal period came into vogue. It is quite possible therefore that enamelled pottery was made in India long anterior to the age of Chenghiz Khan."

Earthen plate from Multan

Courtesy : Indian Museum

Unglazed or terra cotta potteries are made all over India, each province having developed a peculiar shape and type of ornamentation in course of generations of practice. At Aligarh, a type of unglazed earthen vases (always black) is produced with raised ornamentations of flowers and foliage on the surface. A very thin type of pottery known as *Kagazi* is produced in Gujranwala, Bhawalpur, Alwar and other places. These potteries are so thin and consequently brittle that it is with difficulty that they can be taken to a distance and for their thinness they have justly acquired the term *kagazi* or paper-like. Black potteries of Sewan, Khulua, Azamgarh, Aligarh and Ratnagiri have become known as a type by themselves and have acquired unique reputation.

The black colour is produced by the confinement of the smoke during firing and by the application of some materials in the kiln for generating dense smoke. In the finer works of Sewan and Azamgarh the black colour is obtained by a different method. To prevent direct contact with fire, the articles to be turned black are fired within a close jar with damped straw, cow-dung or oil cakes, to generate dense black smoke which comes in contact with the articles to be turned black.

At Azamgarh a peculiar type of highly glazed black potteries are available, worked out in silvery white designs on the surface with the effect of damascened work. After the potteries are baked designs are etched on the surface, and then an amalgam of mercury and tin is rubbed on the surface of the designs thus etched. On the completion of the process silvery white designs appear on the highly polished background. "In the glazing and colouring two preparations are of essential importance, viz, *kanch* literally glass and *sikka* or oxides of lead. In the Punjab, the two kinds of *kanch* used are distinguished as *Angrezi kanch* (English glaze) and *desi-kanch* (country glaze)."

Some of the important centres of painted potteries are Peshawar, Hoshiarpur, Gujranwala, Rawalpindi, Lucknow, Sasseram and Madura. By reason of this art being intimately connected with the productions of idols and other sacred objects and with the frescoing of the walls of temples and houses it is considered utterly unconnected with the kindred Muhammedan art of glazing pottery. On religious and ceremonial occasions of the Hindus throughout India various types of earthen pots are painted and decorated and it is easy to infer that the art of painting potteries might have a religious background having its origination on a religious necessity. The ornamental designs desired to be executed on potteries are either painted on off-hand or a pattern is done on a paper the outlines of which are prickled with pins so that pin holes appear on the outlines of the pattern. The pattern is then placed on the pottery and dusted with the powdered colour along the pricklings. The pattern on the paper is thus transferred on the pottery in the shape of dotted outlines which are afterwards joined and painted according to a pre-conceived colour scheme. The process resembles the process of 'pouncing' practised in painting. The main advantage of the process is to make available a number of potteries of similar designs and colours within a very short period with the minimum of labour.

The important centres of glazed potteries in India

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

are Peshawar, Lahore, Jallandhar, Delhi, Jaipur, Ajmer, Bikanir, Multan, Halla, Bombay, Lucknow, Allahabad, Bulandshahr, Rampur, and many other places. Each of these localities has developed a special type of design and colour scheme which are the discriminative features between the products of the various localities. For the sake of brevity descriptions of potteries turned out in some of the important centres are given below:

In Delhi and Jaipur a type of pottery is produced. It is not made of clay but of ground felspar (ground harbura) mixed with gum or starch. It cannot in consequence be formed on the potter's wheel but has to be moulded or wielded by hand. The art appears to have originated in Delhi. Regarding the Jaipur pottery it has been remarked:

"The articles are made in moulds and glazed with felspar and starch. The colours chiefly employed are blue from oxide of cobalt, and green from oxide of copper. Some of the pottery are semi-translucent, and in addition to blue and green a few other colours have been sparingly employed, specially a canary yellow, a dark blue and brown for vases of one colour. Most of the best examples are hand-painted with conventional floral or arabesque patterns, and sometimes with figures of animals."

Unglazed potteries are also produced at Jaipur some of the interesting types of which are *huqqas*, water vessels, plates and other utensils of black and red and highly glazed.

The potteries of Peshawar are highly polished and the most common form is green and pink on a milky white background with occasional patches of assorted colour. It is also not uncommon to meet the shades of blue and green. Many interesting articles such as tea cup and dish, flower vase, scented stick burner, etc., are produced.

Multan like Halla was famous for the production of glazed tiles and had a large trade in this type of pottery long anterior to its production of vases, lamps and other such ornamental wares. The special Persian characteristics found in Multan wares are due to the close proximity to Persia and the intimate relation that existed for long, between these two countries.

A very interesting phase has been introduced in Bombay potteries by following the ancient Buddhist designs and colour schemes of the fresco paintings depicted on the walls of the cave temples of Ajanta. Large vases and plates, highly polished and glazed, with good worked out in these designs are now available.

In Sind, potteries are available in two forms—(*a*) tiles, and (*b*) tiles, with floral ornamentations usually executed within panels or medallions, the floral designs with the local panel field. The peculiarity of the Sind pottery consists in its painted pattern being slightly raised above the field level by means of painting the pattern first in a white slip and this characteristic process demarcates it from the pottery works of Multan.

The peculiarity of Rampur potteries consisted in painting them in deep green blue colour without any pattern worked out on the potteries which in course of time developed in ornating them in one and sometimes in two shades of green blue with a pattern distinctly moulded above the surface.

With the Hindus idols of clay command a great market as they are in constant demand on every Puja occasion. Earthen puja utensils like painted plates, lamp stands, etc., are also in great demand by the Hindus and in consequence this demand has given an impetus to this particular branch of potter's art. Simultaneous with the art of idol making an art has developed in the line of making clay figures in diminutive form of persons following various professions, painted and dressed. Besides human figures, various types of animals and fruits are produced in a very naturalistic way so as to elicit admiration from all. The centres noted for this type of work are Krishnagar, Lucknow and Poona. Besides these diminutive figures toys in clay are also produced and most of them have an easy pose and a very naturalistic imposition to appeal to the children. In fact, this branch of the potter's art has an educative value. Children have a natural inclination for toys and if the toys are made under proper artistic guidance they go a long way to the formation of the artistic background of children and thereby may serve a useful purpose of creating the artistic background of the nation.

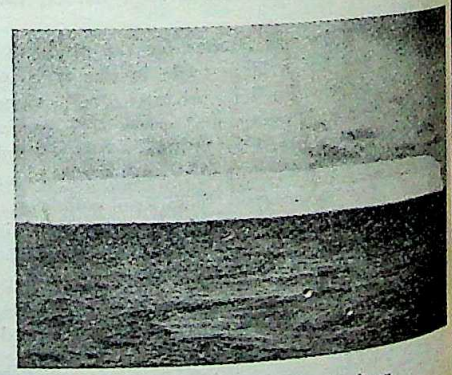
SOME ACCOUNTS OF ANTARCTICA

The Great South Land

By PARESH CHANDRA DAS GUPTA, M.A.,
Calcutta University

Antarctica, also known by such significant names as "The Third World" and "The South Land," is a big and frozen continent below 60° (S) latitude. For hundreds of years this Polar region has been inspiring dreams in the minds of the romance-loving people of Europe as well as of Asia. The existence of such a snowy land in the extreme south of the globe was first predicted by the ancient Greek philosophers, as they speculated its situation on the basis of astronomical observations. Thus, the name Antarctic is composed of the two constituent words, *viz.*, *Anti* (opposite) and *Arkhatos* (the Great Bear or the Constellation Ursa Major).



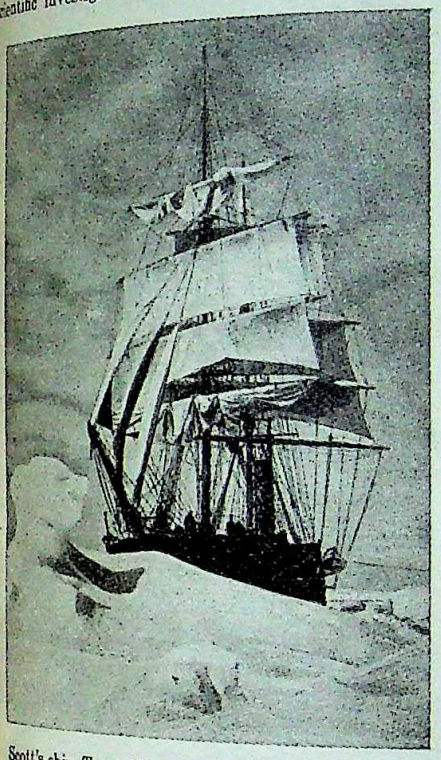
Voyage of Ross (1842) in the Antarctic. His ships the *Erebus* and the *Terror* sailing through the chain of ice-bergs

Curiously, like the famous discovery of America by the celebrated mariner Christopher Columbus in the last decade of the fifteenth century, the discovery of the great South Land was also effected due to the constant eagerness of the occidental nations to find out across the seas new paths to India, the country of riches and wisdom. Actually this happened in 1487, when Captain Bartholomew Diaz rounded Africa at the instance of Henry the Navigator, the king of Portugal. The European sailors in the succeeding years got an impression of the cold regions of the South when Magellan rounded South America in 1520, and Schouten and Lemaire passed through the coastal waters of Tierra del Fuego in 1615. When their accounts were related in Europe, they were not heard simply as "Sailor's tales," and thus a number of people began to dream over the actual existence of a South Land, which would provide them with plenty of riches. Really, that was the day when the Europeans began seriously to think how to rest their economy over the plentifulness of Asia, America and Oceania. Naturally, the South Land of Utopian wealth was also in their golden list.

In the last part of the eighteenth century, France and England were partly determined to discover the snowy Utopia. Thus, in 1771, the French Government sent Joseph Kerguelen to find out the South Land and the result was the discovery of the Isle of Desolation (later known as the Kerguelen island). It lies in the Indian Ocean in latitude 49 degree and 30 S. and longitude 69 degree 40 E.

Perhaps the real glory of discovering Antarctica should rightly be given to James Cook, who for the first time crossed the Antarctic Circle on January 17, 1773, with his two vessels *Resolution* and *Adventure*. After Cook's epoch-making discovery, many important expeditions were sent to the South Land. About all the prominent States of Europe took parts in these projects. Thus, Czar Alexander I of Russia sent two ships *Vostok* and *Mirny* under the able commands of Bellingshausen and Lazareff. The exploration resulted in the discovery of two islands (in 1819 and in 1821) in the Antarctican zone, which were named as Peter Island and Alexander Island. This Russian expedition

An Antarctic tabular ice-berg



decisively proved for the first time that the Antarctican continent is actually a great land-mass (more than 5,000,000 sq. miles) covered by a thick "ice-cap."

In the nineteenth century other important expeditions were fitted out to obtain more information about the Third World (Antarctica). Among the great mariners and adventurers, who

CC-0. Panini Kanya Maha Vidyalaya Collection. Digitized by eGangotri

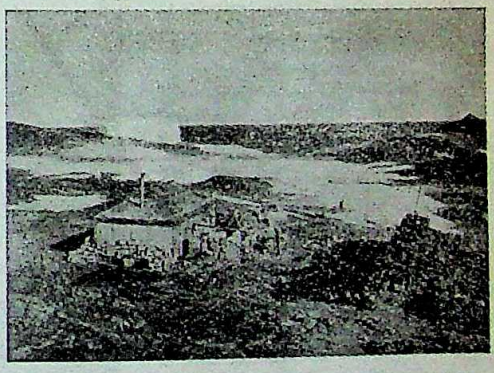
conspicuous parts in them, particular mention may be made of the names of Weddel, Biscoe, Balleny, Dumont d'Urville, Wilkes, Ross, Larsen, Gerlache, Amundsen and others. These great explorers risked many times their lives for the sake of discovery, exploration and scientific investigation.



Scott's ship *Terra Nova* ice-bound in the Antarctic

In the present century the untiring efforts of the great Polar heroes like Amundsen, Scott, Shackleton, Wilson, Drygalski, Nordenskjold, Bruce, Charcot, Mawson, Byrd and others have added to our knowledge about the Polar regions of the South. The point of the South Pole was first reached by Roald Amundsen[1] on December 14, 1911. After a month's time Scott reached the spot on January 16, 1912.[2] Later on, Admiral Byrd accomplished his chivalrous visit to the South Pole by aeroplane, on November 28, 1929. His comparative quick visit was a queer contrast to the most toilsome and extremely risky journeys of the former explorers. In this connection Admiral Byrd has himself remarked :

> "It was difficult to believe that in recent history the most resolute men who had ever attempted to carry a remote objective, Scott and Shackleton, had over this same plateau a few miles each day, with hunger—fierce, unrelenting hunger—stalking them every step of the way."—*Little America.*

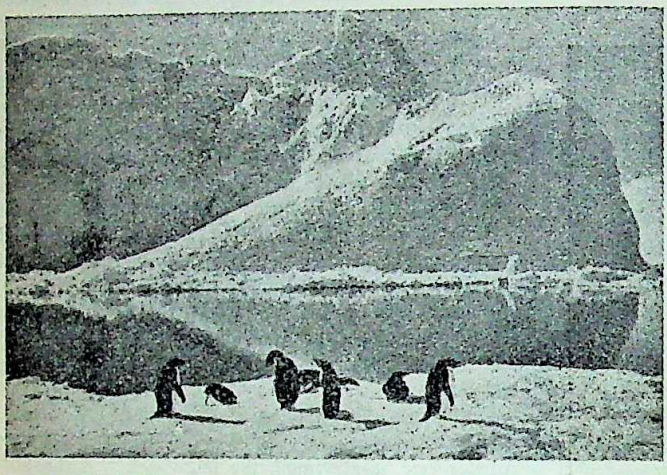
At present, the European countries have established colonies and whaling-stations upon the coasts of Antarctica, which are, day by day, growing into great political importance.[3] By studying the modern trends of international affairs it may be very easily understood that the Antarctican shores are gradually becoming important naval bases. Very recently, Argentina (in Latin America) rivalled with England to take possession of the Falkland Isles (off the coast of Patagonia) and the Falkland Dependency of the South Land. Apart from this, the European nations acquire annually large amounts of money, exceeding £3,000.000 sterling by hunting different species of whales (*viz.*. the rorqual, the humpback and the blue-whales).

Now, the coastal areas of the great southernmost continent may have some importance regarding the past movements of the human races partly civilised or uncivilised.

The hut built by Shackleton's party in 1907. Scott's party took shelter in it in 1911

As A. Vayson De Pradenne points out:

> "The presence of an Austroloid type in the extreme south of South-America seems to be attested by the work of various anthropologists (S. and G. Sergi, Lebzelter, etc.), and affinities of language and cultural connections have also been adduced."[4]



In fact, many of the pre-historic antiquities of Polynesia show some queer resemblances with similar vestiges of the Mayan as well as the Inca civilisation

1. He is, also, famous for his North Polar expeditions.
2. Unfortunately, the heroic explorer and his four brave followers Wilson, Bowers, Oates and Evans died on their way back, due to extreme cold and shortage of food. Afterwards, a search-party discovered the dead bodies of Scott, Wilson and Evans. The last written words of Scott, as found in one of his note-books, tell how his mind remained unconquered even before his death. They are as follows : "Had we lived, I should have had a tale to tell of the hardihood, endurance, and courage of my companions which would have stirred the heart of every Englishman. These rough notes and our dead bodies must tell the tale, but surely, surely, a great rich country like ours will see that those who are dependent on us are properly provided for."
3. Among the Western powers, England, France and Norway have the greatest share of lands in the South Land.
4. *Pre-History*, tr. by E. F. Row, pp. 222-23.

of the Americas. Truly, a number of pyramids and stone and bronze statues of early Polynesia[5] display a great likeness with the ancient pyramids and statues of the two Americas. The mysterious images of San Augastin in Colombia (in S. America) bear such a profound

A typical frozen area of the South Land. The penguins are seen on the ice

resemblance with the armless images of the Easter Island (27 deg. S.—108 deg. 30m. W.) that one can hardly check one's temptation to connect them in some way or other.

But, here a question arises, how the pre-historic Oceanians reached the soils of South America. Of course, there are possibilities that the Polynesians took the ocean-route in order to reach the more eastern regions of the New World. Here,, a doubt arises. This pre-historic migration might not have taken place completely by ocean-route. The brilliant suggestion of Mendez-Correa is very significant on this point. According to him the pre-historic inhabitants of the islands of the southern ocean, possibly reached the lowest fringe of South America by way of the shores of the Antarctic. In support of his contention it has been pointed out by Pradenne that the Antarctican climate in those dim pre-historic epochs was "undoubtedly less severe than it is today."[6] This fascinating view of Mendez-Correa may not seem too incredible as actually the Antarctican shores might have possessed warm regions partly fit for human habitation several thousands of years ago, as the snowy continent still possesses at least one great active volcano, called Mount Erebus in the Victoria Land.[7] Apart from this the existenre of Albatrosses, Penguins, Seals and Walruses on the coastal regions of Antarctica may indirectly hint that human habitation in those regions was, possibly, not totally imposible in pre-historic days. Perhaps, it may be argued without indulging too much in imagination that a number of the early Polynesians might have reached the Polar regions of the South, in the course of their courageous navigation. This may be reasonably supported by the fact that the pre-historic Austric settlers of East India and Oceania often used to traverse hundreds of miles in the blue ocean. As for example, the Malays who were,

An ice-berg and the penguins

possibly, a branch of the civilised Austrics, once spread their culture in the islands and peninsulas lying in the vast region between Madagascar in the West and New Zealand in the East.[8] So, it is not at all impossible that a number of them reached even the Isle of Desolation[9] or the shores of Antarctica.

The view of Mendez-Correa seems to be at least partly supported by the strange scripts of the Easter Island. Thus, in the famous essay of Tomeniko,[10] we find some representations of penguin-like creatures.

Midnight in the Antarctic

This seems to be very interesting, as it is well-known that the penguins are not found beyond the limits of the Antarctican continent. Really, it is a thing to ask ourselves whether the pre-historic or the ancient Polynesians had ever any real knowledge of the Polar regions of the south or not. Here, of course, we cannot at any rate ignore the bare fact that the Polynesians who spread down to Tasmania and lower New Zealand might very naturally reach the Polar Circle often in accidental ways, if not out of deliberate intention.[11] Curiously enough, there are definite traditions in the islands of New Zealand, which clearly point to the cold Antarctican seas. Thus, in a famous historical tradition of the Maoris there is a wonderful account of the South Polar regions. It narrates how one bold mariner of the New Zealand isles, named Ui-te-rangiora built a large canoe (*pahi*) and sailed to the frozen waters of the South, in the middle of the 7th century A.D. In later days, the deeds of this great hero were fervently imitated by another worthy Polynesian navigator named Aru-tanga-Nuku. Thus, the story goes:

> "The desire of the 'ariki' Te Aru-tanga-Nuku and all his people on the completion of the canoe was to behold all the wonderful things seen by the vessel *Te Ivi-O-Atea*[12] in former times. These were those wonderful things: the rocks that grow out of the sea in the space beyond Rapa (about 1,100 miles south-east of Rorotonga); the monstrous seas; the female that dwells in those mountainous waves, tresses wave about in the waters and on the surface of the sea; and the frozen sea of 'pia,'[13] with the deceitful animal of that sea who dives to great depths—a foggy, misty, and dark place not shone on by the sun. Other things are like rocks, whose

Smoke issuing out of the crater of Mount Erebus

> summits pierce the skies; they are completely bare and without any vegetation on them."[14]

As J. C. Andersen points out:

> "This is a graphic description of the impression made in the Antarctic on men accustomed only to the tropics. The rocks growing from the sea, and the objects piercing the skies, bare of vegetation, are ice-bergs; the female whose hair waves about is conjectural, but the hair is the long kelp of those seas; the decitful animal is probably the sea-lion or sea-elephant; 'pia' is arrowroot, which when scraped is exactly like snow, and the snowy wastes were compared with the white substance most familiar to them. The Antarctic ice is to be found south of Rapa in the summer, so there are two instances, about three hundred years apart, of Polynesian voyages sailing into those high latitudes for the sheer love for adventure, and from a desire to see the wonders of the deep."[15]

So we may naturally understand that the real

10. He was a native inhabitant of the Easter Island. Recently he endeavoured to explain some of the peculiar pictographic symbols of the Easter hieroglyphics.

11. In this connection it is very interesting to note that the European navigators of the 16th and the 17th centuries, "frequently met with contrary winds and were driven southward into snowy skies and ice-encumbered seas" while sailing round the Australian continent. See, *Encyclopaedia Brittanica*, Vol. 2, p. 14.

12. The name of the famous boat of Ui-te-rangiora.

13. Arrowroot.

14. Johannes C. Andersen: *Myths and Legends of the Polynesians*, p. 39. London, 1928.

15. *Ibid*, pp. 39-40.

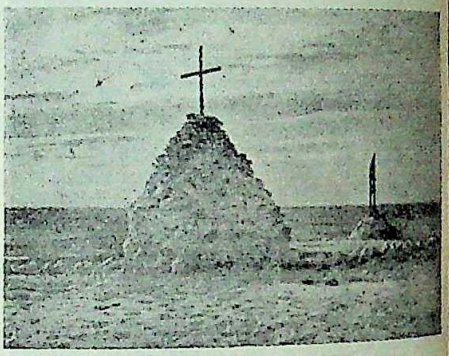
Digitized by Arya Samaj Foundation Chennai and eGangotri

credit of first discovering Antarctica should be decisively given to the early Polynesians, as the authenticity of their oral traditions and accounts about the frozen

Captain Scott



continent cannot possibly be doubted. As Andersen rightly remarks:

> "When, however, traditions of one island are corroborated by comparison with traditions of another hundreds of miles away, the two peoples having been separated for hundreds of years, their authenticity must be accepted."[16]

Hence, we may say that neither the *Resolution* nor the *Adventure* of Captain Cook first sailed in the Antarctican seas, but the voyage was done by *Te Ivi-O-Atea* of the Polynesian hero Ui-te-rangiora, so far as we know up till now. The latter (Ui-te-rangiora), perhaps, first brought the real accounts of the icy South Land to the human society in the historic age, not Kerguelen, Ross, Cook or Belinghausen.

Lastly, (to repeat again), it also seems that the Antarctican coasts might have been, sometimes, really visited, if not inhabited, by the Oceanians even in pre-historic days. It is not impossible that this archaic connection led to the development of a number of strange legends in the cycles of Polynesian Mythology. Thus, one legend tells how one woman named Hine-Nui-Te-Po, in the dim past, went to the Under-World and made herself the great goddess of night. The idea of the Lower-World,[17] where reigned the everlasting night may hint in a very subtle way to the Polar regions of the South.[18] The dominion of Hine-Nui-Te-Po, as it is narrated in the Oceanic mythology was reached by the great Polynesian heroes like Maui and Hutu.

These Polynesian legends, though mightily overgrown with great many fictitious and colourful episodes, may possess some grains of truth. The idea of the land of 'Po' (darkness) where reigns the goddess Hine-Nui-Te-Po,[19] may naturally attract our imagination to the Polar regions of the South, where darkness prevails for several months. It may be possible that the early Polynesians sometimes used to frequent the Antarctican shores from the Ross Sea to the Shetland Islands, though these might have occurred mostly in accidental

The last rest of Captain Scott

voyages. Today, the archaeologists should be conscious about these great possibilities, because if the traces of pre-historic human settlements in the Antarctican area are really discovered any time, they will surely throw a flood of light on the various complex problems of the archaic culture which once dawned over Australia, India, South Africa and the islands of the southern seas.[20]

We do not know, whether the ancient Indians had any real knowledge of the South Land. But, the Puranic

idea of *Dadhi Samudra* (the Ocean of Curd) encircling a great island-continent[21] seems to be highly suggestive regarding this point. It is not impossible that the icy regions of the South was described as the Ocean of Curd by the ancient Hindu geographers, as the early Polynesians described them as the frozen Sea of 'pia' or arrowroot.

Strangely enough, in the Kiskindhya Kanda of Valmiki's Sanskrit Ramayana, there is a peculiar account of the extreme south of the globe. In this particular portion of the epic, the *Vanara* King Sugriva commands his monkey-hosts to march to the South in search of the Maithilian princess Sita, and describes to them the mysterious regions of the South. Thus, he asks his soldiers to stop beyond the Risabha mountain:

"There stay: beyond the dark and drear,
Lies the departed spirit's sphere,
And, girt with darkness, far from bliss,
Is Yama's sad metropolis.
Beyond, your steps you may not set,
Where living things ne'er journeyed yet."[22]

Here it seems very tempting to presume that these lines give a hint to the Antarctican continent. Curiously enough, this peculiar account about the distant south beyond the confines of the earth, which is the home of departed spirits and is the city of Yama, the God of Death, has a peculiar likeness to the similar account of the Under-World as told in the Polynesian story of goddess Hine-Nui-Te-Po.[23]

Apart from this, the mysterious conceptions of Dakshina-Patala (Southern Lower Region) and blizzardous Chandraloka as contained in the Kiskindhya Kanda and the Uttara Kanda of the Bengali Ramayana of Krittivasa may indirectly hint that the ancient Hindu mariners and geographers had at least some faint knowledge of the snowy Antarctic.

Lastly, it should be always borne in mind that there are still many regions in Antarctica which are yet to be explored. Percy Sykes has rightly pointed out about the great South Land that

"There still remain more than two thousand miles of unexplored coast to be charted . . ."[24]

But, in this connection, it should not be forgotten that as the vast space of the Third World lies just at the other end of the deep sea, which extends to the south of India, the Indians have got a natural claim over at least some portions of it. If like the European countries, India establishes some marine bases on the coasts of the South Land, surely her status will be heightened in the international sphere, as her action will not only prove her vitality but also help her to be

—:O:—

AMERICAN STUDENTS LEARN BY HOSTELING

By ELIZABETH L. WADSWORTH

Hosteling first came to Roslyn, a medium-sized suburban town on Long Island, New York, on the East Coast of the United States, in 1939. In that year, social-studies teacher Robert Stanforth, himself an enthusiastic hosteler, told students about this kind of informal, low-cost travel. He told them about hostels, the special, supervised overnight stops for people who travel by bicycle, on foot, or otherwise under their own power. He told them about hostels' low rates—50 cents per night—and about the hosteling code of doing one's own work, which makes these rates possible.

A group of members of American Youth Hostels, Inc., vacationing abroad in the land on a four-day bicycle tour

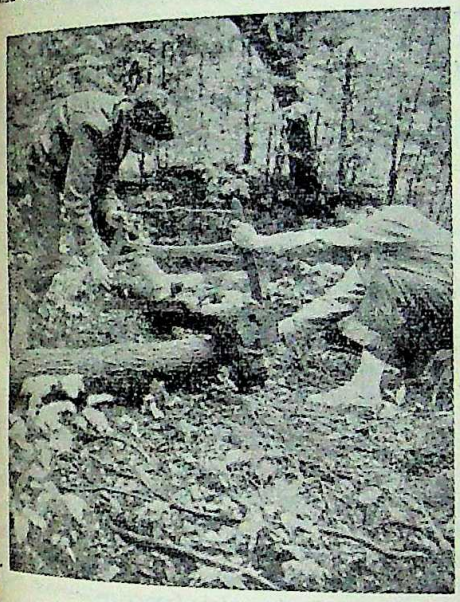
Roslyn students were enthusiastic. During the next few years, teacher Stanforth took out trips regularly on week ends and during vacation times. He was joined at times by [illegible] Walter.

Then came World War II. Bob Stanforth and Frank Walter left the school, and for the next few years hosteling at Roslyn languished for lack of faculty aid. Teachers were in favor of hosteling, but none felt they could lead trips.

So it went until the school year 1946-47. In that year, Frank Walter returned to Roslyn from service in the U. S. Army. Students remembered him from their older brothers' and sisters' days in secondary school. They remembered that he was a hosteler and a trip leader. Not long after his return, a few fourth-year students got together and decided their art teacher would be a good prospect for leading trips. They posed the question. To their delight, Mr. Walter's answer was "of course."

So, in the winter and spring of 1947, Frank Walter and groups of Roslyn students went on their bicycle hosteling trips, to Washington, D. C., the Nation's capital, and New England, the section of the United States comprising the six north-eastern States. Carrying their enthusiasm further, they formed the Roslyn High (Secondary) School Hostel Club, with Frank Walter as faculty adviser.

Interest stayed high over the summer, and when school opened in 1947, the Hostel Club's more than 30 members planned a week-end trip out on Long Island and began to think of an autumn trip to New England. The previous spring's New England journey had taken place over a long week end in May. It would serve as a pattern. There was only one drawback, members agreed it had been too short.



Now the problem arose—how to take a longer trip with school in session. It was then that the club decided

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

to ask parents, school officials, and teachers for time off. They chose the first week in November. This week, plus two week ends, would give enough time really to get acquainted with New England and its country-side.

Each student who wanted to take the trip was to ask for his or her own permission. Armed with general approval from Principal Ross, they set about the job, not knowing whether they would achieve any success at all. Several things had been happening, however, that made their job easy. Parents and teachers alike had been noticing results of the previous spring's trips.

Two hostelers are seen cutting firewood to leave behind for the next group to stay at the hostel

Roslyn's English-language teachers had found that the trips gave source material for the student's written English. As any teacher knows, students will usually learn in direct proportion to their interest in a subject. There seemed no doubt that writing about a hosteling trip was interesting!

Other teachers—and parents—had found that travel brought Roslyn's hostelers a different outlook on other people's customs and attitudes. Even in the few trips they had taken students had begun to see that "our" way is not necessarily the only way.

Parents had noticed hostelers gaining a practical sense of responsibility. Before they went hosteling, for instance, some of the group had had no experience at all with cooking. Others had approached the kitchen with, at best, a tentative air. Very few knew anything about meal planning, the price of eggs, and how to make a good meal for little money. Parents were amazed to find that after one or two trips their hostel-ing offspring were planning, budgeting, and preparing whole meals.

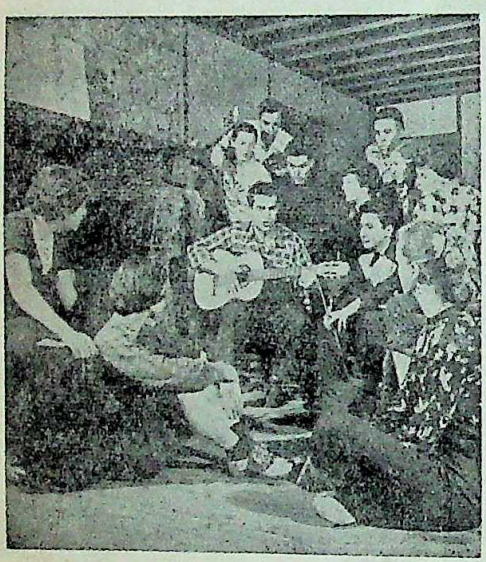
Once permissions were granted, plans for the New England trip went ahead. Planning their trips is a major business for the Hostel Club. Before any trip, Hostel Club members decide first on a day-by-day itinerary. Then, their secretary writes for reservations to the house parents who supervise hostels they will use. If the area is far away, someone looks up train schedules for the first and last parts of the journey. Someone estimates total costs for the trip. Someone finds out about checking bicycles, what equipment the

Youth hostelers in the United States must prepare their own food and plan their own trips to learn resourcefulness and co-operative living

weather may call for, what food-buying facilities will be near each hostel, and so forth.

Each student is responsible for his or her own equipment. If the trip is by bicycle, students see that their machines are in good condition. (Most trips are by bicycle, but there have been ski and hiking trips, too). In practice sessions before the trip, they learn bicycle safety, and they learn to fix flat tires, to oil and otherwise keep a bicycle at its best.

Assembling further equipment can be an education in itself. Students know they must have an American Youth Hostels Pass, which will admit them to hostels; their own eating utensils; and a sheet sleeping sack. Beyond these, it is up to the individual. The guiding principle is weight, since everything goes on the bicycle for hosteling.



In the meantime, members take up special study projects about the area in which they will travel. Someone looks up local history; someone else, points

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of interest; and so on. For weeks before each trip, meeting time is given over to these special reports. Roslyn's hostelers have learned that one gets twice as much from a trip if one knows what to look for beforehand.

Frank Walter points out that students have a serious attitude toward the times when they miss classes. For one thing, they know that they will not get permission to be out of school if their grades are not up. For another, they realize that being out of school for a few days does not mean losing the work—it means making it up on one's own time.

A group of youth hostelers singing around the fireplace in a hostel

Principal Ross comments, in this connection, that members of the Hostel Club stand uniformly high in their work. "I do not know whether hosteling attracts good students," he said, "or whether it makes good students, but hostelers almost without exception do better than average in the classroom."

Planning, however, is only beginning. Mr. Walter believes that hosteling's major values do not lie in planning, but in the trips themselves. He sums it up in a few words: simplicity, participation, democratic group living.

"When you get out hosteling, you dispense with most of today's mechanical devices. You travel on a bicycle. You sleep in a bunk. You join other people for tasks and for fun. You cannot help finding out that friends are more important than conveniences. You actually see why people talk about the beauties of nature.

"You learn to sacrifice something for other people, too. Maybe you do not like fish, but if the rest of the group does, you eat it or go hungry. At the same time, you know you can have your favourite dish when your turn to cook comes up.

"And another thing, when you are out hosteling you have to make up your mind for yourself. If it is your turn to buy the food, it is up to you to figure out how to get the most for the group's money."

He told about one of the students who depended on people around her for everything. When she got out on a hostel trip, she learned, by force of circumstances, to take the initiative. After one or two trips, teachers began to notice a change. Not only did she get on better with her classmates, but her marks showed a decided improvement.

Testimony of the students themselves bears out what their parents and teachers have found. Said one :

"You learn something on every trip, facts, and how to do things. You learn about cooperation, too, and getting along with other people. On a hosteling trip, you sit down and decide what to do. In class or at home, someone usually tells you."

But Roslyn students are not all seriousness. Their first answer to "Why do you like hosteling?" is immediate and universal: "Because it is fun." Mr. Walter knows at least two cases where students who had a choice of high schools chose Roslyn because of the Hostel Club.

During the year 1949-50, Roslyn's schoolboard gave Frank Walter a special leave of absence to study the field of outdoor education. Following this year of study he will return in the autumn of 1950 to start a new department at Roslyn high (secondary) school. This department will combine hosteling, camping, and other activities not in the field of organized sports. Its purpose will be to take all Roslyn's secondary school students the kind of values and education which hosteling has given to some of them.

Until now, hosteling at Roslyn has been open only to secondary school students. It has been restricted by the expense of travel and by the amount of time Frank Walter could spend leading trips. Under the new department, funds will be available so that all students can take part in the program. Special emphasis will be placed on intermediate school students. Whole classes will take part.

Mr. Walter reports that the plan is getting enthusiastic support from other teachers. One or two of them have taken trips with the Hostel Club, but under the new program they will all have a chance to participate.—From *NEA Journal.*

EGYPTIAN AND OTHER LONG-STAPLE COTTON POSSIBILITIES WORK IN WEST BENGAL

BY SARADA CHARAN CHAKRABARTY

EGYPTIAN COTTON ACCLIMATED IN BENGAL: REASONS FOR ADVOCATING ITS CULTIVATION

(1) Imported seeds are generally attacked with pests. This variety, now acclimatized in Bengal, has proved indigenous to the soil.

(2) Its fine, strong staple has length above 1-5/16 inches and can spin 80's warp. It has been acclaimed by the Secretary, Bengal Millowners Association as "an unprecedented thing in the history of India."

(3) Its price is nearly double that of other long-staple varieties, though the yield is same and require equal care and labour in its cultivation.

(4) It can be grown mixed with some food-crop.

(5) Though last 10 years work on cotton under different Government schemes till 1947, has proved its suitability, it has failed to impress the cultivators. In the average fertile soil in Bengal, cultivators get good profit from the crops they are used to grow. Even the most successful grower abandoned its cultivation, the moment subsidies and help provided under Government schemes have been withdrawn. This is the only cotton, if introduced, will appeal to cultivators in Bengal.

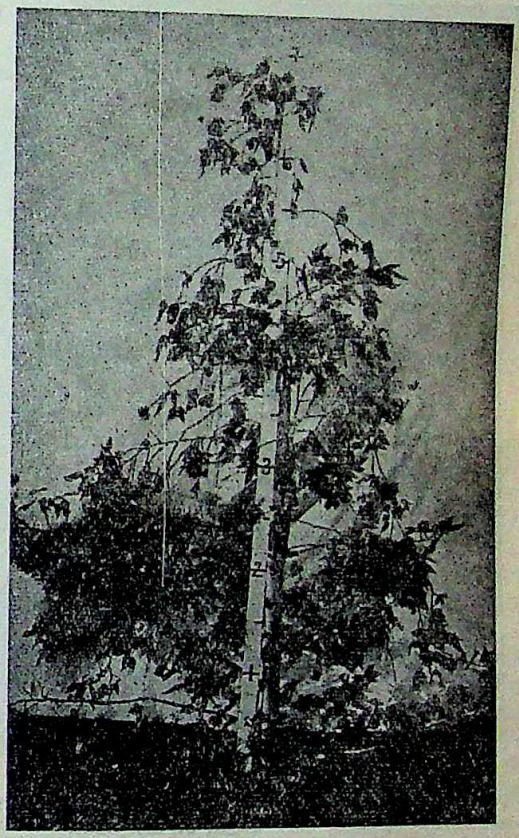
(6) Cost of its cultivation will not exceed Rs. 300|- per acre from which 3 maunds of lint or 9 maunds of seed-cotton are expected. Taking the price at Rs. 250|- per maund, Rs. 750|- may be realised from sale of the produces besides seeds and food-crop cultivated with it. So its cultivation is profitable to cultivators as well as to capitalists.

(7) Opinion on this cotton by one of the celebrated Millowners of Bengal, Sri M. L. Shah of the Mohini Mills, is given here in support of the above statement about its quality.

Mohini Mills Ltd., 22, Canning St.
Calcutta, 17th January, 1951

To Sri Sarada Charan Chakraborty,
P.O. & Vil. Fulea Bayra, Dist. Nadia.

Dear Sir,



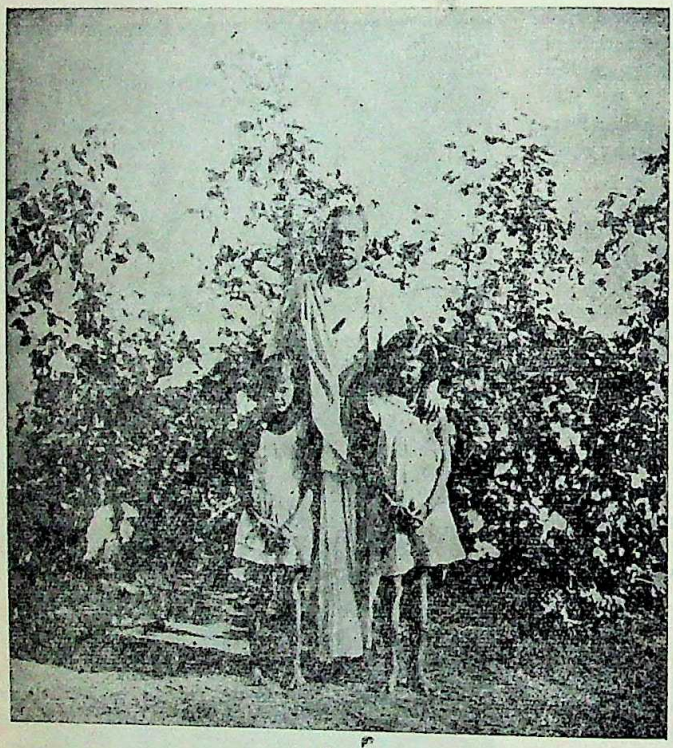
I have inspected the sample of Egyptian acclimatized cotton grown in this season 1950-51 and my opinion on the cotton is as under:—

The length of the staple is approximately 1⅜". The cotton is strong and class is good and almost free from naps. In my opinion this cotton can spin 80s. warp. If this cotton could be grown commercially, the requirement of such cotton will be more than one lac of bales. This cotton can be used by Bengal, as well as all India Mills. Under the circumstances, I recommend a scheme should be put into operation for multiplication of seeds and its preservation for large scale production.

Yours faithfully,
(Sd.) M. L. Shah

PRESENT ACTIVITIES TOWARDS COTTON CULTIVATION IN WEST BENGAL

Though Indian Mills have been suffering acutely from cotton crisis, nothing has been done in West Bengal to



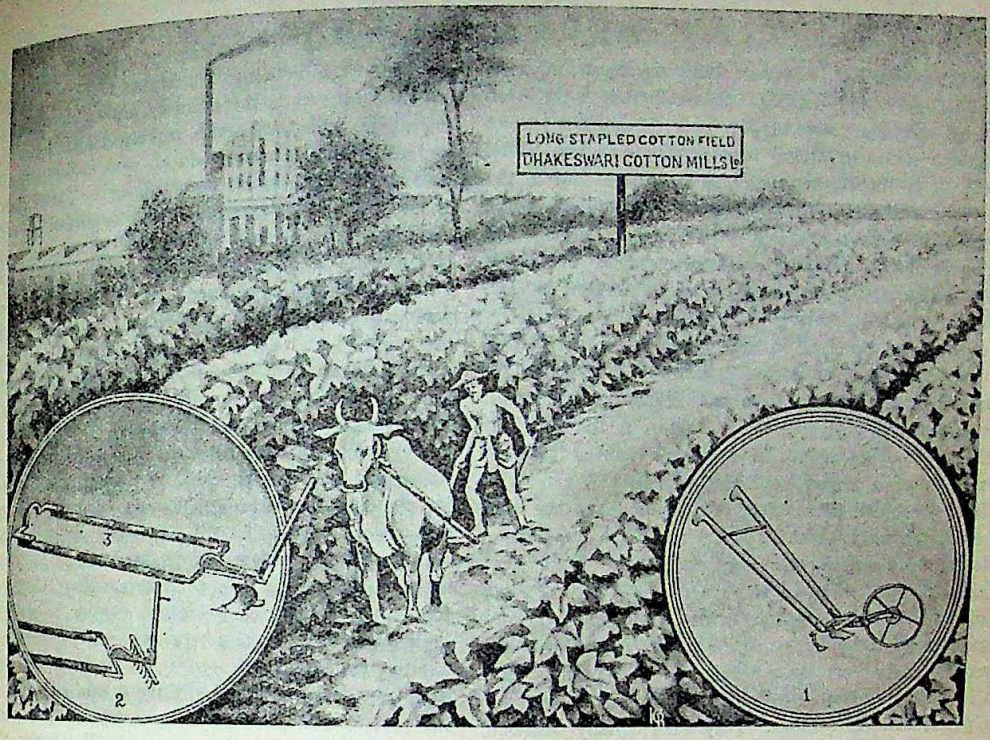
A plant of Egyptian cotton grown in the fields

revive its cultivation since partition of the Province. The Dhakeswari Cotton Mills, which had been pioneer in revival of cotton cultivation in Bengal under my supervision as its Agricultural Officer, also abandoned its cotton works after partition. So I had to come to West Bengal. The proprietor of some lands at Fulea Bayra, Nadia, on the Ganges, Dr. M. R. Chakraborty, M.B. allowed me to continue cultivation of Egyptian and other varieties there. My cultivation attracted many Congress workers and the Governor and many high officials visited and praised my cultivation. I had been, regularly, publishing results and.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

utility of its cultivation in many papers and magazines. My remarks that "in view of the cotton crisis in India, no government can afford long to sit idle in the matter" has proved true. In 1950 the Central Government contributed substantially to enable the Indian Central Cotton Committee to extend its cultivation in the Republic and to make India self-sufficient regarding its requirements of cotton. With a view to introduce its growing among cultivators, I felt the necessity of associating my work with government. As I am the only grower of Egyptian Cotton in the State, struggling hard under many difficul-

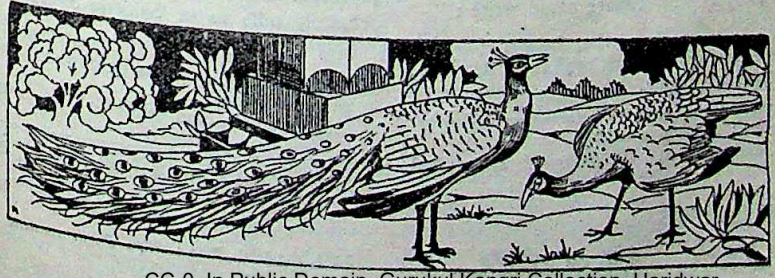


The writer of the article standing by the cotton-plants to indicate the height of the plants

ties to maintain seeds of this precious variety from extinction, I submitted, in 1949, a scheme for seed-multiplication of this cotton to I.C.C.C. through the Agricultural Department. The scheme was in February, 1950 sent to them with recommendation of the State for acceptance and financial help. As I.C.C.C. will take time to make their decision, the State on the recommendation of the Agricultural Department, made an interim grant of Rs. 1000/- for the season 1950-51, to enable me to continue its cultivation. The Hon'ble Minister, Supply Department, Sri N. B. Maiti, with some experts made a tour in Bankura in July, 1950 to ascertain possibilities of cotton cultivation in soils that are unfit for growing jute and paddy. In one place he found 90 seers of seed-cotton collected from 9 kathas of lands which comes to 15 mounds of kapas per acre, rarely collected in other cotton-growing tracts in India. He made further observations as to how cultivable areas in such tracts, now lying uncultivated, may be greatly increased by undertaking minor irrigation schemes and may be managed by the Agricultural Department. As suggested by him, an expert from the Central Government visited those areas who also corroborated his views about immense possibilities of cotton cultivation in those areas. At his instance, the Agricultural Department sent a cotton cultivation scheme for West Bengal for 3 years at a cost of nearly 4 lacs of rupees to the Indian Central Cotton Committee. A cotton sub-committee was also formed with the Hon'ble N. B. Maiti as President to advise the Agricultural Department in its cotton works. The I.C.C.C. considered about the two schemes and arranged to send its secretary to visit West Bengal and submit his report after consulting me and others interested in the schemes. The secretary visited West Bengal and submitted his recommendation to the Central Government, after his return from West Bengal on 12th December, 1950. It is mysterious that I was not given an opportunity to place my views in the deliberations that took place on the eve of the departure of the secretary from this State. As one who framed the seed-multiplication scheme and also as a member of the cotton-sub-committee, I fairly expected a representation. When I learnt that my scheme had been dropped, I submitted a similar scheme to the Agricultural Department for their consideration. According to the scheme now to work in West Bengal large tracts in Birbhum, Bankura, Midnapore shall be cultivated with long staple varieties as Perbhani and Co... from the season 1951-52. My long association with the working of different government schemes in Bengal has convinced me that to interest tillers of the soil, and cotton cultivation to have a footing in Bengal, Perbhani and Co... have to be cultivated as passable varieties to be replaced gradually by the precious Egyptian cotton with multiplication of seeds.

The Secretary, I.C.C.C. came to this State and visited several cotton fields. He visited my area at Fulia Bayra, Nadia on the 4th December, 1950 accompanied by ... and Crop Research Officer. I showed him the vigorous growth of acclimatized Egyptian

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar



Digitized by Arya Samaj Foundation Chennai and eGangotri

(1) Hand-hoes and cultivator; (2) one-bullock-driven harrow; (3) one-bullock-driven light plough

cotton grown under optimum condition and those under adverse conditions. I hope I succeeded in convincing him that the plants are indigenous to soils in Bengal. On the eve of the departure of the secretary on 12th December, 1950, I learnt that the proposal about working of the cotton scheme in West Bengal had been placed before him. Most of the members of the *ad-hoc* committee had not been called for their opinion, though some of them reside in Calcutta and can be requisitioned by phone-call even. It is mysterious that I was not given any opportunity to place my views on the seed-multiplication scheme though the Secretary, I.C.C.C. wanted to consult me on the scheme. As one interested in the scheme and also as a member of the *ad-hoc* committee, I had fairly expected a representation in the matter. It has been decided to work the scheme submitted by the Agricultural Department from the coming season 1951-52. The Secretary, I.C.C.C. after his return to Bombay requested the Agricultural Department, to give me facilities, to enable me to cultivate one acre of land with the acclimatized Egyptian cotton for one year 1951-52. I have accordingly, as advised by the Agricultural Department, submitted a seed-multiplication scheme for one year, on the basis of my previous scheme, recommended by the State to I.C.C.C. in February, 1950.

It is a great satisfaction to see that the government, though very late, has at last undertaken works to revive cotton cultivation in the State. I have every faith in the success of the work under the present erudite and able Director of Agriculture, Dr. Nundy, who, I hope, will soon realise the importance of gradually replacing the existing varieties by the more precious Egyptian acclimatized cotton as the only means to interest tillers of the soil here permanently to its cultivation.

TAGORE'S PHILOSOPHY OF ART

A Critical Study

By Prof. S. K. NANDI, M.A., D.PHIL.

"A GIGANTIC creative endeavour built up its triumph in stupendous carvings defying obstacles that were overwhelming. Such a heroic activity over the greater part of the Eastern sontinent clearly answers the question, 'What is art?' It is the response of man's creative soul to the call of the real."[1] In these poignant lines, Tagore, the master artist, defines art and determines its nature and function in the light of the observation quoted above. It is the activity of the spirit that makes art what it is. The touch of the spirit makes it lively and vivacious. Reality is recreated and reshaped in the imagination of the artist. This activity of the spirit makes all the difference that distinguishes true poetry, from naturalistic poetry. Prof. Radhakrishnan[2] rightly points out that it is the spirit in man that retouches reality in a way and makes possible the rebirth of a higher reality which we call art. The touch of the spirit brings forth the blossoms on the arid wastes of the ugly world. The leper and the hunchback, Shylock and Iago, capture our imagination. Even what we detest, what we abhor and are really afraid of, when presented in art, become illumined with a divine light and pleasant with a kindly shade. The world of true art never closed its doors to the ugly and the deformed and the ludicrous, and cared as much for them as it cared for the grand and the sublime. They were equally welcome.

This definition of art as the 'response of man's creative soul to the call of the real' negates at the outset that art is mere imitation. Plato's censure on art stands self-condemned as soon as we recognise this element of spirit's activity in art. Truth, in the sense of correspondence with the factual world, does not carry much weight with a true artist. He does not so much care for the details, as he cares for the vision of the whole. It is the copyist whose business is to record in every detail but an artist gives you the impression of the whole, which seems to be developing in your imagination. The true artist is always suggestive. The 'beginning-middle-and-end' theory of Aristotle and later upheld by Hegel, tells us clearly that the artist must have a panoramic vision of what he wants to present. A mere catalogue of what is and of what happens will not satisfy a true connoisseur of art. The true poet, Tagore believed, had such a vision and that is why he could create a 'reality' that far surpasses, in dignity and grandeur, what we call 'real' in the ordinary sense of the term. That is why Tagore could write :

"What you create is truer than what happens;
O poet ! thy imagination is more real than Ajodhya, the birth-place of Rama."*

Thus Tagore accords a higher reality to art and as such transcends the ordinary distinction of reality and unreality. It is, in a sense, supra-real. Art follows reality and ultimately it transcends all such categorisation. The notion of reality in art as conceived by Tagore, has been shared and ably expressed by Kumaraswami.[3] Reality in art means the eternal negation of the sense of want. A true work of art is real only in this sense. There we do not find a true replica, a mimic representation of nature, yet we do not experience any feeling of want. Crude details are overlooked. Yet the sense of dissatisfaction does not overwhelm us. Reading Ramayana, we do not hasten to the historian to ascertain whether there were any such characters as Rama and Ravana and whether there was actually any conflict between them. We weep over the tragic end of Sita, the consort of Rama, and do not wait for the historian, who could, after enduring and arduous researches, tell us that the Ramayana might have been a mere fiction. People never questioned the truth and reality of all such epic characters. They accepted them for these characters were not wanting in reality in a higher sense; the characters were real for them, as they did not experience any sense of want in these characters. They were self-contained. In the case of all such successful portrayal mind uncritically accepts what is given for it finds delight in such acceptance. The feeling of want is not there and that is why the question of reality consciousness does not arise at all. We do not question the probability of the appearance of ghost in Shakespeare's *Macbeth;* we relish Tagore's masterly technique in evoking the uncanny feeling in his story, 'The Hungry Stone.' We do not sit in judgment over the probability or improbability of 'Indranath' in actual life. Saratchandra's mighty pen gave it a reality, which is of a higher order. We know that Tagore's Urvasi is no being in flesh and blood, yet we believe that it is in no way more unreal than any other realistic character, taken from life. The content of art may be anything, a Urvasi or a Santhal woman, an Aurobindo or an Iago, a devil or a demi-god. It makes no difference whether we choose the one or the other. Reality in art, according to Tagore, consists in true expression, in the technique of embodying the light that never was on sea or land. This expression is the description of subjective feelings of the artist with proper psychical distance. That only makes art what it is. Tagore definitely tells us in 'Sahityer Swarup':

"Realism in art does not depend so much on its content as it depends on the technique and the mode of expression."

All such realism takes its birth in the region of the

surplus, where man's imagination has the widest latitude of freedom. Poetic imagination works with equal felicity on the lowly bar of the scoundrels and the divine course of the heavenly beings. What is needed is a successful expression of the subjective feelings and that is why Croce, the noted philosopher, so boldly asserted that 'art is form and nothing but form'."

Here we will do well to note that for Tagore, form is only the primary truth about art and not its ultimate significance. There is content to contribute largely towards the making of real art. The form grows round the content and a perfect harmony of the two brings the greatest satisfaction. That is where Tagore is eclectic. He foregoes his position as a subjectivist and uncritically accepts the middle course. Had he been true to his belief in subjective philosophy, he would have held with Croce that art is form and nothing but form and the 'world that is there' is posited for the convenience of exposition. Form and content are not perfectly blended in imagination and it is no achievement of the human mind. There is no a posteriori unification of the two. They come from within as one indivisible whole. Form and content are only a posteriori differentiation and characterisation of one indivisible entity. This conventional naming of the same thing as two different entities should be bid farewell to for all times to come.

Before we close the discussion, we will critically examine Tagore's contention that art must express the human personality. By personality, he does not mean personality in its colourful entirety, but only the higher personality in man.[5] It is essentially what man aspires to be. Man, where he is noble and grand, where he is sublime and a worshipper of reason, is a welcome guest in Tagore's world of art. And such delimitation and narrowing of the content of art, according to Tagore, makes the problem of communication easier. But we are unable to accept his views in the face of contrary empirical evidence. Milton's Satan, Valmiki's Ravana, Scott's Brian de Bois Gilbert are certainly not types of characters that may be admitted by Tagore in his realm of art. Iago, the villain in Shakespeare's *Othello* is an anachronism in Tagore's kingdom of art. We do not think that the artist should express himself in his work of art. He is not to choose between his passions and compassions. Sometimes the one and sometimes the other may come in and reign for a while without doing least violence to the autonomy of art as art. We should not religiously avoid the one and perpetually enthrone the other. That will not lend colour and richness to the variety of art. Moreover, our commonest of experiences, when properly expressed through the medium of art, runs the chance of being better appreciated by those who are common men and they constitute the bulk of the race. Wordsworth's 'We are seven' is an instance in point. Out rarest experiences and higher aspirations may not be shared and properly understood by others and thus they have the least probability of being properly appreciated. In our view, the mission of art is neither to express the divine in man nor the devil in him. Art merely objectifies the subjective feelings whatever they may be. Human personality should not be confused with such passing feelings as find expression in art. For, a true artist sometimes creates characters which are diametrically opposite; an Iago and an Imogen are born from a common mother. It is the 'negative capability' of the artist, to borrow an expression from Keats, that enables the artist to create a God and a hydra-headed monster. They are no expression of the poet's personality. The artist is successful only there, where he works with proper detachment.[6] Without this detachment, an artist is not worth the name. Without this detachment the variety in Shakespeare's and Tagore's creations would have been impossible. The definition of poetry as 'emotions recollected in tranquillity' speaks eloquently of this aloofness. We consider this mental aloofness on the part of the artist to be an essential factor that goes a long way in making art what it is. We fully endorse Elliot's view when he writes :

> "The more perfect the artist, the more separate in him will be the man who suffers and the mind which creates."

———:O:———

THE LATE DR. SIR C. RAMALINGA REDDY
A Personal Tribute

By P. RAJESWARA RAO, Advocate

The passing away of Sir C. Ramalinga Reddy after completing the Biblical age of three scores and ten marks the end of an epoch of eminent educationists like the late Sir Asutosh Mookerjee, Pandit Madan Mohan Malaviya, Sir Hari Singh Gour and Dr. Sachchidananda Sinha, who made their respective Universities pioneers in every branch of learning.

Dr. Reddy comes of a distinguished family. Dedication to learning in our classics and epics. He showed signs of promise even in his teens. At Cambridge his intellect blossomed forth into a fine flower. He attracted the attention of the students and professors alike. He was the first Indian to be elected as the Vice-President of the Cambridge Union. His oratory was pressed into service by the Liberals in electioneering campaign (there was no labour party at that time in England). He was made the Secretary of the Cambridge Liberal Club.

Besides attaining brilliant success in his own subject

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

(Economics) in examination he completed the course of lectures necessary for being called to the Bar. But the late Mr. Gopala Krishna Gokhale advised him to abstain from donning the Barrister's gown and become an educationist in order to mould the character and cultural life of the coming generation. Young Reddy readily accepted his leader's advice to the surprise and consternation of his admirers and fellow-students. With his analytical acumen, critical faculty, erudition and eloquence he might have quickly and easily become a front-rank lawyer and amassed a huge fortune. He might have also adorned the bench with credit and distinction.

But destiny willed it otherwise. He became the Vice-Principal of the Baroda College, a position held by Sri Aurobindo Ghosh before he plunged into the national movement. From there he went to Mysore to become the Principal of the Maharajah's College and ultimately became the Inspector-General of Education in the State. There he came into contact with that intellectual giant, the late Sir Brajendra Nath Seal who subsequently became the Vice-Chancellor of the Mysore University.

Madras under the Montford Reforms opened a new vista for him. At the outset he was caught in the whirlpool of communal politics by joining the Justice Party, which was ushered into existence by that arch-imperialist Lord Pentland in pursuance of the policy of 'divide and rule'. But Reddy proved to be a square peg in a round hole. It did not take him long to get out of the mire. He proved to be a tireless and severe critic of the Justice Party which was in power. His indictment of the Panagal Ministry under dyarchy can favourably be compared with the impeachment of Warren Hastings by Edmund Burke.

The Justice Party literally inaugurated the Andhra University and virtually installed him as the Vice-Chancellor to escape his opposition. Though he could not be silenced, at any rate, his attention was diverted. He gave his very best to the University during its formative period which was not altogether happy. Though he was a keen student of the humanities, consistent with the spirit and the requirements of the times, he gave top priority to applied sciences and research.

The Satyagraha movement in 1930 moved him deeply and he resigned his office as a protest against the repressive policy of the British Government. Subsequently he became a full-fledged Congressite and smashed the opposition of the Justice Party in Andhra. When his successor Dr. S. Radhakrishnan left the University to fill the Professorial chair at Oxford, he once again became the Vice-Chancellor and remained as such till he left it voluntarily an year ago to become the Pro-Chancellor of the Mysore University. Really he wanted to watch and guide its career from a distance. Like Sir Asutosh Mookerjee, he had the uncanny knack of spotting out a genius and giving him the necessary opportunities for expression. In spite of the peculiar political pressure in the shape of Communal Government—a Cabinet of the Justice Party—still prevailing in this part of the country, he successfully avoided considerations other than merit and efficiency in filling up posts of responsibility and trust and also of opportunity and honour.

When the Congress contested elections in 1937 the claims of this veteran nationalist were ignored. Evidently the party bosses were afraid of his intellectual independence. He occupied a cross-bench in the upper chamber —the Legislative Council, as a nominated member. But he was not bitter to those who disappointed him. Following the noble example of that departed elder statesman the Rt. Hon'ble V. S. Srinivasa Sastry he extended discriminating support to the governmental measures.

When the Second World War broke out he was not happy over the Congress policy of going into wilderness. He clearly foresaw the ideological issues and the global consequences with the result that he became a supporter of the war-effort. What was more, he tried to understand and appreciate, with an open mind, the stand taken up by the late Mr. M. A. Jinnah with respect to the Pakistan demand. Thus he drifted away from his previous moorings, and the knighthood conferred on him at that juncture roused public suspicion. But as a member of the non-Party Conference organised by the late Sir Tej Bahadur Sapru, he endeavoured to solve the deadlock.

When the Congress came to power once again in 1946 he was nowhere in the picture. The fact that a man of his attainments and experience was not elected to the Constituent Assembly of India, where he could have risen to great heights, is indeed a pathetic commentary on our public life. But he nursed no grievance and had learnt to take the world as it was since long. He evinced continued interest in public affairs. His comment on men and matters was detached but trenchant. His criticism was marked by brilliant wit, biting sarcasm and ready repartee.

As a man he was frank to a fault, and was not afraid of exposing his private life to public glare. When his admirers were referring to him as a great Brahmachari and a veritable Bhishma he protested and said that it would be appropriate to describe him only as an ex-married man. He was charming in conversation, powerful on platform and peerless in debate and above all he was a strict observer of Parliamentary tradition and democratic convention. As a letter-writer he was a class by himself. As one who continuously corresponded with a good number of the greatest intellectuals of our times in India and abroad, I can say without any fear of contradiction that his letters to me, whatever the subject might be, were most refreshing and I wish that all my correspondence were at such a high cultural level.

Above all he was a non-Party nationalist with sympathy for all. His catholicity was proverbial and served as an invaluable link between the older and the younger generations. His advocacy for the claims of Sanskrit to be the State language of India was cogent and convincing. He might not have achieved success in the popular sense

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of the word. He might not have been prominent. But certainly he was eminent and influenced the thoughts of men at a higher level. The very fact that he instituted a national prize to be awarded annually to distinguished servants in the sciences and humanities, symbolised his lofty idealism. His memory will be cherished by posterity as one who tried to rise above pettiness and prejudice and looked at men and matters without fear or favour, without undue attachment or ill-will. His life is a warning and an appeal to the present generation at this juncture when our thoughts are regimented and actions are regulated by extraneous influences and factors. May his soul rest in peace.

——:O:——

DHOLKA
A Historical Sketch

By MANEKLAL GOVINDLAL JOSHI

Dholka, the taluka-headquarters town of Dholka Taluka of Ahmedabad district of Bombay Province, is an ancient town of historical importance. It is situated 23 miles South-East of Ahmedabad, and is on 22.44° North Latitude and 72.28° East Longitude.

There is no fixed date as to when this town was founded. *The Bombay Gazetteer* states that in *Kathasaritsagar* there is mention of a town named 'Dhavala.' The famous ancient traveller Idrissi has also made a mention of a town named 'Dulaka' in his memoirs.

There is a widespread belief prevalent among the general public that modern Dholka is the famous Virat-nagar of the epic Mahabharata, where the Pandavas had remained in hiding for one year. But recent researches have made it clear that this belief has no historical basis.

According to latest historical researches available, it is assumed that Vaghela king Virdhavala's great-grand-father and Arnoraja's father Dhavala had founded this town of Dholka—naming it Dhavalakka or Dhavalgriha. But this is not a final verdict. Among the various ancient monuments which are still in existence in Dholka, there is still to be found 'Malava' reservoir built by Queen Minaldevi, the mother of great Solanki King Sidhraja Jaysinha. During her regency period Minaldevi had caused two reservoirs to be erected, one at Dholka (Malava or Minal Talav), and the other at Viramgam (Munsar or Minalsar), these being the two towns on the main roads from Gujarat to Saurashtra. Both these reservoirs are still in existence, though almost a thousand years have passed since then. Moreover, Dholka was more important than Viramgam in a way, because the main routes to the then two important ports of Gujarat, *viz.*, Cambay and Dholera, separated from here, as also the main road to the famous shrine of Somnath Patan also passed through Dholka.

The late Poet Nanalal, while addressing the students of the local High School, had remarked that after completing their studies, it is possible that Lord Krishna and his bosom friend Sudama had returned to Sudamapuri (Porbundar) and Dwarka *via* Dholka, and this statement gives support to the mention of the township of 'Dhavala' in the *Kathasaritsagar*.

Also taking into consideration the several pre-historical researches recently brought to light, one is led to believe that the region around Dholka must be very near some sea. In support of this theory one still finds that the southern portion of Dholka Taluka, *viz.*, the Bhat tract, which is essentially a wheat-growing area, and the village Saragwala is said to have been a port. A mound near that village and round stones pierced with holes formerly used as anchors, give great support to this theory. Also river Omkar, which passes through this tract, becomes saltish as soon as the flow of the fresh waters of monsoon is stopped. This also gives support to the theory that this whole region must have been a sea-bed in pre-historic age.

The late Col. Todd, in his famous *Annals of Rajasthan*, while writing about Dholka, states :

> "By what route Kanaksen, the first emigrant of the Solar race, found his way into Saurashtra from Lohkot is uncertain; he, however, wrested domains of a Prince of the Paramara race and found Birnagar in the II century (A.D. 144). Four generations afterwards Vijayasen, whom the Prince of Amber calls Naushirwan, founded Vijayanagar, supposed to be where Dholka now stands, at the head of Saurashtra peninsula."—(Eng. Edition, Vol. I. Page 253).

But he has stated that he has no historical proof to support his theory.

Prof. Altekar in his article entitled "Ancient Cities of Gujarata and Kathiawar" (published in the *Indian Antiquary* of June 1925, pages 26-27), while writing about Dholka, states :

> "Though towns like Khetaka (Kaira), Kasadraba (Kasindra) and Karpatavanijya (Kapadavanj), which are in the vicinity of Dhavalakka or modern Dholka, figure prominently in Vallabhi inscriptions, they do not so much as mention Dhavalakka. If it had then been, as it subsequently became, the headquarters of a district, it would have been certainly referred to in those records.
>
> "Though traditionally believed to be the site.

of Matsyapur or Viratnagara (where the Pandavas lived for a year incognito), Dhavalakka was in those early days only a village; it probably rose to importance when Anhilpurpatana became an important capital and commercial emporium in the tenth century. Stambhatirtha or modern Cambay was the port for the extensive import and export trade of Anhilpurpatana, and Dhavalakka was on the route between those two places as also on the route between Gujarata and Kathiawar. As all this trade passed through Dhavalakka it developed into a city and naturally became the headquarters of a district.

"During the twelveth and thirteenth centuries it became one of the most important cities in Gujarat and an important centre of financial transactions (*cf.*, for instance, the following passage in the Girnara inscription of 1232 A.D.*) Under Vaghela rule, the importance of the town still more increased, for the Vaghela dominions at first consisted only of the territories around Dholka or Dhavalakka and Dhandhuka. It became their capital. The tank at Dholka was built by Minaldevi, the mother of Sidhraja.

"The identity of ancient Dhavalakka with modern Dholka is too obvious to need explanation."

Mr. Bhogilal Sandesara has given the year of foundation of Dholka as Samvat 925 (A.D. 869) in one of his articles published in the July-September, 1941 issue of the *Forbes Quarterly*.

From all these theories it can pretty well be assumed that Dholka must have been founded in the sixth century A.D., and that during the Vaghela regime it had reached the zenith of its prosperity, and as Solankis at Anhilpurpatana became weak, and also from political as well as strategic point of view Anhilpurpatana being more convenient, the Vaghelas, after they attained the suzerainty of Gujarat, removed their capital from Dholka to Patan, with the result that Dholka gradually lost its importance.

During the regime of the Solankis, Dholka along with Vyaghrapalli was bestowed as a gift to a chieftain whose progeny became known as Vaghelas. Virdhavala Vaghela's father, being dissatisfied with the behaviour of Solanki King Bhimadeva II or Bhola Bhim, left Patan, took hold of the regions around Dholka and Dhanduka and began to consolidate them. He also captured the regions between the rivers Sabarmati and Narmada. He made Dholka his capital and began to rule semi-independently, accepting the suzerainty of Patan in name only. Virdhavala, himself being an ambitious and gallant warrior, in order to strengthen his position, captured Godhra and Cambay also, and merged them with his own regions. He had, in famous Vastupal and Tejpal, a most brilliant Minister and a spirited Commander-in-Chief respectively. Their motto of governing the country is best mentioned in these words :

"That minister is clever who without placing his hand on any one's head can increase the treasury, without putting any one to death can protect the country, without war augments its territories."

The world-famous Dilwara temples on Mount Abu are the creations of these two brothers, and therein in the inscriptions Virdhavala is mentioned as 'Mahamandaleshwara' and 'Rana.' From this it is surmised that till then his capital was at Dholka, and that he had still not captured the throne of Gujarat, and had not assumed the title of 'Maharajadhiraja.'

After the death of Virdhavala, his son Vishaldeva succeeded him, and he drove away the last Solanki King Tribhuvanapal, captured Patan, and having assumed the title of 'Rajadhiraja,' proclaimed himself the sovereign king of Gujarat (A.D. 1243).

Both Virdhavala and Vishaldeva had added new fortresses and repaired the old existing ones. These fortresses were but frontier military posts, probably as far surpassed in splendour as in extent by Dholka and other towns of the second class, while they were in turn outshone by the marble-adorned metropolis of Anhilpurpatana.

In *Kumarapalaprabandha*, it is mentioned that Dholka was bestowed to Devashri who had put the red mark on the forehead of Kumarapala, when he became the king of Gujarat, after the death of Siddharaja Jayasinha.

After the removal of capital to Patan, Dholka lost its importance. Shortly after that the Mussalmans came in power, and Ahmedshah made Ahmedabad his capital. Under the Mussalmans Dholka was the headquarters of a local Governor, and it was regarded as a place of no small consideration, and accordingly a garrison was maintained there with an officer of the cadre of Naib-Suba in charge of it.

After this when Ahmedshah II became the king of Gujarat, he being a minor, it is mentioned that his Amirs divided his regions among themselves, and as such Dholka came into the possession of Sayad Mubaraka. In the time of Muzaffarshah III, Dholka was still in the possession of Sayad Hamid, the son of Sayad Mubaraka.

The Mussalmans were in turn succeeded by the Mughals, who became the masters of India. The Mughals captured Gujarat in 1572 A.D. It is reported that Akbar after capturing Gujarat for the second time, while returning to Delhi, went *via* Dholka, and that he passed a night there. His first Viceroy of Gujarat Mirza Aziz Koka had come up to Dholka to see him off.

With the coming of the Mughals, Muzaffar Hussain Mirza, with his mother Gulrukha Begum, had escaped to the South. But as soon as Akbar's back was turned he collected an army at Poona, and returned to regain his kingdom. He captured Baroda. At this time Raja Todarmal, the Revenue Minister of Akbar, who

was then on a tour for surveying the lands of Gujarat, was at Ahmedabad, and he strongly advised the then Viceroy of Ahmedabad to make a bold stand against the rebels, with the result that as soon as the imperial army reached Baroda, the rebels escaped towards Junagadh in Saurashtra. The Mughals followed them, and there was a deadly fight between the rebels and the Mughals at Dholka in which the rebels were given finally a crushing defeat. It is reported that in this battle many women had taken part having put on male clothes, as was disclosed from the dead bodies.

With the passing of times came the fall of the Mughal Empire. It is mentioned that Aurangzeb too had once visited Dholka, and had passed a night there.

In the South, the Mahrathas rose in power and they began to spread themselves everywhere. In 1788, Chimanji Appa, a lieutenant of Peshwa Bajirao, plundered Dholka, and finally in 1804 it passed into the hands of the British from the Gaekwar of Baroda. During the intervening period it had passed from the Mussalmans to Mahrathas and *vice versa*. Lastly, from 1757 onwards it remained with the Gaekwars. During the reign of Gaekwar Anandrao, the chieftain of Kadi rebelled against him, and to put down that rebellion the Gaekwar had to seek the help of the East India Company. The Company came to Anandrao's aid, and crushed the rebellion. In return, it was agreed that an additional battalion of the Company be kept at Baroda, for the maintenance of which the Gaekwar handed over the Dholka Taluka with its income. It is reported that at this time the Dholka Taluka consisted of 600 villages, and had an annual income of about Rs. 4,50,000. As a monument of the Maratha power in Dholka there is still a temple of Nagnath Mahadeo, with a village endowed for its maintenance.

The Bombay Gazetteer, while stating the condition of the Dholka Taluka when it came into the hands of the British Government, reports that

"It was a very fertile region. There were lots of Mango, Rayan, Mahura and Neem trees, giving fruits and shade to tired travellers. There were deep forests off both the banks of river Sabarmati, and lions and tigers were found there. There is no trace of these forests now, and because of the devastating floods of 1863 these man-eating animals have also vanished, and they are now not found anywhere. Besides these, duck and snipe were formerly very common, but now they are less common. Hogs too were found in much abundance, but they are rarely seen now."

In 1812, the population of the Dholka Taluka was 1,31,375, of which 1,01,487 were Hindus; 11,886 were Mussalmans; and 2 were Parsis. The average acreage of farms was 12.2/40, and the average acreage to plough was 10.28/40.

'Bagayat' (fruits, etc.) cultivation was done to a greater extent in Dholka Taluka, and even today the gardens the pomegranates and the dried ginger of Dholka are well-known, and are exported to distant places like Bombay, Calcutta, Delhi, Bikaner, etc. Especially Calcutta is the biggest consuming centre of Dholka pomegranates.

The great traveller Al Idrissi, who visited India in the twelfth century, while giving his account of the important business centres, speaks of 'Dulaka,' Asaval and a third town near Asawal as places of good trade, equal in size. He further states that the Gujarat Ports' chief inland mart was probably Dholka.

Dholka had very extensive business relations with the South. It was and still is a great centre for hand-woven cloth. According to *The Bombay Gazetteer*, these weavers originally came from Radhanpur because of want. Some stayed permanently at Dholka, and some went onwards to Kathiawar and Cambay, where they settled themselves. Apart from these Radhanpuri weavers there were and are many Hindu Khatris or weavers.

Cotton was and is produced in great quantity in the Dholka Taluka, and as such a ginning and pressing factory was established in 1877-78. Unfortunately that has remained the only factory up till now in Dholka town because Bavla and Koth on the north and south respectively of Dholka, have developed into great cotton and grain centres, affecting greatly the trade of Dholka.

Akbar's reign.

The first survey was made in 1823. Before that in 1590, Raja Todarmal had made a survey during

The present boundaries of the Dholka Taluka consist of Sanand Mahal in the North, Matar and Cambay Talukas of the Kaira district in the East, Dhandhuka Taluka in the South, and Limbdi Taluka of Saurashtra and Nala Sarovara in the West. In 1872, it had an area of 690 square miles, with a population of 164 persons per square mile. With the creation of Sanand Mahal, the area is slightly decreased.

The South-West and the South-East portions of the Dholka Taluka are low-level regions. These regions seem to be the sea-bed regions of pre-historic age, because they are still very saltish, and only wheat, gram and cotton are raised there. The average annual rainfall of the Dholka Taluka is 23 inches to 27 inches.

While giving the description of the Dholka town proper, *The Bombay Gazetteer* states:

> "In a well-tilled and well-wooded plain, for about two miles broken at intervals, by mounds from ten to thirty feet high, and by the remains of rich mosques and gardens, Dholka, a mile and a half long three-fourth of a mile broad, is irregularly fortified by a mud wall four miles in circumference. . . . Dholka is probably one of the oldest cities in Gujarat, and has always maintained its position as an important country town and a trade centre."

Today there is no trace of these mounds or the mud wall, though the *Gazetteer* has gone to the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

extent of mentioning that during the Mahomedan period an officer of the grade of a Naib-Suba was stationed here with a garisson to help him in maintaining law and order, and to protect the frontier, and that there was a fort also. The famous historian Farishta has also stated that there was a fort at Dholka. There is every possibility of these statements being true, since Dholka Taluka was on the border of Sorath and Gujarat.

After Dholka had come into the possession of the British, in the very first decade *i.e.*, in 1813 there was a great famine which played a havoc, resulting in the utter ruin of many handicrafts, such as hand-weaving, earthenware, bangles, iron and brass vessels, and tools making, etc. Even though a period of more than a hundred and twenty-five years has passed since then, still these crafts have not regained their former position.

As a remnant of the old days hand-weaving is still to be found, and about 700 to 800 hand-looms are being operated. It is reported that formerly the cloth woven at Dholka was exported to distant countries like Iran and Arabia, but now this cloth is chiefly consumed by the Deccani women. It is further reported that in 1912 at the time of the Coronation of King George V at Delhi, a *sari* specially prepared for Her Majesty was sent from here.

Kasbatis of Dholka

According to local reports, it is said that there were formerly 52 Kasbatis at Dholka enjoying royal ensigns. Col. Walker, while writing about them, states :

> "Previous to the fall of the Moghul Government, the Kasbatis as soldiers of fortune, who had acquired a competence, had settled at Dholka. From their number and war-like character, their influence was great, and they were feared by Kathis. They were useful to the Mahrathas. Due to changes in Government, Dholka district was an uncultivated waste. Gaekwar was incapable. Kasbatis offered to restore the population of many villages on condition that each village they brought into cultivation should be leased to them for certain period for certain rent. Since then it has been customary to grant waste villages to Kasbatis. These Kasbatis were a class of men, who though not possessed of hereditary rights, succeeded in assuming what was wellnigh their equivalent."

There were three chief clans of Kasbatis at Dholka *viz.*, Menas, Rehans and Paramars. In 1800, when Gaekwar proceeded against Shelukar at Ahmedabad one of the Kasbatis named Bavamiyan Parmar had gone with him. Also at the time of rebellion at Kadi, this Bavamiyan Parmar had joined the British forces with his two hundred horsemen. Bavamiyan expired in the same year, leaving behind him two sons, Bapumiyan who came in power after his father, and Malekmiyan. At that time he had thirty villages in his possession.

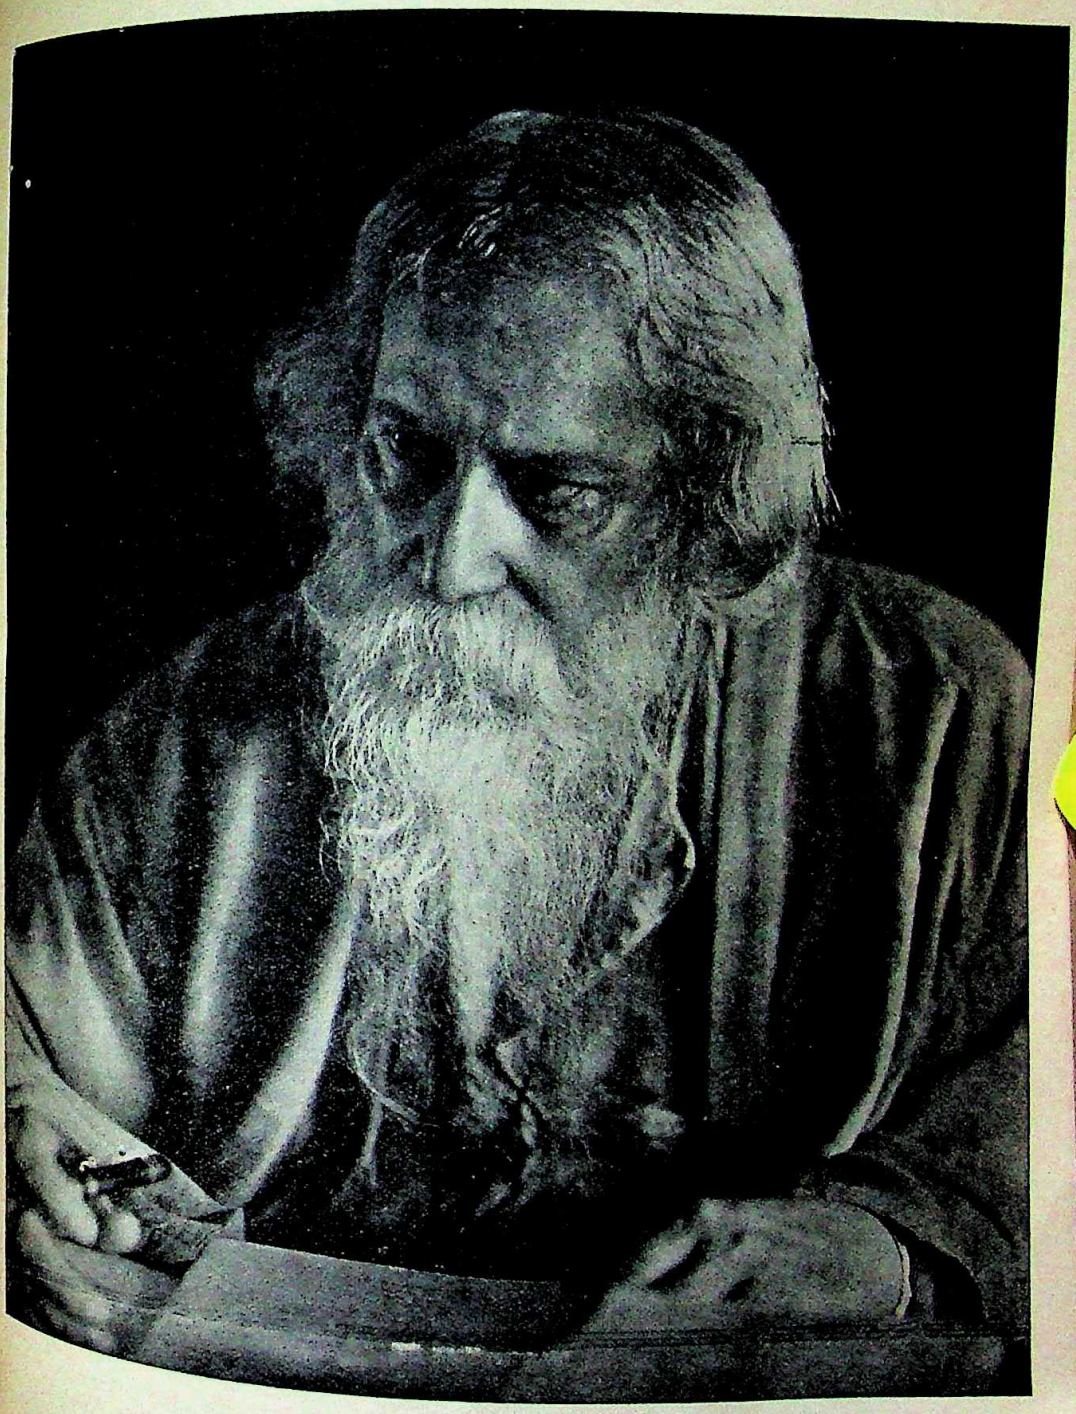
Furthermore, these Kasbatis acted as securities at the time of the collection of land-revenue. Such was their reputation that their protection was paid for by the merchants, and they imprisoned or imposed billets on their debtors without any reference to the Government.

As successors to the Imperial Government at Delhi, the British Government in 1817, took back the possessions of the villages held by these Kasbatis. At that time the case of Bapumiyan was treated as an exception. Today Sardar Shermiyan Parmar of the same clan is still allowed to hold twelve villages on lease. Apart from these twelve villages he holds several portions of big Inami lots (*vantas*), as also he holds a major portion of the Salangpur village near Botad in Saurashtra Union.

Some Ancient Monuments at Dholka

Looking from the historical point of view, the oldest existing monument in Dholka at present, should be considered the Malav lake, excavated by Queen Minaldevi, the mother of famous Sidhraja Jayasinha. Though this lake is round in shape, at one place it is protruding. According to folklore, it is said that when land was being acquired for the lake, the place where the protruding is seen today, was the house of a dancing girl, who refused to sell or move from that place. She was offered to name her own price for her piece of land, but still she refused. Finally Queen Minaldevi hearing of this, sent for her, and asked her the reason why she was adamant in not selling her house. The dancing girl replied :

> "Oh, Queen, you are digging this lake so that people may remember you for ever. You are a queen, whereas I am merely a dancing girl. But I too wish to have my name remembered for ever. And this is the only chance whereby I can do so. Please therefore I beseech you not to force me to sell my house. Thereby you will further be remembered as a queen who for justice's cause did not use coercive measures."



The Queen was very much pleased with her answer and she ordered not to acquire the said piece of land where the dancing girl's house stood, but to proceed with the work of constructing the lake, with that protuberance. This incident has given rise to a very well known proverb in the Gujarati language, "If you want to see real justice done, go and see the Malav at Dholka."

There is a small stone bridge, with seats on both the sides, to reach the centre of the lake. It seems that there was a Shiva temple here, since the Solankis were great devotees of Shiva. At present there is no temple, but a small structure, which looks like the front portion of a Shiva temple. The bridge also is in a tottering condition, and the seats are all practically gone.

From the engineering point of view this lake is worth seeing, especially the arrangement to bring the stone materials to the lake, without any damage being done to

the force of the incoming waters. The intervening well between the passage of the water and the lake has some very beautiful figures carved within it, and they attract attention because of their extreme gracefulness.

(2) The second monument worth mentioning is the mosque of Bilal or Hilal Khan Qazi. It is the oldest mosque in Dholka and was constructed in 1333. It is situated in the northern section of the town. In this mosque the arrangement for female devotees is similar to one found in Alam Chisti's Mosque at Ahmedabad. The arches are of marble and ornamented with carvings, and the 'Mimbar' or the marble pulpit is still in pretty good condition, and is one of the finest in India. The public generally call this structure by the name of Pandava's School.

(3) Then comes the Tanka Mosque situated in the southern section of the town. It was formerly the Jumma Masjid of the town. It was built in 1361 A.D. in the reign of Ferozshah Tughlak. It it also a stone structure. The people call it by the name of 'Bhima's Kitchen.' It is reported this mosque was built after demolishing the residence of Vastupal-Tejpal brothers.

(4) Alafkhan's Mosque or popularly known as the Khan Masjid, is situated in the west side of the town, opposite the railway station. This entire structure is of brick and mortar. It has three big domes, and there are very tall minarets on both the sides. It is reported that the first experiment of building such big domes was undertaken over here, and as it proved a success-ful experiment, a bigger dome was built at Ahmedabad known as 'Dariyakhan's Ghumat (dome),' and the experiment finally ended with the building of the biggest dome in India at Bijapur in the South, known as the 'Gol Gumbaj.'

This mosque was built by Alaf Khan Bhukai, a noble and a bosom friend of Shah Mohmed Begada. Behind the mosque there is a big lake known as 'Khan Talav' and lotus flowers are to be found there. On the north and south of this mosque there are two stone structures at 63 and 40 yards away respectively. Both these structures have 40 stone columns and a stone roof.

(5) The Jumma Mosque of the town is situated in the centre of the city. It is a magnificent old historical monument, and was built in or around 1486 A.D.

(6) On the northern extremity of the town, on the old highway to Ahmedabad, there is a *Vav* (a well with steps leading down to the water's edge) and a roofed stone structure with an inscription in it. This inscription bears the date of 1433 A.D., and it states that this *Vav* was built by the wife of Ashapal, a Bania by caste and a servant of Muzaffarshah, to commemorate the name of his only son who had met an untimely death. It is further stated in the inscription that the water of this *Vav* has miraculous property. Today the *Vav* is in a tottering condition and hence nothing can be done to verify the statement made in the inscription regarding the water.

Modern Dholka

According to the last census of 1941, the Dholka town had a population of 17,600 persons, and today it has exceeded the limit of 20,000. In 1857 five towns of Gujarata were given Municipalities, and Dholka was one of them.

The metre-gauge railway from Ahmedabad to Dholka was extended in 1901, and after a lapse of 25 years it was further extended to Dhandhuka, where it joined the Bhavnagar State Railway branch extended from Botad to Dhandhuka. This gave second direct railway route to Kathiawar. The present regime has decided to build a metre-gauge railway from Dholka to Baroda, *via* Sojitra, Petlad and Bhadran but for the time being this project is suspended.

The famous Vautha fair is held at the Sangam (confluence) of the Sabarmati and Vatrak rivers every year during the month of Kartik on full-moon day. Here meet the waters of seven rivers. The village of Vautha, where this fair is held, is about 7 miles in the South-East of Dholka.

So far as the trade of the town is concerned there is no progress. There is only one ginning and pressing factory, but so far as handicrafts are concerned there are still 700 to 800 hand-looms operated. But owing to competition of the machine-worked textile mills at Ahmedabad, the weavers find it very hard to stand in competition. Now-a-days Chappal manufacture has made appreciable progress.

The industrial city of the magnitude of Ahmedabad having developed in very near vicinity, Dholka has not been able to make any progress.

It is the headquarters town of the Taluka of the same name, with a Mamalatdar's Court, a Sub-Treasury, a Resident First Class Magistrate's Court, a (Junior Division) Civil Judge's Court, a High School, a Municipal Hospital and a Municipal Maternity Home. The present Government has decided to install electricity over here, but so far nothing seems to have been done in the matter.

PEACE THROUGH POWER

By R. K. SOONAVALA

There is an intangible but most effective and potent change of focus in the discussion of the most important question that is agitating the minds of all the statesmen of the world. It will be recalled by all students of international affairs that after the Hitlerian hordes were forced to surrender, one question was being asked in all the chancellories of the world: "*Will* there be another war?" The same question is being asked now in a slightly different form, the difference being subtle but substantial: "*When* will there be another war?"

Thus the fact that there will be another war is being taken for granted by all the countries of the world. There is a huge shadow of armament factories which is being so elongated that it has shifted from Europe to Asia and is likely to engulf the whole of the globe.

Even within two years after the formal cessation of hostilities the hum and whirr of armament factories and ordnance depots all over the civilised nations of the world was acquiring a pitch and intensity that had all the undertones of war. Over and above this a new technique of war was being forged in the shape of Cold War. We may try to trace the origin of that ghastly phrase but we shall fail. The meaning of that phrase is not to be found in any dictionaries of the world and we have grave doubts whether the meaning of that phrase could be traced in the volumes secretly kept in schools of military strategy. And yet even the ordinary reader of our newspapers knows the meaning of the words "Cold War."

Nor is there any guide to the second more difficult question: "When does a Cold War become hot?" On the answer to that question depends the fate of the whole world. Before I proceed to adumbrate the main thesis of this article, let me try to clear up one main question on which there seems to be a great discussion in India. Our Prime Minister has contributed a new concept in international affairs. His greatest contribution to a global peace is his new conception of complete and effective neutrality. Whatever may be the future of India, we are now committed to that foreign policy which has been shaped by the loving hand of the master, forged by the force of circumstances, imposed upon us by the paucity of our military strength as compared with the other big nations, and dictated to us by the very geography of our country. Let there be no misunderstanding on this main and vital question: "We are committed to this policy for a long time to come."

It is significant that even in the midst of the acrimonious elections, both in England and in America, in the midst of war and after war, the rival parties joined hands on the question of foreign policy. Any candidate who criticised the policies of his country in relation to international affairs had no chance of getting votes in England and America. In the heat of discussion on domestic affairs, not a word was said by the contending candidates about international affairs. And the reason is obvious.

The foreign policy of a country is the outcome of many years of past history, integrated by weighty questions of history, geography and politics. There is if the foreign policy of a nation was to be subject the winds and gales of elections, if it was to from side to side according to the change and flux party politics, it would wither, it would crumble would die.

We then start with the basic, cardinal principle of our foreign policy, namely that we shall maintain wherever possible, an effective neutrality. On strength and ability to keep control of international affairs and guide them according to the fundamental concept of our foreign affairs policy, depends future of India, if not of the whole of Asia, greatest contrib tion towards peace is our neutrality.

We then come to the next question: "What neutrality? Is it the *laissez faire* of ancient days it the isolationism preached by some of the reactionary political philosophers of the U.S.A.? Is it the attitude 'I am not my brother's keeper'?" The answer is emphatic *No*. For the way we are shaping our foreign affairs, we have proved to the peoples of the world that ours is a dynamic foreign policy, based on the fundamental concept of strict international neutrality. A masterly intervention in world affairs, within the strict self-imposed chain of neutrality is a new concept in international politics, difficult to grasp and more difficult to appreciate. Yet we have successfully shown that we can do it.

Well then, neutrality, which shall not be inactive, neutrality which shall not be blind, neutrality which shall be dynamic, are the three new concepts in our foreign affairs policy. Now neutrality can have two meanings. One is the narrow, technical meaning laid down in books of international law and the obligations as recognised by international law may be summarised in terms of "abstention," "impartiality and prevention." It is customary for states

declare their neutrality upon the outbreak of war by a formal proclamation issued by the head of the Government. Just a passing example. On September 5, 1939, President Roosevelt issued what is now known as conventional neutrality proclamation under international law and a second proclamation under the Neutrality Act of 1937 imposing an embargo on the exports of arms, ammunition and implements of war to Germany, Poland, France, Britain, India, Australia, New Zealand, South Africa and Canada. To give a more recent example, the following note appeared in *The Times of India* of the 17th instant:

"New Delhi, November 15—The Government of India, in pursuance of their policy of non-interference in the internal affairs of Nepal, have issued instructions to the Governments of Bihar, Uttar Pradesh and West Bengal not to allow any movement of armed men as well as arms and ammunition in either direction across the border.

"It was officially stated today that, on receipt of reports of some aircraft having flown over Nepal, distributing leaflets, the Government of India had issued instructions to ensure that no plane left India on such undertakings."[1]

But to be more explicit, to convey to the reader the exact concept of neutrality as recognised by international law I shall quote a passage from a book which has become the bible of international politics in America. Prof. Frederick L. Schuman says in his book *International Politics* at page 171 as follows:

"A state which has declared itself neutral has a right to have its neutrality respected by the belligerents, by abstaining from any participation in the conflict and by preventing its citizens from engaging in certain acts regarded as breaches of neutral obligations. A neutral state may not permit its territory to be used as a base of hostile operations by either belligerent against the other. It may not permit its armed forces to be employed to the advantage of either belligerent, nor may it officially loan money or sell war supplies to warring governments. . . . A neutral state must prevent the enlistment of troops for war purposes on its territory, and it must intern belligerent troops and aircraft forced into its jurisdiction. Neutral governments are likewise obliged to prevent their nationals from fitting out, in neutral ports, vessels designed to take part in the war."[2]

This passage will show what are the rights and obligations of a state which wants to have itself declared as a neutral country in the midst of storms and shadows of war. But we are adopting the meaning of the word 'neutrality' not in the narrow technical sense of international law. Our neutrality is not a policy in war but also a policy in peace.
